> The committee is concerned about the lack of a coordinated program for the dental health of children while so many federal dollars are being spent under medicaid and similar programs to treat dental conditions in adults that could have been prevented. The committee will expect that some of the funds provided in this appropriation will be used pursuant to the authorization in section 510 of title V of the Social Security Act relating to special project grants for the dental health of children.

We are for this program and have provided funds to start it. The amendment would give them money for a very sizable operating program before the planning has been done—hardly an efficient way to operate. That type of financing is what has gotten many programs a black eye in the past.

I might add, Mr. Chairman, that program did not get started last year because of the Cotton-Eagleton 2-percent reduction amendment which was placed on the Labor-HEW bill in the Senate, and which the House conferees were instructed to accept.

This amendment by the gentleman from Massachusetts (Mr. BOLAND) would add $80 million for Hill-Burton grants. The committee has already added $122.2 million over the budget request for Hill-Burton grants.

This amendment would add money for staffing community mental health centers. The committee has already added $20 million over the budget for staffing of community mental health centers—for a total of $80,100,000, which is an increase of $32,550,000 over the 1970 level.

Finally, Mr. Chairman, the proponents of this amendment feel it necessary to add $500,000 for the National Library of Medicine. There is $19.8 million in this bill for the National Library of Medicine. Five years ago, the appropriation for the library was $9.7 million. I think that shows that this committee has recognized the needs of the National Library of Medicine.

To sum up, Mr. Chairman, we have conducted months of hearings on this

bill. We went over it carefully, item by item. We felt that there were a number of health and medical programs which were inadequately funded, and we have recommended increases over the budget in these cases. Our job is to try to cut up this pie in a responsible manner. We have to make many, many tough decisions. There are few items in this bill on which some Member of this House could not get up and make a heart-rending appeal for more money.

We understand the problems which are addressed in this "package" amendment, and we have already dealt with them generously but also responsibly.

Mr. Chairman, I trust the amendment will be defeated.

Mr. BOGGS. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

Mr. Chairman, like all Members of this body, I dislike finding myself opposing my longtime devoted and beloved friend, the gentleman from Pennsylvania, but I oppose him because the amendment offered by the distinguished gentleman from Massachusetts (Mr. BOLAND) is right. It is not only right from the point of view of the health of this Nation, its physical health, but it is also right from the point of view of the economic health of this Nation.

The gentleman from Massachusetts (Mr. BOLAND) and other members of the committee will point out to the Members in detail the tremendous need for these additional funds for hospitals and medical schools and other health facilities in this country. I do not claim any expertise in that field, but for more than 20 years I have served as a member of the Ways and Means Committee, and today I am a ranking member of that committee. For well over 10 years I have served as a member of the Joint Economic Committee. I consider myself as having been educated by the economists and the others who have come before these committees. I did not do it. They did it for me.

In 1946 this Congress passed the Full Employment Act, which, incidentally, created the Joint Economic Committee. The responsibility of that committee is for the economy of this country. So I direct my remarks to the economic necessity of this bill. I know that we will hear today that this is fiscal irresponsibility. I know that my dear friend, the gentleman from Michigan, of whom I am very fond and to whom I am very devoted, said from the White House steps that prospects of a recession are nil, and I know he will make the argument that Congress here again is defying the will of the President and bringing on increasing inflationary pressures.

Now, let us take a look at the facts. As Al Smith used to say, let us look at the record. This country right now, as I speak to the Members, Mr. Chairman, is in a recession. Euphoric statements emanating from the White House to the contrary notwithstanding, unemployment is going to rise during the remainder of this year. Dr. McCracken, the principal adviser to the White House, testifying before the Joint Economic Committee this very week, flatly conceded that unemployment would increase. Already we have a million more people out of work than was the case when President Nixon became President. Failure of the labor force to grow indicates that there is a considerably larger amount of hidden unemployment, because workers who would normally enter the labor force are discouraged all over this country in trying to find employment. The reduced workweek has cut back on pay. Today a worker buys a home and pays $20,000 for it, but when he is finished, he has paid $35,000 including interest rates. He may lose it because it is mortgaged, and he may lose everything in it, because he loses his job.

Let us take a look at the bulk of President Nixon's deficit. Let us see what it is all about and where it came from. First, let me say this. In their calculations about a balanced budget, there are all kinds of fakery. No. 1, they include a postal rate increase. I have not seen a bill to provide for it. Second, they include a tax on leaded gasoline. It has got no chance whatsoever of being enacted. Third, they talk about a user tax on waterways. It has no chance of being enacted.

These are figures in their projected budget. They are imaginary. They do not exist as practical sources of revenue.

Here is where the problems come from. The $1.8 billion has been caused by increased interest on the national debt, because of the fiscal policies of this administration, trying to rely on monetary policy alone to control inflation.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. BOGGS. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

Mr. HALL. Mr. Chairman, reserving the right to object——

Mr. FLOOD. Mr. Chairman, I was about to ask that.

Mr. HALL. Mr. Chairman, reserving the right to object, is it the distinguished gentleman from Louisiana's intention to address himself to the amendment in the next 5 minutes?

Mr. BOGGS. It is so; yes, sir. I am addressing it right now.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. BOGGS. Mr. Chairman, I thank the House for its courtesy.

Mr. Chairman, $1.8 billion is the result of increased interest charges. Imagine paying 7.5 percent on Government bonds. That is what the rate is today. That is $1.8 billion.

An additional one-half billion dollars is due to the increased cost of unemployment compensation. What does that mean? That means that there are more people unemployed than we have had in many, many years.

Finally, due to the fall off in business and due to the rise in unemployment, the Government revenues for fiscal year 1970 were under the estimate by a billion dollars. If the President Nixon recession continues, the estimates will be approximately $3 billion off.

I am not pulling these figures out of the air. I have obtained them in the Ways and Means Committee from the Treasury Department.

Mr. Chairman, it is therefore mandatory that we adopt the Boland amendment. It is not only in the interest of the Nation's physical health. Imagine a Nation with a gross national product approaching a trillion dollars saying it cannot build hospitals, it cannot educate doctors, it cannot train nurses. What a shortsighted philosophy. But, Mr. Chairman, the Boland amendment is also in the best interest of the economic health of our country. As I said at the beginning, we pledged full employment in the 1946 act. We do not have it today.

This House, together with the other body, has already acted in the field of water pollution. We increased the President's budget some $150 million to $500 million. And it was a good amendment. The distinguished gentleman from Georgia (Mr. STEPHENS) was very instrumental in respect to that amendment. As the economists say, it is an ideal contracyclical device.

This amendment, the Boland amendment, the Stephens amendment, the override of the veto of the Hill-Burton funds, not only serve social goals that are necessary in this country, but also serve economic goals.

The amendment offered by the gentleman from Massachusetts (Mr. BOLAND) will provide much needed public investment required to counteract the current contraction in the private sphere of our economy. If the minority leader, Mr. FORD, thinks that has not happened, I suggest that he talk to a homebuilder. If he thinks it has not happened, I suggest that he talk to the aerospace industry. If he thinks that it has not happened, I suggest that he talk to the lumber industry in the Far West or in the Deep South.

Mr. Chairman, one of the great Presidents of our Nation, President Roosevelt, came to power at a time when this Nation was at the lowest point in its history.

We had a gross national product then of $54 billion. Today it approaches a trillion dollars. When Franklin D. Roosevelt became President 14 million Americans were out of work, and many of them were literally starving to death. President Roosevelt said this, and I quote him:

> The greatest tragedy about unemployment is that it should exist at a time when there are so many things which need to be done. Surely in a country as great as ours the means can be found to put the unemployed to work doing those things.

Mr. Chairman, we have come a long ways in America. We have a great country. Today it is quite different from those bleak days of 1933 when President Roosevelt stood here on the steps of this Capitol Building and said:

> The only thing we have to fear is fear itself.

But let this be said: There are so many more things that need doing; there are so many slums that need clearing; there are so many rivers that need purifying; there are so many schools that need building; there is so much to do to improve the quality of American life. To argue here that we cannot do this is something that I just do not believe and I do not buy it, and I hope that the Boland amendment will be adopted.

Mr. GERALD R. FORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, at the outset let me say that I am delighted on this occasion to be associated with the gentleman from Pennsylvania (Mr. FLOOD) and to have as my opponent the gentleman from Louisiana (Mr. BOGGS).

Mr. FLOOD. Mr. Chairman, it is not very often, so I insist that the House be in order.

Mr. GERALD R. FORD. Mr. Chairman, I listened to the gentleman from Pennsylvania and I listened to the gentleman from Louisiana, and, as I said a moment ago, I am far happier being associated with the gentleman from Pennsylvania (Mr. FLOOD) than with the gentleman from Louisiana (Mr. BOGGS) on this issue. I think the gentleman from Pennsylvania (Mr. FLOOD) is far more qualified to pass judgment on the merits of this controversy than my dear friend the gentleman of Louisiana (Mr. BOGGS). The gentleman from Pennsylvania (Mr. FLOOD) spent the better part of 6 months as chairman of this subcommittee analyzing the testimony that has been given by those from the executive branch and outside witnesses. I wish to compliment the gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Illinois (Mr. MICHEL), the ranking member on our side, for what I think is a first-class job in adjusting and revising some of the recommendations that have been made by the executive branch. These changes have been made in a responsible manner. The pending amendment is irresponsible and should be defeated.

However, if I might make an observation or a comment concerning some of the charges or allegations by the gentleman from Louisiana, let me start out by saying this: We have had this daily political observation and comment, if you can elevate it to that level, by the gentleman from Louisiana about the trouble in the economy. As a consequence I had someone on my staff go back and look at the record. In 1961, 1962, and 1963 I find that nary a word was said about the unemployment figures on the condition of the economy during the Kennedy administration. In 1961 there was a strange silence by the gentleman from Louisiana even though unemployment averaged 6.7 percent in that year under a Democratic administration. The figure of 6.7 percent unemployment in 1961 was almost 2 percent higher than the unemployment figure at the present time.

Mr. Chairman, my researchers have been unable to find a single word from the gentleman from Louisiana in 1962 when unemployment was 5.5 percent under a Democratic administration. Then, I had someone on the staff take a look at the record in 1963 and nary a word from the gentleman from Louisiana about the economic troubles we were having that year when the unemployment rate was 5.7 percent.

So, I assume the gentleman on this occasion is trying to be more than a little political. He could not defend the administration in those days and he is trying to make politics out of the circumstances in 1970.

Mr. Chairman, as a matter of fact, the record shows that today there are 79 million employed Americans, which is 1.5 million more than a year ago. The employment a year ago was the highest in the history of the United States. It is a credit to this administration that we have been able to reduce the military manpower active duty strength in the last year and a half by over 300,000.

It is to our credit that we have been able to absorb so many through employment in other fields of those connected with the defense industries who have lost their jobs in the last year or two.

I might say, as the gentleman from Louisiana well knows, most of the efforts to cut defense spending, to cut space spending, have come from the Democratic side of the aisle. So, if there is any loss of employment in the defense industries or the space industries, the gentleman's political party is responsible for it.

Now, Mr. Chairman, let us talk about the substance of this particular amendment.

The administration recommended $619,742,000 in these nine programs, which represented a reduction of approximately $80 million from the fiscal year 1970 appropriations. Most of that came in what we call the Hill-Burton part of the health and welfare budget. But, at the same time the administration, as it sought to cut down the direct grants programs, provided for the subsidization of interest for hospital construction which is a far more flexible and better way of helping local communities build those facilities that they badly need in your district and my district. In addition, 2 years ago in the housing bill an amendment sponsored by myself provided for FHA financial backing for local, nonprofit hospitals.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(By unanimous consent (at the request of Mr. FOREMAN) Mr. GERALD R. FORD was allowed to proceed for 5 additional minutes.)

Mr. GERALD R. FORD. The net result is that the administration's request for outright grants programs, the interest subsidy programs, the FHA financing program is a far better way of building more hospitals than a continuation and expansion of the direct grant program under the Hill-Burton Act.

So, Mr. Chairman, in my opinion the administration request for $50 million for this program was justified.

On the other hand, I support the committee and particularly the subcommittee for including the amount that they have allocated in their recommendations.

Now, let me make another statement of fact and let us get the record straight, as the gentleman from Louisiana said. In seven out of the nine programs which we are considering here the administration asked for increases in fiscal 1971 over fiscal year 1970. For this I think the administration ought to be congratulated and not condemned. Furthermore, the committee in every instance in its recommendations either held the line comparing fiscal year 1971 with fiscal year 1970, or increased the amounts made available. The net increase over and above the amount of last year is $87,374,000.

This is a rather substantial increase of about $120 million over the President's recommendation. But I am going to support the subcommittee because, when you take into consideration the other adjustments that they have made in other programs, it seems to me that the committee has wisely used judgment in trying to more properly allocate our available resources.

Let me talk for a minute about the particular amendment offered by my friend, the gentleman from Massachusetts (Mr. BOLAND). If the Committee of the Whole and later the House approves this amendment, it will add $360,454,000, which is a 50-percent increase over the amount that was appropriated in fiscal year 1970. And it seems to me that such an expansion is not responsible or wise at this time. We have a far better solution with the recommendations of the subcommittee under the gentleman from Pennsylvania (Mr. FLOOD) and therefore I hope and trust that we follow his advice and not get into the political atmosphere of my friend, the gentleman from the State of Louisiana (Mr. BOGGS).

Mr. CASEY. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Who, Mr. Chairman, can be opposed to better medical care? Who could be opposed to more doctors? Is it not a very attractive package we are offered, and they intend it to be. They gave it a very attractive name, an emergency health amendment. You all have been receiving the telegrams, I am sure, saying "Support the emergency health amendment."

Now, let me tell you something: In this bill, counting everything in the bill, there is $77 billion of the taxpayers' money.

Now, I have heard some gentlemen say that they do not know what a billion dollars is. Let me give you one graphic illustration of what a billion dollars is. If you can get hold of enough of them——

Mr. BOGGS. Mr. Chairman, will the gentleman yield?

Mr. CASEY. Not at the moment.

Mr. BOGGS. The gentleman said $77 billion?

Mr. CASEY. Yes.

Mr. BOGGS. Would the gentleman spell that out?

Mr. CASEY. If you read the report, and not on my time, you will find it. Just use your pencil and add it up.

Mr. BOGGS. How much of that is for social security?

Mr. CASEY. You read the report. I am telling you how much of the taxpayers' money is in here. Am I wrong on that?

You are on the Committee on Ways and Means, and that is the committee that raises the social security taxes.

Mr. BOGGS. You are talking about trust funds.

Mr. CASEY. All right. Some of it represents trust funds, but where did they come from?

Mr. BOGGS. They happen to have been appropriated previously; this is just a mere formality.

Mr. CASEY. All right, but the money came from the taxpayers, and that is what I am talking about.

Mr. BOGGS. So what?

Mr. CASEY. Now, as I was saying before I was interrupted, if you can get hold of enough dollar bills, and stack those dollar bills up flat, one on top of another, to the top of the Washington Monument, you will have $1 billion. There are 77 stacks in this bill, 18 of them for this particular program on health and welfare—18 of those stacks.

Does that sound like this committee has been a little tight? Sure, there are portions of this bill that I would like to see larger. But we do have a responsibility to remain within some reason, in spending the taxpayers' money for these very worthwhile programs.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. CASEY. I yield to the gentleman.

Mr. MICHEL. Does the gentleman not have several very eminent medical schools in his own district and is he not quite well acquainted with the needs of those schools?

Mr. CASEY. Yes, sir; and I wish we could give them more money. Everyone of them wants more money. But we have to be within reason. I dare say the other body will add money to this. We never come back with a figure lower than ours whenever we have gone to conference as you well know.

Were we tight with them? Were we tight? Let me tell you this, and this is a fact. I am not talking to you about social security or the trust funds—I am talking particularly about the health and medical appropriations in this bill.

This committee increased that particular section of the bill over $208,960,000. That is almost a quarter of a billion dollars—almost a quarter of the way up the Washington Monument in $1,000 bills.

We increased substantially the following:

Environmental control	$1,800,000
Mental health	21,860,000
Communicable diseases	400,000
Medical facilities construction	92,200,000
Biologics standards	198,000
National Cancer Institute	25,000,000
National Heart and Lung Institute	6,732,000
National Institute of Dental Research	694,000
National Institute of Arthritis and Metabolic Diseases	6,187,000
National Institute of Neurological Diseases and Stroke	$3,835,000
National Institute of Allergy and Infectious Diseases	3,030,000
National Institute of General Medical Science	17,696,000
National Institute of Child Health and Human Development	1,133,000
National Eye Institute	5,300,000
National Institute of Environmental Health Sciences	777,000
John E. Fogarty International Center for Advanced Study in the Health Sciences	918,000
Health manpower	18,700,000
Research resources	2,500,000

I am not critical of my good friend, the gentleman from Massachusetts, for wanting to do more. We all want to do more as well as his colleagues and associates who are cosponsors, so to speak, of this amendment.

I dare say that he and his friends who are advocating this are going to get a shining star in their crown for their attempt to try to put more money in this. We on the committee are going to be called dogs because we will not accept an amendment adding $360 million more.

This bill is $92 million over the budget and $208 million over the budget in this specific field.

Now I do not want to get involved in this political sparring that has been going on here ahead of me. I do not intend to. I hope you will not get involved in it.

I hope you will work as this committee has worked—not as partisan Members of the House, but as people who have a job to do—a job that we wanted to fulfill the best we could and at the same time show some sign of fiscal responsibility.

We have increased this bill. We hear moans and groans about the increases. We think, we feel, and we know, that we have brought to you a bill that you can be proud of, because we have increased it and tried to give priorities where they belong. We made shifts in these funds.

I urge you, do not be stampeded by a classic name of emergency health amendment. Do not be stampeded by the telegrams. You can rest assured that this committee has done a good job and intends to continue to see that our medical schools and our professionals that are to be trained receive the support that they need. I urge defeat of the amendment.

Mr. YATES. Mr. Chairman, I rise in support of the amendment and move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from New York.

Mr. BINGHAM. Mr. Chairman, I want to congratulate the sponsors of this amendment to increase funds for health facilities under the Departments of Labor, Health, Education, and Welfare, and related agencies appropriations for fiscal year 1971, and to indicate my strong support for it.

Funds for medical manpower, hospital construction and modernization, community mental health facilities, and other health programs provided for in H.R. 18515 are among the most important of our domestic needs. I was shocked as was the Committee on Appropriations, at the totally inadequate sums suggested for these health programs by the President. I support the action of the Appropriations Committee in increasing the funds available for these programs beyond the President's request. But the crisis that we face in the field of medical care argues strongly for even more generous funding. We can wait no longer to begin to bring our medical care facilities up to standards appropriate to the most affluent Nation on earth. Most importantly, we must develop adequate facilities and personnel to insure that every American has access to a full range of professional medical services.

I am particularly impressed with the need for increased attention to the problem of mental health. The incidence of mental illness is increasing rapidly in our fast-paced society, and only a fraction of those who need care for such illnesses are currently receiving it. The problem of drug abuse is only one example of the extent of mental and emotional disorders requiring professional medical attention.

I not that Mrs. Ruth Bushong Fallick appeared before the committee in support of increased funding for community mental health facilities. Mrs. Fallick is active in a number of mental health organizations and programs in areas of the Bronx, N.Y., which I represent. Mrs. Fallick and many other interested citizens in New York are doing excellent work to expand mental health care opportunities and draw attention to the mental health problem, and I feel strongly that these efforts should be fully and generously supported.

I am also impressed by the need to provide additional support to our medical schools for the training of additional doctors which are already in desperately short supply in many areas of the country.

In view of these considerations, I intend to vote for the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) to increase committee recommended funding for health manpower programs, Hill-Burton hospital grants, community mental health centers, and the National Institutes of Health by $360.5 million.

Mr. YATES. Mr. Chairman, in passing I want to allude to the remarks of the distinguished minority leader only momentarily. I think he needs some new researchers. Apparently they forgot to tell him about the Eisenhower depression in the years 1958, 1959, and 1960, and how much higher unemployment was in those years than it was in the year 1960, 1961, and 1962 to which he referred. The minority leader did not tell the House that unemployment began to decline after the Democrats assumed office in 1960, and continued to decline in the years he mentioned.

Second, if the Nixon administration's recommendation of $50 million for Hill-Burton was adequate, as the minority leader said it was, why, then, does he say he is supporting the committee bill that tripled that amount? That is exactly

what the committee did. Instead of the $50 million that was recommended in the budget, this committee approved $172 million, more than triple the amount the President recommended. If the minority leader is so determined to stay within the budget as he urges the House to do, how can he reconcile that position with his support of the committee bill?

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. YATES. I decline to yield at this time.

Mr. GERALD R. FORD. I thank the gentleman.

Mr. YATES. There has been a great deal of verbiage here about telling us we ought to stay within the President's budget. None of us likes to exceed that budget. And if it provided for America's needs, we would never exceed the budget, but the fact is that the administration's recommendation for various HEW programs did not adequately meet the needs of this country. That is why Republicans and Democrats alike on this committee voted to exceed the President's budget by $92 million.

Today there is much talk about priorities. All of us have our priorities, the programs we consider to be of top level importance. All of us have our hangups about what we consider to be essential—essential enough to justify our going above the President's budget. The minority leader, for example, has a hangup on military matters. He was willing to go $100 million over the budget for planes for the Nationalist Chinese Government. My own hangup is for programing to help our people in health, education, housing, antipollution, the problems of the Nation's cities. I am willing to train doctors, laboratory technicians, and to do it in this bill to provide funds to train doctors, laboraory technicians, X-ray specialists, paramedical personnel, to build medical schools and hospitals, to fight the killers and cripplers of mankind through research programs. That is what the Boland amendment will do in much greater measure than the committee bill.

Our beloved Speaker put it best when he spoke to the House at the time we overrode the President's veto of the Hill-Burton bill. He said:

Certainly an issue is involved. To me it seems whether we are going to vote for dollar values today or for human values—

Dollar values or human values. Yes. That is the issue today.

What is so sacrosanct about the figures in a budget which provides a paltry $50 million for the Hill-Burton program?

What is so sacrosanct about a budget which the committee itself exceeds for at least four different programs? The Appropriations Committee rarely does that.

What is so sacrosanct about an administration budget which we know will not nearly meet the medical manpower shortage?

Do the Members realize the amount available for Hill-Burton in this bill is less than it has ever been before? In spite of what my good friend, the gentleman from Pennsylvania, says to the contrary, that is the truth. In 1968, $293 million was made available for Hill-Burton. In 1969, $258 million was made available for Hill-Burton, $50 million less. In 1970, $172 million was appropriated for Hill-Burton, and the committee put a comparable amount in this year.

I say it is less for a number of reasons. One is the inflationary bite. There is a 6-percent inflationary factor which will decrease the amount available by almost $10 million under last year.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, I want to make a comment with respect to the gentleman's most recent remark, because when Hill-Burton was enacted, it was to help the more rural areas of the country get on with hospital construction. It was only in this past year when the legislation was modernized to meet the everyday needs and particularly the urban centers, and that is why we have seen a decline. From this point on, when we can combine the grants with loans, we can provide more than we have ever had before, and we will see these increases.

Mr. YATES. I thank the gentleman. I think essentially his statement is correct except that the fact remains we must deal now with this year and this bill does not do so. The hospital needs of the country have been rising at the same time the Hill-Burton funds have been going down. And the funds are less this year than last and the hospital deterioration grows.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(By unanimous consent, Mr. YATES was allowed to proceed for 5 additional minutes.)

Mr. YATES. Mr. Chairman, my good friend, the gentleman from Pennsylvania, talked about the interest subsidization program as expanding Hill-Burton by $166 million. Ask the gentleman from Iowa (Mr. SMITH) about the interest subsidization program, and what it does. Ask him how enormous the interest indebtedness is likely to be. Ask him how the interest subsidization program would work. He told me he was against it, because of the hundreds of millions of dollars of interest costs to be paid over the life of the mortgages, costs that could be saved by expanding the grant program. Direct grants will save money.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Chairman, as the gentleman pays mortgage on his house or anything else he borrows for, do we not pay interest on amounts of money?

Mr. YATES. That is correct, but if the gentleman read this morning's paper, he saw in it the item respecting the new increase in the cost of living. He noted, I am sure, that the greatest contributing factor to that increase was the cost of medical care. The interest subsidization program will continue that inflationary trend because it will add to the costs that must be shouldered by those using the hospitals.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman from California.

Mr. MOSS. Mr. Chairman, on this interest subsidization when we start looking to the local government, the tax base for the local government does not increase.

Mr. YATES. Of course not.

The Members know what it costs to build a hospital—and I would like to have the attention of my good friend, the gentleman from Illinois (Mr. MICHEL) as we talk of interest costs. Do the Members know what the interest costs are on building a hospital today? They are 8 percent and 9 percent in most States, and they are 12 percent in southern California. How many hospitals will be built when they are faced with that kind of financing? To meet that burden the committee recommends an interest subsidization program that subsidizes only 3 percent of that interest cost. What happens as a result?

The hospital groups which will be building new hospitals or modernizing existing ones will have to pay 5 percent or 6 percent, or 10 percent in a southern California location, over the program subsidy. And who is going to pay those interest costs? The public. They are going to be paid by the people who use the hospitals. As a result, the costs of the hospital care are going to continue to mount and the cost of living index will continue to rise and inflation will continue to plague us.

That is why I say that the Boland amendment, which provides for additional grants and does not require payment of exorbitant interest, is a much more desirable procedure than the one recommended by the committee.

Another factor showing that the amount available for Hill-Burton is less than last year relates to the fact that the authorizing committee provided for a $50 million fund for direct loans for public hospitals of the country. Under the law, the public hospitals cannot use the subsidized interest program. The committee knows that. That is for private hospitals only. And as a result, what happens? $186 million dollars in applications pending with HEW, requests from public hospitals, from county hospitals, from township hospitals and city hospitals.

Does your county or township hospital need modernization? It will have to compete with the private hospitals of the country for the amount of money put in this bill for grants. Mr. Chairman, that is obviously another decrease in the amount made available for the Hill-Burton program.

The action of the committee must be corrected. That is why we offer the Boland amendment.

Mr. MICHEL. Mr. Chairman, will the gentleman yield?

Mr. YATES. I yield to the gentleman.

Mr. MICHEL. In the budget figure there was $30 million for direct loans.

Mr. YATES. But that was stricken out by the committee.

Mr. MICHEL. I appreciate that, because the grant money was increased

from $50 to $172 million. It was just a question there of whether or not the overall figure was going to be in the form of grants or minus $30 million for direct loans.

The gentleman certainly does not mean to leave the implication that all the hospitals around the country are built by Federal grant money?

Mr. YATES. No; I do not.

Mr. MICHEL. Of course not.

Mr. YATES. But the point is that most hospitals need help these days and taking away direct loan funds as the committee did decreases the amount of the grant program to that extent.

The gentleman will recall that I offered an amendment in the committee for almost the full authorizing amount for Hill-Burton, because I believed the House indicated by its override of the President's veto that it wanted adequate money for Hill-Burton. The committee has not done that. I am sure the House wants a greater allocation for Hill-Burton than the committee allowed.

The Boland amendment adds only $80 million, but at least it provides more money than the committee bill, and I am for it.

Mr. MICHEL. Of course, that is an arbitrary figure the gentleman is using. We can shoot the moon.

Mr. YATES. The gentleman is using no arbitrary figure nor am I engaged in shooting the moon. There is an authorizing limitation in the basic legislation, $382 million, I believe.

Mr. MICHEL. The gentleman has no official statistics from the States, other than this overall need.

Mr. YATES. If the gentleman will not take my statement, let me tell the gentleman what this administration's Under Secretary for Health, Education, and Welfare said the overall need was. Is he official enough? He said the need was $11 billion at the present time, and that need is going to go up, not down.

The gentleman knows his testimony well. The gentleman knows what Under Secretary Veneman testified to on the Nation's need for new and modernized hospitals. It was $11 billion. Even knowing that huge sum, the Nixon administration requested only $50 million for this program. That is how the Nixon administration met what President Nixon last year called the greatest medical crisis in our history.

The Boland amendment should be approved.

Mr. BOW. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I rise in opposition to this amendment. This is not a question of whether we provide funds for mental health, cancer research, the training of additional physicians, or the construction and modernization of hospital facilities.

The bill contains funds for all of these purposes. It contains more than was recommended by the administration—more than was included in the budget for each of these items. This bill exceeds the President's request for these items by $186 million.

This is a question of politics—nothing else. It is an attempt to force the bill high enough to see if they can precipitate a veto and then campaign that the Nixon administration is antihealth.

Now if that was the only harm that it caused—it would not be too much of a problem. Campaign issues are a way of life for most of us, and—as I pointed out yesterday—the Nixon record for spending for health, education, and manpower speaks for itself. It exceeds that of both the Kennedy and Johnson administrations.

But something other than a campaign issue is involved. Yesterday my distinguished chairman, the gentleman from Texas, emphasized that we should take the Federal budget out of politics.

Why—I will tell you why—the word is inflation. It results from spending more money than we have to spend.

The education bill was $453 million above the amount budgeted.

If we continue to appropriate funds in excess of the revenue-producing capacity of our tax system—as happened particularly in 1967 and 1968—we will produce the same result—the same inflation that we all know takes difficult and painful measures to eliminate.

Inflation that would not help 25 million people fighting a losing battle to make their social security checks cover the cost of living.

Inflation that would not help 9 million people on public assistance.

Inflation that would not help millions of middle-class Americans caught between taxes and an ever increasing cost of living that is only now beginning to level off.

The fiscal year 1971 budget proposed legislation that would provide $4.6 billion of additional revenue. As of today, more than $4.3 billion of those requests have not been acted upon.

For those who are interested only in politics—I remind you that inflation will also be an issue this year.

Those who vote to add almost $400 million to a bill already containing almost $200 million of increases over the amounts requested may also have to do some explaining.

The administration and this Congress have made reductions in military and space expenditures—$6 billion.

We have changed our national priorities and are now spending more for human resources than defense—for the first time in 20 years.

We have taken this action because we are concerned about the health, education, and welfare of our people.

It is this concern that prompted the increases contained in the bill.

Irresponsibly adding almost $400 million to these increases is a very poor course of action at this point in time.

I urge the amendment be defeated.

Mr. SMITH of Iowa. Mr. Chairman, I move to strike the requisite number of words.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Colorado.

Mr. EVANS of Colorado. Mr. Chairman, with the dramatic discovery of new drugs and their expanding use in State mental hospitals, a virtual revolution has taken place in the care and treatment of the mentally ill people of this Nation. Coincident with the discovery of these wonder drugs has been a brilliant reorganization of our concept of caring for mental patients, one main feature being the development of community mental health centers.

As a result, using these drugs and developing community mental health centers has literally drained off approximately 40 percent of those mentally ill patients who had theretofore been required to be confined to live in mental hospitals.

As if this were not sufficiently dramatic, the number of beds required in our mental hospitals has reduced these past years notwithstanding the fact that an ever-increasing number of people in this country have been diagnosed as mentally ill requiring mental treatment.

In 1963, recognizing this revolution in the care of the mentally ill, Congress acted to assist communities in the development of community mental health centers. This help has come in the form of assistance in capital construction grants as well as paying approximately 30 percent of the staffing costs for these centers.

At the present moment, the importance is not the brick and mortar that would produce new buildings, but rather the skilled and complete staffing of these centers so that the services can be brought directly to our mentally ill on an out-patient basis.

In this year's budget, the administration has unfortunately failed to recommend sufficient Federal expenditures in this area of Federal assistance to the staffing of mental health centers. In his budget for fiscal 1971 the President recommended only $60.1 million. On the other hand, the Appropriations Subcommittee, backed up by the full committee, has recognized the shortcoming of this small budget request and has increased this item for staffing by $20 million, making the total $80 million.

While this action of the subcommittee and the full committee is commendable, it still falls short of the requirements the experts who testified believe must be met in the next fiscal year.

In reviewing some of the testimony and information on this subject it appears to me that there are some 49 community mental health centers that have been recommended for staff funding, but have not been funded for lack of funds. It also appears that there are approximately 80 applications for assistance in staff funding in the pipeline, most of which will be approved before the end of the fiscal year, but for which there will be no staffing funds.

Under these circumstances it was recommended by the National Association for Mental Health, that at least $100 million would be required for Federal assistance in staffing centers ready to go into business in this fiscal year, and the

National Council of Comprehensive Community Mental Health Centers has estimated this sum to be at least $110 million.

Included in this package amendment, therefore, is an additional sum of $20 million which, when combined within the $80 million contained in the bill, should almost make it possible for the Federal Government to honor its commitments to those community mental health centers that are now approved or will be approved in the fiscal year 1971.

Mr. Chairman, most States in this Nation are attempting to move ahead in this development of community mental health centers. Thousands of volunteers, both professional and laymen, are carefully putting together their plans for their earliest possible opening. Eighty more are expected to be approved for staff funding this fiscal year.

It would be tragic, indeed, if any significant number of them could not be opened because staffing funds were not available at the time of approval.

For these reasons, Mr. Chairman, I urge the members of the committee to approve the amendment of the gentleman from Massachusetts (Mr. BOLAND).

Mr. SMITH of Iowa. Mr. Chairman, as was said before, the subcommittee in this bill added $209 million above the budget. Now it has been proposed to add another $360 million, which would bring the total for the bill to $569 million over the budget. It would be so visible as to invite a veto.

Now, I am not against fighting vetoes when we can win, but before we start voting on an amendment like this perhaps we should look at the history of such amendments.

Traditionally we in the House committee have gone through, item by item, and reshaped the HEW appropriation bills according to what we thought the House would want. Then it passed the House substantially in that form. Then it goes to the Senate. If somebody can show a weakness in our bill, he goes to the Senate committee, and the case is made there. They adjust the bill accordingly. Then we go to conference after that, and we come back with a balanced bill that is written by the Congress. Under that procedure we made great progress.

That has been the history until last year. But a year ago next week this subcommittee came to the floor with the HEW bill. Some people—the same people who support this amendment—decided they were going to up it very visibly.

You know what happened then. For the following 9 months from a year ago next week we went up and down the hill with all kinds of motions and resolutions and we ended up in here with a bill in March that had been reduced by the Senate by $347 million below the figure the committee had recommended in July. Lo and behold, the same people were down here with a white flag saying, "Surrender to the Senate." The motion was made to agree to the Senate figure and it carried. Health appropriations were reduced to $115 million below the figure the committee had recommended in July. Now, is this the kind of action that really makes for solid progress in health? We could have gone to conference and gotten the money back in 5 minutes, but they did not want to do that. Surrender to the Senate was the cry at that time, on March 3.

Mr. Chairman, here are some of the items that were reduced, and they are the items in this amendment today. Construction of community health centers, grants, $1.3 million below the amount we had in July. Hospital construction, $82.2 million below what we had in July. Medical-dental student assistance $4.78 million below what we had. Nursing student loans $5.5 million below what we had in July. Is that the kind of friends of health you want to follow again?

Do you want to go down that primrose path with them again and follow the same people and probably end up below what we have in this bill? Before we do that you ought to take a good look at what is in this bill and the procedures we used when we have made progress in this House on health appropriations.

It has been alleged here today that there is a doctor shortage. Everybody admits that. But it does not necessarily follow that money is the answer. In some schools, there are 10 applicants for each medical school slot now. You can give them all free education, and that would not alone increase the number of doctors. Let us get to the cause of not having enough medical services in this country and try to deal with those. That is what the subcommittee did, and that is why we increased 18 items by 209 millions of dollars where we thought it would do some good. We are willing to do more where we believe we can get results and where it can be shown that we will get results. There will be increases in the Senate and we will agree to some of them. But I say that this amendment will not get the results claimed because this amendment does not go to the heart of the problem. We do have good care at a high price in this country for anybody who is seriously ill and who can get to a hospital before they die, but what we do not have is preventive care except for the urban wealthy. In the non-metropolitan areas where 30 percent of the people live, there are only 12 percent of the doctors. Those areas have only 8 percent of the pediatricians. People who work for wages are also in need of preventive care. People that are working cannot afford to take a half a day off to go to the doctor's office. It is not the $10 for the doctor's call as much as it is the $20 or the $30 that they lose in wages each time they do it. They just cannot afford to take the time to go to a doctor's office and wait several hours to secure a tetanus shot for a puncture in the hand.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent (at the request of Mr. YATES) Mr. SMITH of Iowa was allowed to proceed for 5 additional minutes.)

Mr. SMITH of Iowa. Now, the sponsors of this amendment today assume that you can secure enough doctors so that there will be plenty of doctors everywhere. I believe they are just laboring under an illusion. The problem is not as a practical matter solvable that way. It just does not work that way. That is what the witnesses before our committee told us that if we give them all of the money they want, they could increase the turnouts of doctors only 10 percent in 6 years. That is not nearly enough doctors to provide the preventive health care needed. If you are going to labor under the assumption that we can solve this problem with money, you are just mistaken. So what do we do? We import into this country foreign trained doctors. Fifteen percent of our doctors come from foreign countries. They have received 6 years of education compared to nine required in our schools. But have our medical schools been doing what is needed in order to get more doctors and get other kinds of professional people that are necessary so that we can have clinics established in these rural areas under the direction of a doctor in a nearby city, perhaps? No, they have not done that. That is what we need to do. The only hope of substantial improvement in this preventive health field is to revise the whole medical delivery system. We need clinics. We need bachelors of medicine. We need nurse practitioners who can operate a clinic under the direction of a doctor. A clinic where preventive medicine is available near home in off hours for people who work and without long waiting periods. When a patient needs to go to a doctor, the bachelor of medicine or nurse practitioner who knows his own limitations can tell the patient to do so and arrange an appointment. The doctors will not need to be so tied up with work paramedical personnel can do that the patient needs to wait for hours. With more preventive medicine, they won't need to be tied up so much on corrective medicine.

This will require changing some State laws and a new curriculum and courses for health schools. So, instead of pouring more money into the system as it exists now which will not provide what is needed, I say we should reward those that want to make the changes that are needed in this country and we should not continue to assume that increasing the scholarship program can solve the problem.

It requires reform in the medical schools and State laws. An example of what I am talking about is with reference to Howard University. They have a unique opportunity to do something in this health field. They are now operating right here in Washington, D.C. They do not have to change a State law which limits outpatient service by paramedical personnel under some supervision of a doctor as is the case in some of the States. The Congress could make certain changes in the laws if we need to do that. They can do things which they need to do and we have told them we support such programs and have made funds available to them. However, they have not hardly looked at the real problem here. They have not even gone thoroughly into it.

You can look at the hearings and you will see on page 938 of part 4, that they have not made the needed effort to provide personnel for clinics. They have found time and added several social courses but they have not made the effort to add to or change the curriculum so as to provide better medical services.

We will not accomplish the desired results merely by pouring out more money to Howard and other such universities, when they are not moving in the direction that is necessary.

Mr. Chairman, if Members want to support a program to accomplish the objective of more health services, we must have a change in the delivery system instead of merely supporting the present inadequate system.

Mr. Chairman, we increased these 18 items to the extent of $208,960,000. The committee recognizes that we do need facilities and expansion of the present ones. We cannot get more doctors without the facilities, and the increase in facilities is a prerequisite to some extent. But we will not get but 10 percent more doctors of medicine in the next 6 years even with an increase of medical facilities unless the curriculum is reduced for some who will work in a limited capacity.

Mr. Chairman, in my opinion we ought to increase the facilities program more. But, I can assure members that when we come back from the conference with the other body, we will have increased it probably by 50 percent over what is contained in this bill or the amount that is justified.

In addition to that, Mr. Chairman, we need adequate loans for students, not because there is a shortage of students, but for social reasons so that the less wealthy can go to medical school as well as wealthy ones. We need enough so that those people can get into the medical schools and the committee stands for this principle.

We put into this bill a 23-percent increase in loans for medical students and a 130-percent increase for nursing students. And, if they can show they need more, I am sure it will be provided under the committee approach. If needed, we will agree to more in the orderly way these sums have previously been provided until last year. Mr. Chairman, I believe in the usual system for handling appropriations for HEW for under it we have made solid progress. Therefore, I submit that the amendment which is now pending before the committee diverts attention from the real needs and that the way to make solid progress is to pinpoint money toward a new delivery system and for the case against any weakness in the committee recommendations to be made on individual items in the Senate. In the usual way, worthy adjustments will survive.

I urge you to use the procedure which in the past made progress instead of the dramatic big amendment shotgun approach which was used last year when we lost $145 million in the final bill below the amount our committee originally recommended. If any item is shown to be insufficient on its own, we will come back with a conference report that will shape this up and provide some progress instead of going backward.

Do not go down the primrose path on a package amendment again which strikes individual items from the bill or you may end up like last year with some good programs below the amount in the committee bill.

Mr. ROSENTHAL. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from New York.

Mr. ROSENTHAL. Mr. Chairman, I wish to associate myself with the remarks of the gentleman from Iowa (Mr. SMITH).

As the gentleman has indicated there are serious failures in the medical delivery system and which must be eliminated. We have to bring more new young men into the medical schools. And we must broaden the social and economic class base of our medical students. That is why I support the amendment which has been offered by the gentleman from Massachusetts (Mr. BOLAND) because I feel that the medical schools are in a crisis from which they will emerge intact only with considerable congressional understanding and support.

Young men in the third and fourth years of their medical college training have to drop out simply because there are not sufficient funds to grant them the needed loans. Next year even more will be turned out of the medical schools at a time when we need every doctor we can train.

Just today a medical school dean told me that the lower-middle and the middle-class students will suffer more this year than last year. Precisely those economically deprived youngsters that we want to get into our medical schools simply cannot get in because they do not have the funds or cannot obtain the necessary loans.

Mr. SMITH of Iowa. Well, we will increase the amount for that purpose to the extent needed in order to provide all the loans they need.

Mr. ROSENTHAL. Yes, but at the present time those loans are in an inadequate amount.

In fiscal year 1969, 39,156 students of all medical professions were aided by the health professions student loan program.

In fiscal year 1970, just ended, this number dropped to 32,203.

Under the administration's budget, that number would have dropped to 28,168.

Wisely, the committee has increased the funds for loans. But anything short of full funding for programs of medical student loans, which will be repaid to the Treasury eventually, is intolerable if we believe our own words, or the President's of last year, about the "massive crisis" of our medical care system.

The CHAIRMAN. The time of the gentleman from Iowa has again expired.

Mr. COHELAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment offered by my good friend and colleague, the distinguished gentleman from Massachusetts (Mr. BOLAND).

The gentleman from Massachusetts has eloquently explained the emergency health amendments. I do not need to tell the Members of this House that the health care system of this Nation is under increasing stress. The recent report of the Committee of One Hundred calling for a national health plan is the latest manifestation of this stress. It is reported that there will be legislation introduced this week that will attempt to get health services into the inner city and into rural areas.

These steps may be feasible, but I submit that they are predicated on the assumption that there will be adequate medical manpower available. Based on the latest estimates from the Department of Health, Education, and Welfare, this assumption cannot be made. HEW projects that by 1980 there will be these shortfalls: 26,000 doctors, 56,000 dentists, 210,000 nurses, and 432,000 allied health manpower.

Some of the elements of the emergency health amendment are primarily directed at this manpower shortfall, and I will explain them. With the funds provided in this amendment, we can narrow the manpower gap.

Before I develop one aspect of the medical manpower section of the health emergency amendment, it is important for the Members to realize that there are other elements in this package. These components are designed to handle critical gaps in the appropriation bill. For example, the funds for Hill-Burton and community mental health staffing are designed to handle crucial demands and needs in hospital construction and staffs of community health centers.

I just want to point out that this package is only $360 million over the committee recommendation, but its significance lies not only in this small dollar increase but in the programs it more adequately funds.

I would like to focus on the funds directly aimed at the medical manpower area.

In fairness, I must point out that the Nixon administration is not unaware of these medical manpower problems. Indeed, Dr. Roger Egeberg, Assistant Secretary of the Department of Health, Education, and Welfare for Health, has suggested that $150 million be appropriated to attempt to close the medical shortage gap. This was supported by the National Republican Congressional Campaign Committee itself in their memo of July 15, 1970. Thus the administration has admitted a problem exists and is attempting to solve it. But I would respectfully suggest that there is no need for new programs. The existing legislative authority is designed to meet these manpower shortages. What is needed now is dollars—money.

Dr. Egeberg put the question squarely:

If the government does not help the medical schools and the medical students soon, we'll have a doctor shortage for the next 20 years.

I applaud the efforts of Dr. Egeberg but I do not feel that, as Members of Congress, we can allow proposed solutions to this manpower medical crisis to be left to the workings of the executive budgetary process.

We in the House know the needs. We have passed the legislative authority and we need now to fund this authority. This is the "crunch." The Appropriations Committee has provided some increases, but more are necessary even to maintain our insufficient health care system.

I know that some Members might argue that there is a problem in the distribution of medical personnel. I agree that there is a problem in this area. But it remains an unassailable fact that if we do not have the necessary medical manpower pool, we cannot work at redistribution. These projections that I have cited indicate a substantial shortfall in needed medical personnel.

Incidentally, I am aware that the President has blasted the "spendthrift" Congress, but I fail to see how any impartial observer could fail to notice that the burden of our anti-inflation policy is being borne by the workingman. I note for all the Executive anguish over increases in vital education funds, social security payments, and hospital construction funds, the administration was not the least bit hesitant to bail out Penn Central or Lockheed.

Also the administration has not forwarded any revenue schemes. As the distinguished chairman of the Appropriations Committee has pointed out over and over again, this initial budget surplus that was hailed by the administration rested on some tenuous economic assumption. But this debating back and forth has little to do with the issue before the House today.

This amendment adds only a meager $360 million to the Appropriations Committee figure. Surely no one could insist that this small, but necessary, figure in a potential trillion-dollar economy will spell economic disaster. But it can be reasonably argued that a breakdown in our Nation's medical system would have disastrous results domestically.

From the medical manpower aspects of this amendment there are two central provisions of this package. The first pertains to the institutional support for schools of public health and students' funds; the second pertains to the construction of medical facilities. The first of these two central medical provisions was explained by the gentleman from Massachusetts (Mr. BOLAND). I would just like to point out that one of the 107 existing medical schools, 43 are in serious financial trouble. They need institutional support. Also there has to be more money for scholarships. According to the latest estimates, it costs $50,000 for 13 years of training to become a doctor. Thus, there is a need for additional loans—not only for doctors but for other medical personnel.

I would like to spend the remainder of my time explaining the second central provision of this manpower package, that is, the construction of medical training facilities. In this package we are asking for $100 million for the construction of medical facilities. This is $33 million less than the authorization but it would be a beginning for the $400 million backlog of already approved HEW grants.

I mentioned the projections for medical manpower for 1980. I could go on with other statistics, but I think it is significant that for every qualified medical school applicant who is accepted, two are turned away for lack of the schools' capacity to train them. In the 1968 legislation, Congress sought to remedy this situation by authorizing substantial appropriations for construction projects over the following 3 years, but unfortunately the amounts authorized have not been appropriated.

For fiscal year 1971, a total of $225 million is authorized for the construction of schools of medicine, dentistry, et cetera. The administration, however, is requesting an appropriation of only $118.1 million, or about half as much as is authorized. This would be understandable if the need for more construction funds was not evident. But this is simply not the case. As of April of this year, applications for construction grants totaling nearly $400 million have been approved by the Department of Health, Education, and Welfare and have been approved for funding, subject to the availability of money. In addition, another $248 million worth of applications have been received and are being reviewed by the Department.

The same sad story is reflected in the administration's budget request for the program of construction grants for schools of nursing. Thirty-five million dollars is authorized. Applications for more than $37 million has been received, but the administration is requesting an appropriation of only $8 million.

This amendment will not cover the projected shortfalls in medical personnel, but it will begin to close this manpower gap.

For example, American medical schools are now admitting 10,000 medical students per year. To meet the current shortage, to keep up with increased requirements for the future, this number of admissions must be doubled as soon as possible. To do this will demand sizable increase in the capacity of the existing schools and the establishment of from 10 to 25 new schools. There still remain five States in the Nation without medical schools. There are many locations throughout the Nation which have both the population base and the academic capability of initiating new medical educational centers.

To deal with this problem will require a substantial expansion of our construction efforts. This must begin with increased appropriations for this purpose. The funds that would be made available by the appropriation now before the House are totally inadequate for this task to be undertaken.

Let me make this perfectly clear. In this bill, the funds provided for the construction of health educational, research, and library facilities total $126,100,000. Of this amount, $94,500,000 would be available for the construction of medical and related teaching facilities; $23,600,000 for dental teaching facilities; and $8,000,000 for nursing and allied health. In contrast to these proposed amounts, this Congress, in passing the health manpower amendments of 1968, authorized $180 million for the construction of medical and related teaching facilities in 1971; $45 million for dental; and $55 million for nursing and allied health, or a total of $280 million. But even more telling than this contrast is the fact that the National Institutes of Health—NIH—now has on hand approved applications for construction assistance from medical, nursing, and allied health schools totaling $400 million at the very beginning of the year for which the administration is requesting, and the committee passed, only $126,100,000.

In the fact of the urgent needs for health manpower, which can be met only by continued expansion of the medical educational plants of the Nation, $126,100,000 is a travesty.

The health emergency amendment would add $100 million to the administration's appropriation request for this urgently needed construction. This $100 million would increase the funds available for the construction of medical and related schools to $170,100,000; for dental schools to $42 million; and for nursing and allied health schools to $14 million, amounting to a total for the appropriation of $226,100,000.

This increase in the appropriation for construction of teaching facilities for these critical health professions is only a minimum measure of response to the urgent need to expand the teaching facilities of this Nation if we are to meet the demand for physicians and other trained health professionals which this country faces.

The figures—the shortfalls—are there for all to see. We need facilities to train doctors, dentists, nurses, and other medical personnel. We must add construction funds to build and modernize medical training facilities. We cannot continue to delay and procrastinate. This package offers tangible and immediate help in lessening our Nation's medical crisis.

Another action by the administration which poses a serious threat to the unified planning and development of the Nation's medical centers is the proposal to transfer support for construction grants to teaching hospitals to the budget item for the Hill-Burton program, which is financed under the appropriation "medical facilities construction." This transfer involves a program reduction of $33 million in the planned obligation level for the appropriation "Construction of health educational research and library facilities" as a result of this transfer between appropriations.

Furthermore, it appears to be the clear intent of the administration to substitute to the maximum extent possible guaranteed loans as a basis of providing construction funds for teaching hospitals rather than construction grants, which is the present pattern of program support in this area. For some unaccountable reason, the Appropriation Committee in its report supports the transfer of teaching hospitals to the Hill-Burton account. This section will have several alarming effects:

First. It will gravely complicate the

process of planning and funding in a coordinate and unified manner the complex array of facilities that now constitute an academic medical center. The whole design of the Health Professions Education Assistance Act was to provide a single source of funds for the educational, research, and teaching hospital facilities required for medical educational purposes. Only through such a single approach is it possible both for the institution to expeditiously and economically plan and carry through its program of construction and for the Federal Government to efficiently review and make judgments about the adequacy and appropriateness of the entire facility complex for which Federal support is being sought.

Second. The transfer to the Hill-Burton account of teaching hospital construction and the prospect of shifting such construction support to loans will, in effect, exclude from access to Federal support for teaching hospitals the several States whose statutes prohibit borrowing or the funding of capital expenditures by depreciation processes. Such State institutions could not utilize guaranteed loan mechanisms; but perhaps even more fundamental an objection to such a proposal is the fact that more teaching hospitals will operate at substantial losses. These losses effectively prohibit them from using the depreciation devices as a means to amortize loans, because these funds are required to cover operating deficits.

In acting on the amendment now before the House, we would like to make it clear that this action constitutes a repudiation of the administration's device to shift this construction support for teaching hospitals to the Hill-Burton budget and any devices of guaranteed loans.

In conclusion, Mr. Chairman, I urge this Chamber to adopt the emergency health amendment today. This House must assume its responsibilities in attempting to alleviate our Nation's critical medical manpower crisis and appropriate this $360 million figure.

I urge an "aye" vote on this amendment.

Mr. LOWENSTEIN. Mr. Chairman, only 2 days ago this Nation celebrated the first anniversary of one of the most extraordinary scientific accomplishments in history. One might expect that a country capable of such a monumental achievement would have long ago mastered the relatively simple scientific problems of keeping newborn babies and their mothers alive. Unfortunately, this is not the case.

The American people spend more per capita on health care than the people of any other country in the world. Yet our public health statistics place us below most Western countries. Among industrial nations, the United States ranks 18th in life expectancy for men, 11th in life expectancy for women, 14th in infant mortality, and 11th in the percentage of mothers that die during childbirth. The death rate for American men between the ages of 40 and 50 is higher than anywhere in Western Europe. The fact is that our unmatched expenditures on medical services and health care are yielding inadequate progress and results. Despite the fact that American researchers have revolutionized medical science several times over, our vital statistics show that being an American may be hazardous to your health.

The demand for extensive health care has drastically exceeded the supply, particularly among the very young and the very old. There is a critical shortage of medical service personnel; it is currently estimated at around half a million positions, and is expected to increase. By 1975, America will need 43 percent more physicians than it had in 1965, but the number of doctors will increase by only 17 percent. Even more dramatic shortages of dentists and nurses are also projected.

These shortages translate into the almost universally experienced crowds, lines, and delays encountered by those trying to see a doctor. They translate into the harrowing frustrations encountered by parents trying to find a doctor to make a house call for a fevered child. And they translate into the incredible fact that approximately 1 out of every 50 Americans cannot obtain the services of a doctor under any circumstances.

The shortage of hospitals, day care centers, mental institutions and nursing homes illustrates another aspect of our present inability to meet the demand for better medical care. The rise in health care costs—in particular hospital costs—are so outrageous that the cost of the cure is in many cases a greater misfortune for the victim than the illness itself. The American Hospital Association recently told the House Ways and Means Committee that the average daily room rate would rise to nearly $100 a day by 1973, and in some teaching hospitals, already exceeds that figure. The costs for physicians' services rose 9 percent in 1967, and the cost of medical care, drugs, and equipment rose by 7 percent that same year. The cost of a major illness is such that 9 out of every 10 Americans are medically indigent. Health expenditures today amount to $294 for every man, woman, and child in the country. For some middle Americans, this means spending 10 to 25 percent of their incomes on health and medical services. For the poor, this means turning to Government assistance programs, or simply failing to obtain help.

The rising demand for medical service, the slow growth in the supply of physicians, the increasing wage costs in hospitals without commensurate rises in productivity, the increasing complexity of medical care, and the need to incorporate new techniques and equipment, have all contributed to the rise in medical prices. Elimination of the problem requires two key steps. We must eliminate the shortage of medical personnel and facilities on the one hand, and improve methods by which an individual can bear the costs of health care on the other.

Today, Mr. Chairman, we have the chance of making some progress. The health emergency amendment will increase the HEW health appropriation by $360,454,000 for use in reducing the health manpower shortage, improving the quality of instruction, and providing grants for needed facilities. This bill will in large measure make up the difference between the amounts this body authorized earlier this year and the sums the administration and the committee now wants it to appropriate. Specifically:

Earlier this year, this body authorized $255,500,000 for institutional support of health schools. Now that the time has come to make an actual appropriation, however we find the administration and the committee requesting only a fraction of that amount.

The program of direct loans to needy students of medicine, dentistry, nursing and other health professions is one of the most crucial steps in fashioning a long-range solution to the shortage, and the administration has requested less than half the authorized amount. This cut comes at a time when our 107 medical schools have files bursting with loan applications. Projecting this cut, only 14 percent of students would be aided in 1971 under the administration budget. Only 2 years ago, 37 percent of these students received financial aid. New students will be forced to look elsewhere for their careers—present students will be forced to drop out of school.

The administration requested less than half of the $260,000,000 authorized for construction of new teaching facilities and improvement of existing facilities. Right now, there are almost $600,000,000 worth of approved but unfunded applications for the construction of medical and dental teaching facilities. The health emergency amendment would provide $226,100,000 as an inroad to the construction backlog.

One of the more hopeful programs Congress has undertaken for assistance in the mental health area is the program for community mental health centers which is designed to reduce the number of patients in mental hospitals by emphasizing outpatient care in the local community. The greatest initial need of these centers is for money to staff the facilities adequately. The committee and administration requests for funds are admittedly inadequate to keep even existing centers operating. To allow such programs to fall short, after extending hope to local communities that they themselves can begin to eliminate the disgrace of mental health treatment facilities, is a retreat which may eventually be paid for by the psyche of the Nation.

We clip the wings, tell the bird to fly, and then wonder why she is grounded.

This country has produced more than enough men and women with the intellectual capacity to meet its medical needs. It is a question of building schools and financially assisting people undergoing the extended and rigorous training. We can begin to do this today by funding projects at a realistic level.

But much can also be done without additional financial assistance to utilize existing resources more efficiently, including: greater use of outpatient clinics and treatment centers to keep expensive hos-

pitalization to a minimum; improvement in design and operation of hospitals with an emphasis on patients doing as much as possible for themselves; greater coordination and integration among the various health services, with an aim toward eliminating duplication of costly equipment.

To help meet the rising costs of medical care, it seems that almost any extension of Government subsidized insurance programs to greater numbers of Americans would be appropriate. Americans already within or nearly within the coverage of the current medicare and medicaid programs probably are the ones in greatest need of assistance. But these programs are far from generous in their provision of benefits. As the New York State Social Services Commissioner George Wyman testified:

> To add a provision for an eligible recipient to pay twenty percent of the cost of the outpatient services is placing a burden on him to pay something which we have already determined he does not have. . . . A study by our department has shown that we are providing care to a significant number of persons who are just above the public assistance levels. We are actually requiring the recipients to spend themselves into poverty.

Obviously, adequate provision of medical services to our poor and elderly Americans should be the first priority of business.

That does not mean there should be room for complacency about our present system of providing medical care to other Americans. Only 50 percent of all Americans have taken out health insurance policies, and many of those policies do not guarantee comprehensive benefits at that. Almost any of the myriad of proposals dealing with subsidized insurance would improve the situation, including several proposals that are being studied by this body. The alarming spiralling of costs demands more than half measures, however. We must develop a comprehensive scheme of insurance that would be the sine qua non to the achievement of a rational allocation of scarce medical resources.

Today we are again at one of those junctures where we can commit our compassion, expertise, and determination to the improvement of the splotchy health record of our country. That some Americans suffer from health problems is inevitable. That some suffer from health problems that could be averted or eased by wiser use of our national resources is a disgrace.

Mr. FASCELL. Mr. Chairman, I rise in support of the emergency health amendment to the Labor-HEW appropriations bill. I particularly endorse the $104.8 million increase in institutional support of medical schools.

Many of the Nation's medical schools have obtained grants which are in danger of not being funded without the new increases. For example, in my home state the University of Florida submitted grant applications for $395,661 in dentistry and $1,950 in pharmacy. These applications have been approved but their future is in serious doubt. Dr. E. M. Papper, vice president and dean of the University of Miami's School of Medicine, has strongly urged support for the passage of this amendment.

In testimony before the Labor-HEW Subcommittee Dr. Roger O. Egeberg, Assistant Secretary of Health and Scientific Affairs, stated:

> We place the highest priority on the need to overcome the great manpower shortages that are literally crippling the American health care system.

Today we have an opportunity to reduce these great shortages. We face a serious health crisis in the near future unless the Congress takes immediate and positive action to increase funds for student loans, medical construction, and other vital programs. I firmly recommend the passage of the emergency health amendment.

Mr. HUNGATE. Mr. Chairman, in his state of the Union message, the President stated:

> America, which has pioneered in the new abundance, and in the new technology, is called upon today to pioneer in meeting the concerns which have followed in their wake—in turning the wonders of science to the service of man.

The efforts of the healing arts will be severely diminished in their thrust and effectiveness if they cannot reach the people for whom they were intended. Our Nation is in the midst of a severe manpower crisis in the health fields. The innovative hospital construction bill recently passed by the Congress will be a hollow monument to our scientific ingenuity if we do not have the physicians, nurses and technicians adequately to staff the new facilities.

The present crisis can only be met by increasing our training capacity for health manpower and strengthening our schools and hospitals which train future physicians. With projected shortages in the health manpower personnel from 227,000 in 1967 to 322,000 in 1975, additional funding above and far beyond the $242,234,000 requested in the President's budget for fiscal year 1971 must be appropriated to attract, train and retain such qualified personnel.

The Budget request of $12,000,000 for direct loans to student physicians means a $3,000,000 cut in loans, and the committee has decided to increase the budgeted amount by $10,000,000. I support the fullest possible funding for direct loans to our student physicians and nurses. I urge support of the Boland-Yates amendment.

Mr. FRIEDEL. Mr. Chairman, I rise in wholehearted support for the amendment offered by my friend and distinguished colleague, the gentleman from Massachusetts (Mr. BOLAND), and I want the entire House to know how deeply I appreciate the leadership that he has shown all of us in this current debate. I know the deep commitment that my colleague has in this important area of health manpower education.

I have, several times over recent weeks, spoken out on this important subject of our need for a new and massive commitment in the area of medical education and manpower training. Just last week, I held a meeting of the entire Maryland delegation with representatives from the affected Maryland institutions in order that we in the House could discuss with them the nature of their problems. At that meeting, representatives from Johns Hopkins University clearly illustrated the plight that this institution faces. The School of Public Health of Johns Hopkins University relies directly upon Federal support for 86 percent of its budget. Fifty-eight percent of Johns Hopkins School of Medicine's total budget is also directly related to Federal funds. Last year this institution, which I submit is world renowned in the field of medical training, incurred a deficit of $2.5 million. There is no doubt that this deficit will continue to grow unless we act with resolution to restore the money that is so badly needed for these programs.

As I have said time and time again, we in the Congress simply must take the proper action to reverse the mistake in judgment that has been made by the administration in submitting to us inadequate requests for funds for these programs. The Nation, and particularly my State must have more trained medical professionals. The hospitals and medical centers in all of our communities are responding to greater requests for community services. This is especially true in those institutions which, like ours in Baltimore, are located in the ghetto areas of the inner city. While these institutions and their dedicated staffs are trying to cope with the grave burdens of the communities in which they are located, they are at the same time attempting to carry out their traditional role in furnishing highly educated and badly needed trained health care professions. We, in the Congress, simply must make a maximum effort today to assist them. By voting for the Boland amendment, we can go a long way in lightening the load that these dedicated institutions are now carrying valiantly and at the same time we will preserve for the Nation's future these most valuable institutions.

I should like to include at this point a letter I sent this morning to Members of the House hopefully clarifying the confusion concerning the allocation of Hill-Burton moneys contained in the bill:

> HOUSE OF REPRESENTATIVES, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE,
> *Washington, D.C., July 22, 1970.*
>
> DEAR COLLEAGUE: The House will consider, shortly after noon today, the HEW appropriations bill.
>
> In the debate on the Boland Health Emergency Amendment on the floor yesterday, there seemed to be some confusion about the Hill-Burton portion. For the information of my colleagues, I would like to report the following facts:
>
> 1. The Hill-Burton bill, which the Congress recently passed and then re-passed over the President's veto, authorizes $317.5 million in construction grants for fiscal year 1971. The FY 71 Labor/HEW appropriations bill recommended by the Committee contains only $172.2 million for Hill-Burton construction grants. The Boland Health Emergency Amendment would add $80 million, producing a total of $252.2 million for construction grants—still $65.3 million short of the amount recently authorized by the Congress.
>
> 2. The Director the Hill-Burton program, Dr. Harold Granning, originally recommended to HEW an appropriation of $295 million for

construction grants (see page 981, Part 2, of the Labor/HEW Subcommittee Hearings) for FY 71. Even with the Boland amendment added to the Committee's bill, the appropriation for hospital construction grants would fall $42.8 million short of the amount recommended by Dr. Granning.

3. The amount recommended in the Committee bill for construction grants in fiscal year 1971, $172.2 million, is the exact amount allocated to the States in FY 70 for this purpose and is $95 million less than the amount allocated to the States in FY 69.

The attached exhibit, pages 1034 and 1035 of the Subcommittee Hearings, shows the allocations made to each State under the Hill-Burton formula for FY 69 and FY 70 (the FY 71 column is no longer valid, since the Committee changed the HEW request). The Boland amendment would bring the appropriation for construction grants up to within $15 million of the FY 69 allocations and the amounts allocated to the States in 1969 approximate those for 1971 under the Boland amendment.

Sincerely,

SAMUEL N. FRIEDEL.

[1] Includes $30,000,000 for direct loans.

Mr. DONOHUE. Mr. Chairman, I support and I earnestly hope a very great majority of the Members will approve this emergency health amendment to sensibly and moderately increase the funds, in this Labor and Health, Education, and Welfare bill, for urgently needed medical manpower programs, Hill-Burton hospital construction grants, community mental health centers, and the National Heart and Lung Institute.

These and other item increases in this bill are recommended as the minimum amounts necessary to help relieve the critical national shortages in medical manpower, hospital space, and research projection.

Among the very long and most impressive list of medical and other organizations urging the adoption of this amendment are the Association of American Medical Colleges, the American Public Health Association, the American Dental Association, the Ad Hoc Committee on the Nation's Health Crisis, the AFL–CIO, the UAW, the Urban Coalition, and the Center for Community Affairs.

These, and others, are authoritative and persuasive witnesses by themselves, but most of us in the Congress also have personal knowledge of the extreme shortages that presently exist in medical manpower facilities and research. For instance, in my home city of Worcester, Mass., the new and urgently needed University of Massachusetts Medical School has an approved outstanding, but unfunded, health manpower grant in the amount of $16,540,000 that is vital to the school's operation. The Framingham, Mass., Heart Disease Epidemiology Research Study is being phased out by the National Heart and Lung Institute, for lack of some $100,000 in funding, despite and against the advice and recommendations of the foremost cardiovascular authorities in the Nation who have openly and publicly stated that this heart study is at the peak of its generating point of special and invaluable medical benefit return, for the very moderate investment involved, to the American people; and many hospitals and community centers in our State and region have a woeful lack of space and professionally trained personnel to even come close to responding to the ever-increasing medical care and treatment demands being made upon them. The same situation exists in almost every other area of the country.

Let it be clearly understood that all the respected and responsible authorities, individual and organizational, who are advocating and supporting this amendment are well aware of the economic circumstances that surround us today, and they are not lending their prestige and reputations in favor of an imprudent and unwise projection of government spending. On the contrary, they are striving to focus administration and congressional attention upon the economic and social urgency of establishing and choosing priorities of spending in the public and national interest. They very deeply believe, as so many of us do, that when money is tight, either in the family or a government, basic human needs must come before doubtful and unnecessary material needs.

According to accepted and acknowledged experts, there is a tremendous urgency for additional funds in this bill to even provide for the minimum health requirements of all of our citizens. The increases suggested and recommended in this amendment are rock-bottom amounts and constitute only a "low profile" response to the medical care crisis enveloping our Nation today. No one has to tell anyone in this country about the staggering advances in medical costs, at all levels, that have occurred in our society in modern times and which seem to be almost daily mounting. The funding action we are suggesting now will obviously serve, in the long run, to encourage the quickest possible minimum increase in the desperately needed nationwide supply of health care and will also serve to head off the medical cost spiral that tops the list of inflationary pressures on the current economy. Let us, then, in common sense and common concern, dedicate our efforts, in these times, to continuing reductions in areas of unproductive, doubtful, and not immediately essential exploratory and experimental spending areas while we take prudent and responsible action, here, today, to meet the minimum health and medical care requirements of the great majority of the American people by overwhelmingly adopting this pending emergency health amendment.

Mr. VANIK. Mr. Chairman, I will cast my vote in favor of the emergency health amendment which will attempt to provide increased appropriations for the vital health programs of the Department of Health, Education, and Welfare.

The acceptance of this amendment will be the very minimum that we can do to meet the very real medical care crisis facing America.

The extra money provided by this amendment will do a great deal to provide an increased supply of trained health workers and professional personnel. By increasing the supply of health workers and facilities it will help head off further increases in the spiraling cost of medical care.

We in the Greater Cleveland community are acutely aware of the enormous pressures which exist in the area of medical training. Case-Western Reserve Medical School in my congressional district has been among the most severely affected because of lack of adequate funding. Fortunately, the State of Ohio has provided a degree of emergency funding for this year. But the financial situation at this medical school, and others, for the coming semester is indeed very bleak. Even if this proposed level of funding were to become effective immediately, the shortage of facilities, trained teachers and scholarship assistance is so severe that it will be impossible for our medical schools significantly to increase the number of enrollees because of increased operations costs and development time required to become fully operational.

It is inconceivable to me that the administration would in the name of fighting inflation, seek to cut back the funding for this vital bill, in light of the severe shortage of trained medical personnel and vast increase in the need for medical services. As far back as October of 1965, I pleaded that the Government assist with vastly increased training and scholarship

programs in medical training to meet the predictable increases in need for services because of the implementation of the medicare and medicaid programs. There was no such response.

Simultaneously, large numbers of aging medical training facilities became unusable. Medical services for the general population of this country increased dramatically and what is worse, the number of available skilled medical personnel remained relatively static.

There are, Mr. Chairman, only four medical schools in the entire State of Ohio, the fifth largest State in the Union. I am continually chagrined at the high number of fine, academically talented young men and women who are unable to enter a medical school because the schools' places have been entirely filled. Time and again, Mr. Chairman, these rejected students must turn to other professional studies since it is impossible for them to defer further education while they await an opening at some unspecified time in the future.

Our community and the Nation cannot allow this shameful denial of education and training to continue when we so badly require thousands of doctors and other trained medical personnel to meet present medical service needs.

The money provided for the training of future physicians today, the money provided for expanded health research now, will pay off tomorrow in thousands upon thousands of lives being saved.

We are in a health crisis.

We are the richest nation in the world and yet we permit ourselves to rank 13th in terms of infant mortality.

Seven years ago it was estimated that we needed $3.2 billion to modernize our Nation's hospitals. Today we need $11 billion to modernize our Nation's hospitals.

In manpower, this country needs 48,000 more doctors than it has today. We need 17,800 more dentists; 150,000 more nurses; 266,000 more "allied health personnel"—technicians, therapists, and other medical aides.

Yet we are failing to meet this health crisis.

For example, the President recently vetoed this year's amendments extending the Hill-Burton hospital construction program and providing for an expanded program of emergency room improvement, loans to hospitals for expansion and other needed improvements. Fortunately, the Congress repassed that legislation over the President's veto. Despite this evidence of the Congress's concern for health programs, the administration requested only $50 million for hospital construction grants in fiscal year 1971—the fiscal year that began a month ago. The Appropriations Committee of the House is to be commended for increasing this figure to $172 million. And yet this figure is totally inadequate when you consider that in 1968 almost $300 million was appropriated for this program, $250 million in 1969, and $172 million—the same amount as recommended by the committee for this 1971 fiscal year—in fiscal year 1970. Each year the figure has gone down, but the need, the demand, has gone up.

The following community hospital needs of Cuyahoga County are being deferred because of the severe limitations of Federal funds:

PROJECTS WHICH COULD BE APPROVED UNDER THE HOSPITAL MEDICAL FACILITIES CONSTRUCTION PROGRAM, IF THERE WERE NO LIMITATIONS ON FEDERAL FUNDS—FISCAL YEARS 1971 AND 1972

In the area of health manpower there has been a similar failure. The administration requested $12 million for direct loans to students of medicine, dentistry, and other professional health fields. This figure is approximately half that carried in the 1970 fiscal year appropriation act. Similarly, the administration requested $9.6 million for direct loans funds for nurses—down $6.7 million from last year. Although this is an area where we desperately need trained professionals and although this is an area where the cost of training is very high, the percentage of students being helped has declined drastically. In 1968, 37 percent of all health professional students were receiving assistance. Under the administration's proposal, that percentage would decline to 14 percent.

The emergency health amendment, a package amendment being offered today and which I hinted to support would provide the following increased assistance in the following areas: Medical manpower institutional support and student loans, health educational facilities construction, Hill-Burton direct grant program, community mental health centers, staffing grants, National Heart and Lung Institute, pilot dental care projects for needy children, grants to medical school libraries.

This is expensive; this is costly. At stake is the quality of health care for each of us and those we care about, now and in the future.

This package amendment, providing additional sums to meet the emergency medical crisis facing the Nation, has been put together after careful study by members of the House Appropriations Committee. The men sponsoring this amendment have given careful study to the Nation's health needs. This extra money can and will be used carefully and wisely to save lives and improve the health of all of us.

I would like to commend the Appropriations Committee for their general support of the National Institutes of Health. The committee has supported each of the divisions of the National Institutes so that the program levels of last year can be maintained and in many cases improved. The administration requested a 6-percent increase in the research components of NIH which, as the committee stated in its report, "is likely not enough to offset the inflation which af-

fects research costs even more than those of other activities." It stated:

For regular research grants, the main source of support for biomedical research throughout the country, the budget allows an increase of less than 3.4 percent. For research training grants, a prime investment in the future, there is virtually no increase at all and funds for research fellowships are actually decreased by 4.2 percent.

The process of slow attrition has already resulted in slowing the pace of research.

The committee demonstrated its concern over this curtailment of research on cancer, stroke, arteriosclerosis, arthritis, diabetes, epilepsy, lobar pneumonia, and countless other terrible and deadly diseases by providing that all NIH research components were restored to at least their fiscal year 1970 program level.

The committee made special increases in the funds available for the National Cancer Institute. It provided $25 million more than the administration requested and nearly $50 million more than appropriated in fiscal 1970. This extra money is particularly important in light of recent findings of cancers caused by chemicals. We are exposed to a large number of chemicals in our polluted environment—and new chemicals are being added to the environment nearly every day. Approximately 1,000 chemicals produce cancers in animals and some 30 of these are cancer causing in man. We must maintain adequate research to detect those chemicals which are cancer causing and to prevent their wide-scale deployment in our industrial society.

The committee is also to be commended for its continued support of the National Heart and Lung Institute. Each year some 160,000 men under age 65 die from heart attacks. It is estimated that this figure could be substantially reduced if arteriosclerosis—the degenerative blood-vessel disease, characterized by a gradual narrowing of vital blood channels by fatty substances—could be prevented or its damage reversed. Recent NIH study on primates has shown that arteriosclerosis can be reversed. A great deal of research remains to be done, however, before we will know whether this process can be reversed in human blood vessels. The money for that research must not be denied.

The committee has also continued support for research by the National Institute of Dental Research. Dental decay remains one of the major American health problems. For every 100 Army inductees, it has been found that 600 fillings, 112 extractions, 40 bridges. 21 crowns, 18 partial dentures, and one full denture are required. The Institute of Dental Research is working on ways of ending the dental decay problem which affects 98 percent of our population. They have been working on methods of protecting teeth, modifying elements in one's diet, and combatting bacteria—perhaps through a new form of immunization.

The list of vital, life-saving research carried on by the National Institutes goes on and on. The National Institute of Arthritis and Metabolic Diseases is working on improvements in artificial kidney processes, on gout, arthritic disorders and diabetes. The National Institute of Neurological Diseases and Stroke has made remarkable gains in the cure of Parkinson's disease and is working in the field of epilepsy. The National Institute of Allergy and Infectious Diseases is doing remarkable work in an effort to be helpful to the some 22 million Americans who are plagued with some form of allergy—and some forms are extremely troublesome and disabling. This Institute is also working on new vacines against viruses, tissue transplant rejection, hepatitis, and lobar pneumonia, the latter of which claims the lives of between 25,000 to 40,000 Americans each year.

The bill before us today continues appropriations for many vital programs. In terms of human happiness, in terms of the removal of human suffering, nothing is more important than the continued, expanded, drive to improve the capabilities and quality of American health care.

We must fight inflation and the spiraling cost of government, but we must also fight against ill health and the crippling and deadly diseases which cut short the productivity and the useful and precious lifespan of man.

Mr. ADDABBO. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) to increase the appropriation under H.R. 18515 for the Departments of Labor and Health, Education, and Welfare.

This legislation provides the House with an opportunity to affirm our commitment to a new system of domestic priorities which recognizes social programs, particularly in the health and education fields, as high on our agenda for increased activity. The bill before us today contains appropriations for a number of basic programs, including the Hill-Burton and health manpower programs.

The growing concern in our Nation over the health crisis is warranted and increased expenditures to meet this crisis are urgently needed. The enactment of medicare and medicaid in 1965 have caused an increased demand for health services and have pointed up a critical shortage of hospital beds and skilled nursing across the country. The Department of Health, Education, and Welfare has estimated an immediate need for $11 billion to build new beds and modernize existing beds.

This shortage is a serious problem in the southern part of Queens County, N.Y., where there are no hospitals. The recent closing of Howard Beach Hospital which served 200,000 residents of this area and the conversion of the facility to a drug treatment center by the Governor of New York have aggravated the problem. The only way in which our community can meet the need for hospital beds is through the Federal assistance program. The community itself cannot meet the expense of construction nor can normal philanthropic sources cover this cost.

The Hill-Burton program is the proper vehicle for assuring both the necessary funds and the proper regional planning for health facilities. Unless we fund this program adequately, we will simply make the hospital bed shortage more critical and increase the costs of solving this problem in the future. Construction and modernization requirements have already tripled in the last 10 years.

Manpower needs must also be met by increased appropriations for the shortage of health personnel is the root cause of the health crisis. The statistics have been quoted over and over again. We need 50,000 more doctors, 18,000 more dentists, 150,000 more nurses, and 270,000 additional allied health personnel. These shortages will increase at rapid rates unless we commit ourselves to a meaningful program of action today.

These are some of the serious problem areas which H.R. 18515 should be attempting to solve and I support the Boland amendment as a needed boost to the purpose and intent of this appropriation measure as I supported these amendments in full committee as a member of the Committee on Appropriations.

Mr. HALPERN. Mr. Chairman, I support this amendment to add funds to the Health, Education, and Welfare appropriations bill in order to meet the bare minimum needs of nine important health programs in the Department of Health, Education, and Welfare, and I particularly call attention to the area of mental health care. There is a crisis in health care in this country and we must do something to meet it. The $360 million added by these emergency health amendments will be a beginning of an effort to do something to close the gaps that exist in health care.

It is only a beginning, but it is a step we must take if we are to meet the national goal, as stated by the Nixon administration a year ago:

Effective and dignified health care for every American no matter what his station in life or where he lives.

As that administration report on the Nation's health stated on July 10, 1969:

We cannot accept anything less in this the most affluent society in the world. As long as there are people in this country who are denied essential health services because of poverty, or race, or lack of access for any reason, we have fallen short of our promise as a Nation.

It will be difficult enough, in my opinion, to fulfill the promise of that fine statement even if the amendment is accepted. Without the amendment and the additional emergency funds it will provide, I do not see how we can begin to meet our commitment.

We have many pressing needs in the health area in this country. Our infant mortality rate, while improving, still ranks 16th or so in the world. The infant mortality rate of our nonwhite population is shamefully high and would rank far lower in the nations of the world. We have a shocking shortage of medical personnel. We have a need for twice as many more doctors than we are presently producing. Many of the hospitals of our country, particularly those in our large metropolitan areas, are in a decrepit condition and desperately need

financial assistance if they are to remain open and able to serve their communities. Great municipal hosiptals in Boston, Chicago, St. Louis, to name just a few, are having serious problems maintaining their accreditation because they have not been able to secure sufficient funds to modernize obsolete and wornout facilities.

The emergency health amendments will add the needed funds to help meet these problems. These amendments will also give additional funds to the National Heart and Lung Institutes which is carrying on valuable work in searching for ways of cutting down the toll from the Nation's leading killer, heart disease. These amendments will aid in the construction of educational, research, and library facilities in the various fields of health. Funds appropriated by these amendments will assist the National Library of Medicine in its important programs of support for medical libraries throughout the country.

In addition to providing funds to combat physical illnesses, the emergency health amendments will support the continuing battle against mental illness, our Nation's No. 1 health problem. When one considers that more than one-half of our Nation's hospital beds are occupied by mental patients, the enormity of the problem becomes apparent. Since 1963, when the community mental health centers program began, we have made enormous progress toward the goal of making comprehensive mental health care available to all Americans, at centers not far from their homes.

Continuing provisions for mental health care, however, especially staffing grants must be included or this progress to date will be stymied. Particularly will the development of the community mental health center program suffer if the $60 million currently proposed for staffing centers and $20 million carried over from last year for construction of centers are passed without substantial increase. The former sum is insufficient to continue fully the present staffing commitments and will not enable the operation of a single new center.

Since Queens is the only major borough in New York without a mental health center, I am greatly concerned about the crippling effect such a limiting of funds would have. The proposed Jamaica-South Flushing Mental Health Center will never reach fruition if the increase is not appropriated, and the work of hundreds of concerned Queens residents, and the hopes of thousands will not be realized. It would be indeed sad for the mental health of our communities if such a promising law as Public Law 91–211, passed unanimously by both Houses of Congress, would be thwarted by failure to appropriate sufficient funds to implement it.

Though the need for mental health care is great, at times the cost may be discouraging. However, when the cost is put into perspective and one considers the cost in dollars as compared to the cost in human suffering, it appears that mental health programs are indeed a bargain. We must keep this perspective and continually provide the necessary support.

These are all important health programs, and they do not get adequate funds under the appropriations bill as it has been reported to this body. If we, as a House of Congress, are going to do our part to help fulfill the promise of the United States as a nation dedicated to the idea that health care should be a right accessible to all, then we must support this amendment. I shall vote for it.

Mr. FLOOD. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. HOLIFIELD, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 18515) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1971, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. FLOOD. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to extend their remarks in the RECORD on the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) to the bill, H.R. 18515.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

HOUR OF MEETING TOMORROW

Mr. PRICE of Illinois. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 11 o'clock a.m. tomorrow.

The SPEAKER. It there objection to the request of the gentleman from Illinois?

Mr. VANIK. Mr. Speaker, I reserve the right to object.

Mr. Speaker, I would like to know why we are leaving the House at 4:30 o'clock in the afternoon when we are really in the middle of our workday. Can someone tell me why we are dropping this important discussion in midstream? I would like to know the reason. Why must we adjourn this early and come back early tomorrow morning? Is there any answer to this?

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. VANIK. I yield to the gentleman.

Mr. GERALD R. FORD. Of course, I accept the comment of the gentleman from Ohio in the spirit in which he asks the question. The answer is that the President of the United States has asked some Republicans, about half of us, to come down to the White House for a reception.

Mr. VANIK. Is that the reason we adjourned early yesterday? I was shocked to find the House adjourning at 4:30 o'clock yesterday afternoon, again in the middle of a very important matter of business. Was there something going on yesterday?

Mr. GERALD R. FORD. Yes; the answer is the same.

Mr. VANIK. I would certainly hope that these items of entertainment or whatever else goes on would occur in such a way that it would not interfere with the business of the House. We are here, first of all, to legislate and to get our business done. I just do not feel happy about having our work terminated in the middle of the afternoon.

Mr. JACOBS. Mr. Speaker, will the gentleman yield?

Mr. VANIK. I am very happy to yield to my colleague, the gentleman from Indiana.

Mr. JACOBS. I was wondering—I was told that rather than a reception, it was a picture-taking session. Would that be correct? What my father refers to as a sheepdip?

Mr. VANIK. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Illinois (Mr. PRICE)?

There was no objection.

HONEST DIFFERENCE OF OPINION

(Mr. KEE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KEE. Mr. Speaker, I have just read an article, dated July 11, 1970, written by Mr. Ray Marton, associate editor of the Dominion News, a newspaper published in the city of Morgantown, W. Va.

It occurred to me that the Members of the House would be interested in reading this informative article which substantiates the fact that in America, there is always room for an honest difference of opinion.

While I was not present and, therefore, do not have any knowledge concerning the meeting held in Black Eagle, W. Va., I do fully agree with the report of this meeting as outlined so clearly by Mr. Martin.

The fact remains that there are three members of the board of trustees who administer the United Mine Workers of America welfare and retirement fund. One member represents the United Mine Workers; one member represents the coal producers who pay into this fund from royalties; and the third member represents the public interest and, as such, has been designated to serve as administrator of this program.

As a matter of fact, it is my understanding that when the contract between management and labor is signed, it is required that the name of the members of the board of trustees be included in the contract.

This article further points out that some of those promoting dissension in the coal fields have their eyes and minds on something other than the health and welfare of the miners and, in my opinion, the existing contract should be

honored by both sides in view of the urgent need for the continued production of coal which is absolutely vital to our Nation.

Therefore, Mr. Speaker, I do include this informative article written by Mr. Ray Martin for all to see:

PHONY MINERS IMPERIL NATION

(By Ray Martin)

ATLANTIC CITY, N.J.—It is not possible to cast your eyes down the boardwalk of this oceanfront community, which is celebrating its 100th birthday, and look at the string of lights and assorted devices, which depend on electricity, hence coal, without being reminded of the trouble brewing in the coal fields of West Virginia and other coal producing states.

As the battle cry was sounded in southern West Virginia for a new round of pickets to appear at the mines Sunday night, I couldn't avoid recalling some of the factual discoveries I've made during the past few weeks.

The willingness of some of the persons promoting this strike to distort facts is absolutely incredible.

For instance, miners who met in Black Eagle, W. Va., were told that there could be no increase in pension benefits because W. A. (Tony) Boyle spent UMWA Welfare and Retirement Funds in his campaign to defeat the late Joseph (Jock) Yablonski. This statement was designed, of course, to make the miners madder than a school of piranha fish.

If there was a shred of truth in that particular charge against Boyle, I'm sure that the other two trustees of the UMWA Welfare Fund would have exposed the UMWA president by now and had him placed in a padlocked cell. I suggest that the coal industry and the Fund put that yarn to rest in the following fashion: 1. The industry, through the National Coal Association, prepare a list of company remittances to the Fund starting in 1969 and continuing up to date. 2. That the Fund issue a statement of its income and expenditures for the same period of time, with a detailed accounting for monies spent for other than pension checks and payment of miners' medical bills.

I wonder how many miners and mines were the victims of a fraud when the effort was made to close the mines last month? I use the word "fraud" in its truest sense. Some of the mines were closed by persons who probably never saw a piece of coal, except to shovel it into a furnace—if then. Miners at the various mines would do themselves a favor if they requested to see the picket's dues card.

In that regard, I disagree with the suggestion made by a Wheeling newspaper that Boyle should oust the dissident members of the UMWA. Even if a majority of those involved were card-carrying unionists, such a move wouldn't solve the current problems.

I'm just about convinced that some of those promoting dissension in the coal fields have their eyes and minds on something other than the health and safety of the miners on whose backs they're walking and jumping. Why do they show up at meetings with current lists of coal reserves at electrical power plants? Why are some of them trying to discredit me in the eyes of miners who have fought tooth and nail for increased safety? Why are they trying to drive a wedge between this writer and the Yablonski family? Why are these people trying to divide the loyalties of the miners?

While members of the Yablonski family and I do not agree completely with each other's theories with respect to Jock's murder and a few other items, there's a mutual respect for the right of each of us to stick with our own individual thoughts.

I suspect that one of the major causes of dissension in the coal fields today is the handiwork of a chap who is quite adept at impersonating key personalities on the telephone. The FBI should catch up with this fellow any day now.

As for those persons who are trying to close the mines down as some sort of tangential move related to the cause that Jock Yablonski espoused, I would remind them of his admonitions against striking at the rally at Sophia, W. Va. He did an excellent job at halting a strike that day that some of the very same coal field proachers, who are at work today, tried to foment.

The coal miners of West Virginia and the nation have many valid complaints against their union, some elements of the coal industry and the government itself. With proper action, these complaints can be resolved. Blind obedience and response to persons with ulterior motives is not the course to success, however.

Mike Trbovich, national chairman of Miner's for Democracy, has assured me that he is not a candidate for the presidency of the UMWA, if and when a new election is ordered by the court. This should put to rest one of the gimmicks being used to divide miners in West Virginia.

Kenneth Yablonski, speaking for himself and his brother, Chip, said they have no candidate for the union presidency. "We are not partners to a dictatorship, that's what our father fought. We want the miners to have the right to pick their own candidates," Yablonski said.

J. Richard Lucas of Carmichaels, Pa., will bow out of the picture as President Nixon's choice as the successor to Bureau of Mines Director Jack O'Leary. Besides being too close to the coal industry, key senators decided his span of knowledge was too limited for the post to which he was appointed by the President. A direct announcement of Lucas' withdrawal should also ease tension in the coal fields.

The current best bet as O'Leary's successor is Thomas A. Henrie, director of the Bureau of Mines Metallurgy Lab at Reno, Nevada.

The real shocker of recent days is a decision by Judge Howard F. Corcoran in the U.S. District Court in Washington. He rejected a petition filed by Joseph L. Rauh Jr. which sought to compel the UMWA to pay his legal fees for representing Jock Yablonski during the union's election campaign. During the campaign, Rauh publicly said he was serving as Yablonski's attorney without pay.

In rejecting Rauh's request, the judge said: "This court is not satisfied that the suits instituted by Yablonski and dismissed by the court were intended to or did benefit the union except in the most indirect and theoretical way. Rather, the suits were brought with the primary purpose of aiding Yablonski in his election bid. Accordingly, there is no basis for the award of attorney's fees and they will be denied."

MISUSE OF GOVERNMENT TRUST FUNDS

(Mr. VANIK asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. VANIK. Mr. Speaker, in today's Washington Post, staff writer Hobart Rowen quoted an unidentified White House official who indicated that the deficit in fiscal 1972 may be so large that the administration has started a study of how it might control the so-called uncontrollable portion of Federal spending.

The official is credited with suggesting that among things which might be considered is a suspension of the Government's obligation to pay interest into some of the trust funds.

This suggestion that the Government reduce its expenditure for interest by withholding interest to the social security, medicare, and unemployment trust funds accounts is a reprehensible attack on the integrity of the trust funds. These trust funds belong to the contributors and are set aside for inviolate purposes. To withhold interest on the public debt held by these funds would constitute a betrayal of the trust responsibility.

If it should become Government policy to "rob" the trust funds of their legal and proper interest—the Government will prove itself an unfit trustee of special funds.

The article is as follows:

WHITE HOUSE MULLS BUDGET BASE CUTS

(By Hobart Rowen)

A White House official said yesterday that the administration is so fearful of a large budget deficit in fiscal 1972 that it has started a study of how it might control the so-called "uncontrollable" portion of Federal spending.

The official said that he was willing to attack even the interest on the national debt, normally considered the most automatic cost item in the budget.

"Even if we make just a little dent in it (the interest cost), it would be worthwhile," he said. He suggested that something might be done "on the money management side." Among question which might be raised is the Government's obligation to pay interest into some trust funds.

He conceded he did not know how much might be saved, "but when you're dealing with sums of that size, you have to look at all possible devices." He indicated that a study already has been "launched" at the Office of Budget Management.

He also warned against looking for further budget cuts on the military side, because they would have to occur "in the basic funds for the security of the country." Even if there were to be a Vietnam ceasefire within a few months, he added, virtually no more money would be saved out of the current year's fiscal budget.

"There just isn't very much left that is connected with Vietnam," he said. He added later that "a great deal (of cutting expenditures) has already been done in anticipation (of the end of the war)."

The interest cost of the national debt for fiscal 1971 currently is estimated at $20.8 billions.

Other Government programs considered uncontrollable that the official said would be examined closely for possible savings are: health, social security, farm subsidies, and veterans benefits. In some of these cases, he noted, payments may be based on formulas that are no longer valid. In almost all cases, the Administration would have to go to Congress to accomplish its purpose.

The somewhat desperate move against the uncontrollable part of the budget (estimated to be 68 to 70 percent of the total) is part of an Administration effort to focus attention on its charge that Congress is letting spending get out of hand.

One Administration spokesman said that if Congress continues to pass appropriations bills running far beyond the President's recommendations, "new taxes (for the fiscal 1972 year) will be the only choice."

Another official, however, said "higher taxes would be the very last thing that I want to come to in any circumstances."

Coincidentally, the Administration passed the word that the Housing and Urban Development appropriation, which runs to $1.2 billion above the Nixon recommendation, is "a ripe candidate for a veto."

IT IS TIME TO GET THE FOREIGN MILITARY SALES ACT OUT OF CONFERENCE AND PASS IT SO THAT WE CAN PROVIDE MILITARY HELP TO ISRAEL BEFORE IT IS TOO LATE

(Mr. STRATTON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. STRATTON. Mr. Speaker, I take this time to express to my colleagues in the House my very profound conviction that we must move swiftly in this Congress to get the Foreign Military Sales Act, H.R. 15628, out of the conference committee and get it promptly enacted into law, because it happens to be the only practical, realistic, and effective way to supply the planes and other armaments which Israel desperately needs to preserve her independence in the Middle East today in the face of Soviet aggressive pressure.

Time, in that vital area of the world, Mr. Speaker, is in my judgment, fast running out.

It has long been obvious that Israel cannot survive in the Middle East against the combined pressure of the Arabs and Soviet military power, unless the United States is prepared to supply Israel—as the Russians have long been supplying the Arabs—with the military hardware, especially the high performance jet aircraft, which are essential for her survival. I have repeatedly urged President Nixon over the past several months to provide Israel with the 50 Phantom F–4 jets which we have promised to deliver to her.

My information today is that we have now begun to release these jets to her, on a dribble-by-dribble basis, surreptitiously, apparently so as not to upset the Russians, who somehow never seem to worry about such niceties. The trouble with this snail's pace supply line is not only that it moves much too slowly to meet Israel's desperate needs. What is even more serious, by keeping our decision to complete our deliveries to Israel secret, we lose all the very beneficial results of letting the Russians and the Arab world know clearly and unequivocally that we are behind the Israelis and do not intend to let them go down the drain for lack of sophisticated, modern military hardware. In other words, we are deliberately throwing away the deterrent power of our action and thereby, ironically, increasing rather than decreasing the chances of war in the Middle East by our pussyfooting tactics.

Once the 50 Phantom deal has been completed, however, we will have run out of legislative authority to finance further sales of military hardware unless the Foreign Military Sales Act is speedily enacted into law. This is the bill the House passed back on March 24, 1970, with an amendment specifically backing up our commitment to Israel and providing the vitally needed legislative authority to provide arms to Israel on other than a strict cash-on-the-barrelhead basis, in fact setting up the working machinery required for us to provide to Israel what she needs and must have to protect herself.

That bill passed the House overwhelmingly by a vote of 351 to 26. Curiously the minority of 26 included my distinguished opponent, the gentleman from New York (Mr. BUTTON) who recently made a mass mailing in the 29th District to voters of the Jewish faith in which he strongly expressed his support for military aid to Israel but carefully refrained from telling these voters of his March 26 vote against the legislation which would provide the practical financing for this assistance, as well as explaining to them how he could at the same time favor aid to Israel yet be opposed to the only piece of legislation which could make that assistance a reality. How one can face two different ways on this issue is beyond me.

But those Members of the House who seem to think you can somehow make bricks without straw will have another opportunity—and I hope it will be an early one—to vote for Israel as well as issue releases for Israel. The Foreign Military Sales Act is the one that was held up in the Senate for 7 weeks while the so-called Cooper-Church amendment on Cambodia was debated at extended length. It is now pending in a House-Senate conference committee where the Cooper-Church battle threatens to delay it even further.

Perhaps if the vital correlation between this bill and the future of Israel were better understood, perhaps if some of those Members who propose to support Israel would also support the legislation that would make this defense possible, instead of voting against it and loading it down with controversial amendments, we might get this measure enacted into law before the situation in the Middle East has deteriorated beyond the point of no return.

FEDS IN THE SCHOOLHOUSE DOOR

(Mr. NICHOLS asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. NICHOLS. Mr. Speaker, on Friday of last week Senator STROM THURMOND of South Carolina, in a speech before the U.S. Senate, soundly denounced the Nixon administration's announced policy, proposed by the Justice Department, to send, in the Senator's language "100 carpetbagging lawyers into the South for the purpose of assuring forced integration of public schools."

Mr. Speaker, I join the Senator from South Carolina in his opposition to this proposal which certainly indicates a lack of confidence in school officials in my State and throughout the South in their efforts to abide by the edicts of the Federal courts.

The one thing that we need least in my State is Federal agents snooping around and poking their noses further into the operation of our school system. Alabama officials, from the Governor of my State on down through the county superintendents of education and the members of the county and city school boards are doing their very best to comply with the court orders. I strongly urge the President to rescind this announced intention of the Justice Department.

In connection with this, the Montgomery Advertiser's lead editorial "Feds in the Schoolhouse Door" points up in a most enlightening manner that we have no need for these proposed Federal school watchers.

FEDS IN THE SCHOOLHOUSE DOOR

Back in the early days of school desegregation, southern politicians were properly denounced, in their states and nationally, when they recklessly predicted trouble before schools opened under new integration orders.

We were among those who said this was an open invitation, inciting the lawless. It was designed to be a self-fulfilling prophecy. If individuals didn't take the cues, governors were then obligated to intercede to prevent the "trouble" they had predicted. This happened in Alabama, Mississippi, Arkansas, etc.

That era has largely ended. The South is perplexed and angered to the extreme by sectional enforcement of the law of the land—Dixiland, that is. But as a general statement, most recent school desegregation orders, however resented, have been obeyed.

Now the federal government has announced, well in advance of school opening, that it will stand in the schoolhouse door, by sending platoons of Justice Department attorneys and other gauleiters to the South, including Montgomery.

The announcement was perhaps intended as a deterrent to trouble, but it is of a piece with the aforementioned predictions by southern politicians in years past.

Thus it is an incitement which is unwelcome and unwise, and can only exacerbate the resentment of a people who see themselves beset from all sides by the zealous imposition of Reconstruction II. (Some "southern strategy.")

It would have been normal prudence for the Justice Department to have contingency plans and personnel on standby alert in the event of any efforts by a small band of thugs to frustrate court orders. That is standard procedure.

But to *announce* the dispatch of a kind of new Freedman's Bureau to the Deep South is so provocative we can only conclude that the Justice Department is either very stupid or so intent on having some rebellion to put down it may want one—just as our southern demagogues wanted trouble in those early days of integration.

Montgomery, specifically mentioned as one of the beachheads for the feds, without the prior knowledge of United States Attorney Ira DeMent, is particularly offensive. Time and time again Montgomery has been praised for complying with court orders and for working out acceptable plans. The school board—and, by clear implication, all citizens—has been lavishly complimented by Judge Johnson and the judges of the Fifth Circuit Court of Appeals.

But the integration hawks in the Justice Department have been itching for a piece of the action. Peace and order by compliance are not to the liking of the gung-ho recruits who see in the southern campaign a chance to win their battle stars and ribbons for heroism in a conquered but still hostile province.

We hope and trust they will be disappointed. But we say to them as we said to other demagogues years ago: if there is trouble, you are responsible by reason of deliberate and provocative announcements.

INTRODUCTION OF FOOD STAMP BILL

(Mr. POAGE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. POAGE. Mr. Speaker, this morning the House Committee on Agriculture by a vote of 27 yeas, 6 noes, and one present, favorably reported the general farm bill to which I made reference yesterday. The committee then voted unanimously to instruct the chairman to introduce a food stamp bill which had been approved as to wording and substance some time ago.

I am today introducing this bill and I ask unanimous consent to include at this point a brief summary of the provisions of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The material referred to follows:

FOOD STAMPS

The committee has amended in significant fashion H.R. 12222, the Administration sponsored bill to amend the Food Stamp Act of 1964, as amended. Foremost among the changes are (1) inclusion of an amendment which would require able-bodied adults to register for and, if available, accept employment as a condition precedent to obtaining stamps; (2) to require payment of at least 50 cents per person per month for program participation, and; (3) to require States to pay a small portion of the cost of the program. A brief summary of the measure follows:

Section 1 broadens the policy of the basic Act by recognizing that limited purchasing power is related to hunger and malnutrition.

Section 2 of the bill consists of definition changes occasioned by substantive amendments, the most significant of which are to expand the program to Puerto Rico, and define "elderly" persons.

Section 3 contains authority to simultaneously operate Food Stamp and Commodity Programs, however individual participants are precluded from simultaneously receiving dual benefits.

Under Section 4 the Secretary of Agriculture in conjunction with the Secretary of HEW is directed to establish uniform national standards for participating households. Separate standards for the American Territories newly covered by the Act, are proscribed.

This section also provides that an able-bodied person between the ages of 18 and 65, except those persons responsible for the care of others, register for and accept employment if it is offered as a condition of eligibility for the household of which he is a member to be eligible for program benefits. No person would, by virtue of the requirement, be forced to accept employment at a struck plant.

Section 5 contains authority for establishing the value of coupons with a minimum monthly payment of at least 50 cents per person per month required of each participant. Outside sources would not be precluded from making the required payment. Authority for the purchase of stamps, on other than a monthly basis, is also contained in this Section, however, it would not allow participants to use that vehicle as a means of obtaining more stamps than they would otherwise be entitled to receive.

The educational outreach provision of the bill is contained in Section 6. Under this section State agencies are directed to initiate educational programs designed to inform potential participants of the program. Deductions for public assistance checks for coupon allotments are also authorized under this Section.

Finally, the Section authorizes persons 60 years of age or older who are participating in the program to use stamps to purchase meals delivered to them if prepared by an instrumentality of a political subdivision or a nonprofit organization.

Section 7 amends and strengthens present enforcement provisions.

Section 8 of the bill revises the formula by which the Federal government reimburses State agencies for administrative expenses incurred in implementation of the program. The new formula recognizes the need for insuring prompt hearings for aggrieved households who have heretofore been denied an adequate opportunity to appeal denial of entitlement to benefits of the program.

Section 9 of the bill requires participating States to finance a portion of the amount by which the value of coupons issued to households exceeds the amount paid by such households. The rate of State sharing would be 2½ percent for the first year; 5 percent for the second; 7½ percent for the third; and, 10 percent of the fourth and ensuing years.

Section 10 authorizes open-ended appropriations for the program through fiscal year 1973.

Section 11 contains authority to allow ongoing programs to continue to exist until brought into conformity with this bill and gives the Secretary additional authority to extend food assistance to communities without programs.

Mr. POAGE. Mr. Speaker, the committee will meet tomorrow and it is my hope that we may favorably report this bill.

EXCESSIVE SPENDING LOOMS AS CALCULATED IN CONGRESS

(Mr. DEVINE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, the big spender label seems to be pinching a little bit, because a lot of the big spenders are squealing and squeaking around here today.

My attention has been invited to an editorial that appeared in the Sunday, July 19, Columbus, Ohio, Dispatch entitled "Excessive Spending Looms as Calculated in Congress." The editorial states:

EXCESSIVE SPENDING LOOMS AS CALCULATED IN CONGRESS

Strange mischief is afoot in the Congress of the United States with regard to needed appropriations to run the federal government. Only one of the 14 bills required to finance national affairs has reached the White House.

There is a growing school of thought that the Democrat-controlled Congress, acutely aware this is an election year, is not as concerned with fiscal responsibility as it is with embarrassing the titular head of the opposite political party, Republican President Nixon.

Leaders of Congress are heard more and more to moan that the President is "ignoring new priorities" while expounding that federal legislators are "responding to the needs of the people."

This is not a new political tactic. In the early 1930s, as the nation was trying to find a way out of the devastating Great Depression, we had a Republican president, Herbert Hoover. And the House was controlled by Democrats.

Then, as now, there were compelling political considerations. And there was mischief. While Mr. Hoover tried to meet necessary obligations, he also attempted to avoid economic disaster by keeping the federal government solvent.

He sought a reasonably balanced budget. Yet, Treasury Department records show that by the time congressional leaders completed their manipulations, federal expenditures were double actual receipts.

Further, they ignored recovery recommendations by the Hoover administration, but revived many of them after the inauguration of a Democratic president, Franklin D. Roosevelt, in 1933. History shows the FDR regime accumulated much credit for its so-called "New Deal."

But history also shows the FDR regime planted the seed for excessive government-spending, a mischief being practiced by too many leaders in Congress today.

A tell-tale example of the current thinking is embodied in the recent hassle over aid to hospitals, a highly-emotional issue. The President favored the measure but not the excessively high figure. And especially, he opposed a stipulation that he be "required" to spend the $2.8 billion total amount within a set period of time. He vetoed the bill, but was overridden by the "new priorities" line of thought.

We are not, as was the case in the early 1930s, fighting our way out of a Great Depression. But there is a very good chance that following a deliberate and calculated path of excessive spending will plunge us into an economic situation far more damaging than a depression.

IN SUPPORT OF H.R. 18573

(Mr. McCULLOCH asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. McCULLOCH. Mr. Speaker, on March 26, 1970, I introduced legislation designed to help law enforcement agencies to cope with the menace of bombings and bomb threats which have afflicted our country in recent months. Twenty-eight of my colleagues joined me in introducing the measure. A subcommittee of the Committee on the Judiciary is now conducting hearings on this legislation.

The hearings have demonstrated more than ever the necessity for new measures to control the activities of the anarchists who are using explosives as instruments of terrorism across the land. According to a survey conducted by the Department of the Treasury, between January, 1969 and April, 1970 more than 40,000 bombings, bombing attempts, and bomb threats were reported to law enforcement agencies. The actual bombings, which number more than 4,000 in that period, were responsible for the deaths of 43 people and for $22.6 million of property damage.

The bill which I introduced in March, H.R. 16699, approaches the problem by providing increased penalties and a broadened scope of the existing Criminal Code provision, 18 U.S.C. 837. This is a necessary approach, but not the only one, if we are to solve the bombing problem. In addition to the deterrence of the criminal statute, we must make it more difficult for the criminal to obtain the materials he needs to make his bombs. There is no doubt that the ease of access to explosive materials has been a contribut-

ing factor in the rash of bombings which we have experienced.

The legislation which I introduced yesterday, H.R. 18573, at the request of the Secretary of the Interior is the proposed Explosives Control Act of 1970. It would complement H.R. 16699 by regulating the importation, manufacture and sale of explosives. Major features of the new legislation, which will be administered by the Secretary of the Interior because most explosives are used in mining operations, are:

Issuance of licenses to importers, manufacturers and dealers in the explosives industry.

Issuance of permits to commercial users of explosives.

Licensees must obtain and record positive identification of purchasers of explosives.

Prohibitions on the sale of explosives to minors, felons, fugitives from justice, drug addicts, and mental defectives.

Prohibitions on the sale of explosives to persons, other than licensees or permittees, who are nonresidents of the State in which the sale is made unless they are residents of a contiguous State that permits such a sale.

Penalties of up to 10 years imprisonment for violations of the provisions of the bill.

Mr. Speaker, there can no longer be any dispute about the need for control of the distribution of explosives. I urge my colleagues to give the legislation which I have introduced prompt and careful consideration.

ELIMINATING AN UNEMPLOYMENT COMPENSATION INEQUITY FOR EX-SERVICEMEN

(Mr. CHARLES H. WILSON asked and was given permission to address the House for 1 minute to revise and extend his remarks and include extraneous matter.)

Mr. CHARLES H. WILSON. Mr. Speaker, today I am introducing in the House a bill that will amend title 5 of the United States Code to eliminate an inequity that some ex-servicemen have run into after their discharge from the military. My bill will change section 8502(b) of title 5 to provide that for the purposes of unemployment compensation all the States shall treat accrued leave of ex-servicemen as wages for past services rather than as current wages constituting a bar to benefit payments. In effect, passage of this proposed legislation would alter the treatment for unemployment compensation purposes of ex-servicemen in 28 States. Today these States deny or hold up unemployment insurance benefits to those men again in the civilian labor market, who receive pay for unused accrued leave. Such pay is considered wages and under that rationale these States deny unemployment benefits for a period determined by the number of days of accrued leave paid by the Federal Government.

This situation was brought to our attention by Henry L. Lacayo, president of Local 887 of the UAW in California. It, in turn, had been brought to his attention when one of his local's members was denied unemployment compensation for a 47-day period since he had been paid for 47 days of unused accrued leave—leave to which he was entitled for his 3 years in the armed services, including duty in Vietnam. This young man had resumed his civilian life by returning to work at North American Rockwell where he was previously employed prior to induction into the U.S. Army. Unfortunately, due to economic problems in the aerospace industry and this gentleman's lack of seniority, North American Rockwell was forced to lay him off.

Consequently, he applied for unemployment compensation but was turned down due to the State of California's reading of section 8524 of title 5.

In providing for unemployment insurance coverage for ex-Federal employees and ex-servicemen, it has been the policy of Congress, with respect to the conditions of eligibility for benefits, to require that the provisions of the State unemployment insurance law apply. Section 8502(b) of title 5 of the United States Code requires that:

> Compensation shall be paid by the State to a Federal employee in the same amount, on the same terms, and subject to the same conditions as the compensation which would be payable to him under the unemployment compensation law of the State if his Federal service and Federal wages . . . had been included as employment and wages under that State law.

Section 8521(b) extends the same principle to ex-servicemen.

Congress made an exception to this general rule, however, by specifically requiring that payments for unused accrued leave be deemed to continue the employment of the individual "during the period after the termination with respect to which the individual received the payment." The exception was subsequently deleted with respect to ex-civilian employees of the Federal Government but not with respect to ex-servicemen. An identical provision in both the House and Senate versions of H.R. 14705, a bill to extend and improve the Federal-State unemployment compensation program would delete this exception with respect to ex-servicemen by repealing section 8524 of title 5 of the United States Code.

Repeal of section 8524, however, would only delete the requirement that States deny unemployment compensation to ex-servicemen during periods with respect to which the individual received payment for unused accrued annual leave. It would not provide or require States to provide compensation during such periods. Our bill would require the States to treat accrued leave of ex-servicemen as wages for past services. This, in turn, would necessitate uniformity of treatment of these ex-servicemen throughout the United States and stop a form of discrimination that has resulted in part from Federal Government action.

The State legislatures have taken diametrically opposite views as to unemployment compensation eligibility during periods covered by terminal leave. The laws of 24 jurisdictions consider unused accrued leave to be wages for past services constituting no bar to current benefit payments. The laws of 28 other jurisdictions consider unused accrued annual leave to be current wages constituting a bar to benefit payments; under this concept, the individual is considered to remain fully employed throughout a period with respect to which the unused annual leave is paid and does not become unemployed and eligible to receive benefits until the expiration of such period.

I cannot agree that it was the intention of Congress to penalize ex-servicemen who have honorably served their Nation and who cannot find employment after their discharge. To allow some States to discriminate against these individuals while others take cognizance of the true meaning of payments for accrued leave appears to be a prostitution of the principles underlying such payments. Since we are both in a recession and the number of men discharged from the military grows yearly, revision of existing legislation is necessary. As President Lacayo recently stated:

> To deny unemployment benefits to veterans who have chalked up sufficient earnings to qualify is . . . a heartless attitude and a brutal "thank you" for men, many of whom have recently risked their lives in service to their country.

Passage of H.R. 14705 and the repeal of section 8524 of title 5 was a step in the right direction. Enactment of my amendment to section 8502 would result in the States and Federal Government treating those who have completed military service for the United States in a manner more fitting of our Nation. I urge rapid enactment of the bill introduced today.

URBAN MASS TRANSPORTATION ACT OF 1970

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. COUGHLIN) is recognized for 5 minutes.

Mr. COUGHLIN. Mr. Speaker, I believe that in the near future this House will have an opportunity of voting on S. 3154, the Urban Mass Transportation Act of 1970.

In anticipation of that time, I thought Members might be interested in the comments of Mr. James C. McConnon, chairman of the Southeastern Pennsylvania Transportation Authority, and two related editorials. Mr. McConnon's remarks, made before the House Republican Task Force on Transportation on June 6, are most pertinent to the problem of urban mass transit and I recommend them highly to my colleagues.

The items follow:

STATEMENT BY JAMES C. MCCONNON

As Chairman of Southeastern Pennsylvania Transportation Authority, known locally as SEPTA, I appreciate this opportunity to talk with you as you seek to aid the Congress in responding to the urban-transportation challenges of the 1970's.

We in this region, Mr. Chairman, are especially proud of, and grateful to, the "Law-

rences" of your Task Force. These two Pennsylvanians, Congressman Coughlin and Congressman Williams, have worked effectively and tirelessly to improve and strengthen public-transportation facilities in Southeastern Pennsylvania.

Congressman Williams, as you may know, served with distinction for two-and-a-half years as a member of the SEPTA board. Congressman Coughlin was one of the Authority's earliest supporters.

And although he sits on the other side of the aisle in Washington, we would be remiss in not expressing here our appreciation for the efforts in behalf of better transportation of another area worker, Congressman William A. Barrett, Chairman of the Subcommittee on Housing of the House Committee on Banking and Currency.

SEPTA, an agency of the Commonwealth of Pennsylvania, is located near the midpoint of the populous northeastern corridor stretching from Boston to Richmond. It was created to preserve, improve, expand and coordinate public transportation in the City of Philadelphia and the surrounding Pennsylvania counties of Bucks, Chester, Delaware and Montgomery, a region with a population of more than four million persons.

SEPTA's transportation system not only serves this region but also interchanges passengers with the Lindenwold rapid-transit line of the Delaware River Port Authority operating in the South Jersey area. SEPTA also operates bus service in New Jersey and, by contract, bus lines in the State of Delaware.

SEPTA-owned facilities and those with which it has contractural relations embrace 166 routes, with 3,200 vehicles operating more than 270,000 miles daily. On a typical weekday passengers number one million one hundred thousand. These facilities comprise the nation's third largest urban-transportation network and include railroad, subway, elevated, bus, trackless-trolley and surface-rail lines.

In the six years of its existence SEPTA has worked to preserve and, to the extent possible, improve commuter-rail and transit services in the region. This has been a demanding task, calling for the reversal of a downhill course shaped by four decades of belt-tightening and neglect on the part of private transportation operators.

In this task we have had the indispensable support of the Commonwealth of Pennsylvania, the City of Philadelphia and the counties of Bucks, Chester, Delaware and Montgomery. These have supplied the money needed to keep in being essential railroad services, together with certain suburban bus lines. Local funds to match some $23 million in federal grants for improvements to commuter-rail facilities are being provided largely by the same sources. And needless to say, gentlemen, we are most grateful for that federal aid.

The City of Philadelphia and Delaware County, it should be noted, have made available the credit backing that enabled SEPTA to acquire from Philadelphia Transportation Company and Philadelphia Suburban Transportation Company the area's two largest transit networks.

The SEPTA region has made extensive local outlays for public-transportation improvement and expansion. The City of Philadelphia, with SEPTA's financial commitment, is building and planning extensions to its Broad Street Subway system at a cost of well over $100 million. Other locally financed projects have included nearly $50 million in rapid-transit and commuter-railroad improvements, $15 million in surface-lines betterments and the excellent $94-million Lindenwold line.

This metropolitan region has passed the point, however, at which fare-box revenues and the resources of local government are adequate to support acceptable standards of service and equipment. Thus we must look hopefully to the House of Representatives as it considers the Administration's transit-aid legislation embodied in Bill S. 3154 passed by the Senate last February.

This bill, as you know, would authorize $3.1 billion over five years, with contract authority, for capital improvements and demonstration projects. For this all urban transportation operators would be grateful.

Even so, the transportation needs of metropolitan areas are so great that they exceed those S. 3154 could satisfy. Thus our first plea to the members of this Task Force is for favorable action on the Administration's transit-aid legislation, S. 3154, now before the House Committee on Banking and Currency. This legislation, gentlemen, must be enacted, as the first step toward adequate support of the nation's urban transportation systems.

An indication of the requirements of the SEPTA region is given by our six-year capital-improvement program. This program, which includes projects of the City of Philadelphia, totals $613 million. More than $200 million of this amount must come from the federal government.

This program represents a minimum appraisal of the needs of Southeastern Pennsylvania. It includes urgently needed new railroad commuter cars, streetcars and buses; improvements to railroad stations and subway stations, many of them well over a half-century in age; expanded station parking; railroad and rapid-transit extensions, including a line to the airport; an underground connection between center-city commuter railroad terminals; improved communications facilities, and other necessary projects.

Urban-transportation systems are the providers of needed mobility to countless people, chiefly workers, shoppers and students. To lower-income groups, the elderly and the handicapped, they are especially essential.

These systems, however, exert influence well beyond the bounds of transportation. There is scarcely a major urban problem that cannot be eased to some extent by a strong and healthy local-transport structure.

Good public transportation can link low-income jobseekers with employment opportunities, afford accessibility to new and better city housing, cut down air pollution, reduce traffic congestion, ease student tensions, preserve real-estate tax values, minimize the dislocated business and uprooted homes of expressway construction, maintain the vitality of central business districts and bolster the local economy in many ways.

Thus public transportation has a many-sided involvement in urban society and a potential for mitigating some of its most vexing problems. Because of this, and because local resources (which have been generously committed in this region) are not adequate to the task, we believe there is justification for urging the Congress to provide whatever share of the nation's resources is required to support and improve urban-transportation systems.

To us it is clear that this share must be sufficient to meet not only capital needs but operating costs as well. The latter have risen sharply, as wage rates and prices of materials have spiralled upward. There are big-city systems today on which labor costs alone exceed the entire farebox revenue; here in Philadelphia, on SEPTA's city transit division, the labor-cost proportion has reached 80 per cent.

To attempt to meet this situation by slashing service or boosting fares would defeat the very purposes for which public-transportation agencies exist. Such measures would drive away some passengers. They would inflict inconvenience and additional expense on others, many of whom are already hard-pressed to make ends meet. And a still more harmful imbalance would be created between travel by public transportation and by the less efficient and more costly-to-the-community method represented by the private automobile.

For example, the public-support program administered by SEPTA has resulted in a 42 per cent increase over the past ten years in ridership on the region's 13 rail-commuter lines. This is a most significant achievement, brought about during a period when the use of virtually all urban-transportation systems was declining. It would cost at least a half-billion dollars to build the necessary additional highways if these railroad commuters were to travel by automobile, an amount many times greater than the cost of the public-support program.

And so, gentlemen, the very preservation of the values of urban transit systems, to say nothing of the improvement of those systems, depends upon sources of support beyond that of the fare-box.

In a little over three weeks a new Department of Transportation will come into being in Pennsylvania combining, under a single administration, several state agencies now functioning in that field. This department, we are certain, will pursue a policy according full recognition to the needs of transit and commuter-railroad users. We believe that such a policy should make provision for some form of broad-based state-tax support for urban transport. This tax, among other things, would provide local matching funds for federal grants.

In summary I would urge the Task Force to consider the following specific points which we feel are vital to the long-range solution of the urban ground-transportation problem:

1. A substantially greater amount of federal money must be invested in mass transportation. While it is indeed impressive that President Nixon has proposed and the Congress is now considering a federal mass-transportation program providing $3.1 billion for the next five years, which is more than five times greater than the amount of federal spending for this purpose during the past six years, a larger commitment is needed. The major underlying problem we face is the great lack of capital investment over many years, which has not only reduced available operating equipment and reduced service and ridership but has caused the virtual disappearance of the important supporting manufacturing industries so necessary to developing new technology in mass transportation.

2. The amount of local matching funds needed to obtain federal funds should be lowered. Highways funds are available locally on the basis of a 10 per cent investment. There is no reason why mass-transportation funds should require a 33⅓ per cent, or even 50 per cent, local investment. If there is any justification for the expenditure of federal money for mass transportation, and no one denies that there is, then it should not be siphoned on an artifically restrictive basis which prevents its application where most needed.

3. In considering local funds needed to obtain federal monies for mass transportation, full credit should be given for the past investment which a community has made to keep its transportation system alive. The SEPTA region, comprising the City of Philadelphia and the counties of Bucks, Chester, Delaware and Montgomery, has invested hundreds of millions of dollars in capital projects and operating subsidies in order to maintain the network of mass-transportation facilities. This expenditure should be recognized for what it is; namely, an exercise of local responsibility which serves to reduce by vast amounts the outlay of federal money required to rescue mass-transportation systems.

Local communities should be given further credit for the amount of their past local investment in the matching of federal funds.

4. The artificial limitation of 12½ per cent on the amount that any state can receive from federal mass-transportation funds should be removed from Bill S. 3154. The states that have done the most to preserve mass transportation at their own expense, the states which have the greatest total need, such as Pennsylvania, are arbitrarily discriminated against by this artificial limitation. Federal funds should be placed where they are needed to deal with the problem for which they are required.

5. The federal government should continue to recognize and should formally acknowledge the importance of local control of mass-transportation programs. Urban mass-transportation is truly local in nature. While the problem in New York City is similar to the problem in Philadelphia and to the problem in Detroit, Chicago and Los Angeles, none of the urban transportation problems in each of these localities has any effect on any of the others.

The operation of urban transportation is essentially local in nature. This fact has been recognized in Pennsylvania in the establishment of SEPTA under the Metropolitan Transportation Authorities Act of 1963. It was more recently emphasized in the legislation just enacted creating the Pennsylvania Department of Transportation which explicitly provides for local participation in mass-transportation planning and programming.

SEPTA serves as a local regional agency responsive to the requirements of the local governments and people of the region and is further sensitive to local requirements through its cooperation with the Delaware Valley Regional Planning Commission, which is likewise a local regional agency responsive to local problems and needs.

6. The Congress should insist that all revenues derived from intersate activities relating to transportation should be made available in some measure to meet the transportation problems of the region from which the revenues are derived.

In this region the Delaware River Port Authority collects a special use tax in the form of bridge tolls across the Delaware River. It has recently committed these revenues to the construction of the $94-million Lindenwold Line in South Jersey, an important and valuable public-transportation project. These revenues and all similar interstate revenues should be made available on the same basis to enable the regional transportation agencies to deal with their pressing transportation problems.

This Committee, serving as a Task Force on Transportation, is an important acknowledgement of the responsibility of the federal government in this area. It must be recognized that the billions of dollars which are being spent to develop the highway system that the country needs must be met with comparable expenditures for mass transportation.

Public-transportation systems are the only way to deal with the high peak-hour traffic experienced in metropolitan areas. It is a simple fact that an urban expressway generates more traffic than it can carry. It is a corollary to this fact that unless efficient mass-transportation systems are developed in our urban areas, the vast expenditure of federal funds to build highways in these areas will be wasted.

We wish you gentlemen of the Republican Task Force every success in your important undertaking. Thank you.

[From the Philadelphia Evening Bulletin, June 8, 1970]

TRANSIT'S CAPTIVE RIDERS

The welcome emphasis now being placed upon urban public transportation is usually linked to the need for persuading travelers to use commuter trains and buses rather than their automobiles.

But there is a large segment of the urban population for which there is no such choice. This is the group, estimated in and around Philadelphia at more than 500,000 persons, who do not have the use of private automobiles to get to and from their jobs, schools or markets and are thus public transit's captive fares.

Philadelphia's transit engineer, Edison L. Tennyson, makes a needed and telling plea on behalf of these transit riders. And one of the points he makes is that these individuals suffer more as federal and state governments devote their efforts and funds to gigantic highway projects and slight or ignore completely the urgent need for improved public transportation.

Mr. Tennyson suggested to a Republican Party congressional task force on transportation that those who must depend upon public transportation to get from one place to another do not insist upon exotic, supersophisticated cars and other facilities. What the captive riders need, he explained, is reliable, clean and efficient transportation at a price they can afford.

Here, indeed, is a message for the Republican task force to carry back to Washington. The federal government should move at once to correct the present imbalance in its transportation efforts to provide immediate and adequate assistance to the Southeastern Pennsylvania Transportation Authority and to the Penn Central, Reading and other urban transit lines.

The Nixon Administration has proposed a program providing $3.1 billion nationwide for the next five years. A far larger amount of federal money is needed and the annual appropriations should not be dependent upon the moods of Congress.

SEPTA chairman James C. McConnon suggested to the transportation task force that the amount of local matching funds required to obtain federal grants be lowered and that credit be given for past investments made by communities to improve their transit system. These are valid requests. They deserve favorable action in Washington.

The best way to assure that the nation's urban transit systems receive the federal help they need and deserve is to eliminate the separate Highway Trust Fund, which provides assured financing of highway projects, and establish instead a single Transportation Trust Fund.

It is clear by now that the country, and especially its cities, can no longer afford to treat each kind of transportation separately—either in planning or in financing.

[From the Philadelphia Inquirer, June 14, 1970]

BOTH SIDES OF THE RIVER

Equitable allocation of all available revenue for mass transit purposes is essential to the development of a balanced and coordinated system of public transportation in the Philadelphia metropolitan area.

Chairman James C. McConnon of the Southeastern Pennsylvania Transportation Authority made some excellent suggestions in this regard in testimony at a hearing in Philadelphia conducted by the Republican Task Force on Transportation of the U.S. House of Representatives.

The SEPTA chief, warning that local governments are unable to provide all the financial assistance necessary to develop and maintain good public transit at reasonable fares, urged state and Federal officials to give greater recognition to transportation needs.

He noted, for example, that the Federal Government pays up to 90 percent of the cost of highway projects but only one-half to two-thirds of the cost of mass transit programs.

Especially significant, we believe, was Mr. McConnon's comment relative to the distribution of Delaware River bridge tolls for mass transit purposes.

"Congress should insist that all revenues derived from interstate activities relating to transportation be made available in some measure to meet the transportation problems of the region from which the revenues are derived," the SEPTA chairman said.

"In this region the Delaware River Port Authority collects a special use tax in the form of bridge tolls across the Delaware River.

"It has recently committed these revenues to the construction of $94,000,000 Lindenwold line in South Jersey, an important and valuable public transportation project.

"These revenues and all similar interstate revenues should be made available on the same basis to enable the regional transportation agencies to deal with their pressing transportation problems."

Mr. McConnon's point is well made.

Use of bridge tolls to finance the high-speed line in South Jersey is commendable, and there is no doubt that Philadelphia derives benefit from the project, but transit projects on the Pennsylvania side of the river also should share in bridge-toll revenues.

CAPTIVE NATIONS—THE CRY FOR FREEDOM IS BEING HEARD

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, last week we marked the 12th annual observance of Captive Nations Week. We recognized the tyranny and oppression of Communist rule in the once free countries of Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania. This observance showed our unified support for the peoples of these dominated lands, who are denied the freedom and basic human rights that we have cherished since our forefathers founded this Nation.

It is gravely important that we continue to demonstrate our solidarity with the 100 million oppressed people of East and Central Europe. Many thousands of American citizens today are refugees from Iron Curtain countries that are continuously purged by the dominant forces of Communist oppression. Many thousands of our people have brothers and sisters, mothers and fathers, and other loved ones still being forced to live under the tyrannical domination in the captive nations of Europe. The only hope for these people is America, the land of the free. This observance afforded us an opportunity to fulfill our moral obligation to the principles of freedom, equality, and equal opportunity, and to give support to those denied these principles. I am heartened that the plight of the captive nations is not forgotten in these times of glamour issues and instantaneous controversy.

There appears to be no end to the oppression in Eastern and Central Europe in sight. The Soviet Union seems willing to take any risk in order to preserve their domination of this bloc of countries. With increased Soviet buildup in the Middle East, apparently risking the outbreak of a major military conflict, it is

appropriate that all Americans show their deep commitment to the plight of the oppressed people of the captive nations dominated by the Soviet Union. This signal of support greatly heartens the people of these nations.

In the town of Ashland, N.H., a captive nations observance saluting America was held Sunday, July 19. A proclamation from the Governor of New Hampshire and messages from the New Hampshire congressional delegation were read. Mrs. Howard Ball of Claremont presided as mistress of ceremonies for the eighth annual observance. Observances of this type that were held throughout our country help to instill hope in the people of the captive nations.

Observances such as those of last week are necessary to show our support for the plight of the oppressed people of the captive nations. However, I feel that the House of Representatives should continue to review the plight of the captive nations. Therefore, I renew my suggestion to establish a Special Committee on the Captive Nations and insert my resolution, House Resolution 349, in the RECORD at this point:

H. RES. 349

Whereas, on the issue of colonialism, the blatant hypocrisy of imperialist Moscow has not been adequately exposed by us in the United Nations and elsewhere; and

Whereas Presidential proclamations designating Captive Nations Week summon the American people "to study the plight of the Soviet-dominated nations and to recommit themselves to the support of the just aspirations of the people of those captive nations"; and

Whereas, following the passage of the Captive Nations Week resolution in 1959 by the Congress of the United States and again during the annual observances of Captive Nations Week, Moscow has consistently displayed to the world its profound fear of growing free world knowledge of and interest in all of the captive nations, and particularly the occupied non-Russian colonies within the Soviet Union; and

Whereas the indispensable advancement of such basic knowledge and interest alone can serve to explode current myths on Soviet unity, Soviet national economy, and monolithic military prowess and openly to expose the depths of imperialist totalitarianism and economic colonialism throughout the Red Russian Empire, especially inside the so-called Union of Soviet Socialist Republics; and

Whereas, for example, it was not generally recognized, and thus not advantageously made use of, that in point of geography, history, and demography, the now famous U-2 plane flew mostly over captive non-Russian territories in the Soviet Union; and

Whereas in the fundamental conviction that the central issue of our times is imperialist totalitarian slavery versus democratic national freedom, we commence to win the psychopolitical cold war by assembling and forthrightly utilizing all the truths and facts pertaining to the enslaved condition of the peoples of Poland, Hungary, Lithuania, Ukraine, Czechoslovakia, Latvia, Estonia, White Ruthenia, Rumania, East Germany, Bulgaria, mainland China, Armenia, Azerbaijan, Georgia, North Korea, Albania, Idel-Ural, Tibet, Cossakia, Turkestan, North Vietnam, Cuba, and other subjugated nations; and

Whereas the enlightening forces generated by such knowledge and understanding of the fate of these occupied and captive non-Russian nations would also give encouragement to latent liberal elements in the Russian Soviet Federative Socialist Republic—which contains Russia itself—and would help bring to the oppressed Russian people their overdue independence from centuries-long authoritarian rule and tyranny; and

Whereas these weapons of truth, fact, and ideas would counter effectively and overwhelm and defeat Moscow's worldwide propaganda campaign in Asia, Africa, the Middle East, Latin America, and specifically among the newly independent and underdeveloped nations and states; and

Whereas it is incumbent upon us as free citizens to appreciatively recognize that the captive nations in the aggregate constitute not only a primary deterrent against a hot global war and further overt aggression by Moscow's totalitarian imperialism, but also a prime positive means for the advance of world freedom in a struggle which in totalistic form is psychopolitical; and

Whereas, in pursuit of a diplomacy of truth, we cannot for long avoid bringing into question Moscow's legalistic pretensions of "noninterference in the internal affairs of states" and other contrivances which are acutely subject to examination under the light of morally founded legal principles and political, economic, and historical evidence; and

Whereas, in the implementing spirit of our own congressional Captive Nations Week resolution and the Presidential proclamations, it is in our own strategic interest and that of the nontotalitarian free world to undertake a continuous and unremitting study of all the captive nations for the purpose of developing new approaches and fresh ideas for victory in the psychopolitical cold war: Now, therefore, be it

Resolved, That there is hereby established a committee which shall be known as the Special Committee on the Captive Nations. The committee shall be composed of ten Members of the House, of whom not more than six shall be members of the same political party, to be appointed by the Speaker of the House of Representatives.

SEC. 2. (a) Vacancies in the membership of the committee shall not affect the power of the remaining members to execute the functions of the committee, and shall be filled in the same manner as in the case of the original selection.

(b) The committee shall select a chairman and a vice chairman from among its members. In the absence of the chairman, the vice chairman shall act as chairman.

(c) A majority of the committee shall constitute a quorum except that a lesser number, to be fixed by the committee, shall constitute a quorum for the purpose of administering oaths and taking sworn testimony.

SEC. 3. (a) The committee shall conduct an inquiry into and a study of all the captive non-Russian nations, which includes those in the Soviet Union and Asia, and also of the Russian people, with particular reference to the moral and legal status of Red totalitarian control over them, facts concerning conditions existing in these nations, and means by which the United States can assist them by peaceful processes in their present plight and in their aspiration to regain their national and individual freedoms.

(b) The committee shall make such interim reports to the House of Representatives as it deems proper, and shall make its first comprehensive report of the results of its inquiry and study, together with its recommendations, not later than January 31, 1970.

SEC. 4. The committee, or any duly authorized subcommittee thereof, is authorized to sit and act at such places and times within or outside the United States to hold such hearings, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, and to take such testimony as it deems advisable.

SEC. 5. The committee may employ and fix the compensation of such experts, consultants, and other employees as it deems necessary in the performance of its duties.

HOUSING: NEW YORK OR SAIGON

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, it appears as if we are on the verge of starting another chapter in the sad history of our involvement in Vietnam.

As reported earlier this month, President Nixon, in a letter to President Thieu of South Vietnam, stated that the United States will finance 20,000 new houses each year for the next 5 years for the families of South Vietnamese soldiers. Already our military support of the Thieu regime has drained off countless sums of money as well as thousands of lives while our urgent domestic needs have been neglected.

Despite this, the President has apparently decided that we ought to expand our financial support to other areas of South Vietnam's society in order to prop up a regime that continues to imprison political opponents and balks at independently meeting such pressing social needs as land reform. This is bad enough but when at the same time we are failing to provide decent housing for our own citizens, the logic of our building public housing for the Vietnamese is perverse.

Our 1968 Housing and Development Act contained the recognition that every American family should have a decent home and envisions 26 million units during the following 10 years. But this program has never been fully funded and the houses are not being built because our resources are being spent on overheated military operations particularly in Vietnam. The result is that this country is in the midst of a housing crisis and New York City best illustrates this condition. With over 500,000 substandard housing units in this city, with an estimated 30,000 units being abandoned or demolished each year, Government sponsored public housing has provided the meager number of approximately 1,000 new units per year over the past several years. When compared to the city's estimated annual need of 35,000 to 40,000 new units each year, the proportions of our predicament become clear. Our housing needs can never be met without greater funding from the Federal Government and greater commitment from the administration. Yet this administration has indicated a willingness to finance annually 20 times more housing for Saigon than for New York City.

The result of such a twisted commitment is the continued decay of our urban centers and the continual disillusionment and bitterness of our citizens, of every social class and race, causing the rising tensions in our country. There are 135,000 low-income families in New York City alone on the waiting list for public housing. How long can we ask these peo-

ple to wait? Tens of thousands of our citizens, who could afford moderate- and middle-income housing at reasonable prices find that none is available. Only luxury housing starting at $100 per room is being built. Are the needs of the poor and the middle class to be ignored while our Government builds houses in Saigon? Would it not be better if the White House worried about housing here at home? Would it not be sensible for Secretary of Housing and Urban Development, George Romney, to support full funding for the 1968 Housing and Development Act?

FEDERAL RESERVE REPORT ON THE PROPOSED PENN CENTRAL LOAN GUARANTEE

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, slowly the facts about the ill-fated loan guarantee to the Penn Central Transportation Co. are coming to light.

Last night, I received—out of the deep recesses of the Federal bureaucracy—a copy of the long-hidden credit report prepared by the Federal Reserve on the Penn Central Transportation Co.

The reason this report has been kept from public view so long is now apparent. The report makes it plain that the administration had planned to proceed with the loan guarantee despite the most serious questions raised by the Federal Reserve. It is obvious that the administration was willing—prior to a last-hour reversal—to risk hundreds of millions of the taxpayers' money in a highly questionable scheme.

The administration was willing to toss several hundred million dollars into the wind despite the fact that the Federal Reserve made it plain that it was unwilling to certify Penn Central's ability to repay the loan.

The closing paragraph of the credit report of the Federal Reserve Bank of New York states:

> From the viewpoint of protection against possible financial loss, it is our view that the financial risk to the guaranteeing agency cannot be measured at this time in view of existing uncertainties in respect of the available pool of collateral, the nature and timing of legislation and the success of new management in its programs.

Earlier in the same report, the Federal Reserve stated:

> We are not sufficiently informed at this time as to the existence of adequate free collateral to assure that in the event of default by the Company the United States would be able to recover its investment from the sale or other disposition of the collateral within a reasonable time.

Even more important is the fact that the Federal Reserve Bank of New York found that the $200 million or the $225 million being sought under the guarantee was only the beginning of the welfare program for this giant corporation. Significantly, the Federal Reserve report states:

> The cash needs of the Company through the year 1971, could, in our estimation, reach or exceed one-half billion dollars. The proposed V-loan financing in the amount of $200 million maturing on October 31, 1970, of itself, would provide inadequate assistance to the Company and, in all likelihood, merely postpone the institution of proceedings under the Bankruptcy Act.

In short, Mr. Speaker, the Federal Reserve report confirms what many in the Congress suspected—the Administration was not risking just $200 million, but possibly up to a half-billion dollars of the taxpayers' money.

The Federal Reserve report is written in polite terms and in places, it obviously leans over backward to be friendly to its allies in the Administration and to give them every out possible. But in the end, the report makes it plain that the Government is embarking on a highly risky scheme without assurance that the taxpayers will be protected.

Mr. Speaker, it is startling that high officials of the administration would have, for a moment, considered making this loan guarantee in the face of the findings of the Federal Reserve. But this report was in the hands of administration officials at a time when Members of Congress were being lobbied by the administration to support the loan guarantee and to support other legislation providing more funds for the Penn Central Transportation Co. I was called by administration officials urging my support for the loan guarantee; yet, I was not informed that the administration was in the possession of such an adverse report from the Federal Reserve.

The Federal Reserve report on the credit worthiness of Penn Central was necessary under the Defense Production Act and it was flown to Washington by courier on the evening of June 17 and hand carried to officials in the administration. The implication throughout this period was that the administration had received a favorable report from the Federal Reserve and that there was some type of assurance that the Government would be protected if it went through with the guarantee. The Federal Reserve report which I am now making part of the public record makes it plain that no such assurance was contained in the credit findings.

It should be remembered that I, along with other Members of Congress, was informed on Friday morning, June 19—2 days after the Federal Reserve report had reached Washington—that the loan guarantee was to be made by the administration sometime that day. Before the day was out, this approval was withdrawn.

However, the question remains—How could the administration go this far down the road in a plan to throw hundreds of millions of dollars out the window without the slightest assurance of repayment? Who are the officials within the administration who looked at the Federal Reserve report and said, "The public be damned"? What prompted public officials to act in such a manner with public funds? Where are these officials now and what positions of responsibility are they carrying out?

The Federal Reserve report makes it obvious that the high officials for the administration were willing to go along with a plan which placed the Federal Government's rights alongside those of the last class of lenders—the unsecured lenders to Penn Central. The Government would have only had a second lien on the capital stock junior to the existing liens in favor of commercial banks. The Government was being asked to undertake an extraordinary step in the Penn Central case, and it seems that the administration should, at a minimum, have insisted on primary claim to the assets in event of default. All in all, it appears that the administration took a rather casual—if not callous—attitude about the taxpayers' funds.

Mr. Speaker, I am also greatly disturbed by the fact that the administration appeared on the one hand to bring the Congress into its confidence while at the same time withholding essential documents such as this Federal Reserve report. Such a procedure does not enhance the confidence of the Congress in the administration. If the administration wanted our cooperation in this loan guarantee, certainly it was incumbent on it to let us in on the credit findings of the Federal Reserve.

In one of the early reports on the loan guarantee—made at a time when the administration was seeking congressional approval—the Federal Reserve stated:

> The Company's cash needs for 1970 and 1971 to be met through borrowing are great. Such needs could reach or exceed, in our estimation, one half billion dollars. There is no assurance that more will not be needed in years subsequent to 1971. There is no likelihood of early repayment of outstanding or new advances. Indeed, there is no assurance of repayment of those advances over the long term unless there is a fundamental improvement in the operating experience of the Company, coupled with financial assistance in the amount of the estimated need of approximately one half billion dollars and a sufficient period of time in which to correct the underlying situation. Accordingly, given the existing circumstances as set forth in the original V-loan application and the proposed loan terms, we would not have recommended approval of the subject application on the basis of factors normally considered in appraising credit risks.
>
> In our view, further financial assistance to the Company in the limited amount of $225 million would have provided no significant relief to the Company. At best, it would have resulted in a brief delay in the instituting of proceedings under the Bankruptcy Act. The apparent inadequacy of the proposed financial aid to the Company under the original V-loan agreement presented the likelihood of substantial loss to the guaranteeing agency.

One of the most significant points brought out by the Federal Reserve report is the fact that the Federal Reserve did not have the time to carry out a real credit investigation. The Federal Reserve makes this very plain in the following quote:

> The Company is part of a complex holding company structure involving three tiers of holding companies. Many of the assets of the Company and of its affiliates appear to be encumbered by covenants and liens contained in a variety of complex bond indentures and other credit arrangements. We estimate that, to perform the kind of credit analysis that we have performed in the past with respect to prospective V-loan borrowers could take

several months. Clearly, it could not be performed in time for a V-loan to save the Company from bankruptcy proceedings, if the condition of the Company is as represented to us.

Mr. Speaker, there are many other quotes that could be lifted from the Federal Reserve document, but I think the entire report should be read by the Members of Congress. I place in the RECORD a copy of the reports on the Penn Central Transportation Co. as issued by the Federal Reserve Bank of New York and made available to the administration:

FEDERAL RESERVE BANK OF NEW YORK,
New York, N.Y., June 17, 1970.

Re F.R.B. of N.Y. Defense Production Loan No. 392.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM,
Washington, D.C.

Attention: Mr. E. Ralph Massey, Chief, Discount Operations Section.

GENTLEMEN: Reference is made to our letter of June 17, 1970 with which we forwarded copies of an application dated June 16, 1970 for the issuance to First National City Bank, New York, New York, on behalf of itself and a group of participating banks, of a V-Loan Guarantee Agreement pursuant to Regulation V, to cover 100% of a revolving credit providing for advances, under certain conditions, up to $50 million to be made to Penn Central Transportation Company, Philadelphia, Pennsylvania.

We enclose two copies of our summary report dated June 17, 1970 in respect of the application for guarantee of this interim V-loan credit.

Very truly yours,
THOMAS M. TIMLEN, Jr.,
Vice President.

SUMMARY REPORT ON APPLICATION FOR V-LOAN GUARANTEE OF INTERIM FINANCING OF PENN CENTRAL TRANSPORTATION CO. PENDING ISSUANCE OF V-LOAN GUARANTEE IN THE AMOUNT OF $200,000,000 TO THE PENN CENTRAL TRANSPORTATION COMPANY

On June 2, 1970 First National City Bank, New York, New York (the "Agent Bank"), on behalf of itself and a group of participating banks, made application for the issuance of a V-loan guarantee agreement pursuant to Regulation V of the Board of Governors of the Federal Reserve System to cover a proposed loan to be made to Penn Central Transportation Company, Philadelphia, Pennsylvania (the "Company"), a wholly-owned subsidiary of the Penn Central Company, a publicly-owned company. Subsequent negotiations developed a revised proposal for a 100% V-loan guarantee of a loan in the amount of $200,000,000 to mature October 31, 1970 and to be secured, in part, by (1) the pledge of various assets of the Company, (2) the assignment of the Company's accounts receivable, and (3) a second lien on the capital stock of a subsidary of the Company.

This Bank, in its "Summary Report on Application for V-Loan Guarantee in Connection with Loan to Penn Central Transportation Company", dated June 17, 1970, commented on the proposed V-loan as follows:

"The revised terms of the V-loan were developed in the expectation that the outlook for timely legislation affording broad assistance to the railroad industry would be favorable and in the expectation that this loan and other bank loans to the Company would be extended and additional guaranteed loans would be available as indicated above. Based upon the revised terms of the proposal, the expectation of timely favorable Congressional action on the proposed legislation, the recent and proposed changes in senior management of the Company designed to improve its performance and prospects, the V-loan which has been applied for could provide time for a coordinated effort by the Government, the participating banks, and the Company to work out plans designed to restore the Company to health and to enable it to repay the indebtedness at some time in the future.

"From the viewpoint of protection against possible financial loss, it is our view that the financial risk to the guaranteeing agency cannot be measured at this time in view of existing uncertainties in respect of the available pool of collateral, the nature and timing of legislation and the success of new management in its program."

On June 17, 1970, the Agent Bank, on behalf of itself and a group of participating banks, made application for the issuance of a V-loan guarantee agreement pursuant to Regulation V to cover 100% of a proposed loan up to the aggregate amount of $50,000,000 to be made to the Company, to be payable on demand but not before June 29, 1970 and to be secured by specified assets of the Company. The purpose of the proposed $50,000,000 loan is to provide funds to the Company on a short-term basis pending the preparation of the V-loan agreement and other documents required in connection with the proposed $200,000,000 loan. The $50,000,000 loan would be repaid from the proceeds of the $200,000,000 loan. Accordingly, a guarantee on the $50,000,000 loan should be issued only if it is determined that the guarantee will be issued with respect to the $200,000,000 loan.

In view of the information available as to the current cash position of the Company, the proposed $50,000,000 loan appears to be a necessary intermediate step to achieve the objectives contemplated in connection with the proposed $200,000,000 loan and other substantial long-term financing, with Government guarantees, under proposed legislation which, we are informed, is expected to be enacted. From this standpoint, the comments of this Bank with respect to the $200,000,000 loan appears applicable to the $50,000,000 loan.

FEDERAL RESERVE BANK OF NEW YORK,
New York, N.Y., June 17, 1970.

Re: F.R.B. of N.Y. Defense Production Loan No. 391

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM,
Washington, D.C.

Attention: Mr. E. Ralph Massey, Chief, Discount Operations Section.

GENTLEMEN: Reference is made to our letter dated June 2, 1970 with which we transmitted two copies of an application for the issuance to First National City Bank, New York, New York, on behalf of itself and a group of participating banks in process of being formed, of a V-Loan Guarantee Agreement pursuant to Regulation V, to cover 100% of a proposed revolving credit and term loan in the aggregate amount of $225 million to be made available to Penn Central Transportation Company, Philadelphia, Pennsylvania.

We now enclose two copies of our report dated June 17, 1970 entitled Summary Report on Application for V-Loan Guarantee in Connection with Loan to Penn Central Transportation Company, which contains a summarization of the principal terms and conditions of the proposed financing arrangement after giving effect to modifications in a number of substantive respects.

Very truly yours,
THOMAS M. TIMLEN, Jr.,
Vice President.

SUMMARY REPORT ON APPLICATION FOR V-LOAN GUARANTEE IN CONNECTION WITH LOAN TO PENN CENTRAL TRANSPORTATION CO.

On June 2, 1970, First National City Bank, New York, New York (the "Agent Bank"), on behalf of itself and a group of participating banks in process of being formed, submitted to the Federal Reserve Bank of New York an application for the issuance of a V-loan guarantee agreement pursuant to Regulation V of the Board of Governors of the Federal Reserve System, to cover 100% of a proposed revolving credit and term loan in the aggregate amount of $225 million to be made to Penn Central Transportation Company, Philadelphia, Pennsylvania, (the "Company") a wholly-owned subsidiary of the Penn Central Company, a publicly-owned company. In meetings with representatives of counsel for the Company and bank lenders to the Company, it was represented that (1) absent an ability to further borrow money the Company would be unable to meet its current obligations in the early part of the month of June and would be forced into reorganization proceedings under section 77 of the Bankruptcy Act, and (2) existing bank creditors of the Company were unwilling to make further loans to the Company without the protection afforded by a 100% guarantee by the Government.

In subsequent negotiations between the Agent Bank, other major existing bank creditors of the Company, representatives of the Government, and this Bank, attention was focused on a proposal for a 100% V-loan guarantee of a loan in the amount of $200 million of various assets of the Company, (2) the assignment of the Company accounts receivable, and (3) a second lien on the capital stock of a subsidiary of the Company. The terms of the proposed loan were developed in the light of expectations of the enactment of Federal legislation that would result in additional substantial funds being made available to the Company for extended periods with Government guarantees and that the maturities of the proposed loan and of other indebtedness of the Company to commercial banks would be extended for comparable periods. The proposed V-loan would thus serve as interim financing pending the arranging of more substantial assistance for longer periods that would permit the development of plans designed to produce a viable Company at some future time.

This summary report discusses the financial position of the Company, reviews briefly the original V-loan application, and comments on the proposed V-loan that has been developed as a result of the negotiations between the Agent Bank, other major existing bank creditors of the Company, representatives of the Government, and this Bank.

RECENT EVENTS LEADING TO PRESENT FINANCIAL CRISIS

On April 21, 1970, Penn Central Company announced a first quarter loss for 1970 of $62.7 million, sharply greater than the $12.8 million loss in the corresponding 1969 period. Most of the loss in the first quarter was attributed to railroad operations. Following shortly after the disappointing earnings reported for the calendar year 1969, the April 21, 1970 announcement impaired the ability of Penn Central Transportation Company to roll over maturing issues of its commercial paper, close to $200 million of which was outstanding on the date of the announcement of the first quarter loss. Between that date and May 22, 1970, maturities and payments of commercial paper exceeded sales of commercial paper by $78 million. Back up lines of credit provided by banks were utilized to cover maturing commercial paper; those lines have been exhausted. Additional loans to cover subsequent maturities of commerlial paper—$25 million prior to June 30 and the balance of $75 million prior to December 16, 1970—are not available in the ordinary course.

Pennsylvania Company (Pennco), a wholly-owned subsidiary of the Company, had scheduled a public issue of $100 million of 25-year debentures on June 2, 1970. The proceeds from the sale were to be used to

repay a $50 million loan from a group of banks (the Chemical Bank loan) due June 11, 1970, made in anticipation of the sale of the debentures, and the balance was to be made available to the Company. On May 29, 1970, the $100 million debenture issue of Pennco was postponed indefinitely because of inability to market the issue.

SUMMARY OF BASIC PROBLEMS OF PENN CENTRAL TRANSPORTATION CO.

We quote from the representations of the prospective V-loan borrower submitted in support of the application for loan guarantee:

"Penn Central Transportation Company, like a number of other railroads, is in grave economic difficulty. The Railroad's financial condition is accentuated by the relatively large part of operations in passenger service. Penn Central, as the largest railroad in the East, experienced a very difficult two years in 1968 and 1969. In 1969 the loss from rail operations amounted to $220 million, following a loss of $140 milion in 1968. Income of $137 million in 1969 and $116 million in 1968 derived from real estate and subsidiary company operations was used to subsidize the railroad. During the first quarter of 1970 the unfavorable trend in operating results accelerated. Loss from rail operations amounted to $100 million. Thus, in two and one-quarter years the Railroad lost $459 million from rail operations.

"Consolidated ordinary earnings of Penn Central Company amounted to a loss of $22.1 million in 1969 compared with a profit of $68.3 million in 1968. The reduction in earnings for the year was attributable primarily to the deficit of the Railroad. The principal factor which depressed Railroad Earnings in 1969, and in recent years has resulted in a loss from rail operation, is the impact of higher costs that was not covered by freight rate increases. In 1969, the Railroad's wage level increased 7%, or by $74 million. However, it was not until November 18, 1969 that the Railroad obtained a 6% increase in freight rates. As a result additional revenues fell far short of absorbing increases in operating costs. The same lag is taking place in 1970."

PRESENT BANK CREDITORS AND HOLDERS OF COMMERCIAL PAPER

There follows a summary of the major groupings of bank creditors, which in total number approximately 70 institutions.

Penn Central Transportation Co., debtor

1. $300 million secured revolving credit and term loan—First National City Bank, New York, New York, as the lead bank, and 51 other banks, under a credit agreement dated April 1, 1969 which provides for a revolving credit of $300 million available at the prime rate until January 1, 1971, on which date outstanding loans are convertible into a term loan repayable in annual installments from January 1, 1972 through January 1, 1976. As security, the borrower pledged all the stock of its wholly-owned subsidiary, Pennco. Pennco operates as an investment company, with its principal interests in companies not directly related to the railroad operations of the Penn Central System. Pennco's principal investments include holdings in Norfolk and Western Railway Company and other railroads, all of the common stock of Buckeye Pipe Line Company and controlling interests in two real estate development companies, Great Southwest Corporation and Arvida Corporation.

2. $50 million unsecured revolving credit—First National City Bank as the lead bank, and eleven other banks, under a Eurodollar Revolving Credit Agreement dated November 14, 1968, with a maturity of October 31, 1973.

3. $30 million unpaid balance of unsecured loan made by First National City Bank and another bank under a letter agreement dated May 6, 1965, with a maturity of January 31, 1971.

4. $12.5 million in unsecured loans made by Manufacturers Hanover Trust Company, New York, New York, and Cleveland Trust Company, Cleveland, Ohio.

5. $46.5 milion in unsecured loans made by a total of 26 banks under lines of credit arranged by the Company with the individual banks as support to the issuance of commercial paper. Maturities are understood to range from advances payable on demand to advances payable in ninety days.

6. $108.3 million in commercial paper outstanding as of June 2, 1970, held by a large number of banks (in some cases for the account of customers) and other investors, including mutual funds, insurance companies, industrial companies and educational institutions, and maturing at various dates through December 16, 1970.

Pennsylvania Co., debtor

1. $50 million revolving credit provided in February 1970 by Chemical Bank, New York, New York, and nine other banks, in anticipation of, and to be repaid from, the proceeds of the $100 million debenture issue, the sale of which was postponed indefinitely on May 28, 1970. These outstanding loans matured on June 11, 1970 but their maturities were extended on that date to June 11, 1972. Proceeds of these loans were made available to the Transportation Company.

2. $2.5 million term loan due February 1, 1971 made by Chemical Bank and Morgan Guaranty Trust Company of New York.

Penn Central International (N.V.), debtor

1. $59.2 million in loans denominated in Swiss francs obtained from European banks and other lenders, guaranteed by Penn Central Company, and maturing at various dates from February through April 1971.

WEAKNESSES IN PENN CENTRAL DEBT STRUCTURE

The observations in this report concerning the financial position of the Company relate solely to its obligations on commercial paper and under the financing arrangements with banks described above. No analysis or appraisal has been attempted because of time limitations of bonded indebtednesses, obligations under conditional sales agreements and equipment leases, borrowings by real estate development subsidiaries, etc.

The imminent likelihood of acute financial involvement is based upon the inability of the Company to repay its commercial paper maturing during the month of June and subsequently, when its cash resources will be exhausted. The non-payment when due of any obligation of the Company for borrowed money constitutes an event of default under the $300 million credit, and presumably under other credits described or referred to above.

In view of the developing situation, the two major New York City banks which have been lead banks in the financing arrangements established for the Company and its subsidiary, Pennco, proposed to take steps forthwith to better secure the positions of the bank creditors they represented.

PROPOSED FINANCING UNDER ORIGINAL V-LOAN APPLICATION TERMS

In brief, the originally proposed financing in an aggregate amount of $225 million, in part a revolving credit and in part a term loan would have been secured by pledge of the Company's accounts receivable and unbilled revenue, and had an interest rate the same as the prime rate of the Agent Bank (presently 8% per annum), a commitment fee of ½ of 1% per annum, and a maturity of December 31, 1976. The loan proceeds were to be used in meeting the Company's estimated cash requirements, totaling $263 million, for the period from June 1 through December 31, 1970, to cover operating losses, capital expenditures for the railroad, commercial paper maturities and other debt retirement, and miscellaneous cash requirements.

PROSPECTS FOR REPAYMENT

The $225 million financing as originally proposed was represented in the application for loan guarantee as "deemed sufficient on basis of present forecast *for balance of 1970*" (italics supplied), a statement qualified by the Agent Bank's letter of transmittal dated June 2, 1970 questioning whether the Company would be able to borrow any of the additional amount of $25 million to $38 million needed to meet its total estimated needs of $263 million for 1970. The 1971 financial forecast reflects an estimate that $126 million in financing, other than for the acquisition of equipment, would be required to meet the cash needs of the railroad after giving effect to $53.3 million in funds received from the sale of property and salvage and $22 million in advances from subsidiaries.

Representations, related to repayment of the financing, were made with respect to major areas of potential improvement in rail operating results in 1970 and 1971. Stated briefly, these areas are:

1. Two 6% freight rate increases before the end of 1970.

2. Assumption by State and local governments of the financial responsibility for operating commuter facilities.

3. The discontinuance or cutback of long-haul passenger service.

4. Economies effected through reductions in work force.

5. Savings to be realized out of the 1968 merger of the Pennsylvania Railroad and the New York Central Railroad.

We note that the three areas first mentioned, which may hold the greatest prospect for significant improvement in railroad operating results, are in large degree outside the Company's control.

COMMENT

The Company's cash needs for 1970 and 1971 to be met through borrowing are great. Such needs could reach or exceed in our estimation, one half billion dollars. There is no assurance that more will not be needed in years subsequent to 1971. There is no likelihood of early repayment of outstanding or new advances. Indeed, there is no assurance of repayment of those advances over the long term unless there is a fundamental improvement in the operating experience of the Company, coupled with financial assistance in the amount of the estimated need of approximately one half billion dollars and a sufficient period of time in which to correct the underlying situation. Accordingly, given the existing circumstances as set forth in the original V-loan application and the proposed loan terms, we would not have recommended approval of the subject application on the basis of factors normally considered in appraising credit risks.

In our view, further financial assistance to the Company in the limited amount of $225 million would have provided no significant relief to the Company. At best, it would have resulted in a brief delay in the instituting of proceedings under the Bankruptcy Act. The apparent inadequacy of the proposed financial aid to the Company under the original V-loan aggreement presented the likelihood of substantial loss to the guaranteeing agency.

REVISED V-LOAN PROPOSAL

Following submission of the original V-loan proposal intensive negotiations on a virtually continuous basis have been conducted between representatives of the Government, the Agent Bank, and this Bank, together with their respective counsel, to develop terms and conditions for a V-loan agreement acceptable to all parties. In a departure from usual procedures, representatives of the Government participated directly in the negotiations as to the terms of

the proposed V-loan agreement, indicating the readiness of the Department of Defense to guarantee the proposed V-loan if terms satisfactory to the representatives of the Government could be developed. Basic to the development of the terms of the proposed V-loan were the understandings reached as to the need for an extension beyond October 31, 1970 of the maturity of that loan and the extension of the maturities of outstanding bank loans to the Company, as well as the expectation of the enactment of Federal legislation that would make available substantial, additional financial assistance to the Company through a program of Government guarantees.

TERMS

The meetings between the representatives of the Government, the Agent Bank, and some of the major bank creditors and this Bank developed a revised proposal, the principal terms of which are as follows:

Amount of V-loan: $200 million (Revolving Credit).

Guaranteed Percentage: 100%.

Maturity: October 31, 1970, with possible extensions under comparable Government guarantees, until June 1972.

Interest Rate: Prime rate in effect from time to time at the Agent Bank (presently 8%).

Guarantee Fee: The guarantee fee to be paid by the Company (at present, this would be 3%).

Commitment Fee: ½ of 1%.

Collateral: (1) Pledge of various assets owned by the borrower as may be determined to be readily available for pledge and as having material collateral value. (2) Assignment of borrower's accounts receivable. (3) Second lien on the capital stock of Pennsylvania Company (junior to the existing lien in favor of the lenders under the $300 million credit).

The security interest in the foregoing would apply not only to the V-loan but also to all subsequent direct or indirect Government financing to an aggregate of $500 million including the V-loan.

Guarantee by Penn Central Company: There will be a guarantee by the Penn Central Company, owner of 100% of the outstanding capital stock of the borrower, with the guarantee to be collateralized after the $59.2 million Swiss franc loan is paid. All presently existing unsecured bank loans will be similarly guaranteed, and the loans under the $300 million secured credit will also be similarly guaranteed for any deficiency after collection on their collateral.

Standby Agreement: All present bank creditors of the borrower and its subsidiary, Pennco, will agree to standby so long as the V-loan (and any other Government financing) is outstanding and unmatured but in any event for a maximum of two years. The standby would be terminated in the event of insolvency and/or bankruptcy.

Participation in V-Loan Collateral: (1) All unsecured bank lenders (banks providing the loans and credits described in numbered paragraphs 2, 3, 4, and 5 on Page 5 of this report) will share pro-rata, with the bank lenders participating in the V-loan in the collateral enumerated under the caption "Collateral" above. (2) Banks participating in the $300 million credit will also have a lien interest on the assets primarily securing the V-loan and unsecured bank creditors, but only to the extent repayment of the $300 million credit is not obtained from its primary collateral security, i.e., the stock of the Pennsylvania Company.

Other Terms and Conditions: As may be agreed upon by the financing institutions, the borrower, the Guarantor and this Bank, including provisions to assure the normal flow of dividends from Pennco to the borrower (which would, however, also prevent undue transfers of assets from Pennco, and the upward flow of proceeds from the sale of assets by Pennco, to the borrower).

COMMENTS

Penn Central Transportation Company, the largest railroad in the Northeast, has experienced severe operating difficulties since the merger of its two predecessor railroad companies. In the two and one-quarter years to March 31, 1970, losses from rail operations totaled $460 million (on the basis of accounting required by the Interstate Commerce Commission) and although operating income from other than rail operations has reduced such losses, continuing deficits have contributed to the need for financing during 1968 and 1969 aggregating $933 million. The Company cannot raise additional funds in the financial markets in view of the magnitude of its debt obligations relative to the circumstances in which it finds itself at present.

The problems of the Company are deep-rooted and not susceptible of simple and prompt cure. There have been doubts that the Company's management (at least prior to the change in chief executive officers on June 12, 1970) can turn the Company around in its railroad operations so as to substantially reduce the magnitude of its present losses. Its financial condition at present is precarious and proceedings under the Bankruptcy Act could result from the exhaustion of cash resources and borrowing power. In consideration of the extension of further credit, present bank creditors have demanded a 100% guaranty by a Government agency on new advances. In addition, to further secure existing outstanding loans, bank creditors have been demanding additional, collateral in the nature of liens on what perhaps are the most valuable assets from a collateral standpoint.

The Company is part of a complex holding company structure involving three tiers of holding companies. Many of the assets of the Company and of its affiliates appear to be encumbered by covenants and liens contained in a variety of complex bond indentures and other credit arrangements. We estimate that, to perform the kind of credit analysis that we have performed in the past with respect to prospective V-loan borrowers could take several months. Clearly, it could not be performed in time for a V-loan to save the Company from bankruptcy proceedings, if the condition of the Company is as represented to us. We are not sufficiently informed at this time as to the existence of adequate free collateral to assure that in the event of default by the Company the United States would be able to recover its investment from the sale or other disposition of the collateral within a reasonable time. The Agent Bank and this Bank are in the process of appraising the value and availability of a pool of assets of the Company which, on the basis of values reflected on the books of the issuer only, totals in excess of $1.2 billion. The degree of protection such pool of assets, serving as collateral to the proposed V-loan, would afford the guaranteeing agency cannot be determined accurately pending further legal and credit analysis.

As stated above, the cash needs of the Company through the year 1971, could, in our estimation, reach or exceed one-half billion dollars. The proposed V-loan financing in the amount of $200 million maturing on October 31, 1970, of itself, would provide inadequate assistance to the Company and, in all likelihood, merely postpone the institution of proceedings under the Bankruptcy Act. However, in the course of their negotiations with the Agent and other participating Banks, the representatives of the Government expressed confidence in the outlook for the passage of legislation to assist in preserving the country's railroad systems through the establishment of a Government loan-guarantee program. If, as contemplated by the representatives of the Government, such legislation is enacted by the Congress and financial assistance by the Government to the Company is made available for extended periods and in the suggested amount of $500 million, it would seem that the management could have adequate time and funds to effect a major improvement in the Company's situation.

The management of the Company has recently been changed by the replacement of its chief executive officer. In a recent statement the new chief executive described his plans to recruit a new management team, with particular reference to obtaining a proven chief operations officer and a proven chief financial officer. He also discussed his plans for a reduction of 10 per cent in the Company's work force over the next several months, a significant reduction in corporate overhead, and the elimination of unprofitable long-haul passenger service. The prompt accomplishment of these objectives would significantly improve the Company's position.

The revised terms of the V-loan were developed in the expectation that the outlook for timely legislation affording broad assistance to the railroad industry would be favorable and in the expectation that this loan and other bank loans to the Company would be extended and additional guaranteed loans would be available as indicated above. Based upon the revised terms of the proposal, the expectation of timely favorable Congressional action on the proposed legislation, the recent and proposed changes in senior management of the Company designed to improve its performance and prospects, the V-loan which has been applied for could provide time for a coordinated effort by the Government, the participating banks, and the Company to work out plans designed to restore the Company to health and to enable it to repay the indebtedness at some time in the future.

From the viewpoint of protection against possible financial loss, it is our view that the financial risk to the guaranteeing agency cannot be measured at this time in view of existing uncertainties in respect of the available pool of collateral, the nature and timing of legislation and the success of new management in its program.

HE GETS BY WITH A LITTLE HELP FROM HIS FRIEND

(Mr. HANNA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANNA. Mr. Speaker, the Internal Revenue Service has just issued an important ruling. Ordinarily, the public reacts with favor when anyone is successful in eking a favorable determination out of the parsimonious tax bureaucracy. In this case, however, some special facts have come to light which should cause a different reaction.

Over two decades ago Roy Crocker, founder and president of Lincoln Savings & Loan Association of Los Angeles, headed the campaign of an aspiring politician. As a consequence of Mr. Crocker's ambitious activities that politician was elected to the Congress. In the two decades that followed, Mr. Crocker generously supported this rising political star. He supported the candidate in successful bids for the U.S. Senate, the Vice Presidency, and the Presidency of the United States.

In light of Mr. Crocker's erstwhile support for Richard Nixon, I suppose it

should come as no surprise that Mr. Crocker has been made the benefactor of the largess of Presidential power. No one would question the President inviting Mr. Crocker to the White House for dinner. Probably no one would seriously challenge the wisdom of the Presidential decision to reward Mr. Crocker's political steadfastness with an appointment to a high executive or ambassadorial post. However, it would appear that either Mr. Nixon was not content to bestow such humble rewards or that Mr. Crocker felt his long service entitled him to special sinecure. Whichever was the case, Mr. Crocker and the savings and loan which he heads has been rewarded with what must be one of the most extraordinary rulings ever issued by the Internal Revenue Service. President Nixon's longtime fundraiser has been given a special lift in his efforts to raise funds for his business, the Lincoln Savings & Loan Association. Mr. Crocker's savings and loan association has been given a private revenue ruling which permits it to establish a program of tax deferred savings. The association is the only financial institution in the United States with authority to engage in such activity. A number of other savings and loan associations and commercial banks have sought similar IRS sanction. To the surprise of no one their requests have been denied.

The importance of the preferential revenue ruling given President Nixon's old crony is that it permits Mr. Crocker to outbid competitors in the savings market during a period of unprecedented money tightness. The ruling is worth millions to the association Mr. Crocker owns and controls.

The manner in which the ruling was given is particularly revealing. Although it has far-reaching effects on Federal tax policy, the Assistant Secretary of the Treasury for Tax Policy was not consulted before it was handed down. While the ruling has important implications in terms of the Federal Reserve Board's regulation of rates paid by depository intermediaries on savings accounts, there is no record that the Federal Reserve Board was consulted prior to the ruling being issued.

Loyalty is a personal quality which we much respect in our society. However, I fear the President's sense of proportion is—to understate the point—somewhat distorted. His action in bestowing this immense advantage on a political pal is a blatant and arrogant exercise of Presidential power. The act of the President makes clear the high moral tone the President has sought to establish is for public consumption, not personal application.

TENTH ANNIVERSARY OF THE NAVY LAUNCHING OF POLARIS A–1 FLEET BALLISTIC MISSILE FROM THE NUCLEAR SUBMARINE U.S.S. "GEORGE WASHINGTON"

(Mr. ANDERSON of Tennessee asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ANDERSON of Tennessee. Mr. Speaker, I would like to call attention to an event that marks a significant anniversary for the American people and, indeed, all the people of the free world. Ten years ago this past Monday, July 20, this country crowned a remarkable technical and industrial achievement when the U.S. Navy launched a Polaris A–1 fleet ballistic missile from the nuclear submarine U.S.S. *George Washington* as it cruised, submerged, off the coast of Florida near Cape Kennedy.

This event was a milestone in U.S. technology, where literally millions of Americans combined their talents and dedication to take the fleet ballistic missile and the submarine which carries it from concept to reality in just 4 years—5 years ahead of the original target date.

But even more significant about that launch of Polaris on July 20, 1960, I believe, was our reaffirmation of tenets upon which this Nation was founded. Polaris was not developed to wage war—it was developed to prevent war. Polaris became the cornerstone of our policy of deterrence—we made it clear that this country would never initiate nuclear war; but we also intended to maintain a force which could rain swift and total devastation on any nation which launched a nuclear attack upon the United States. Thus, Polaris along with this Nation's mix of strategic deterrent weapons has a purpose unique in the history of warfare: to prevent nuclear war.

How successful has Polaris and our policy of deterrence been during the past decade? Our Nation has not been at peace much of that time, but I am confident that the specter of nuclear holocaust is more remote today than it was 10 years ago. The reliability of the FBM weapons system has remained unchallenged. A fleet of 41 nuclear submarines, each capable of carrying 16 missiles, has been built, commissioned and sent on peacekeeping patrols. The more advanced A–2 and A–3 Polaris missiles have replaced the A–1. And Poseidon, a completely new fleet ballistic missile, developed by the same Navy-civilian team which produced Polaris is about to become operational.

We cannot mark this day without sharing a deep debt of gratitude to the thousands of American Navy men who have given a remarkable account of themselves during the past 10 years. When you consider the fact that Polaris sailors have made almost 800 deterrent patrols, which adds up to more than 130 years of submerged time, the enormity of their job becomes evident. Their dedication and sacrifice has made a valid and lasting contribution to this Nation's search for peace.

TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. The United States is the world's largest producer of honey. In 1968 the United States produced 200,000,000 pounds of honey. This was 2½ times more than the second leading producer, Mexico.

AMERICAN CASUALTIES DROP

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. GERALD R. FORD. Mr. Speaker, even a single casualty would be one too many, if this were an ideal world we live in. But the heartening downward trend in the number of Americans killed and wounded in Vietnam is something in which we can all rejoice.

Weekly U.S. casualty reports this month continue to reflect a downward trend, evidence that the destruction of enemy supplies during the Cambodia operation and the success of the Vietnamization program have lived up to the President's expectations.

Statistics show that from the first half of 1968 to the first half of this year, American deaths in Vietnam have been reduced by two-thirds, 66.7 percent. The number of Americans wounded has likewise been reduced by a similar margin, 66.9 percent. Deaths for the first half of 1969 contrasted with the first half of 1968 show a reduction of 38.8 percent; and from 1969 to 1970, by 49.7 percent.

The number of Americans wounded the first half of 1969 as contrasted to 1968 shows a reduction of 25.8 percent; from 1969 to 1970, 55.4 percent. Approximately one-half of those classified as "wounded" are not hospitalized and remain in the field for treatment. The figures for the first two quarters of each year are used because 1970 is only half over.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. PELLY, for the week of July 27–31, on account of official business.

Mr. RHODES (at the request of Mr. GERALD R. FORD), for today and the balance of the week, on account of illness in the family.

Mr. HUNT (at the request of Mr. GERALD R. FORD), until 4 p.m. today, on account of a personal matter.

Mr. CUNNINGHAM, on account of personal affairs.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

The following Members (at the request of Mr. FOREMAN), to revise and extend their remarks, and to include extraneous matter to:

Mr. COUGHLIN, today, for 5 minutes.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MADDEN, and to include extraneous material.

Mr. DON H. CLAUSEN to revise and extend his remarks during the consideration of the Interior Appropriations Conference report.

(The following Members (at the re-

quest of Mr. FOREMAN) and to include extraneous matter:)

Mr. STEIGER of Wisconsin.
Mr. DON H. CLAUSEN.
Mr. GUDE.
Mr. DUNCAN in two instances.
Mr. ROBISON in two instances.
Mr. BROYHILL of Virginia.
Mr. BUSH.
Mr. SCHERLE.
Mr. COWGER.
Mr. ESHLEMAN.
Mr. QUILLEN in four instances.
Mr. WYMAN in two instances.
Mr. BEALL of Maryland.
Mr. WOLD in two instances.
Mr. BOB WILSON in six instances.
Mr. LUJAN.
Mr. BELL of California.
Mr. BRAY in two instances.
Mr. ZWACH in two instances.
Mr. COUGHLIN.
Mr. FOREMAN in two instances.
Mr. WYDLER.
Mr. FISH.
Mr. BYRNES of Wisconsin.

(The following Members (at the request of Mr. DANIEL of Virginia) and to include extraneous matter:)

Mr. JONES of Tennessee.
Mr. WALDIE.
Mr. FEIGHAN in three instances.
Mr. LEGGETT in two instances.
Mr. WILLIAM D. FORD.
Mr. PRYOR of Arkansas in two instances.
Mr. TUNNEY in two instances.
Mr. ANDERSON of California in two instances.
Mr. BOGGS in two instances.
Mrs. CHISHOLM.
Mr. GONZALEZ in two instances.
Mr. EVINS of Tennessee in two instances.
Mr. HOWARD.
Mr. CHARLES H. WILSON.
Mr. HANNA.
Mr. YATES.
Mr. BINGHAM.
Mr. ADAMS.
Mr. O'NEILL of Massachusetts in six instances.
Mr. MATSUNAGA in two instances.
Mr. BLATNIK.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 3192. An act to designate the navigation lock on the Sacramento deepwater ship channel in the State of California as the William G. Stone navigation lock; to the Committee on Public Works.

SENATE ENROLLED BILLS SIGNED

The Speaker announced his signature to enrolled bills of the Senate of the following titles:

S. 3889. An act to amend section 14(b) of the Federal Reserve Act, as amended, to extend for one year the authority of Federal Reserve Banks to purchase United States obligations directly from the Treasury; and

S. 3978. An act to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on July 21, 1970 present to the President, for his approval, bills of the House of the following titles:

H.R. 14452. An act to provide for the designation of special policemen at the Government Printing Office, and for other purposes; and

H.R. 14453. An act to authorize the Public Printer to grant time off as compensation for overtime worked by certain employees of the Government Printing Office, and for other purposes.

ADJOURNMENT UNTIL 11 O'CLOCK A.M. TOMORROW

Mr. DANIEL of Virginia. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 38 minutes p.m.), under its previous order, the House adjourned until tomorrow, Thursday, July 23, 1970, at 11 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2236. A letter from the Director of Civil Defense, Department of the Army, transmitting a report on property acquisitions of emergency supplies and equipment for the quarter ended June 30, 1970, pursuant to subsection 201(h) of the Federal Civil Defense Act of 1950, as amended; to the Committee on Armed Services.

2237. A letter from the Assistant Administrator, General Services Administration, transmitting a draft of proposed legislation to authorize the disposal of celestite from the national stockpile and the supplemental stockpile; to the Committee on Armed Services.

2238. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes; to the Committee on Post Office and Civil Service.

RECEIVED FROM THE COMPTROLLER GENERAL

2239. A letter from the Comptroller General of the United States transmitting a report on improvements needed in Federal Aviation Administration procedures for determining excess spare parts, Department of Transportation; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. POAGE: Committee on Agriculture. H.R. 13543. A bill to establish a program of research and promotion for U.S. wheat; with an amendment (Rept. No. 91-1322). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADAMS:

H.R. 18577. A bill to authorize the conveyance to the Columbia Hospital for Women of certain parcels of land in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. BINGHAM (for himself, Mr. ADAMS, Mrs. CHISHOLM, Mr. COHELAN, Mr. FRIEDEL, Mr. GIBBONS, Mr. HARRINGTON, Mr. HAYS, Mrs. HECKLER of Massachusetts, Mr. LEGGETT, Mr. MADDEN, Mr. MCDADE, Mr. MEEDS, Mr. MOSS, Mr. PODELL, Mr. POLLOCK, and Mr. TIERNAN):

H.R. 18578. A bill to create a new National Service Agency to fill military manpower requirements, to create a voluntary civilian service as an alternative to military service, and for other purposes; to the Committee on Armed Services.

By Mr. FULTON of Pennsylvania:

H.R. 18579. A bill to amend section 620 of the Foreign Assistance Act of 1961 to suspend, in whole or in part, economic and military assistance and certain sales to any country which fails to take appropriate steps to prevent narcotic drugs produced or processed, in whole or in part, in such country from entering the United States unlawfully, and for other purposes; to the Committee on Foreign Affairs.

By Mr. MCCLURE:

H.R. 18580. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure that U.S. requirements for low cost energy will be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. MAILLIARD (for himself and Mr. GALLAGHER):

H.R. 18581. A bill to amend chapter 3 of the Foreign Assistance Act of 1961, relating to U.S. contributions to international organizations and programs, to provide for a program to control illegal international traffic in narcotics, and for other purposes; to the Committee on Foreign Affairs.

By Mr. POAGE:

H.R. 18582. A bill to amend the Food Stamp Act of 1964, as amended; to the Committee on Agriculture.

By Mr. STAGGERS (for himself, Mr. SPRINGER, Mr. JARMAN, Mr. ROGERS of Florida, Mr. SATTERFIELD, Mr. KYROS, Mr. PREYER of North Carolina, Mr. NELSEN, Mr. CARTER, Mr. SKUBITZ, and Mr. HASTINGS):

H.R. 18583. A bill to amend the Public Health Service Act and other laws to provide increased research into, and prevention of, drug abuse and drug dependence; to provide for treatment and rehabilitation of drug abusers and drug dependent persons; and to strengthen existing law enforcement authority in the field of drug abuse; to the Committee on Interstate and Foreign Commerce.

By Mr. STRATTON:

H.R. 18584. A bill to provide for the redistribution of unused quota numbers; to the Committee on the Judiciary.

By Mr. TEAGUE of Texas:

H.R. 18585. A bill to amend title 38 of the United States Code to provide that no Veterans' Administration hospital or domiciliary facility shall be constructed, acquired, or altered unless such action is first approved by the Committee on Veterans' Affairs; to the Committee on Veterans' Affairs.

By Mr. WYDLER:

H.R. 18586. A bill to provide for fulfilling the manpower needs of the armed services of the United States on a voluntary basis, and for other purposes; to the Committee on Armed Services.

By Mr. BURLESON of Texas (for himself and Mr. JARMAN):

H.R. 18587. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges and quality of medical service; to the Committee on Ways and Means.

By Mr. DON H. CLAUSEN (for himself, Mr. ROBERTS, Mr. MCEWEN, Mr. DENNEY, Mr. MILLER of Ohio, Mr. CLEVELAND, Mr. EDMONDSON, Mr. SCHADEBERG, Mr. JOHNSON of California, Mr. PETTIS, and Mr. HAMMERSCHMIDT):

H.R. 18588. A bill to authorize appropriations for the construction of economic growth center development highways and for other purposes; to the Committee on Public Works.

By Mr. DONOHUE (for himself, Mr. HUNGATE, Mr. WALDIE, Mr. FLOWERS, Mr. MANN, Mr. SMITH of New York, Mr. SANDMAN, Mr. RAILSBACK, and Mr. COUGHLIN):

H.R. 18589. A bill to facilitate representation of persons having claims against the United States by legal counsel of their own choosing; to the Committee on the Judiciary.

By Mr. EDMONDSON (for himself, Mr. CLARK, Mr. DON H. CLAUSEN, Mr. HAYS, Mr. MOSS, Mrs. SULLIVAN, and Mr. WRIGHT):

H.R. 18590. A bill to amend title 13 of the United States Code to provide for a recount (by the State or locality involved) of the population of any State or locality which believes that its population was understated in the 1970 decennial census, and for Federal payment of the cost of the recount if such understatement is confirmed; to the Committee on Post Office and Civil Service.

By Mr. GREEN of Pennsylvania:

H.R. 18591. A bill to amend section 905 of the Tax Reform Act of 1969; to the Committee on Ways and Means.

By Mr. HARRINGTON (for himself, Mr. ASHLEY, Mr. BURKE of Massachusetts, Mr. DADDARIO, Mr. HALPERN, Mr. HANNA, Mr. HANSEN of Idaho, Mr. MESKILL, Mr. MIKVA, Mr. MOORHEAD, Mr. MURPHY of New York, Mr. OTTINGER, Mr. ROSENTHAL, Mr. SCHEUER, Mr. STOKES, Mr. TIERNAN, Mr. CHARLES H. WILSON, and Mr. WOLFF):

H.R. 18592. A bill to amend the Fish and Wildlife Coordination Act to provide additional protection to marine and wildlife ecology by providing for the orderly regulation of dumping in the coastal waters of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. HARRINGTON (for himself, Mr. BINGHAM, Mr. CHAPPELL, Mr. CLAY, Mr. FARBSTEIN, Mr. FRIEDEL, Mr. HATHAWAY, Mr. HOWARD, Mr. MORSE, Mr. NEDZI, Mr. REES, Mr. RYAN, and Mr. TUNNEY):

H.R. 18593. A bill to amend the Fish and Wildlife Coordination Act to provide additional protection to marine and wildlife ecology by providing for the orderly regulation of dumping in the coastal waters of the United States; to the Committee on Merchant Marine and Fisheries.

By Mr. MCCULLOCH (for himself, Messrs. BROWN of Ohio, CLANCY, DEVINE, FISH, MILLER of Ohio, SANDMAN, and STANTON):

H.R. 18594. A bill to regulate the importation, manufacture, distribution, storage, and possession of explosives, blasting agents and detonators, and for other purposes; to the Committee on the Judiciary.

By Mr. TUNNEY:

H.R. 18595. A bill to prohibit the movement in interstate or foreign commerce of horses which are "sored," and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. CHARLES H. WILSON (for himself and Mr. TUNNEY):

H.R. 18596. A bill to amend title 5 of the United States Code to provide that for purposes of unemployment compensation the States shall treat accrued leave of exservicemen as wages for past services; to the Committee on Post Office and Civil Service.

By Mr. ZWACH:

H.R. 18597. A bill to aid in the control of drug abuse by establishing a code for the identification of prescription drugs, to be printed on individual tablets or capsules; to the Committee on Interstate and Foreign Commerce.

By Mr. BROWN of Michigan:

H.J. Res. 1321. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. HARVEY:

H.J. Res. 1322. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. MCKNEALLY:

H.J. Res. 1323. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. SCOTT:

H.J. Res. 1324. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years or older; to the Committee on the Judiciary.

By Mr. WIDNALL:

H.J. Res. 1325. Joint resolution to extend the effectiveness of the Defense Production Act of 1950 to August 31, 1970; to the Committee on Banking and Currency.

By Mr. WYMAN:

H.J. Res. 1326. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. FULTON of Pennsylvania:

H. Res. 1156. Resolution to amend the Rules of the House of Representatives; to the Committee on Rules.

By Mr. WILLIAMS:

H. Res. 1157. Resolution making it the sense of the House of Representatives that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. ROBERTS introduced a bill (H.R. 18598) for the relief of John Harwin Parrish, postmaster at Gladewater, Tex., and for Mary James Kates, owner of the Gladewater Daily Mirror, which was referred to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

429. The SPEAKER presented a memorial of the Legislature of the State of California, relative to public use of beaches on Federal military installations in California, which was referred to the Committee on Armed Services.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

551. By the SPEAKER: Petition of the House of Representatives, Republic of the Philippines, relative to application of the principle of equal pay for equal work in U.S. bases and foreign private firms operating in the Philippines; to the Committee on Foreign Affairs.

552. Also, petition of the Interstate Oil Compact Commission, relative to the oil import quota system; to the Committee on Ways and Means.

553. Also, petition of the Governor of the Territory of Guam, relative to his endorsement of the recommendations of the Constitutional Convention authorized by the Ninth Guam Legislature to review the Organic Act of Guam; to the Committee on Interior and Insular Affairs.

SENATE—*Wednesday, July 22, 1970*

The Senate met at 11 a.m. and was called to order by Hon. MIKE GRAVEL, a Senator from the State of Alaska.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal God, who art from everlasting to everlasting, we thank Thee for this day, for this hallowed place of service, for work to do and strength with which to do it. Spare us from absorption with things as they are, but give us grace and wisdom to create a world as it ought to be.

Look upon this good land and in these testing times make us wise in every decision and resolute in every action to the end that the righteousness which exalteth a nation may prevail in our ways. Turn us backward to appropriate the enduring values of our heritage and turn us forward to exploit the insights, skills, and wonders of this age—for the making of the unfinished world which is yet to be.

In the Redeemer's name. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 22, 1970.

To the Senate:

Being temporarily absent from the Senate I appoint Hon. MIKE GRAVEL, a Senator from the State of Alaska, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. GRAVEL thereupon took the chair as Acting President pro tempore.

MESSAGE FROM THE HOUSE RECEIVED DURING ADJOURNMENT—ENROLLED BILL SIGNED

Under authority of the order of the Senate of July 21, 1970, the Secretary of the Senate, on July 21, 1970, received a message from the House of Representatives, which announced that the Speaker had affixed his signature to the enrolled bill (S. 3978) to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971, and it was signed by the Acting President pro tempore (Mr. ALLEN).

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, July 21, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HOLLINGS TODAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, following the remarks today by the distinguished Senator from Tennessee (Mr. BAKER), the distinguished Senator from South Carolina (Mr. HOLLINGS) be recognized for not to exceed 20 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that at the conclusion of the remarks by the distinguished Senator from South Carolina (Mr. HOLLINGS), there be a period for the transaction of routine morning business with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair now recognizes the distinguished Senator from West Virginia (Mr. BYRD) for 1 hour.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

Mr. BYRD of West Virginia. Mr. President, I take the floor at this time to express my support of the conference report on the District of Columbia Court Reform and Criminal Procedure Act of 1970. In doing so, I wish to compliment the conferees of the Senate and the House in reporting back to their respective houses a conference report which is designed to give law-abiding citizens in the District of Columbia better protection and which is also designed to reorganize the courts and expedite the rendering of justice.

For years now, we have witnessed an ever-increasing rate of crime in the Nation's Capital. Since 1957, Washington, D.C., has risen from 12th place among 16 cities of comparable size, to first place in regard to the crime rate. President Nixon, during the campaign in 1968, referred to Washington, D.C., as the "crime capital of the world," and, although he was criticized for having said it, the appellation was an appropriate one. When we look at the fact that Washington, D.C., with fewer than 1 million people, has many more criminal killings a year than all of England with more than 40 million people, we should, however reluctant we may be to do so, admit that such a notorious and infamous record is one of which we cannot help but be ashamed. Yet, it is one that cannot be denied.

Women are raped on the elevators, raped in the streets, raped in the alleys, and raped in the privacy of their apartments and homes. Gun battles break out in banks and grocery stores and on the street corners. Store owners are shot to death at their cash registers. Women who work in the offices of Members of Congress are hesitant to put in extra hours because they are afraid to walk alone to their cars on the parking lots. Aides to Senators are beaten and robbed on the streets in the shadow of the Capitol Building. Women cower behind padlocked doors and drawn window shades at night and are afraid to venture out on the streets by day. Most areas in the city are unsafe at night, and many areas of the city are unsafe in the daytime. Gangs of foul-mouthed hoodlums roam the streets, taking over the street corners and harassing law-abiding citizens. Many inner-city churches have ceased to conduct evening services and are plagued by vandalism and robberies. Grace Baptist Church at 9th Street and Carolina Avenue SE., announced several months ago that it was moving to the suburbs after a series of attacks on parishioners by groups of youths after evening services. Many downtown Washington stores have added to their security forces in order to reduce attacks on shoppers by juvenile gangs of hoodlums and thugs. Old men and women have been attacked by youths with slingshots. Only last year, an 81-year-old woman who was named District of Columbia "Mother of the Year" in 1963, suffered a broken hip and right leg when she was pulled down a stairwell by a purse snatcher. Government workers are grabbed from behind and knocked down and beaten while being robbed by teenagers. Shootings occur in the schools where students carry everything from steel knuckles and blackjacks to switchblade knives and guns.

Washington, D.C.—your Capital and mine—has become the mecca of the rapist, the mugger, the robber, and the thief—call it the crime capital of the world, if you wish—it is a virtual jungle of fear and crime and violence—in spite of the fact that there are more policemen per capita than in any other city of comparable size in the country.

In calendar year 1962, 1,572 robberies occurred in the District of Columbia, of which 506 were classified as armed robberies; that is, robberies in which a pistol, firearm, or other dangerous weapon was used. Only 7 years later, in 1969, there were 12,423 robberies, including 7,071 perpetrated with a weapon. Of these 7,071 armed robberies in the District, 6,280 involved the use of a gun.

Thus, in a period of 7 years the number of robberies accounted for in the District of Columbia, increased from 1,572 to 12,423.

Similarly, with respect to murder, there were, in 1962, 91 homicides; by 1969 the figure had leaped to 287. Just take a trip to the morgue some Sunday afternoon, if one wishes to see what is going on in the District of Columbia with respect to homicides. I have visited the morgue on several occasions. People are killed with butcher knives, hatchets, and guns. They are set afire after having had gasoline poured on them. Try a visit to the morgue sometime and see for yourselves. It is not a pleasant sight.

During the same period, 1962 to 1969, the incidence of forcible rape had grown from 82 in 1962 to 336 in 1969.

I have said time and time again that the rapist has virtual immunity in this city. I have also said that it is safer to walk the streets of Moscow—insofar as the rapist, the thug, and the mugger are concerned—than it is to walk the streets of Washington, D.C.

I say this, having walked the streets of both cities myself. As a matter of fact, I would say that it is safer—at least as safe, and perhaps safer—to walk in the jungles of the Congo than it is to walk the streets in some areas of the Nation's Capital insofar as the commission of rape, murder, et cetera, is concerned.

These are harsh things to say about the Nation's Capital. But as chairman of the Appropriations Subcommittee on the District of Columbia for 8 years, and as a member of that subcommittee for 10 years—I am no longer a member of the subcommittee—I had the opportunity to see the results of crime in the Nation's Capital over that long period of time. I had the opportunity to study the facts and the statistics, to go out with the police and to see things as they were. So I know whereof I speak and I do not hesitate a moment to state what I believe to be the truth with respect to crime in the city.

Lots of people do not like to hear it. But they will not venture out on the streets in some of the areas of this city in the daytime, to say nothing of the night. Oh, they might go along if they have a half dozen policemen with them. I did the same thing often myself, always with some policemen around.

The truth is that this is a city of fear, a city of crime and violence.

In the last 5 years burglaries have more than doubled, so that by last year the startling figure of 22,992 had been reached.

So, Mr. President, the law-abiding citizen cries out for relief from violence and the fear of violence. And the law-abiding citizens of the Nation's Capital are not alone. Their fears are shared by the millions of tourists who visit this city every year. And it is the responsibility of Congress to act to provide protection for the law-abiding citizens of this Capital and of this country.

A system of justice which does not protect the law abiding has failed in the basic reason for being, and we are very close to failing.

The conference report, while perhaps not what any one of us would most hope for in every respect, constitutes a step forward in the protection of the citizenry of this community and a step forward in the restoration of law in a civilized society. The basic purpose of all government is the protection of society and we have failed miserably in this respect in recent years. In my judgment, the conference report faces up to this fact, and it offers to fulfill that purpose in the Nation's Capital. The conference report is the product of almost 4 months of work by the Senate and House conferees—of which I was not one, of course—and, as a compromise between the originals of the Senate and House versions, I recommend its approval by this body.

It provides desperately needed court reform for the District, and, in addition to the beneficial court reorganization aspects, the conference substitute provides for 17 additional judges to the superior court.

The conference report provides that persons 16 years old and older are to be tried as adults when charged by the U.S. attorney with murder, forcible rape, robbery while armed, burglary in the first degree, or assault with intent to commit one of these offenses.

And why should that not be? They know the difference between right and wrong. They know what they are doing when they are taking a life. They know what they are doing when they are committing rape. They know what they are doing when they are robbing or committing a burglary.

This is a realistic position for the conferees to have taken when one studies the statistics and the facts concerning crime in the District of Columbia.

Persons who commit crimes of violence when armed with a gun or other deadly weapon may, if convicted for the first time for having committed a crime of violence, be sentenced to an additional period of imprisonment up to life, entirely aside from the penalty provided for such crime. A 5-year mandatory minimum penalty upon a second or subsequent conviction is provided, in addition to the penalty provided for such crime, for persons who commit crimes of violence when armed with guns or other deadly weapons.

The so-called no-knock provisions are controversial, but they do not change existing law, except that they merely put into clear statutory form the current law in effect today in the United States, and they provide the additional protection of requiring prior judicial approval of an entry without notice when the circumstances which would justify such entry are known at the time application for a warrant is made.

One of the most controversial features of the conference report is that comprehensive provision which gives judges the authority to take into consideration, in setting pretrial conditions of release, the danger which a person charged with a violent and dangerous crime poses to the safety of the community—and the authority, under certain conditions and proper safeguards, to detain, pending a speedy trial, the chronic "mad dogs" of society who make a profession of violent crime. At the same time, the provisions spell out procedures to afford optimum protection for the rights of an accused who is temporarily detained pending a speedy trial. I believe this to be one of the most important steps that can be taken to combat rampant violent crime, and for good reason.

A year-by-year analysis of the crime figures demonstrates that the District's soaring offense rate most dramatically rose following the 1966 enactment of the Bail Reform Act. That legislation guaranteed to most criminal defendants pretrial release on certain conditions, no one of which could involve the defendant's potential dangerousness to the community. In fact, the judge was simply precluded from considering the factors of dangerousness in determining release conditions for all noncapital criminal defendants under the terms of the Bail Reform Act of 1966.

In 1967, when hearings were held by the Senate Appropriations Subcommittee on the District of Columbia, of which I was then the chairman, testimony disclosed that the District of Columbia courts were being inundated by an increased criminal caseload and all sorts of delaying motions which were demoralizing the courts, the police, the U.S. attorney's office, and Government prosecution witnesses. The prime cause of this was shown to be the Bail Reform Act of 1966—working in concert with the Criminal Justice Act—which, in effect, required the courts to immediately turn back on the streets habitual violent offenders of the most heinous crimes who flouted the whole system of justice by using every tactic to delay their trials while they continued to murder, rape, and rob.

In view of this, is it surprising that there has been a growing fear on the part of the law-abiding public?

When the arraigning magistrate feels he is forced to regularly release back to the streets—on normal or relatively low bail or on personal recognizance—perpetrators of the most vicious crimes, to continue preying on the public until trial—often at some far future date—because the prime consideration is that of assuring presence at the trial, and when no consideration may be given to the safety of the community, then I believe it is time to change the law and without further delay. The present state of the law is proving to be a windfall to the chronic violent criminal, while it is proving to be something of a catastrophe for the law-abiding public and the victims of the criminal element.

This body has an opportunity now, however, to take a step directed toward reversing the skyrocketing statistical trend of violent crimes in the Nation's Capital City. The pretrial detention amendments to title 23 of the District of Columbia Code are aimed at a particular facet of the crime problem with which the judiciary presently has no power to deal; namely, recidivism of arrested criminals whose pretrial release poses a clear danger to the citizens of the District. By giving judges power to insure that certain defendants in certain well-defined circumstances will be unable to prey on the law-abiding citizenry during the period between arrest and trial, a significant portion of criminal activity may be prevented.

It is well known that not all the individual offenses which comprise the totals recited earlier are committed by different criminals. Studies have shown that many offenders tend to repeat their unlawful activities, and some offenders do so at an alarming rate during the period between arrest and trial. A 1968 Metropolitan Police Department study of 130 persons indicted for armed robbery and released during fiscal 1967 determined that 34.6 percent of such released persons were indicted for a subsequent felony committed while released. A review of an investigation of the U.S. attorney's office made by the Judicial Council Committee To Study the Operation of the Bail Reform Act studied 105 robbery defendants indicted and released to await trial in 1968; 63.7 percent of these defendants were rearrested for commission of a new crime while on bail.

Finally, a recently concluded Metropolitan Police Department survey, covering persons arrested for part I offenses during the first 6 months of 1970, determined that 3,007 arrests were made involving 2,743 different persons. Of these, 2,743 different offenders, 239 were arrested more than once during this period, and the 239 accounted for 503 arrests. Furthermore, of the total number of persons arrested—2,743—1,561 had a criminal record prior to 1970, and of this number—1,561—154 were arrested more than once during the first 6 months of 1970.

A few examples of persistent lawlessness permitted under current law, the Bail Reform Act, serve to highlight the breakdown of the bail system to the detriment of visitors to the city and the citizens of the city:

On February 3, 1967, a Peoples Drug store was held up by three men. On February 6, subject "A" and two accomplices were arrested. Subject "A" was indicted for robbery and assault with a dangerous weapon, and was released on personal bond on June 21. On November 9, 1967, a delivery man for the

Kolker Poultry Co. was held up. Subject "A" was subsequently arrested and indicted. Bond was set at $7,500, and subject "A" was released on that bond on February 18, 1968. On December 22, 1967, a Briggs & Co. deliveryman was held up and robbed. Subject "A" was arrested on December 30, 1967, for that offense, bond was set at $2,500, and he was released on that bond on January 12, 1968. On May 23, 1968, a bank was held up and robbed, and subject "A" was arrested on June 1 and indicted. Bond was set in the amount of $10,000 and the defendant was released on that bond on July 15, 1968. On August 15, 1968, another bank was held up and robbed and subject "A" was arrested for that crime 1 week later. Bond was finally set at $75,000 on September 9, 1968, and the defendant remained committed.

Mr. President, a second example of persistent lawlessness permitted under current law was that involving subject "B."

On May 29, 1968, an attempt to rob a Safeway Store was thwarted by an off-duty police officer. Subject "B," who had fled, was arrested on June 11, subsequently indicted, and released on $1,000 bond on June 13. He was later arrested for a robbery and an attempted robbery of the same realty office committed on October 2 and October 15, 1968, respectively. Indictments in both cases followed. On November 1, 1968, the defendant was released on the same $7,500 bond. On October 4, 1968, a drycleaning establishment was held up and robbed. Arrested for this robbery on December 4, subject "B" was released on personal bond on December 10. This defendant was arrested for three other separate robberies committed during the same general period of time. Finally, in February of 1969, the various cases were disposed of in court and the defendant was incarcerated.

Obviously, a system of criminal justice which permits examples of repeated criminal behavior such as these, and many others which can be documented, hardly fulfills its primary purpose of protecting the law-abiding public. Certainly, these subjects by their conduct have forfeited their rights to remain free while awaiting trial. If pretrial detention had been authorized and utilized in these two cases, no less than 10 separate felonies would have been prevented. Think of it. No less than 10 separate felonies could have been prevented in these two cases alone. And, in the case of subject "A," if such detention had been allowed, the court would not have been required to resort to a $75,000 bond in order to protect the citizens of the city, a procedure which, though eminently justifiable, was probably violative of the spirit, if not the letter, of the Bail Reform Act.

It would be a far more honest and reasonable procedure to detain such a person, after full and fair hearing, for no more than 60 days during which time the defendant's trial would be scheduled and held. Statistics referred to earlier indicate that a significant number of criminal offenses would be prevented. The defendant's rights would be protected under the multitude of safeguards incorporated in the bill, including the right to appeal from a judicial decision ordering detention. Most important, however, travesties of justice, such as the examples reviewed above, could be prevented.

In discussing the provisions for detention prior to trial, I make no pretense of giving an erudite expression of the history of the law as it applies to bail or pretrial or other release in criminal matters. I simply wish to point out some facts regarding the background and evolution of Federal criminal law in this respect.

At the outset, I think everyone will agree that the eighth amendment to the Constitution deals solely with "excessive" bail and fines and with "cruel and unusual punishment," and that there is no prohibition in the Constitution against detaining without bail persons charged with crimes punishable by death. It is quite important, it would seem, to keep this in mind. The eighth amendment merely states:

> Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted.

Now, the very same U.S. Congress which promulgated the eighth amendment in 1789, at the same time also enacted a bail statute. The First Congress made a distinction between capital and noncapital Federal crimes and that First Congress provided for bail at some level in all but capital offenses. The pertinent portion reads:

> And upon all arrests in criminal cases, bail shall be admitted, except where the punishment may be death, in which cases it shall not be admitted but by the supreme or a circuit court, or by a justice of the supreme court, or a judge of a district court, who shall exercise their discretion therein, regarding the nature and circumstances of the offence, and of the evidence, and the usages of law. (1 Stat. 91, Sec. 33.)

So it was this act of Congress, rather than the Constitution itself, which gave the right to bail in noncapital cases.

But let us look at the eighth amendment of the Bill of Rights and this original bail act in the light of history and the conditions of the times in which they were promulgated and enacted.

In this connection, it should suffice merely to point out that at the time the eighth amendment to the Constitution was ratified, practically all of the more serious crimes carried the death penalty, and there was an all too recent history of instances of burning people at the stake, breaking them on the wheel, and all sorts of other inhuman treatment, which forms of punishment were inherited from English law, although practiced to a lesser degree in the Colonies.

As for the severity of the old English law from which our own legal system was derived, it may be said that apparently believing a reign of terror was the most efficient method of keeping the criminal elements under constraint, legislators in those early days inflicted the death penalty almost indiscriminately upon all classes of offenders. Many of the offenses for which persons were executed in those days were little more than what we know now as misdemeanors. Execution in those days seemed the solution for most crimes.

America inherited this attitude of severity, which continued long after the United States became a nation. Harsh repression was the primary policy toward crime in the newly created States.

The same Congress which enacted the original bail law in 1789 also enacted a Crimes Act and prescribed the death penalty for all the more serious crimes over which the Federal Government had jurisdiction. Accordingly, persons accused of such crimes did not have the right to bail. These crimes, under the then rather limited jurisdiction of the Federal Government, included: First, murder; second, treason; third, robbery; fourth, stealing a ship; fifth, a seaman laying violent hands on the commander of a ship; sixth, revolt on a ship; seventh, piracy or robbery under false colors; eighth, accessory before the fact of piracy or robbery—assisting, counseling, aiding, and advising—and even, ninth, forgery, counterfeiting, or uttering of a public U.S. security. Larceny did not carry the death penalty, but it was provided that those found guilty should be fined not more than four times the value of the property stolen and publicly whipped not more than 39 stripes—the Crimes Act of 1790, 1 Statute 112.

At about the time the original U.S. bail law was enacted, the English law, from which our bail provision and constitutional Bill of Rights admittedly stemmed, listed 240-some offenses which were subject to the death penalty.

Even a century later, in 1891, according to House of Representatives Report No. 108, 54th Congress, First Session, 1896, there were 60 crimes punishable under U.S. Federal law which carried the death penalty. Eighteen of these offenses for which the penalty of death could be inflicted were in the civil code under the jurisdiction of the Federal courts of the United States—as distinguished from military and naval codes.

The history of the law in the respective States more or less paralleled the Federal law in the severity of the punishment meted out for most serious criminal offenses, and even well into the present century, the laws of many States still provided for the death penalty in a number of the more serious crimes, such as murder, robbery, rape, treason, arson, burglary, kidnapping, and so forth.

The laws of many States today still provide the death penalty with respect to the more serious crimes such as murder and rape. I think that is rightly so. I think if there were a few executions for premeditated murder and for rape, there would be a greater feeling of safety on the part of the law-abiding citizen when he or she walks or ventures out upon the street in the day as well as in the night.

Some may feel that this is a harsh thing to say. I have witnessed an execution. It is not a happy sight. But, Mr. President, I state my honest belief when I say that if there were some executions for rape in this city, there would be fewer rapes.

Let us think of the victims for once.

Let us think of the victims who undergo an ordeal that is perhaps worse than death, and who, in many instances, suffer death as well. Let it be your sister, let it be your daughter or your wife, and then state how you would feel.

I am a bleeding heart—my heart bleeds for the victims of these atrocious, savage crimes. My heart bleeds for the women who are almost daily attacked in this city, dragged into an alley and raped, with a knife held to their throats. Let there be a few executions and the rapist will not so freely commit his beastly crime.

To cite an example, 2 or 3 years ago there was a Negro woman in this city who was detained for 15 hours and raped by between 15 to 20 different men. Stories of rape appear almost daily in the newspapers of this city—dastardly crimes committed with impunity by savage beasts walking the streets, attacking, raping, and killing innocent, defenseless women.

I say put the rapist in the electric chair, and let women walk the streets again, in safety and without fear.

The point that I was earlier making and which I now reemphasize is that this first U.S. Congress, which in 1789 promulgated the Bill of Rights to our Constitution—including the eighth amendment regarding excessive bail and inhuman punishment, and the fifth amendment relating, among other things, to due process—and which, at the same time, enacted the first bail law, did so under a far different set of conditions and circumstances than those which exist today.

When that early Congress provided, by legislation, that all crimes which were not punishable by death should be subject to bail, in reality, it provided that only relatively minor offenses should be subject to bail, and it excluded from mandatory bail provisions most of the serious offenses simply by making such crimes capital offenses.

It would, therefore, follow—not only as a practical matter, but literally—that in the Federal law—from the beginning and continuing for a century or more—there was no right to bail for those accused of the more serious crimes; and the courts, or judges, in arraigning persons accused of all such serious crimes, could exercise discretion "regarding the nature and circumstances of the offense, and of the evidence, and the usage of law"—1 Statute 91, section 33—as to whether the accused should be detained pending trial.

The result, a harsh reality, was that many of these grievous offenders never had the opportunity to again become a danger to society—for, until their trial, they were detained, and, if found guilty, were hanged. Further, it would seem apparent that the Congress which authored the Bill of Rights and enacted the first bail statute did not consider then that it was infringing upon the rights of those accused in these many serious crimes by denying them the right to bail pending trial.

Another fact which goes to the very crux of the issue, but which seemingly is too often completely overlooked, is that Congress from the outset had, and exercised, the authority to determine the penalties for particular crimes, including those offenses for which the penalty of death should or could be inflicted, and Congress had—and exercised—the authority to determine the classes of cases in which bail should or should not be allowed. This is inherent in the very language of the first Bail Act of 1789 and the Crimes Act of 1790, and there has been no change to the present day. This authority perhaps may best be stated in the language of the 1952 Supreme Court decision in *Carlson* v. *Landon*, 352 U.S. 524, at page 545, in which it was stated:

> The bail clause was lifted with slight changes from the English Bill of Rights Act. In England, that clause *has never* been thought to accord a right to bail in all cases, but merely to provide that bail shall not be excessive in those cases where it is proper to grant bail. When this clause was carried over into our Bill of Rights, nothing was said that indicated any different concept. *The Eighth Amendment has not prevented Congress from defining the classes of cases in which bail shall be allowed in this country.* Thus, in criminal cases bail is not compulsory where the punishment may be death. (Italic supplied.)

No reasonable interpretation of the language of the eighth amendment to the Constitution, or the original bail law, could seem to lead to any other conclusion but that there is no constitutional right to bail or pretrial release except within the context of the language of congressional enactment, particularly as it applies to more serious crimes. It would also seem to logically follow that—in spite of frequent references in modern day case law and in legal treatises to the traditional right to bail, or constitutional right to bail—Congress has the right to legislate such conditions as are warranted with respect to pretrial detention, bail, or release of the accused, in serious crimes, who poses a danger to society.

With the passage of time, much of the harsh, repressive attitude toward certain types of crime—which was inherited from the English law but continued long after the United States became a nation—was swept away by growing humanitarian sentiment, and this eventually resulted in more humane forms of punishment and more compassionate prison methods and the use of such corrective methods as probation, parole, and so forth. The number of capital offenses was gradually reduced by legislative changes in the statutes to a few of the gravest crimes. However, as previously indicated, it was not until 1892 that the number of capital offenses in the U.S. civil code was reduced substantially.

At the time Congress enacted laws reducing the penalties for many of the more serious crimes from death to imprisonment, there was no change made in the law with respect to bail—nor would it appear that any legislative consideration was given to bail aspects at the time, the major issue being what effect the removal of the death penalty would have as a deterrent to crime. At least in retrospect, it might even be said that this was a matter of inadvertence. It followed, of course, in accordance with the language of the bail statute, that as soon as the punishment for an offense was reduced from death to a lesser penalty, the offense became bailable at some level.

It does not follow, however, that because Congress changed the penalty for crimes which once carried the death penalty to something less, it could not have changed the bail act to retain the provisions with respect to discretionary detention pending trial which these offenses had once carried when they were punishable by death. Nor would it seem to follow that if Congress neglected to change the bail act or did not see the need at that time, it foreclosed itself from doing so at a later date when changed conditions might warrant it.

Is the crime of robbery, or arson, or burglary, any less serious in its consequences to the victims of such crime today than it was when the penalty was death? Or must Congress reimpose the death penalty in such cases in order to permit the courts to exercise discretion, where the facts warrant, in detaining an accused in a violent or serious criminal offense if his release poses a danger to society? Does not the public have the same right of protection today from the violently lawless or dangerous criminal that it, in fact, had when our first Bail Act was enacted? Or has the protection afforded under those old laws been lost because Congress removed the death penalty for these serious offenses? Does anyone believe that Congress changed the death penalty to imprisonment in certain cases because it felt that those crimes were not serious—or did it do so for humanitarian reasons? When Congress reduced this penalty, was it acting in keeping with the times in imposing more humane punishment for the particular crimes committed, or was it doing so in order to permit the accused to go free on bail? It would seem that the answer to all of these questions is obvious.

With Federal judges, for over 100 years after the passage of the original Bail Act, having clear discretion to fix or deny pretrial bail in practically all of the more serious and violent crimes because such crimes carried the death penalty, it becomes somewhat academic as to whether the reasons for detention were to prevent flight or to safeguard the community. Further, because the yardstick prescribed in the 1789 Bail Act was that in considering whether or not to allow bail or detain the accused, the judges were to look at "the nature and circumstances of the offense, and of the evidence, and the usages of law," it is not surprising, as recent studies have found, that, for 177 years, bail was set in an amount based largely on the crime rather than in an amount which would reasonably assure the appearance of the defendant in court, and that money bail has also been used consistently as a method of preventive detention of persons charged with crimes where it was deemed that their release before trial would pose a danger to the peace and security of the community. This is not

surprising; first, because Federal statutory law in the form of the 1789 Bail Act specifically gave the courts this discretion for a period of 100 years or more, or until the death penalty was changed to imprisonment in many of the more serious crimes, and, second, in addition to this precedent, it seems a sound rule to have related the amount of bail to the gravity of the crime, the weight of the evidence, and, among other things, the danger which the accused posed to the peace and security of the community.

Against this background, to now say that the only reason for setting bail in the case of a chronic violent offender is to reasonably assure that the accused will appear in court, is hardly tenable; or to say that the danger of an accused to other persons or to the community is not a reason which should be taken into consideration in fixing bail in a particular case, or is a lesser reason than the possibility of flight by the accused, also seems to me untenable.

Historically, of course, the primary reason for bail, in that class of cases in which release on bail at some level was called for, was the danger of flight from prosecution. In that class of cases, which, in times past and at the time of the enactment of the 1789 Bail Act, included only the less serious offenses, there naturally had to be some responsible relationship—in the fixing of bail—between the gravity of the crime, the weight of the evidence and the particular circumstances of the particular case, and the amount of bail set in each case.

It might be worthy of note that seemingly there were relatively few appeals from rulings of lower Federal courts on the matter of bail in the first century and a quarter following the establishment of our Federal judicial system, and this would appear to have resulted from the fact that the Federal judges had fairly broad discretion in the matter of fixing or denying bail pending trial, particularly in the more aggravated crimes.

Further, even a quick examination of U.S. criminal case law will reflect that the various refinements which began to expand more explicitly the rights of the accused with respect to bail or release, for the most part, resulted from fairly clear abuses of discretion on the part of judges or courts in refusing bail or in imposing excessive bail in cases where an accused was charged with a relatively less serious offense as computed with a serious crime of violence.

Some of these Federal decisions dealt with cases where bail had been refused outright in a minor offense; had been imposed at an obviously excessive level in relation to the offense; had been imposed arbitrarily without looking at the facts and circumstances of the defendant's particular situation, and so on. There were decisions which held that the purpose of bail was to reasonably assure the defendant's appearance at trial and, therefore, there must be a reasonable relationship between the amount of bail fixed and the possibility that the defendant might flee, all based on the circumstances of the particular case. However, there were also cases which held that the court, in determining reasonable bail, did not have to accommodate itself to the defendant's pocketbook and that if the defendant were unable to make bail set in a reasonable amount, his recourse was to move for trial.

The Criminal Pleadings and Trial Rules Act, enacted June 29, 1940, empowered the Supreme Court to prescribe rules of pleadings and practice, which rules were not to take effect until they had been reported to Congress and a full session had elapsed so as to allow Congress to approve or disapprove. If Congress approved, or made no changes, thereafter all laws in conflict therewith had no further force and effect.

Pursuant to this act, an Advisory Committee on Criminal Rules was appointed under the control of the Court to revise, bring up to date, and codify such rules. In 1946, these Federal Rules of Criminal Procedure were finalized and eventually became law under the act. With respect to bail, rule 46(a), title 18, United States Code, entitled "Right to Bail" and dealing with bail prior to conviction, in substance, restated the original Bail Act; that is, it provided that persons arrested for an offense not punishable by death shall be admitted to bail, and that persons arrested for an offense punishable by death may be admitted to bail, by any court or judge in the exercise of discretion, giving due weight to the evidence and the circumstances of the offense. More pertinently, rule 46(c), dealing with the amount of bail, which subsection was included for the first time as a statutory rule, provided that—

> If the defendant is admitted to bail, the amount thereof shall be such as in the judgment of the commissioner, or court, or judge, or justice, will insure the presence of the defendant, having regard to the nature and circumstances of the offense charged, the weight of the evidence against him, the financial ability of the defendant to give bail, and the character of the defendant.

From this time on, until the passage of the 1966 Bail Reform Act, this was Federal statutory law and it clearly stated the purpose of bail prior to trial was to reasonably assure the presence of the defendant and that, among other things, in fixing bail the financial ability of the defendant to give bail was to be considered. In other words, by the enactment of rule 46(c), Congress, in providing more precise standards for the fixing of pretrial bail, had in effect confined its purpose in all noncapital cases to reasonably assuring the presence of the accused at trial. The 1951 Supreme Court decision in *Stack* v. *Boyle*, 342 U.S. 1, which is much cited, of course, was written within the context of this statutory law. In this case, the Court held that a person arrested for a noncapital offense shall be admitted to bail and cited the Judiciary Act of 1789 and rule 46(a)(1) as authority. In accordance with Federal rule 46(c), it also held that—

> Bail set at higher than an amount reasonably calculated to fulfill this purpose is "excessive" under the Eighth Amendment.

It should be noted, however, that this case was actually decided on the fact that the lower court had arbitrarily set very high identical bail—$50,000—for each of a group of persons accused of conspiracy to violate the Smith Act without looking into the circumstances of the case of each accused, and on the basis that other Communists in an entirely unrelated case had taken flight after conviction. It would further seem significant that, in a separate opinion by Justice Jackson, in which Justice Frankfurter joined, it was stated, in discussing the reasonableness of bail in conformity with rule 46(c):

> This is not to say that every defendant is entitled to such bail as he can provide, but is entitled to an opportunity to make it in a reasonable amount.

There was a substantial increase in the number of appeal cases relating to bail following enactment of rule 46(c), particularly in the 1950's and 1960's. Without doing injustice to the large number of well-written and sound decisions based upon the facts of the particular case, I believe it might be said that, generally, as the number of appeals has increased, confusion has also increased with respect to the priorities to be given the various elements to be considered in fixing bail or other conditions of release in noncapital cases, with the more liberal courts or judges seemingly placing the greater accent upon the financial ability of a defendant to make bond, his family ties, his appearance in court on previous charges, and so forth, rather than upon the gravity and circumstances of the crime charged, the weight of the evidence, and the character of the defendant. Some judges have seemingly gone so far as to hold that a person charged with a serious criminal offense not punishable by death who cannot make bond in any amount, must be released on his personal recognizance because, in his case, any bond would be "excessive" under the eighth amendment to the Constitution. This theory, which is strictly contra to the theory of "reasonable bail," as expressed in Stack against Boyle by Justice Jackson—referred to earlier—and in a number of other cases, would seem to be carrying the matter of absolute logic to an illogical end.

In hearings held in 1967 before me, as chairman of the Senate Appropriations Subcommittee on the District of Columbia, regarding the sharply rising cost of crime and law enforcement, information was developed, as I have already indicated, which would make it appear that the passage of the 1966 Bail Reform Act, while providing an equitable format for quickly releasing the large percentage of persons charged with various types of lesser Federal offenses, had resulted in a rapidly worsening situation with respect to serious crime and a sharp increase in lawlessness in the District of Columbia.

In enacting the 1966 Bail Reform Act, Congress took cognizance of many inequities in the Federal bail system and particularly of the problem of the indigent who, when accused, cannot make bail in the usual amount. In essence, it made the same distinction with respect to capital and noncapital offenses as was made in the original Bail Act of 1789 and rule 46(a)(1) of the Federal Rules of Criminal Procedure. It did not include

any provision which would permit consideration of danger to the community in fixing conditions of pretrial release in a noncapital case. However, it permitted consideration of such danger in considering pretrial detention in capital cases and after conviction in noncapital as well as capital cases. In noncapital cases, it placed the accent on "release" rather than on "bail" and provided a number of alternatives to bail. It sanctioned pretrial release on personal recognizance or upon execution of an unsecured appearance bond, unless the judge, in his discretion, determined that "such release would not reasonably assure the appearance of the person as required," in which event, he might impose one of five additional conditions, or any combination thereof. These conditions included: First, placing the accused under the supervision of another person or agency; second, placing restrictions on travel, associations, or place of abode; third, requiring an appearance bond in a specified amount and a deposit of up to 10 percent thereof in cash or other securities; fourth, requiring a bail bond with sufficient solvent sureties or the deposit of cash; and, fifth, any other condition deemed reasonably necessary to assure the appearance as required, including a requirement that the accused return to custody after specified hours.

The law requires the arraigning judge or commissioner to issue an order containing a statement of the conditions imposed and if the accused, after 24 hours from the time of the original hearing, is still unable to meet the conditions of release, he is entitled to have his conditions reviewed by the judicial officer who imposed them and, unless the conditions are amended and the accused released, the judicial officer shall set forth in writing his reasons for continuing the conditions of release, whereupon the defendant may move to have the order amended, which motion shall be determined promptly, and if the person is still detained, an appeal may be made to a court having appellate jurisdiction.

I will not take time in a long documentation as to why the 1966 Bail Reform Act needs to be amended, or why, as it is operating in conjunction with the Criminal Justice Act, it is contributing to the sharp rise in violent crime and an unacceptable breakdown in the administration of justice. There are many pages of testimony in the 1967 hearings of the Senate District of Columbia Appropriations Subcommittee with respect to crime, congestion in the courts, low police morale, and high vacancies on the force, the implementation of the recommendations of the President's Crime Commission, and related matters, which will attest to this. I shall attempt, however, to point out some of the more significant reasons in support of the need for a change in the law—a change which, insofar as the District of Columbia is concerned, is, in effect, provided for in the conference report.

Mr. SAXBE. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I am happy to yield to the able Senator from Ohio.

Mr. SAXBE. To what does the distinguished Senator from West Virginia attribute the seeming reluctance of the opponents of the conference report to submit to the courts the question of the unconstitutionality of these two specific provisions? I find that their opposition to the conference report always goes back to the constitutional question, and when one says, "Well, if it is unconstitutional, we have a court for that purpose," yet they do not want that. Has that disturbed the Senator?

Mr. BYRD of West Virginia. I have mixed feelings with regard to this, may I say to my friend from Ohio. I believe that it is the responsibility of every Senator to attempt to interpret the Constitution as well as his best lights will allow him to do so, in voting for or against a bill when the constitutionality thereof may be in question.

I think we, as Senators, have that responsibility. On the other hand, I can see the validity of the point raised by the able Senator from Ohio. Of course, the courts are the last entity. They have the final say. The courts will say. They will rule on this act. I am willing to let the courts rule on it.

Mr. SAXBE. Is this not an area where reasonable men can disagree?

Mr. BYRD of West Virginia. It is, indeed.

Mr. SAXBE. What disturbs me is that here we have a crisis, and anyone who lives in Washington knows that this is a particular crisis, not just Washington but in the rest of the country, that we are outgunned at almost every level of the prosecution. This is something I know from personal experience at the arrest level; that is, the inability of the police to preserve the evidence, to do the legal and proper thing, to part-time and poorly paid prosecutors, and to crowded dockets which make it terribly difficult for even a dedicated policeman-prosecutor combination to get a conviction, or even to bring an accused to trial.

It has been my feeling that rather than a strict concern over the Constitution in all these things, we have set it up as a thing that we shy away from at all costs. In other words, we do not try to go to the extent of the powers granted in the Constitution to fight crime, especially in time of crisis, but rather that we back away from the limits of the Constitution, thereby giving an advantage to the criminal which he is quick to take advantage of.

I have always been convinced that a greater percentage of our law violations comes about because people think they can get away with it. It is all coolly calculated in the minds of those who feel that they can do it, who feel that their chances of being captured is remote, and even more remote is the possibility that they might be convicted, or even tried so far as that goes. Finally, that they will be sent to the penitentiary. We know that the percentage of those actually arrested and who finally go to the penitentiary is less than 10 percent.

I am as much interested in civil rights as I know the distinguished Senator from West Virginia is. I am interested in living within the Constitution in the handling of crime; but I fail to see why we should not go to the limits of the constitutional limitations, which were well considered, rather than to avoid all possible confrontation and, thereby, giving the criminal another advantage.

The PRESIDING OFFICER (Mr. YOUNG of Ohio). The time of the Senator from West Virginia has expired.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to proceed for 10 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. I thank the able Senator from Ohio—who was once attorney general of that great State—for his observations.

With respect to the point raised regarding court determination of the constitutionality of this measure, I am willing to let the courts do that. But I do feel that, with due respect to those of our colleagues who do not want to vote for the conference report because of what they believe to be its unconstitutionality, it is our responsibility as lawmakers to interpret as well as we can the constitutionality of our own actions. We take the oath to support the Constitution of the United States. I am not quite willing, therefore, to leave it entirely up to the courts, especially the Supreme Court of the United States as it has been constituted in recent years, to have the whole say in determining the constitutionality of every measure we pass here.

Of course, under the Constitution the Court will determine. But I think I have a right—not only a right but a responsibility—to also do some determining here. But what I have attempted to show this morning is that pretrial detention is not unconstitutional but that it is, indeed, constitutional.

With regard to the reference which the Senator made to civil rights, he is indeed a great defender of civil rights. I, too, am a defender of civil rights and equal constitutional rights.

But too often we forget the civil rights of the victims of crimes—the civil rights of the men, women and children in this community to go to the parks, to walk the streets, to go to the grocery store, to go to school without fear of being criminally attacked, mugged, robbed, or murdered. These law-abiding citizens have civil rights, too. I, for one, think that we should give consideration to their civil rights, and I believe that is what we are doing in this conference report.

Mr. President, as a general proposition, under the present 1966 Bail Reform Act, a person who is engaged in serious crime can be—and generally is—released almost immediately to the street after being caught and charged with such a crime, if he can show that he is without visible assets, or has appeared in court on some previous occasion when he was charged with a crime, et cetera, regardless of the fact that he is a chronic violent offender. Under the Criminal Justice Act, if there is evidence that the accused is without sufficient means to hire a lawyer, he is furnished counsel without charge and other costs of his defense are also provided free. Once back in circulation and free to resume his pursuit of

crime, he has little desire to face the consequences of a trial. So, it follows that there are motions for this and motions for that, continuance upon top of continuance, on one ground or another; and there are always reasons why the accused could not be in court on the day set, et cetera, or his rights have not been protected, et cetera, while the police involved in his apprehension and the victims of, and witnesses to, the crime of which he is accused, together with the assistant U.S. attorney charged with the prosecution, come to the court not just 1 day, but more frequently, time after time, ready to perform their various responsibilities under our system, only to find that the case has again been postponed while the defendant is out on the street, thumbing his nose at the law, laughing at the courts and victimizing the public. The results have been frustrating and devastating.

Let me cite some of the evidence and facts adduced at our 1967 hearings on specific aspects of the situation, as well as what has been happening since.

Testimony was received to the effect that there was an increase of 37.9 percent in crime index offenses in the District of Columbia between fiscal year 1966 and fiscal year 1967 (hearings, p. 2838). This was a tremendous increase in 1 year. The crime index offenses are: criminal homicide, forcible rape, robbery, aggravated assault, burglary, larceny (over $50), and auto theft. However, the crime of robbery jumped 68.7 percent in this 1 year—from 2,905 to 4,903. That was a phenomenal increase in violent crime, and I suggest that it had a direct relationship to the Bail Reform Act and the manner in which it was operating in conjunction with the Criminal Justice Act. This was not just a 1-year phenomenon, however. Robberies in fiscal year 1968, according to police department figures, jumped another 34.3 percent over fiscal year 1967. In this 2-year period, robberies went from 2,905 to 6,584—for an increase of 3,679 robberies. In other words, the increase in robberies during this 2-year period was more than the total number of robberies reported in fiscal year 1966. Further, the robberies reported committed in calendar year 1968, compared with calendar year 1967, increased 34.3 percent. There were 8,921 robberies in calendar year 1968. If one compares this with the 2,905 robberies reported in fiscal year 1966, one finds that there was an increase of 207 percent in robberies over a 2½-year period, or more than three times as many as were reported in fiscal 1966. This is an intolerable situation.

Now, let us take burglary. There was an increase of 38.6 percent in burglaries reported in fiscal year 1967 over the number reported in fiscal year 1966. There were 9,221 reported in 1966 and 12,789 in 1967—see the hearings, page 2838. In fiscal year 1968, there were 16,378 burglaries reported—another increase of 27.6 percent. In that 2-year period, there was a total increase of 7,157 burglaries.

I do not believe that this just happened. Something in the law-enforcement system came apart, and the finger points to the Bail Reform Act.

With respect to the sharp increase in criminal felony cases on the trial calendar of the U.S. District Court for the District of Columbia, testimony was received from the office of the U.S. attorney for the District of Columbia that as of October 3, 1966, there were 761 criminal cases pending, being handled by 15 assistant U.S. attorneys with an average caseload of 50 cases per trial assistant. As of October 2, 1967, the cases pending had jumped to 1,229, and while 19 assistant U.S. attorneys were working on these trials, the average caseload had risen to 65—see the hearings, page 3257.

With respect to the cause of the increase, a District court judge testified:

> In large part, the situation which exists with respect to the criminal docket has developed over the last year as a result of the operation of the Bail Reform Act in conjunction with the Criminal Justice Act, whereby anyone charged with a crime can be released on low bond or on personal recognizance and a large percentage of the cases will be provided with counsel. It is little wonder that no one pleads guilty until the last moment, or until he is facing trial, or that every device that can be invented is used to delay the date of trial. The statute says the defendant "shall be released," and the only time I can refuse is if I make a finding he might flee the jurisdiction. (Hearings, p. 3269).

With respect to the effect which quick release to the street of those accused of serious crimes or crimes of violence has on the victims of the crimes and witnesses for the prosecution, an assistant U.S. attorney testified:

> It has a very deleterious effect, especially on not only the victims of the crimes but on the witnesses of the crimes who see the victim at the mercy of the defendant in any given case. (Hearings, p. 2870).

There was testimony that because of repeated continuances, many witnesses for the prosecution just failed to show up or washed their hands of the situation after repeated appearances at court, necessitating the dismissal of the case.

There was also testimony indicating that as the result of the number of serious crimes more than doubling in a very short time, which, in turn, inundated the criminal calendar of the U.S. district court, numerous felonies were reduced to misdemeanors and were disposed of in the court of general sessions.

It was apparent throughout our hearings, that the turning back upon the streets of chronic offenders and perpetrators of the most serious crimes on little or no bail—and without regard to the gravity of the crime or the weight of the evidence—had had a most damaging effect upon respect for the law and had resulted in confusing the distinction between minor offenses and aggravated violent crimes and had undermined respect for all authority. Also, testimony was received indicating that the very fact that great numbers of persons charged with serious crimes of violence were released to the streets on their personal recognizance, or on very low bail, had the effect of encouraging others to commit crime.

The Metropolitan Police produced numerous cases where professional dangerous criminals were arrested time after time for the most vicious crimes and remained on the streets, on bond pending trial, where they continued to carry on their usual "profession." Some of the cases which were outlined at the hearings during the short time available were:

The Connie Wilkins case (p. 2871, et seq.), in which the defendant, who was on parole for armed robbery, between May 11, 1965, and September 23, 1966, was arrested 13 times on charges including numerous armed robberies, kidnaping, housebreaking, and shooting it out with the police, and, of course, repeated parole violations, and he still made bond and was released on parole each time to continue his career of crime on the streets.

The Theodore Evans case (p. 2880, et seq.) involved a defendant on parole who, on November 29, 1966, was indicted for armed robbery and was released on $2,500 bond and the parole board notified. On December 29, 1966, he was arrested for grand larceny and carrying a gun. The parole board was notified and he was released on personal bond. On February 22, 1967, he was charged with shooting a boy in the leg. The parole board was notified and he was released on $2,500 bond. On June 6, 1967, incident to the armed robbery of a business establishment, he was shot and killed.

Then, there is the case of the McCulloch brothers (p. 2883, et seq.), wanted in Maryland, Virginia, and Michigan, for armed robbery. In January 1966, they were released in Detroit on $5,000 bond for armed robbery. On November 22, 1966, one of the brothers was indicted by the grand jury in the District of Columbia for interstate transportation of a stolen motor vehicle and related offenses, and was released on $2,500 bond. On November 30, 1966, both brothers were arrested in Alexandria, Va., for armed robbery. They were indicted and bond set. On the same date, arrest warrants from the State of Maryland for three cases of armed robbery were received by Virginia authorities and lodged as detainers. On December 7, 1966, arrest warrants were issued in the District of Columbia charging the brothers with armed robbery of a jewelry store, and lodged as detainers with the authorities in Alexandria. On January 26, 1967, the brothers made bond on the Virginia charges and were transported to the District, where bond was set at $2,500 and the defendants were released upon posting an 8-percent deposit. They were arrested February 3, 1967, on fugitive warrants and returned to Maryland for trial. Each deposited $6,000 security bond and they were released. Three weeks later, one brother, with three others, was arrested in Washington, D.C., for housebreaking, robbery, assault with a dangerous weapon, and kidnapping. He was indicted on April 14, 1967, and on the same date, his brother was indicted for armed robbery and assault with a dangerous weapon. As of August 8, 1967, one of the brothers was at large under the Bail Reform Act and the other was in custody in the District of Columbia by virtue of the pending indictment.

Mr. President, I ask unanimous con-

sent that I might proceed for an additional 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, these cases, of course, are now history—and there is always someone who will say that they are isolated exceptions—but, actually, it would be more accurate to say that such cases are happening all the time. To prove this, it is only necessary to pick up a newspaper any day to find that at least one violent offender has repeatedly been charged with one serious offense after another and has continued to be released to the streets to continue his "career."

With respect to releasing dangerous people to the streets under the 1966 Bail Reform Act, a U.S. district court judge testified:

> We do now have this business of reporting to police precincts, and we are getting reports in promptly on them. And last Friday we terminated 13 that had failed to report on the 10th of July to a precinct. But every day I sit in motions releasing people on personal bond that I know are a great danger to the community.

The same judge, in commenting on the fact that an accused could report to a police precinct at 7 o'clock and rob a grocery store at 8 o'clock, advised that:

> . . . reporting doesn't assure anything, but we release these people and I know they are a great danger to the community. (Hearings, p. 2894)

It would appear that the evidence piling up has become conclusive that the social service approach to handling hardened violent criminal offenders will not work and that, regardless of the number of judges appointed—and we should have more judges and more law enforcement personnel—rising violent crime cannot be controlled without a change in the law to give the courts discretion, upon arraignment, to consider the danger the accused poses to the community. The situation has become similar to a contagion which has raged out of control with no preventive serum as yet developed to check it.

We now have had enough experience under the Bail Reform Act to know that it is not working in the manner in which it was hoped, and that the manner in which it is operating has a direct bearing upon the sharp rise in crime and the increase in lawlessness, and there is now ample proof that it needs to be changed. As I have pointed out, the principal reason it is not working is that the Federal statutory law requires that chronic violent criminals who have shown a high probability of danger to society must be released on low bond or personal recognizance because the only yardstick the statute permits in setting bail or other conditions of release is the danger of flight.

Yet, when it is proposed that the statutory law be amended to permit consideration of the danger which such violent offenders pose to society, a chorus of voices is raised protesting that to consider anything other than flight of the accused on pretrial release is unconstitutional; that it violates the traditional presumption of innocence; that it is punishment before conviction; that it is impossible to predict that an accused will commit another crime if released; that it violates the constitutional right of "due process," and so forth.

Such claims, if they have substantial merit, deserve serious consideration, but we know that the law with respect to bail in noncapital cases is not a constitutional right, but a statutory right. The strict presumption of innocence is merely a rule of evidence that comes into operation at the time of trial. It does not require all defendants to be treated as though they were innocent prior to trial. It is the existence of probable cause, based on the weight of the evidence that a person has committed an offense, which justifies his arrest and indictment and the denial of pretrial liberty in certain cases where there are strong reasons for requiring pretrial detention.

We know that pretrial detention has been accepted in capital cases since the Bail Act of 1789, and that such discretion in capital cases was carried over into the 1966 Bail Reform Act. Further, in the exercise of this discretion, the Bail Reform Act of 1966, for the first time, explicitly provides that the danger which the accused poses to society may be taken into consideration. The 1966 Act also permits consideration of such a danger in noncapital cases in determining whether or not a defendant may be detained pending appeal after conviction.

In the matter of due process, the interests of society must be balanced against the liberties of the individual, and restrictions and conditions imposed must be matched with the need to impose them. Nor can a ruling to detain, or to fix other conditions of release of an accused based on the danger he poses to society, be arbitrary or not based on the gravity of the crime, the weight of the evidence, and other circumstances of the particular case. Any defendant is entitled to all of the legal safeguards constituting due process, including a hearing at the time of his arraignment, or a special hearing, so that all appropriate facts may be presented. If, based on facts, the judge, in the exercise of his discretion, determines that the defendant should be detained, or sets reasonable bail which the defendant is unable to make, the defendant has the right to appeal such a ruling and certainly he has a right to a speedy trial. The constitutional guarantee of a speedy trial has become almost meaningless under present conditions, with most of the worst offenders taking every step possible to delay trial. It should be no more difficult for a judge to make a judgment as to whether a defendant poses a danger to society than it is for him to make a determination that the defendant is apt to flee the jurisdiction.

Mr. President, in this regard a judge in the District of Columbia called my office today and said that he had heard on the radio this morning the gist of what I planned to say on the District of Columbia crime bill.

He said that he could not resist calling to say that he unequivocally supports what I was reported as planning to say about the bail system.

He said: "We can literally predict who will commit another crime."

He said the commission of new crimes by men out on bond is a constant story, not the exception.

It would seem established without doubt that the situation which exists today with respect to the chronic violent criminal requires that there be pretrial detention where the facts and circumstances warrant, for, as was stated by a distinguished jurist in my 1967 appropriations hearings:

> Of what value is a system of criminal justice which assures us the most absolute protection from the excesses and errors of the police but renders us more vulnerable to the attacks of those whom the police are charged with restraining?

The conference report allows such pretrial detention in order to "reasonably assure the safety of the community." We must not reject this opportunity—which may not come again soon—to deal an effective blow against chronic criminals who for too long have been permitted to declare open season on defenseless, law-abiding citizens in the District of Columbia.

I urge the adoption of the conference report.

Mr. President, I apologize to Senators who have been waiting to speak. I appreciate their indulgence and patience.

Mr. President, I yield the floor.

Mr. BAKER. Mr. President, no apologies are necessary. The distinguished Senator from West Virginia has done his usual extraordinarily good job in his presentation this morning.

I conceive the thrust of his remarks to be entirely relevant and extremely important to the conference report we are considering today and upon which we will vote tomorrow.

It may be said that there is nothing more important in the administration of our laws than swift, sure, and inexorable justice, and that all the other paraphernalia of preventive detention, high bail, no-knock, or the other provisions of search and seizure, as provided in the U.S. Constitution and in the constitutions of all the States, are only peripheral to the basic issue. The basic issue is the guarantee of a swift and sure trial. If we had swift, sure, immediate justice it would go a long way toward alleviating many problems with which we are forced to contend in this crime package.

As I have said previously on the floor of the Senate, the important thing to remember about the District of Columbia crime bill and the conference report upon which we will vote tomorrow is not that it is new ground, because it is not new ground, but rather that it is the orderly codification and improvement of existing law, much of which we provided, to beef up the administration of justice in the District of Columbia to provide sure and swift justice.

I remember when I practiced law in Tennessee in my younger days which was

shortly after I attended the University of Tennessee Law School, and I was appointed to defend people. After being appointed I had to fight manfully to keep from going to trial the next day. I am sure from personal observation that that had a substantial effect on my client, the defendant, and on me as attorney. The defendant was usually tried and exonerated or convicted before there was any thought of returning to the street and committing another crime. That is the way it properly should be.

Mr. BYRD of West Virginia. I thank the Senator for his comments.

ORDER OF BUSINESS

The PRESIDING OFFICER (Mr. YOUNG of Ohio). Under the previous order the Senator from Tennessee is recognized for 30 minutes.

DIRECT POPULAR ELECTION OF OUR PRESIDENT

Mr. BAKER. Mr. President, a major item of legislative business yet to be considered by this body is the proposal to abolish the electoral college and adopt direct popular election of our President. I am a cosponsor of and shall support actively Senate Joint Resolution 1, introduced by Senator BAYH, supported by President Nixon, passed overwhelmingly by the House of Representatives, and ordered reported to the full Senate by the Judiciary Committee.

Direct popular election of our President and Vice President is the only system under which we can be certain that no man will be elected President receiving fewer votes than his opponent and under which each citizen's vote will be counted equally with that of all other citizens. Election results will not be distorted by faithless electors, out-of-date census figures, or a one-State, one-vote rule in the House of Representatives. Further, every citizen will have reason to vote for President, even if his State or congressional district is dominated by the opposing political party, and presidential tickets and campaigns will be designed to appeal to all voters in all States. It is only by popular election that all of these beneficial results can be achieved.

Perhaps the most important objection voiced by the opponents of popular election is that it will be disruptive of our federal system and disadvantageous to small, less populated States. Those stating this contention do so because the electoral college assigns to each State as many electoral votes as the State has Congressmen and Senators, and each State has, of course, two Senators, regardless of its population, and at least one Congressman, even if the entire State is far less populated than a single congressional district in a large State.

While opponents of popular vote contend that the apportionment of electoral votes is an integral part of the great compromise adopted by our Founding Fathers as a protective device for smaller States, a reading of the debates and reports of the Constitutional Convention reveals this to be historically inaccurate. The great compromise was adopted to settle the question of representation in Congress and was then later applied, almost as an afterthought, to the electoral college. Small States were offered protection in the choice of the President, not by the apportionment of electors, but by the provision that each State's voice would be equal in the House of Representatives in the event that no presidential candidate received an electoral majority. The Founding Fathers expected that the electoral college would serve as a nominating board and that the House would make the final determination from among the top five candidates. Of course, the system does not work as intended, and most would agree that this particular provision is now a dangerous impediment to the will of the people.

The claim that the present electoral college system favors small States does not stand analysis. It is based, as Prof. James Kirby has stated, upon a simplistic view of voter strength that does not reason beyond the fact that each State is awarded at least three electoral votes causing the ratio of electors to population to range, based upon 1960 approximate population figures, from 1 to 75,000 for Alaska to 1 to 390,000 for California. The deduction is that each Alaskan has about five times the voice of a Californian in a presidental election.

In my view, this is a classic demonstration of the use of figures to distort reality. The fallacy results because of the unit rule under which the popular vote winner in each State is awarded all the electoral votes of that State. With the operation of the unit rule the apportionment of electors in favor of small States is only apparent, not real. The people of the 15 States with the least favorable population to electoral vote ratio inhabit States with 312 electoral votes, and, in fact, the 12 largest States could elect a President with the 281 electoral votes they control. The candidate who carries these large States by even a handful of votes obtains a far greater number of electoral votes than he can obtain by carrying several smaller States by larger popular majorities. As a result of the winner-take-all system, national candidates concentrate their efforts in those larger States in which party competition is vigorous and which are generally carried by one political party or the other by a relatively small percentage of the popular vote.

Obviously, those who contend that the small States have an advantage under the present electoral college system are in contradiction with others who contend that, in fact, the larger and more urban States have such an advantage. Both contentions cannot be right, and, as I have said, I believe it is the small State advantage claim that is factually inaccurate. But I also firmly believe that those who urge retention of the electoral system because of the large State advantage base their argument on the wrong premise; that is, that the Presidency should be urban oriented to offset the alleged rural orientation of the Congress.

The President is the officer of all the people and, along with the Vice President, is the only elected official who speaks for all the people. For this reason I believe that in voting for the President one man's vote should count equally with that of all other men. I do not believe that the election of the President should be weighted toward big States or small States, toward urban interests or rural interests, toward Republicans or Democrats. I believe that the vote should be given to all the people—equally and directly.

Closely connected to the claims that popular election will destroy our federal system and be disadvantageous to either small or large States is the contention that direct election will produce an incentive for widespread voting fraud. In actuality it is the present system that should encourage more voting irregularity. Under the present winner-take-all electoral system a few fraudulent votes can determine the result of the State's entire electoral vote while under the direct system illegal votes would affect only the number of votes involved, thus greatly reducing the likelihood of any effect on the election outcome. Obviously, the possibility of voting irregularities can occur under any system, but I believe fraud is best prevented by a system that is direct, easily understood, and applied to all other elections.

There is yet one other argument by opponents of popular vote that cannot be overlooked. This contention is that direct election, if adopted, would be disruptive of our two-party system in that it would cause the creation of several ideologically oriented parties which might undermine the moderate political tone that has generally prevailed in our country. The underlying basis of this contention is that ideologically oriented splinter parties are presently discouraged because they rarely, if ever, can win a plurality of the popular vote in any State and thus capture the electoral votes of that State.

I have always believed in the tenets of our two-party system and am of the view that our unique two-party arrangement is largely responsible for the success of our form of government. I do not, however, believe that a direct vote of the people for their President would in any way endanger the present workings of our system.

There are many institutional factors which discourage third parties. Electoral laws, campaign practices, social patterns, the high cost of political campaigning, statutory obstacles to getting on the ballot, and the legal status of the two major parties as supervisors of elections in many States all contribute to the difficulty which minor parties have in attaining any degree of national influence or support.

Prof. V. O. Key contends that since the institution of the Presidency, unlike a multiparty Cabinet, cannot be divided among numerous parties to provide a coalition government, the presidential institution is itself a major reason for the evolution and development and the continuation of the two-party system

as we know it in its present national broad-based character. Other authorities assert that our system of electing Representatives by a plurality vote in single-member districts is the underlying basis of our political party system.

I believe that, if anything, direct election will strengthen the working of the two-party system in presidential elections. Since every man's vote will count, regardless of how badly it may be outnumbered at the State or district level, direct vote will encourage two-party competition in every section of the country. Vigorous, active campaigning in those States and areas where elections are closely contested will be as important as ever, but it will be equally important for candidates for the Presidency to seek votes in States where a given candidate has little hope of winning a popular plurality.

Mr. President, there was a time when the concept of the electoral college served a desirable and necessary function. Today the machinery of the electoral college remains; its reason for being has passed. The machinery itself must be eliminated. The system is more than a harmless anachronism; it represents a dangerous impediment to the voice of the people, an unnecessary barrier interposed between the voting citizen and the highest office in the land.

The vast foreign and domestic responsibilities of our President indicate clearly that no man should be called to assume the office without a universally understood mandate to govern and to lead our Nation. Every other official in the country from justice of the peace to mayor to Senator is elected by direct popular vote of the people. So should it be with the President of the United States.

ORDER OF BUSINESS

The PRESIDING OFFICER. Under previous order, the Senator from South Carolina (Mr. HOLLINGS) is recognized.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

Mr. HOLLINGS. Mr. President, it is quite clear that all of my colleagues who have participated in the debate on the pending District of Columbia crime conference report are unified in the objective of passing legislation which will embody the necessary constitutional and procedural safeguards and still provide effective law enforcement provisions. The question that divides opinion on the issues relates to the problem of alternatives. Certainly no one doubts the need for prompt legislation.

The District of Columbia leads the Nation in criminal offenses, including murder, rape, robbery, aggravated assault, larceny, and auto theft. In a city whose population is slightly over 760,000, more than 56,000 felonies were reported in 1969, but only 2.5 percent resulted in convictions. And the crime rate continues to rise. The number of felonies reported in the District of Columbia has risen 122 percent in the last 5-year period.

In my experience, my apartment was twice broken into, my administrative assistant was mugged; from my window of my apartment, I saw a young lady beaten, and my colleague, Senator LEN JORDAN, was attacked in the elevator of the building where we both lived—all within the shadow of the Capitol.

Although the thrust of the legislation is toward combating crime in the District of Columbia, the implications of this legislation are certainly nationwide and it is important that we consider the provisions most carefully. It is equally important that we consider all criticisms carefully in terms of the legal framework of constitutional safeguards.

The distinguished Senator from North Carolina, Senator ERVIN, whom we all recognize as an outstanding constitutional lawyer, and others have raised what they feel are serious questions concerning this conference report, particularly the no-knock and pretrial detention provisions. In view of his announced concern, and my respect for Senator ERVIN's views, I have approached this legislation very thoroughly. I have reviewed the statements, testimony, and the floor debate closely.

One of the major areas of conflict in the debate centers on the pretrial detention provisions. I was especially pleased to note that the vital principle established by the Senator from North Carolina at the time of the passage of the Bail Reform Act has not been altered in the conference report. No financial condition should be imposed on a man's freedom in order to insure the safety of the community. The man's record, not his wallet, should determine whether he will be held. Consequently, pretrial detention will not be imposed on the poor alone in the guise of a high money bond to insure appearance, but on those, rich and poor alike, found after hearing to meet the exacting tests laid out in the bill.

The question of pretrial detention under the bill has been attacked on the ground that it violates the eighth amendment, the time-honored presumption of innocence, and the due process clause of the fifth amendment. In my judgment, it does none of these. The language of the eighth amendment does not expressly deny or grant the right to bail and is, therefore, susceptible to two interpretations.

One interpretation would be that since the amendment does not specifically grant the right to bail, it can be construed to mean that bail shall not be excessive in those cases where it is proper and that the setting of no bail in certain cases would not be excessive.

The second interpretation would be that because the amendment does not provide for the denial of bail, it can be construed to require the setting of bail in all cases with the caveat that it never be excessive. Reviewing the historical background of the amendment, and the available constitutional interpretations, I am persuaded that the eighth amendment does not prevent Congress from defining the classes of crimes in which bail will be denied.

The eighth amendment was embodied in the American Bill of Rights of 1789 and was modeled after the English Bill of Rights, which did not grant the right to bail in all cases. England, the source of our constitutional and legal system, has long permitted pretrial detention in noncapital cases. Just recently, the Chief Metropolitan Magistrate of London testified before the Senate District Committee that in England bail is left to the discretion of the magistrate and that, in practice, bail is refused on four main grounds: First, likelihood of flight; second, interference with or intimidation of witnesses; third, the likelihood that the accused will commit other crimes if released; or fourth, the necessity of protecting the accused. In 1947, the English Court of Criminal Appeal in *Rex.* v. *Phillips*, 32 cr. App. R. 47, stressed particularly the need to detain persons likely to repeat their crimes, and the substantial probability of guilt—the very factors listed in the pretrial detention provisions of the legislation now under consideration by the Senate.

Eleven of the original 13 States enacted bail statutes, wherein six of them denied bail automatically in capital cases. Authority to deny bail in capital crimes remains the general pattern throughout the United States today. In my own State of South Carolina, rape, arson, and burglary were defined as capital cases in which bail was automatically denied. Although the death penalty typically applies only to a limited number of serious offenses today, it seems clear that when the eighth amendment was adopted it clearly permitted pretrial detention. The only Supreme Court decision which discusses the history of the amendment was the 1952 case of *Carlson* v. *Landon*, 342 U.S. 524, wherein the Court stated that the Congress is not prevented by the eighth amendment from defining the class of cases in which bail is denied. The test denying bail, of course, concerns persons charged with crimes of violence whose release would pose a substantial threat of death or injury to others.

Despite this background in Anglo-American jurisprudence, there are many of us who are uneasy with the notion of detaining a man prior to trial even though on analysis the arguments against doing so can be legally refuted. The man, however, is not being detained because of a determination of guilt, but because his release pending trial is found to be sufficiently dangerous to society to overcome the presumption in favor of pretrial release. If we instinctively dislike pretrial detention, we should instinctively dislike even more the repeated instances of defendants who have been freed on bail committing serious crimes while at liberty. The increase in crime and in crimes committed by those on bail necessitates a return to pretrial detention unless we wish to consciously discard an important weapon in the war against crime. Mr. President, at this point, I ask unanimous consent to have printed in the RECORD at the end of my remarks an editorial from the July 15 Charleston, S.C., News & Courier, which makes this point forcefully.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HOLLINGS. The bill now pending permits pretrial detention up to 60 days for defendants charged with dangerous crimes or crimes of violence and detention of drug addicts is to be under medical supervision. The term of detention is, therefore, limited. Additionally, detention is limited to defendants which have been found in adversary proceedings to constitute danger to the safety of the community. It seems clear that when it is judicially determined that an individual's release would seriously endanger the lives and safety of others, the criteria for such release should not be based upon the question of whether or not he is going to show up in court when his trial is called.

We have heard quite a bit about a study of the National Bureau of Standards purportedly showing that 5 percent of that category of persons arrested for violent crime and 5 percent of that category arrested for dangerous crime are rearrested after release from bail for another crime in the same category. In view of the crime statistics we hear, this may seem somewhat low. On closer inspection, however, the NBS report indicated why. Of the 654 persons studied, 29 percent were actually detained on whatever basis, and therefore, not capable of committing crimes while awaiting trial. During the period studied, arrests were made in only 29 percent of the reported offenses in the District. The NBS study suggests that if all the reported cases were cleared by the police—that is, arrests made—the true rate of arrests for those released awaiting trial might have been as high as 40 percent. I refer to the report, page 110. I do not intend to undertake a statistical debate; I merely wish to point out that study or no study we still do not know exactly how many crimes are committed by those awaiting trial. We only know that the addict with a $50-, $75-, or $100-a-day habit must get money somewhere. And we know a significant amount of crime—too much, whatever the percentage—is committed by defendants free on bail. I am persuaded the case precedents in history plus the realities of our experience support the interpretation that although bail may never be excessive there is no absolute right to bail.

As to the violation of the due process clause of the fifth amendment, the Supreme Court stated in 1965:

> The fact that a liberty cannot be inhibited without due process of law does not mean that under no circumstances it can be inhibited.

This was stated in the case of *Zema* v. *Rush*, 381 U.S. 1 (1965) at page 14, concerning the reasonable Government restrictions on the right to travel abroad. The Court went on to state that the test of reasonableness which obviously involves the consideration of the individual's interest in freedom as opposed to society's interest, not only concerns the governmental restriction imposed but also the extent of the necessity of the restriction. In the Carlson case mentioned before, the Supreme Court upheld the denial of bail to alien Communists pending deportation proceedings in the face of the due process argument by stating that the refusal of bail was not arbitrary or an abuse of power under the circumstances.

There is also legislative precedent on the point. Congress in 1964 enacted the District of Columbia Hospitalization of the Mentally Ill Act, 21 District of Columbia Code, section 501, a bill sponsored by Senator ERVIN, which provided for detention in a hospital of individuals believed to be mentally ill and dangerous prior to any court determining the mental illness or resulting dangerousness. I feel, therefore, that the due process clause of the Constitution does not prevent pretrial detention under proper circumstances.

Mr. President, let me address myself briefly to the other matter of which we have heard so much—the so-called no-knock provision of the bill. Here again, the media would lead you to believe that this is a novel provision. Yet, it has been the law for a very long time. The provision now before us, as a general rule, requires that an officer making an arrest or executing a search warrant must knock and announce his identity and purpose. It does, however, permit certain exceptions in what the courts have called exigent circumstances. These are carefully spelled out in the legislation. If the officer has probable cause to believe, first, that notice is likely to result in the evidence subject to seizure being quickly and easily destroyed; second, that notice is likely to endanger the officer or another; third, that notice is likely to enable the escape of the person to be arrested; or, fourth, that notice would be a useless gesture, he may break and enter without notice. The first three exceptions listed are spelled out in *Ker* v. *California*, 374 U.S. 23 (1963). The fourth circumstance was judicially recognized in *Miller* v. *United States*, 357 U.S. 301 (1958) and again most recently in *Bosley* v. *United States*, No. 21, 513, D.C. Cir. (Apr. 9, 1970). In Bosley, the court held that if the police see the suspect sleeping, the door being ajar, they should go in and wake him before stating their purpose—the announcement to a sleeping man being a "useless gesture."

These provisions do depart from existing law in one respect, they require a no-knock authorization in the warrant where possible. While this is a departure, it is one the Senate has already adopted in January of this year in S. 3246, the Controlled Dangerous Substances Act. That legislation authorized no-knock permission in a search warrant for drugs if the issuing judge is satisfied that there is probable cause to believe the property will be quickly and easily destroyed or notice will endanger the officer or another. The pending conference report contains the same authority but adds the positive requirement that if the officer has this knowledge in advance, he must obtain the authorization in the warrant.

Certainly, one of the most insidious types of crime in our society today is the rampant sale or pushing of narcotics. The disposal of narcotics is a very easy matter if the home contains modern plumbing fixtures. All too often, law enforcement officers have been unable to secure an arrest or obtain evidence because drugs "vanish" from the premises during the time they wait for admittance after they have announced their authority and purpose. This is also true of efforts to break up organized gambling.

It seems to me, therefore, that under the present judicial interpretations and the proposed procedural safeguards that are available, the proposed legislation provides a practical and constitutional alternative in handling the criminal problems in our Nation's Capital. I think it is an essential protection for the safety of our law-enforcement officers and a necessary alternative to prevent the proliferation of violence and criminal activity.

There are other provisions that have caused concern to my colleagues. Rather than discuss them in detail at this point, I would only state that I have studied the arguments and do not believe they are at odds with the necessary procedural and constitutional requirements necessary under our judicial system.

As pressing economic and social problems have cried out for solution in the past, Mr. President, Congress has responded with a wide variety of legislation designed to cure social ills and meet new demands. Surely no social ill cries out more for solution than the staggering crime problem in the District of Columbia. In my judgment, the proposed conference report is constitutionally sound and proposes a reasonable step forward in combating crime in our society. The time has come for this Congress to face the responsibilities of securing protection for our citizens. As Aristotle said more than 2,000 years ago:

> The law is order and a good law is good order.

I believe that by this legislation Congress will be properly discharging its responsibility in attempting to establish an orderly society through sound legislation.

EXHIBIT 1

[From the Charleston (S.C.) News & Courier, July 15, 1970]

PRETRIAL DETENTION

After voluminous and often heated testimony before a Senate subcommittee on constitutional rights, the issue of pretrial detention is coming before the U.S. Senate for decision.

The proposal for detention in jail before trial of someone charged with a crime takes the form of an amendment to the Bail Reform Act of 1966. That act was designed to minimize the use of money bond as a means of detention and a barrier to a person's freedom.

In practice, as Richard G. Kleindienst, Dept. of Justice deputy attorney general, has told the Senate subcommittee, the Bail Reform Act "absolutely precludes a trial judge from considering danger to the community in setting conditions of pretrial release in a non-capital case."

Under the act, every defendant charged with forcible rape, arson, kidnaping, armed robbery, burglary, bank robbery and a number of other crimes has an unequivocal statutory right to release before trial, unless

substantial evidence exists that he will attempt to escape jurisdiction of the court.

Those opposed to reforming the act contend that if a person charged with a crime can be detained prior to trial his freedom is being denied without due cause. Those favoring reform offer compelling evidence that defendants released under the Bail Reform Act are free, until their trial, to continue to prey on the community.

"Eliminating money bond," Mr. Kliendienst has said, "does not eliminate the social need to detain those persons who pose a serious threat to the public safety."

This threat has increased since the Bail Reform Act was passed. A survey made by the U.S. Attorney's Office discloses that of 557 robbery defendants indicted during 1968, some 70 per cent of the 345 defendants released before trial were rearrested for a new crime. Pretrial detention could have protected the public against these criminals.

Under proposed legislation, no one would be detained unless (1) he came within one of a group of carefully chosen categories who may pose a danger to society, (2) the judge finds that the defendant cannot be released on any condition that would reasonably assure the safety of the community, and (3) there is a "substantial probability" of the defendant's ultimate conviction.

Sen. Robert C. Byrd, D-W. Va., has said that the Bail Reform Act, passed with the best of intentions, "is proving a windfall to the chronic violent criminal." Society deserves protection against such persons. Until the judicial system can be geared up to speed trials of those charged with crimes against society, pretrial detention seems to provide the only means by which chronic offenders can be kept off the streets.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order, the Senate will now transact routine morning business.

Is there morning business?

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TOWARD BALANCED GROWTH: QUANTITY WITH QUALITY

Mr. JAVITS. Mr. President, I invite the Senate's attention to a report of the National Goals Research Staff of the President, under its Director, Leonard Garment, which has just been submitted. It is a most provocative report and represents an important step in identifying those national goals which raise legitimate challenges to our frequently random adoption of transitional priorities, themselves based on values which may already be outmoded.

Some of the issues raised, such as education and consumerism, reflect the maturing of our understanding of a commitment to the solution of problems of a longstanding nature; but others, such as environment, population growth, and the distribution of our resources, recognize the emergence of problems whose compelling thrust has been but recently perceived.

In identifying the goals which we should seek, the report does not attempt to set priorities; but it does give us an indispensable blueprint on how we may begin to do so, and also stimulates and provokes us into the urgent need for doing so.

It is really a threshold report to the effort to establish national goals. For those purposes, I commend the report to the Senate; and I ask unanimous consent that a summary be printed at this point in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY: TOWARD BALANCED GROWTH: QUANTITY WITH QUALITY

(Report of the National Goals Research staff)

President Nixon established the National Goals Research Staff July 13, 1969. The role assigned to the Staff was to analyze social trends, make projections about the kind of society that could result if present trends continue, forecast future developments and pose alternatives for the future domestic life of the Nation. The Staff did not undertake to set goals or to be a planning office. Rather, it studied and compared a variety of national domestic strategies that are available to the Nation and that can help in making the kind of informed choices essential to guide the processes of change.

The past year's work of the NGRS represented an experiment in supporting the formulation of national policies. One objective of the experiment was to aid in the improvement of the national decision-making processes of public and private institutions by anticipating events rather than by simply reacting to "crisis" situations. A second objective was to provide longer-range concepts of future conditions of our society in the recognition that the choices made today will importantly affect the kind of society we will have in 10, 20, or—in some cases—even 50 years. A third objective was to provide the American people with information which would facilitate their participation in setting the Nation's goals and related policies.

In connection with this third objective, the President directed the Staff to prepare a public report by July 4th of this year. He stated that the report should "serve as a focus for the kind of lively widespread public discussion that deserves to go into decisions affecting our common future."

The report of the National Goals Research Staff takes its central theme from the President's call, in his State of the Union message, for the development of a policy on national growth. The report examines a number of areas of American life where the issues of the nature and direction of growth are being argued. But, increasingly, we have become aware that growth is not enough. We have become alarmed at the threats to our environment posed by industrial and technological progress. We have developed a new and acute awareness that the quality of life cannot be measured in quantitative terms.

Concern has bred alarm, and some have urgently demanded that we call a halt to growth altogether. Yet, as the report points out, our need is not to stop growth but to redirect it. We *can* have quantity with quality. In fact, given our rising levels of expectation, we cannot have quality without quantity. But it is equally true that quantity without quality is no longer adequate either as a goal or as a standard of measurement. Plainly, we need to develop a concept of "balanced growth" and the guidance mechanisms through which it can be achieved on a sustainable basis. Many of the policy debates of this coming decade will be over how we strike the balances.

Making intelligent policy choices becomes increasingly complex as society itself becomes more complex, and as the consequences of various courses of action become more far-reaching and more intricately intertwined.

Though the choices are more complex, our means of making those choices have also been greatly advanced.

The vast increase in scientific knowledge, in technological capability, in our understanding of the economic and social forces that shape our society, all greatly increase both our capacity and responsibility to make intelligent choices about our future.

Of all the advances in our understanding of the ways in which human institutions work, none is more significant than those we now are making in our understanding of the means by which results that we want can be achieved and those we do not want can be avoided.

The report emphasizes that as we choose our goals for 1976 and beyond, it is vital that the process of decision be as broadly based as possible—not only involving the intelligence and the energy of people everywhere, but also inspiring an active sense of participation—"a role for everyone."

This report is meant to inspire debate—and to help give that debate form, direction, and meaning.

If people are to make their wishes felt effectively, it is important that they be aware of what the real issues are—that is, what the real questions turn on, where the "pressure points" are, and what the considerations are that must be weighed in any responsible determination of a particular policy. By presenting some of the emerging major debates in this form, it is the objective of the Report that informed, effective, and constructive discussion of the issues involved will be encouraged on the broadest possible basis.

A summary of each of the chapters of the Report follows:

CHAPTER 1—EMERGING DEBATES

America appears to be at a point of profound change, frequently characterized as that from an industrial society to a "post industrial society"—from a society in which production of goods was of primary concern to one dominated more by services and the generation and use of new knowledge. Consequently, we are in a period of marked social change, one aspect of which is the search for a growth policy to guide that change. This report examines several areas in which the choice of a future growth policy is explicitly or implicitly being debated. Its intent is to use these case examples as a part of a learning experience, as one discrete step in the evolution of a policy of balanced growth, as called for by the President. The approach is analytical and not prescriptive. The purpose is to aid the American people and their representatives in what is assumed to be a long process for evolving a growth policy.

The key substantive areas in which the problem of growth is being debated are: population growth and distribution, environment, education, basic natural science, technology assessment, and consumerism. In general, these topical areas do not correspond to the major social problems with which we are presently concerned, including those of our cities, campus unrest, the Vietnam War, and race relations. These represent dissatisfactions over our performance according to our established priorities.

Probably the major message that comes from the existing debates over a growth policy is not that our institutions have proven incapable of doing their job. Rather, many of our institutions have performed very well the tasks which we set for them a few decades ago. However, in so doing, they have created unanticipated problems with which we must now deal, and they must be reori-

ented toward the tasks that are appropriate in a society capable of a new level of performance. The range of criteria whereby we will judge institutional performance will be broader in scope and longer in time perspective. An essential part of this period of transition is the attempt to shift from a reactive form of public decisionmaking, in which we respond to problems when they are forced upon us, to an anticipatory form in which we try either to avoid them or be prepared to deal with them as they emerge.

It is the hallmark of our country that Americans have adjusted to change while preserving the basic qualities of their institutions. This has happened a considerable number of times in our history. In the course of this history, a predominant theme has been one of economic growth, and an accommodation to a larger population. At no time was economic growth considered so dominant a goal that it obscured all other concerns, but neither was the growth per se viewed as other than a good thing.

Today, for the first time, we find the virtues of economic growth questioned, and this issue is put in popular terminology as one of "quantity versus quality." This is, in the view of this report, a false phrasing of the issue, since the new qualitative goals being proposed and the old goals yet unmet can be achieved only if we have continued economic growth. The issue is better put as one of how we can ensure continued economic growth while directing our resources more deliberately to filling our new values.

A large portion of the explanation for this seems to lie in our demonstrated ability to achieve economic stability and growth in the period following the passage of the Employment Act of 1946. Even though our economy is at the moment in a period of transition, the pervading public and official view is that we are a Nation of growing, unprecedented economic resources.

At the same time that we have become a Nation that can afford to care we have also become a Nation that cannot afford not to care. The past decade has been marked by an emerging sense of conscience for the plight of the underprivileged, an awareness of social and economic problems that are the unanticipated consequence of our past actions, a resolution that we can guide our affairs more rationally, and simultaneously, a broad popular demand for citizen participation in the management of their own fate. While this was happening, we also developed new techniques of decisionmaking whose promise spurred the resolution to run things more rationallly, but whose full potential is incompletely understood or tested.

While this resolution to run our affairs both more rationally and more effectively was emerging, two complicating circumstances arose. The Vietnam War placed a strain on our admittedly large resources and belatedly forced us to recognize the necessity of considering priorities more seriously. And, a more complex model of how to go about purposive action evolved in part from the ecologists' experience with the environment, and in part from our increasing knowledge of social science and our mixed experience in attempting social and political reform.

We thus find ourselves at a point at which the following things are true: We have rising expectations and changing values concerning the goals we should set for ourselves both in resolving existing inequities and in improving the quality of our lives. However, while our resources are large and growing, they are finite and we must set priorities more deliberately. In compensation for this complication we have the promise of more rational methods of public decisionmaking as a way of selecting and implementing our priority goals. But, this must be brought about in a context in which there is greater public participation, and greater recognition of the complexities of the world—both social and environmental—in which we live.

CHAPTER 2—POPULATION GROWTH AND DISTRIBUTION

In a nation that once valued its population size and growth, and in which the phrase "fastest growing" was attached to the name of proud municipalities, the question of overall population size and distribution has come under active debate.

The question of population size in the United States is not Malthusian. The issue is not whether we can feed and clothe a population of any size we can realistically envisage, or even supply it with the expanding amount of energy it may demand. It is rather that of whether a technologically advanced and industrially prosperous nation wants, or can continue to pay the price of congestion and contamination that comes from our overall affluence. It is suggested that our size may be limited by the ability of the environment to absorb the wastes that result from our economic success.

Students of the overall size of our population are in no agreement as to precisely what the size will be by the year 2000, nor on what an optimum population size for a nation such as ours would be. But, more recent projections suggest that the increase in our population over the next 30 years may be considerably less than the additional 100 million that had generally been forecasted. In fact, it may even be that the present rate of increase will slacken off so that we will reach the zero growth rate that some demographers have been advocating.

However, the issue of population distribution is a different matter, and one to be taken seriously regardless of what may be the upper limit of the population size. Our population has been concentrating increasingly, not only in cities, but more and more proportionately into a few rather large urban masses. This has resulted in a lowering of the quality of life in both urban and rural areas. Projection of such a migration pattern is actually a de facto distribution policy since it will affect such decisions as industrial plant location and other types of investment which will make the prophecy of increasing concentration self-fulfilling.

We have before us a set of decisions. One which appears not to be urgent is that of overall-size of the population—even after the effects of a considerable amount of immigration are taken into account. Apropos of population distribution, we need to decide on whether or not we will adopt a deliberate strategy to encourage internal migration to negate the forecasts of ever-growing urban congestion in a few megalopoli. A viable option for such an alternate strategy is a policy of encouraging growth in alternate growth centers away from the large urban masses, coupled with a complementary effort of the use of new towns.

CHAPTER 3—ENVIRONMENT

Man is redefining his relationship to his environment. He has progressed from fearing, to understanding, to using, to abusing, and now to worrying about the physical and biological world about him. Throughout all but the very recent history of the United States, our relationship to the environment has been one of exploitation. We have seen our natural endowment as a source of riches to be extracted and used, or later, to be extracted and processed. Concern for the environment was generally limited to whether or not we were exhausting our inheritance of sources of food, energy, and materials.

The current interest in the environment has two distinctively novel emphases. The first is that the limitations that the environment places on our activities may not be on the input side (sources of food, energy, and materials), but on the output side (a place to dispose of our wastes). The second, which is closely related to the first, is that the environment, in addition to having a limited capacity to absorb wastes, is a complex ecological system in which intervention of an apparently minor sort can, and often does, have far-reaching consequences through a chain of unsuspected reactions.

Both of these aspects of thinking about the environment have important consequences on the way we think about other things. They raise the question of whether or not there may be an upper limit on our economic growth as a consequence of the limitations on how much waste can be absorbed. And, the model of complex ecological systems affects our whole way of thinking about the consequences of our action not only in the enivronmental sphere, but also in the social sphere where we are coming to realize that causation is just as complex.

Some scientists and other anxious citizens assume a doomsday model of the future in which increased economic production will drive us to our destruction. In response, others propose what is called a paradise-regained model which would return us almost to a state of nature. Fortunately, the doomsday model does not forecast that which is inevitable, and the latter, which would probably be unattainable if tolerable, need not be entertained.

A mixed strategy of response to our environmental problems is proposed. We need to expand our inadequate knowledge of ecological systems. But while expanding this knowledge, we must take those measures which we know are called for. We need to consider our current technological and economic alternatives in the light of long-range ecological balance. Additionally, we need to resolve conflicts between our demands for products and services, and the depletion and pollution generated by them.

The market mechanism can and should be used as one of the devices for regulating these demands. Government should play a role through appropriate regulations, taxes, subsidies, and standard setting. Since environmental problems and their solution are of a global nature, we must and are beginning to act in concert with the other nations of the world.

Our environmental problems are a result of our technological and economic successes and of our philosophical view of nature. Now we must learn to use our technology and our economic output better to bring us in harmonious relationship to that environment. As will be found in other sections of this report, it is becoming apparent that the relatively narrow criteria by which we have, in the past, judged technical and economic progress must be expanded to consider a wider range of consequences.

CHAPTER 4—EDUCATION

We have an educational system that is in many respects unparalleled. It has grown in size and resources to the point where we have nearly universal education through the secondary schools and a proportion of our population attending institutions of higher education that is unprecedented. Yet, this system is under severe attack and criticism; it is seen as having been set up to serve the needs of an America that has greatly changed in the intervening years. There are many who argue that it is necessary for the schools to deemphasize quantitative expansion along traditional lines and emphasize adaptation to the needs of a rapidly changing society.

In the past, the public has equated going to school with education. The role of the school was to transmit information and instill traditional values. The society of today is one changing so rapidly that skills and information become outmoded, and traditional values are under challenge. Furthermore, the proportion of information that children re-

ceive from the mass media is so large and the range of values to which they are exposed so diverse that it may well be that the schools should be devoted to giving them the cognitive skills for integrating information, and a framework within which to sort out the diverse values to which they are exposed.

In addition to what may fundamentally be a new orientation demanded of the schools, they are being asked to respond to current problems in two ways. First, it is said that they should be relevant to the needs of the student, which is to say that they should teach him as an individual to be able to deal with contemporary problems. Second, the higher institutions of learning, in particular, are being asked to solve the present problems of society.

The choices with which the schools are confronted involve, on the one hand, teaching problem-solving skills, fostering the development of students as individuals, and conducting problem-oriented research. Or, on the other hand, there is the option of continuing to transmit the old knowledge and values at the primary and secondary levels, and continuing to transmit the traditional knowledge and seeking to develop knowledge for its own sake at the higher levels of education.

By and large, it would seem that we must look for some appropriate mix rather than shift over to a complete doctrine of relevance. In the meantime, we need to develop further understanding of the educational process and of how to evaluate it. We must further develop an experimental posture toward innovation in education which will reflect our basic uncertainty as to how to go about the many problems with which the educational system is faced.

All of the above holds for the educational system at large. With respect to the children of minority groups, we have the special task of ensuring equal educational opportunity, and of understanding and dealing with those special disadvantages which are imposed on them by their environment.

Taken all in all, the educational system, which is the crucial single institution for the development of our citizenry so that they can live happily, shape our system wisely, and contribute to both the direction and rate of its growth, is in a state of severe stress. The educational system is having its own "growth" problems which, if not solved, will have a profound impact on the growth of the Nation as a whole.

CHAPTER 5—BASIC NATURAL SCIENCE

The American scientific establishment has grown and the capacities of its researchers have developed to the point that our capability in basic research has made us preeminent in the world. Having achieved that position, basic natural science finds itself in a crisis of both financial and social support. Historically, Federal funding, the main source of basic scientific research, has been large relative to the scientific resources available to do the work. In the recent past, as the scientific establishment continued to grow, the supply of funds leveled off so that the previous relationship has in effect been reversed. There is too little money relative to the number of scientists involved. At the same time, in the past half decade, scientists and their works began to come under fire as a result of the association of scientists with the military, and with industrial technology which has produced environmental pollution. In concert with these two developments, our national priorities have shifted to the solution of social problems, and basic scientists are being asked to shift their focus of work from the development of knowledge for its own sake to working on basic problems which have relevance for today's social issues.

The result is serious strain on an institution which furnishes us with our most fundamental understanding of ourselves and of our world, and which has been the source from which technology has evolved in recent times to serve economic growth. In the past few decades, we have been very successful in making basic science useful, but now we find ourselves in a crisis as to how to ensure its future usefulness, and of how to balance the long-range utility of basic knowledge with present urgent needs.

One of the major decisions with which we are faced is that of the level of support we will furnish basic science in the future. This is clouded by the problem of making basic research "useful" in the short run. It is in the nature of basic research that answers to practical problems may be found in unsuspected areas of inquiry. Some problem areas, at a given time, have a greater potential for exploitation than others. Setting research priorities on the grounds of probable utility is often a choice of possible short-term benefits against the longer-term ones which might result from a more rapid expansion of the basic pool of knowledge by permitting science to pursue the internal logic of its own development.

What is indeed, and may in fact be developing, is a forum in which the partially conflicting needs for maintaining the integrity of the core of basic research and the practical needs of the society are resolved.

In conjunction with the need to work out an appropriate level and distribution of funding, we must face the fact that an articulate minority are attacking the very rationale and spirit of science and of rational inquiry itself—the most elementary tools man has for the orderly guidance of his affairs.

CHAPTER 6—TECHNOLOGY ASSESSMENT

The Nation's infatuation with technology is at a turning point as profound as that of its relationship to the environment. Historically, we have tended to do that which was technically possible, if it were economically advantageous, on the simple ground that this represented "progress." However, as technology has increased with great rapidity, it has forced on us increasing unplanned social change and environmental problems we did not anticipate and do not want. At the same time, our notions of the complexity of social and environmental problems have made us increasingly cautious with respect to the actions we plan to take. Our level of affluence has given us a longer time perspective within which to assess the consequences of our actions. As with so many other of the debates with which we have been concerned, the technology assessment movement—which embodies this new attitude toward technology—asks us to judge our actions by a wider range of criteria than we have used in the past.

Formally, technology assessment is a term coined in the Congress to label a set of procedures to aid the Congress in making decisions for the orderly introduction of new technology and the evaluation of technology already in use. However, it is better viewed as a manifestation of a larger phenomenon of a decreasing willingness of both the public and its representatives to tolerate the undesirable side effects of things done in the name of progress. The public has protested effectively against the displacement of people by highways, aircraft noise, and the building of new powerplants. Specific actions have indicated that we have the disposition to forgo immediate economic benefits in order to avoid social and environmental costs which once would have been accepted with no more than pro forma consideration. The existence of formal technology assessment, now in both the congressional and executive branches, is to be taken as no more than a specific manifestation of the broader concern.

There are major policy problems with the prospect of doing technology assessment in a formal fashion. One is that of establishing criteria for deciding which among all of the new technologies emerging shall be selected for assessment, and how inspections, standards, and controls shall be established. Another is the extent to which technology assessment shall become a "way of life" in the American economy with increased consideration of the second-order consequences of technology through all strata of decision-making, both private and public. Most general, however, is the problem of how we will manage the impact of the possibility of technology's adverse effects with the demand for new technology to ensure economic development. Among other things, we may have to accelerate our efforts to detect new benign technological opportunities and facilitate their rapid introduction to offset the impact of inhibiting the introduction and use of harmful technology.

CHAPTER 7—CONSUMERISM

American business prides itself in its ability to develop, produce, and deliver a great flow of new technologically sophisticated products of a wide variety. Yet, its very success in this has produced a wave of complaints. There have been consumer movements in the past based on issues of product safety and quality, deceptive practices, monopolistic practices, aesthetics, and so on. However, what marks the new consumer movement as distinctive is that it features resentment that the stream of new products is so large and the differences among products so small that choice among them is said to have been made difficult. Furthermore, it is argued that the technical complexity of many of them is such that the untrained individual cannot evaluate them.

The result has been the evolution of a system of consumer protection which, since 1964, has featured commission and special assistants at the highest levels of Government, increased activity in the regulatory agencies, and finally in 1969, a Presidential enunciation of a "Buyer's Bill of Rights." Laws have been passed and new standards set. Testing procedures have been tightened. Consumer information services have grown.

The anomaly of the present consumerism market is that a highly market-oriented economy has produced a situation, in which it is said by at least an influential minority, that the doctrine of consumer sovereignty—the notion that the consumer can regulate business by his free choices—is no longer tenable for some undefinable but sizable segment of the marketplace. Some extreme manifestations of this position would have a considerable impact on the way our economy runs. Already, the consumerism movement has had an important and probably beneficial influence on business practice. This movement consists of a myriad of small issues, but the large one confronting us is that of developing a proper policy posture that will give the desirable amount and kind of protection to the consumer and, at the same time, preserve a business environment in which the economy can continue to grow.

The consumerism movement has been regarded by some as a fad. It is important to note that the complaints which stimulate the present consumer concerns are an integral part of a technologically sophisticated, market-oriented economy such as we have so deliberately developed in recent decades and which seems certain to continue.

CHAPTER 8—ECONOMIC CHOICE AND BALANCED GROWTH

The search for a policy of balanced growth has major implications for the allocation of economic resources and is crucially dependent upon economic growth. Conventional economic policy goals include full employment, an acceptable rate of growth, price stability, and a satisfactory balance of payments. Added to these now is a new set of

goals under the vaguely defined label of "quality of life." These concerns mirror a desire by many Americans to create a society better able to enjoy what it produces, and to grow in ways harmonious with its physical environment.

The setting of new goals and the establishment of priorities among them are matters of social choice. Economic analysis can help in understanding some of the central aspects of these choices, but it cannot dictate the answers. The choices themselves are those of the people, expressed individually through their private institutions and through their governments. The key choices are among competing ends. Economic analysis can contribute toward the meeting of these ends once they are chosen, and an economic policy of sustained growth can make it possible for more of these ends to be achieved.

CHAPTER 9—TOWARD BALANCED GROWTH

This report is motivated by the President's explicit call for the development of a national growth policy. It is assumed that both the meaning and form of this policy will evolve and that contributions such as this are but steps in that direction. This report takes an inductive approach to the overall problem by identifying a number of issue areas in which it seems meaningful to say that a debate bearing on growth policy is taking place. The issues which were selected are those which the National Goals Research Staff judged would make a distinctive contribution to the Nation's awareness. An example of an exclusion might be that of urban problems, a subject truly essential to our growth, but a matter much discussed by others of greater competence on that topic.

The major lesson to be extracted from the substantive problems reviewed here is the high desirability of an explicit growth policy with a relatively long-term perspective. In instance after instance, it was found that today's problems are a result of successes as defined in yesterday's terms. The object lesson has not been that our institutions are incapable, but that in the past we set performance criteria for them in terms now recognized as too narrow but which at one time were appropriate. We have become widely aware of the second-order consequences of our action, and we have demonstrated our resolution to take them into account when we can anticipate them. What we need is increased ability to anticipate those consequences and an explicit policy framework within which to evaluate them.

The central ingredient in the development of a growth policy will be for the American people to decide just what sort of country they want this to be. This process is in being, as reflected in these debates. Hopefully, this report and other events will serve as vehicles to facilitate discussion and choice. To further facilitate this process, we will have to develop better institutional arrangements for the people to relate to the leadership and better mechanisms of policy analysis to serve all parties.

While it is clear that an explicit growth policy is desirable, it seems equally clear from these debates that it is likely that what will emerge is not a single policy but a package of policies consistent with each other, each designed to meet one or more of our national objectives. This package of policies will shape both the directions of our society and the balance among the many segments of society in terms of priorities and interrelationships. It will not be a set of policies which the government alone can develop and effect. It will be a set of policies which emerge from the decisions of the government and the people, and which, in turn, will affect the decisions of both the government and the people.

APPENDIX A

These are only a few examples of possible developments, many of which have begun or may begin to emerge in the 1970's. Many of these developments may not appear in the 1970's or even later, but the list suggests that, as we view the prospects for our Nation, we must broaden our vision to take into account a variety of developments which will bring many new dimensions of human experience.

As illustrated by these selected trends and forecasts, the 1970's promise to be a decade of extraordinary change. Our Nation in 1980 could be one in which cities are more clogged with immovable traffic, air is less breathable, streams polluted to the point where expensive processes will be necessary to get usable water, seashores deteriorating more rapidly, and our people suffering needlessly from having not developed the necessary institutional arrangements for achieving the promise of this decade of change.

On the other hand, America in 1980 can be a Nation which will have begun to restore its environment, to have more balanced distribution of regional economic development and of population; a Nation which has abolished hunger and many forms of social inequality and deprivation; and a Nation which will have begun to develop the new social institutions and instruments necessary to turn the promises of this decade of change into reality.

If we are to see the second of these possible features realized in the America of 1980, we must begin now to define what we wish to have as our national goals, and to develop in both our public and private institutions the specific policies and programs which will move us toward those goals.

THE ATLANTIC COMMUNITY DEVELOPMENT GROUP

Mr. JAVITS. Mr. President, I invite the attention of the Senate to the development of a company called the Atlantic Community Development Group, of which I had the honor to be the inspirer originally, as chairman of the Economic Committee of the NATO Parliamentarians' Conference, in the early 1960's.

This has become a massive private enterprise effort of mutualization, a consortium of the greatest companies and banks in the industrial world at this time, to assist in the development of Latin America; but the idea is being extended to Asia, where a company already has been organized, and one is in prospect in Africa and one will ultimately come in the Middle East. The success of this enterprise is so critically important as bearing on the validity of the enterprise system as a technique for world development, quite apart from governments, that I commend this study to my colleagues.

Incidentally, the Overseas Private Investment Corporation, which we will organize soon, which has already been authorized by law, though a Government entity, follows the same general idea of stimulating this kind of world activity. It has tremendous consequences in relieving us of budget strain and other disadvantages of the kind of foreign aid we have been carrying on for years, which cannot be displaced, but a good deal of whose work might be done in this way.

I ask unanimous consent that an article on the development of this company, published in the July 11, 1970, issue of Business Week, making reference to its very gifted executive director, Ernst Keller, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE COMPANY THAT NURTURES LATIN BUSINESS

"ADELA is the kind of company that doesn't exist in developed countries, because they don't need it," says Ernst Keller, managing director of the Lima-based ADELA Investment Co. He adds: "There is no problem in finding capital for developing countries—the scarcity is management men."

ADELA (the Atlantic Community Development Group for Latin America) provides both money and management knowhow for Latin American business. Indeed, like available Jones, the multifaceted entrepreneur in Al Capp's comic strip, ADELA will supply just about any financial or managerial service. Keller claims that the company has helped mobilize close to $1-billion worth of investment in Latin America.

Since ADELA was organized in 1964, it has put $82-million in share capital and loans into 99 companies in 19 countries. ADELA organized many of the ventures, ranging from mining and meat packing to steel mills, food retailing, and computer service centers. And for every $1 that ADELA invests in its projects, other companies, banks, and lending institutions invest at least $9.

ADELA and its subsidiary, ADELATEC Technical & Management Service Co., are now working on a series of new ventures:

A company to warehouse, transport, and distribute farm products in Latin America, with Anaheim International of Fullerton, Calif. (Another company, Latin American Agribusiness Development Corp. is looking for ventures. Its partners include Bank of America, Cargill, Inc., Deere & Co., and Gerber Products Co.)

The Jamaica Negril Estates, formed with the Jamaican government's Urban Development Corp. This involves an option to buy a big tract of beach and swamp for a $140-million resort complex, new town, and farm belt. ADELATEC drew up the project and ADELA is talking to potential investors.

A hotel chain called Hotel Associates, with Braniff Airways, Inc. It will cost about $150-million, coming mainly from local investors.

Among other things, ADELA is promoting Latin American economic integration by organizing multinational industrial ventures that exchange materials and products across national borders. It is setting up a holding company to provide services to industrial leasing companies in several countries, and it has spawned a litter of smaller private investment companies in seven Latin countries.

Eventually, Keller hopes to move into mutual funds.

Meanwhile, ADELA nurtures the businesses it has already created by helping with everything from market surveys to financial reorganization. It sells the same services to outsiders.

POWER BACKING

In all this, ADELA is backed by the financial strength and the technical and managerial knowhow of the world's most powerful corporations—239 of the biggest banks and industrial companies in the U.S., Canada, Europe, Japan, and Latin America. They each subscribed up to $500,000 of ADELA's $60 million in authorized capital, and have paid in over $50 million. With such blue-chip backing, ADELA exerts financial leverage far beyond its own resources. It borrows additional funds from member banks, and it gets long-term loans from such sources as the Inter-American Development Bank and Germany's Kreditanstalt für Wiederaufbau. Other investors, local and foreign, take shares in ventures organized by the company; they feel their money will be safe and return a good profit under ADELA's wing.

ADELA was launched with 56 initial stock-

holders, mostly U.S. and European companies, amidst the turmoil in Latin America that followed the Cuban revolution. Senator Jacob K. Javits (R-N.Y.) persuaded the Ford Foundation to finance the study that led to its founding. One aim was to spur economic development by funneling more outside capital into the area; another was to strengthen private enterprise and create a better business climate. Some shareholders thought these were worthy objectives, but were frankly skeptical about ADELA as a moneymaker. In fact, one European banking house promptly wrote off its shares as a straight loss. Nevertheless, ADELA earned profits of $2.9 million in its last fiscal year and paid a 4% dividend to stockholders. Now a similar venture with many of the same shareholders, the Tokyo-based Private Investment Company for Asia, is helping organize and finance companies in developing nations of the Far East.

LEADERSHIP

Keller has put his personal stamp on ADELA. A hard-driving, outspoken Swiss, the 50-year-old Keller had been assistant vice president of W. R. Grace & Co.'s South American division and had founded his own investment firm in Lima.

For ADELA, he recruited a staff that is both young and multinational. Executive Vice-President Eugene R. Gonzalez, for example, is an American born in Chile. Vice-President Desmond Cameron, an Englishman, came to ADELA from Schroder bank in London; Peter Rabbow, one of five ADELA managers, is a German; Arturo Yermoli, an ADELATEC manager, is a Chilean industrial engineer who worked in Argentina. About 40 executives and staff members work out of Lima and 50 are scattered in other offices in Latin America, Washington, and Zurich.

"Keller motivates his people very strongly," says Howard C. Petersen, chairman of Philadelphia's Fidelity Bank, one of ADELA's founders and now its chairman. "I think one of the attractions is that there is a certain relevance in what they do. As a consequence, ADELA can perhaps get better and more strongly motivated men than other companies."

HOW IT WORKS

Keller describes ADELA and ADELATEC as "a service organization and mover of human and financial resources." Staffers in Lima and resident representatives in 13 countries look for investment opportunities. When one is turned up, ADELA converts it into a concrete "bankable" project with feasibility, market, engineering, and financial studies.

"Only then do we become an investment company," says Keller. "We can only provide seed capital. We go around hat in hand getting money from other investors—Latin American, foreign, institutional."

That is not too difficult for a company that has the world's biggest banks as stockholders. "We maintain good contacts with shareholder banks," says an ADELA executive. "So all we do is write an informal, chatty letter describing the project and asking if they are interested. If so, we supply the project study made by our analysts."

In Bolivia, for example, ADELA financed the development of new properties by a small tin mining company, Cia. Minera del Sur. It put up $1 million in loans and equity, and New York's First National City Bank, an ADELA shareholder, loaned $500,000. In Buenos Aires, ADELA financed a major expansion by meatpacker Frigoríficos Argentinos, S.A. (FASA), by lending $1.5 million and placing another $2 million of loans with banks.

IN MANAGEMENT

ADELA's role, though, goes far beyond ordinary investment banking. "One of its major contributions has been on the management side," says Petersen. "If you have the management, the money follows."

Once financing has been obtained, explains Keller, "our services begin again. The project must be planned, programmed, designed, purchased, and installed."

One of the company's biggest projects is Cía. Pino Celulosa de Centroamérica, a $70-million pulp and paper mill that will exploit a vast stand of virgin timber in Honduras. The Honduran government development bank, the Central American Bank for Economic Integration, and the International Finance Corp. are putting up part of the share capital. ADELA and ADELATEC made a preinvestment study and a feasibility study, helped organize the company, obtained financing, and looked for a foreign paper company with knowhow to run the mill. Negotiations are under way with the International Paper Co. to manage the venture and put up 51% of the equity. ADELA will buy $3.5-million worth of shares and sell them off gradually to local investors.

Bringing in Latin partners and taking only a minority interest in companies helps ADELA avoid the charge of "economic imperialism" that is a favorite political issue in the region. Julio Juncosa Seré, president of the fast-growing FASA, says that because ADELA is multinational, it was an attractive source of "impartial credit." Since FASA competes with British and American-owned meatpackers, it was reluctant to have ties to financial groups in those countries. "We had other offers and turned them down," Juncosa says.

In a typical minority investment, ADELA aided Armat Metalúrgica, a Chilean maker of coin blanks, in financing a new plant. ADELA bought a 25% interest in the company for $333,000 and loaned another $250,000. Armat now exports to Israel and Uruguay, and has a contract to supply coins for Argentina's new "hard peso."

ADELA's industrial stockholders participate directly in some of the manufacturing companies it organizes. Germany's Fried. Krupp, for example, supplied equipment and the financing for an Ecuadorian steel rolling mill.

SOME MISSES

ADELA has had some notable failures, among them Promecan, a Peruvian fishing boat builder. The company has overexpanded, and ADELA helped refinance it by buying 40% of its stock for $700,000 and lending it another $1.7-million. Keller also persuaded his old company, Peruinvest, and the Peruvian government development bank to put money into Promecan with the aim of diversifying the company and overhauling its management. Then a crisis hit the fishing industry, customers cancelled their orders, and Promecan went broke.

Says a top ADELA executive: "When we brought Promecan out to breathe, suddenly there wasn't any air." Promecan has gone through bankruptcy now, though, and is back in business with a Japanese partner.

Recently, much of ADELA's emphasis has been on strengthening Latin America's thin financial markets by setting up financial intermediaries. ADELA has launched "financieras" (private investment companies) in a number of countries, and has formed industrial leasing companies in Mexico and Brazil. In Mexico, it is setting up a company that will "warehouse" commercial paper up to five years' maturity by buying and holding it for its own account. In Brazil, it plans to buy into a brokerage house.

ADELA also develops local capital markets by helping family owned companies go public. Last year, it bought out La Cortina, a Venezuelan carpet manufacturer. ADELA plans to convert the company to public ownership by selling shares to Venezuelans.

Now ADELA is starting to promote Latin American exports. The newly created Adela Trade Development Co. will bring together expertise in financing, management, production, packaging, and transport to expand trade within the region and exports to overseas markets. "You are a dead duck if you think only in terms of a local market," says ADELA manager Fortunato Quesada, a former Peruvian diplomat.

In such ventures, the risks are increased by Latin America's political ups and downs. But old Latin hands, like Keller, keep their cool.

Keller says: "There is no question that investors who have not lived in Latin America are being scared off by the present tendency toward greater nationalism—in some cases, quite radical nationalism. But nationalism exists everywhere, with different names. In industrial countries, it is called protecting the balance of payments."

ENROLLED BILLS SIGNED

The President pro tempore announced that on today, July 22, 1970, he signed the following enrolled bills, which had previously been signed by the Speaker of the House of Representatives:

S. 417. An act to authorize the Secretary of the Interior to convey certain lands in New Mexico to the Cuba Independent Schools and to the village of Cuba;

S. 778. An act to amend the 1964 amendments to the Alaska Omnibus Act;

S. 885. An act to authorize the preparation of a roll of persons whose ancestors were members of the Confederated Tribes of Weas, Piankashaws, Peorias, and Kaskaskias, merged under the treaty of May 30, 1854 (10 Stat. 1082), and to provide for the disposition of funds appropriated to pay a judgment in Indian Claims Commission Dockets numbered 314, amended, 314–E and 65, and for other purposes; and

S. 3685. An act to increase the availability of mortgage credit for the financing of urgently needed housing, and for other purposes.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. GRAVEL) laid before the Senate the following letters, which were referred as indicated:

REPORT ON REGISTRY OF MINORITY CONSTRUCTION CONTRACTORS

A letter from the Secretary of Housing and Urban Development, Washington, D.C., transmitting, for the information of the Senate a registry of minority construction contractors (with an accompanying document); to the Committee on Banking and Currency.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on potential savings by centralized control of overseas air passenger transportation, Department of Defense, dated July 21, 1970 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on improvements needed in Federal Aviation Administration procedures for determining excess spare parts, Department of Transportation, dated July 22, 1970 (with an accompanying report); to the Committee on Government Operations.

PROPOSED INDIAN FINANCING ACT OF 1970

A letter from the Secretary of the Interior, transmitting a draft of proposed legislation to provide for financing the economic development of Indians and Indian organizations, and for other purposes (with accompanying papers); to the Committee on Interior and Insular Affairs.

PROPOSED FEDERAL SALARY COMPARABILITY ACT OF 1970

A letter from the Chairman, United States Civil Service Commission, transmitting a draft of proposed legislation to amend title 5, United States Code, to direct the President to adjust the rates for the statutory pay systems, to establish an Advisory Committee on Federal Salaries, and for other purposes (with accompanying papers); to the Committee on Post Office and Civil Service.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. GRAVEL):

A joint resolution of the Legislature of the State of California; to the Committee on Commerce:

"ASSEMBLY JOINT RESOLUTION No. 4

"Relative to a national wildlife refuge for South San Francisco Bay

"Whereas, The establishment of a national wildlife refuge for the southern portion of San Francisco Bay to preserve open-spaced and recreational values in the natural environment of the bay for benefits to man and to protect a wildlife habitat of national significance from the increasing threat of urbanization has been endorsed, after extensive studies, by the Bureau of Sport Fisheries and Wildlife of the Department of the Interior, and resolutions in support of such action have been adopted by 23 government agencies of the San Francisco Bay area; and

"Whereas, House and Senate bills to establish the refuge were introduced during 1969 and these bills, which were in committee on the adjournment of the first session of the 91st Congress, will be reintroduced and hearings held on the question of the proposed refuge after January 1, 1970; and

"Whereas, The proposed refuge area of open water, sloughs, tidal, shallows, flats, marshes, saltponds, and upland meadows is a natural habitat for 100 species of water birds and 42 species of land birds and, as a vital part of the Pacific Flyway, is host to thousands of migratory wild birds making the long fall flight from the Arctic to Baja California and South America; and

"Whereas, The South San Francisco Bay region provides the habitat and resting areas for several species of bird and animal life which are on the verge of extinction, and prompt acquisition of land for a national wildlife refuge is essential in view of the continuing pollution and destruction of the natural environment of the region by rapidly expanding urban development; and

"Whereas, The proposed national refuge, carefully managed for the protection of wildlife, would also provide the people of the San Francisco Bay area and of the nation with access to the bay and its wildlife for observation and enjoyment, offering opportunity for picnicking, photography, fishing, and other recreational activities compatible with the primary purpose of the refuge, and would enable students of all ages from elementary school to college to use the refuge as an outdoor laboratory for the study of biology, ecology, history, and sociology; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to establish a national wildlife refuge for the southern portion of San Francisco Bay; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to the Secretary of the Interior, to the House Committee on Merchant Marine and Fisheries, to the Senate Committee on Commerce, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"ASSEMBLY JOINT RESOLUTION No. 49

"Relative to Pyramid Lake natural resources

"Whereas, Pyramid Lake in the State of Nevada is a unique and beautiful national asset deserving of preservation and protection for the enjoyment of present and future generations; and

"Whereas, The potential recreational and economic value of Pyramid Lake to the people of the State of Nevada and particularly to its owners, the Paiute Indian people whose reservation encompasses the lake, is beyond question; and

"Whereas, Pyramid Lake is a natural geologic sink which receives the flood flows of the Truckee River system and which historically received the entire flow of the river system; and

"Whereas, It is well substantiated that the diversion of Truckee River water over the past sixty years has caused, except for exceptionally wet years such as 1969, the progressive lowering of the level of Pyramid Lake; and

"Whereas, The unique recreational and economic resources of Pyramid Lake are being endangered as its level declines due to the diversion of water from the Truckee River system to meet the many competing demands; and

"Whereas, While uses of water from the Truckee River system in California unquestionably have some adverse effect upon Pyramid Lake, the fundamental problem centers upon the annual average diversion of 241,000 acre-feet of water at Derby Dam in Nevada for use in the Newlands Project and upon the operational criteria adopted by the Secretary of the Interior for the Truckee-Carson River system; and

"Whereas, Stabilization of the water level of Pyramid Lake and the provision of minimum flows necessary to sustain fish life and spawning in the Truckee River below Derby Dam would enhance the lake's fishery resources and create economic benefits to the Paiute Indian people who own the lake; and

"Whereas, A properly developed Pyramid Lake would provide high quality recreation for large numbers of residents of California; and

"WHEREAS, The United States Department of the Interior is charged with responsibility for assuring the protection and wise use of the nation's natural resources and controls in major part the waters of the Truckee River-Carson River system; and

"WHEREAS, The conflicting interests of various bureaus within the United States Department of the Interior have precluded satisfactory resolution of the water management problems of the Truckee River-Carson River system; and

"WHEREAS, These conflicting interests are centered in the Bureau of Indian Affairs, the Bureau of Sports Fisheries and Wildlife, the Bureau of Land Management, and the Bureau of Reclamation; and

"WHEREAS, The level of Pyramid Lake will continue to decline until such time as these conflicts are resolved; and

"WHEREAS, A resolution of the water management problems of the Truckee River-Carson River system is beyond the capabilities of the States of California and Nevada; and

"WHEREAS, The Assembly Committee on Water, in its evaluation of the proposed California-Nevada Interstate Compact concerning the waters of the Lake Tahoe, Truckee, Carson, and Walker River Basins, has concluded that a final resolution of this conflict and of the water management problems of the Truckee River-Carson River system can only be attained through positive action by the Secretary of the Interior; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California memorializes the President and the Congress of the United States and the Secretary of the Interior to take those actions necessary to assure the protection and preservation of Pyramid Lake; and be it further

"Resolved, That the Secretary of the Interior is requested to take immediate action to achieve coordination of the activities of the various bureaus within the Department of Interior in order to solve the problems relating to management of the Truckee River-Carson River system; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and the Vice President of the United States, to the Speaker of the House of Representatives, to the Chairmen of the Senate and House Committees on Interior and Insular Affairs, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of the Interior."

ESTABLISHMENT OF A JOINT COMMITTEE ON THE ENVIRONMENT—JOINT REPORT OF COMMITTEES ON COMMERCE, INTERIOR AND INSULAR AFFAIRS, AND PUBLIC WORKS (S. REPT. NO. 91-1033)

Mr. JACKSON. Mr. President, the Commerce, Interior, and Insular Affairs and the Public Works Committees today filed a joint report on Senate Joint Resolution 207, a resolution to establish a Joint Committee on the Environment. The report recommends the enactment of Senate Joint Resolution 207 as amended by the committees. A companion measure, House Joint Resolution 1117, has already been passed by the House.

The establishment of a nonlegislative Joint Committee on the Environment will give the Congress a new institution which can provide a continuing overview of both present and emerging environmental problems and can be an important source of data and information for the standing committees of the Congress. This measure has received the careful attention of the Senate committees who exercise primary jurisdiction over environmental matters and its enactment has been unanimously recommended.

The PRESIDING OFFICER (Mr. SCHWEIKER). The report will be received and the joint resolution will be placed on the calendar, and the report will be printed.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

John G. Hurd, of Texas, to be Ambassador Extraordinary and Plenipotentiary to the Republic of South Africa.

Mr. FULBRIGHT. Mr. President, I also report favorably sundry nominations in the Diplomatic and Foreign Service

which have already appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they may lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER (Mr. YOUNG of Ohio). Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Helmut Sonnenfeldt, of Maryland, and sundry other persons, for appointment and promotion in the Diplomatic and Foreign Service.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. BROOKE:

S. 4109. A bill for the relief of Santa Bonanno Merlino; to the Committee on the Judiciary.

By Mr. TYDINGS (by request):

S. 4110. A bill to amend Section 8 of the Act approved March 4, 1913 (37 Stat. 974), as amended, to standardize procedures for the testing of utility meters; to add a penalty provision in order to enable certification under Section 5(a) of the Natural Gas Pipeline Safety Act of 1968, and to authorize cooperative action with state and federal regulatory bodies on matters of joint interest; to the Committee on the District of Columbia.

ADDITIONAL COSPONSORS OF BILLS

S. 3252

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Texas (Mr. TOWER), I ask unanimous consent, at the next printing, the name of the Senator from California (Mr. MURPHY) be added as a cosponsor of S. 3252, to amend the Internal Revenue Code of 1954, as amended.

The PRESIDING OFFICER (Mr. YOUNG of Ohio). Without objection, it is so ordered.

S. 4041

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Texas (Mr. TOWER), I ask unanimous consent that, at the next printing, the name of the junior Senator from Illinois (Mr. SMITH) be added as a cosponsor of S. 4041, to repeal section 7275 of the Internal Revenue Code of 1954, relating to amounts to be shown on airline tickets and advertising.

The PRESIDING OFFICER (Mr. YOUNG of Ohio). Without objection, it is so ordered.

S. 4075

Mr. LONG. Mr. President, on July 10, 1970, I introduced S. 4075, a bill to provide for limitation of the importation of sulfur. Since that time, the junior Senator from Texas (Mr. TOWER) has expressed his desire to be a cosponsor of that bill. I, therefore, ask unanimous consent that the name of the Senator from Texas be added to S. 4075 as a cosponsor.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

S. 4099

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Iowa (Mr. MILLER), I ask unanimous consent that, at the next printing, the name of the junior Senator from Texas (Mr. TOWER) be added as a cosponsor of S. 4099, to amend section 2771 of title 10, United States Code, relating to final settlement of accounts of deceased members of the Armed Forces.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

SENATE RESOLUTION 432—ORIGINAL RESOLUTION REPORTED TO PROVIDE ADDITIONAL FUNDS FOR THE COMMITTEE ON APPROPRIATIONS

Mr. RUSSELL, from the Committee on Appropriations, reported the following original resolution (S. Res. 432); which was referred to the Committee on Rules and Administration:

S. RES. 432

Resolved, That the Committee on Appropriations hereby is authorized to expend from the contingent fund of the Senate, during the Ninety-first Congress, $35,000, in addition to the amounts and for the same purposes, specified in section 134(a) of the Legislative Reorganization Act, approved August 2, 1946, Senate Resolution 204, agreed to June 16, 1969, and Senate Resolution 315, agreed to February 2, 1970.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on yesterday, July 21, 1970, he presented to the President of the United States the enrolled bill (S. 3978) to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning July 1, 1971.

The Secretary of the Senate also reported that on today, July 22, 1970, he presented to the President of the United States the following enrolled bills:

S. 417. An act to authorize the Secretary of the Interior to convey certain lands in New Mexico to the Cuba Independent Schools and to the village of Cuba;

S. 778. An act to amend the 1964 amendments to the Alaska Omnibus Act;

S. 885. An act to authorize the preparation of a roll of persons whose ancestors were members of the Confederated Tribes of Weas, Piankashaws, Peorias, and Kaskaskias, merged under the Treaty of May 30, 1854 (10 Stat. 1082), and to provide for the disposition of funds to pay a judgment in Indian Claims Commission Dockets numbered 314, amended, 314–E and 65, and for other purposes;

S. 3685. An act to increase the availability of mortgage credit for the financing of urgently needed housing, and for other purposes; and

S. 3889. An act to amend section 14(b) of the Federal Reserve Act, as amended, to extend for one year the authority of Federal Reserve Banks to purchase U.S. obligations directly from the Treasury.

AUTHORIZATION OF CERTAIN MILITARY APPROPRIATIONS DURING FISCAL YEAR 1971—AMENDMENT

AMENDMENT NO. 789

Mr. SCOTT. Mr. President, I am submitting today an amendment to H.R. 17123, an act to authorize appropriations for Defense, that I believe each member of this body can join in supporting.

As President Nixon has emphasized, we are moving from a wartime economy to a peacetime economy. This shift in national priorities is unquestionably in the interest of the country as a whole. We must remember, however, the cases of individual citizens whose jobs may be eliminated in this process.

In March, the elimination of 58,600 positions in the Department of Defense was announced. The vast majority of the people displaced by this reduction in force were career civil servants. Future reductions will also involve career employees. To seek new jobs poses a tremendous hardship to these people. Similarly, the Federal Government can ill afford to lose their skills and experience.

The amendment I am submitting would affirm the sense of the Congress to be that government departments and agencies, when filling vacancies, give priority consideration to Federal career employees who have been displaced from positions eliminated in the Department of Defense or other departments or agencies as the result of reductions in force.

My amendment would also declare the sense of the Congress to be that departments and agencies should comply fully with the Presidential memorandum of April 24, 1970, and with the displaced employee program of the U.S. Civil Service Commission, both aimed at effecting priority consideration for displaced employees.

Sufficient normal vacancies occur each year to permit the Government to absorb qualified displaced persons who want to continue in the Federal service. All that is required is a conscientious effort by departments and agencies to place these persons. The Congress should lend its voice to the efforts of the executive branch and the Civil Service to insure that this task is accomplished.

The PRESIDING OFFICER (Mr. SCHWEIKER). The amendment will be received and printed, and will lie on the table.

NOTICE OF FURTHER HEARINGS ON GEOTHERMAL STEAM

Mr. MOSS. Mr. President, on behalf of the Subcommittee on Minerals, Materials, and Fuels of the Interior Committee, I announce that a further public hearing has been scheduled for Tuesday, July 28, on S. 368, to authorize the development of the geothermal steam and associated resources on the public lands.

The Atomic Energy Commission, which has done some extremely interesting work in artificially produced geothermal steam, and the Federal Power Commission have been requested to attend the hearing and make presentations within the immediate future.

It is the committee's earnest hope and expectation that a bill can be worked out very shortly that will insure orderly development of this greatly needed source of energy, which may be relatively pollution-free in many areas, and which will be fair and equitable to the pioneers in geothermal development.

All interested Members of Congress and the public are invited to participate in these hearings. It is requested that the Interior Committee staff be notified by those wishing to be heard.

ADDITIONAL STATEMENTS OF SENATORS

THE 200TH ANNIVERSARY OF THE DECLARATION OF INDEPENDENCE

Mr. BOGGS. Mr. President, 190 years ago three citizens of Delaware—the first State in the Union to ratify the Constitution—made a pilgrimage to the city of Philadelphia.

The journey of one of those signers of the Declaration of Independence provided a dramatic sidelight in our State's history to the daring and unprecedented action in the crucial session of the Continental Congress of 1776.

Delegate Caesar Rodney, who had returned to his home in Dover because of a serious malignancy that had spread over half his face, was notified that the Declaration would be acted upon within 24 hours.

This patriot thereupon got out of his sick bed, and although running a high fever, rode horseback during a stormy, rain-swept night the 80 miles from Dover to Philadelphia, changing horses many times in order to obtain the topmost speed.

Historians Merle Sinclair and Annabel Douglas MacArthur, in their detailed and documented account about the signers of the Declaration of Independence, said of Rodney:

> He had served his province for more than 20 years, and was a recognized leader in the movement to rescue Delaware from British rule.

Rodney arrived in time to sign the Declaration along with two other great patriots of Delaware, Thomas McKean and George Read.

The pilgrimage of that time, in July of 1776, was to Philadelphia, metropolis of the Colonies and having a population of almost 35,000. That city, as historians Sinclair and MacArthur relate, was "the logical meeting place."

It has now been recommended, Mr. President, that Americans—in fact, all citizens of the world—be given the opportunity to journey on another pilgrimage, 200 years later, to the birthplace of our Nation.

Once again, the logical place, as the historians said of 1776, will be Philadelphia.

The commemoration of the 200th year of our freedom—in 1776—will be national in scope and involve every State, city, town and hamlet, and all our territories and possessions.

But the city of Philadelphia, "the city of brotherly love," will be one of the main focal points and the scene of a possible unusual international exposition on a truly universal scale.

Pilgrimages, Mr. President, are one of mankind's oldest and most cherished urges to recapture faith, hope, principles, and ideals.

The American Revolution Bicentennial Commission, created and established by Congress, has submitted to the President its report containing recommendations for the commemoration of one of the most important peaceful—and I emphasize the word "peaceful"—events in world history in this bicentennial decade—the 200th year of our country's history.

The hardworking Commission—of which Dr. J. E. Wallace Sterling is Chairman, and Hobart Lewis, the president and editor in chief of Reader's Digest, the Vice Chairman, and M. E. Spector, the dedicated Executive Director—has, I know, been confronted with many questions.

It sometimes must have seemed as if every American wanted to help commemorate the event but that each had a different idea. Thus, Mr. President, hard decisions had to be made on the basis of fact, on what would be possible, and what was suitable.

The Commission has proposed a national "Festival of Freedom," divided into three major components: First "Heritage '76," second, "Open House USA," and third, "Horizons '76." Proposed commemoration activities of considerable magnitude are outlined for the Washington, D.C., area, Boston, Miami, and other cities.

The Commission was charged by law and by the intent of Congress to propose and oversee a possible world's fair, if the Commission deemed it suitable. I congratulate the Commission in its selection of Philadelphia. The Commission, as Congress intended, will be in charge from start to finish over all national events, including this proposed world's fair and this is as it should be because the Commission has organized or helped organize some 50 State commissions and scores of local bicentennial commissions; the National Commission must coordinate all these activities.

I ask unanimous consent that the brief portion of the Commission's report dealing with the world's fair be included in the body of the RECORD at the conclusion of my remarks.

I also ask unanimous consent, Mr. President, to have printed in the body of the RECORD at the conclusion of my remarks a brief analysis by the American Law Division of the Legislative Reference Service, Library of Congress, of certain responsibilities of the Commission as required by law and congressional intent.

The American Revolution Bicentennial Commission has met its responsibilities thus far in admirable fashion. It has many difficult tasks ahead in this bicentennial era. I am sure that all States and cities are prepared to help, and I know that Philadelphia has and is preparing a broad program for a universal fair.

In this age of plastic and chrome, the Commission has taken particular note of other possible ways in which to commemorate our freedom, not only going back to the past but looking forward to the future, socially and morally as well as materialistically.

I extend my congratulations to the public Commission members, the ex officio Cabinet members and the eight Members from the Congress. And last, but not least, I think the Commission staff, under Mr. Spector's excellent direction, deserves our compliments. These staff members include the Deputy Executive Director, Hugh Hall; the Director of Policy and Planning, Dr. Lynn Carroll, and his assistants, Martha Jane Shay and Nancy Porter; the Administrative Officer, Lamar Whitaker; the Deputy Administrative Officer, Edward T. Simms; the Executive Secretary, J. K. Morrison III; the General Counsel, Gene Skora; Administrative Assistant, Mrs. Particia L. Reynolds; the Special Events Officer, Pat Butler; and the International Affairs Expert, William Blue.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

The American Revolution Bicentennial Commission's report to the President contains the following recommendations and suggestions regarding the possibility of an International Exposition in the City of Philadelphia in 1976 as part of the commemoration of the 200th year of our freedom:

"One facet of such international participation is an international exposition endorsed by the Bureau of International Expositions. The Commission has deliberated seriously and long about international participation. It has been greatly aided by the Department of Commerce which, with the cooperation of other Federal agencies, has carefully studied proposals presented to the Commission by the Cities of Boston, Philadelphia and Miami, and by the National Capital Region.

"As a result of these deliberations and studies, the Commission recommends: that the President commit the full support of his office to a great and imaginative multi-city exposition in 1976 to celebrate the American quest for life, liberty and the pursuit of happiness. There should be no commercially-oriented world's fair in the traditional sense anywhere in the nation during the Bicentennial Era.

"Philadelphia: To recognize that America is the product of many foreign lands, institutions and peoples, the Commission urges the fullest international participation in the fiscal year, 1976. For this purpose, the Commission is aware of the value of a Bureau of International Expositions (BIE) sanctioned event. Accordingly, if Philadelphia, where the Declaration of Independence and the Constitution were signed, will commit itself to an exposition which will have commemorative, historical emphasis, and which is cultural and inspirational, rather than commercial, in intent, the Commission invites that city to undertake the challenge of such an exposition."

Analysis of Certain Responsibilities and Powers of the American Revolution Bicentennial Commission—From the American Law Division, Legislative Reference Service, Library of Congress:

Just how broad the powers of this Commission are, and specifically if the Commission has the sole right to select and recommend to the President a possible site for a World's Fair in 1976?:

"Specifically, the enactment creating the American Revolution Bicentennial Commission sets forth the duties of the Commission as follows:

"(a) It shall be the duty of the Commission to prepare an overall program for commemorating the bicentennial of the American Revolution, and to plan, encourage, de-

velop, and coordinate observances and activities commemorating the historic events that preceded, and are associated with, the American Revolution.

"(b) In preparing its plans and programs, the Commission shall give due consideration to any related plans and programs developed by State, local, and private groups, and it may designate special committees with representatives from such bodies to plan, develop, and coordinate specific activities.

"(c) In all planning, the Commission shall give special emphasis to the ideas associated with the Revolution . . .

"(d) Not later than two years after the date of enactment of this Act, the Commission shall submit to the President a comprehensive report incorporating its specific recommendations for the commemoration of the bicentennial and related events . . .

"(e) The report of the Commission shall include recommendations for the allocation of financial and administrative responsibility among the public and private authorities and organzations recommended for partcipation by the Commission . . ."

Opinion as to the Actual Legislative Intent of the Legislation:

"In reporting the resolution to the Senate, the committee report (S. Rept. 1317, 89th Congress) stated in part:

" 'The Commission would (1) provide a creative and helping hand to State, local and private groups in their commemorations; . . . (3) plan for celebrations at the national level . . .'

"The House committee, in reporting the House Resolution (H.J. Res. 903), adopted an excerpt from the Senate report which included the above quoted language (H. Rept. 1672, 89th Congress).

"This language tends to indicate an intent on the part of the Congress to create a single Commission to plan and coordinate on a most comprehensive basis the commemoration of the American Revolution bicentennial. While World's Fairs usually tend to emphasize material and cultural achievements and forecasts rather than purely historical events, we see no reason why a World's Fair for the year 1976 could not appropriately be oriented toward a commemoration of the most historical events of the American Revolution. It seems to us, also, that because of the special importance that the nature, purpose, and operation of the Fair be fully integrated with the plans of the whole commemoration, the responsibility for recommending the site for such a Fair, if any, should rest with the Commission. The designation of the Secretary of Commerce as an *ex officio* member of the Commission, rather than as the office authorized to make recommendations regarding World's Fairs—which he normally is—suggests that it was contemplated that in this instance the Congress intended that any recommendation concerning a site for a 1976 World's Fair would be made by the American Revolution Bicentennial Commission.

"Further indication of the intent of the Congress was found in the committee reports with respect to the 1967 amendment (Public Law 90–187, 81 Stat. 567). The following excerpt from the committee reports (H. Rept. 509 and S. Rept. 609, 90th Congress) shows that, at least within the Judiciary Committees, the Commission was regarded as authorized to consider the question of a major international exposition:

" 'It appears that the Commission will consider the question of a major international exposition as a part of the bicentennial celebrations. In view of the fact that the Department of Commerce has the major responsibility in the executive branch for fairs and expositions held in the United States, it seems appropriate that the Secretary of Commerce should be an *ex officio* member of the Commission.'

"Thus, it can at least be argued that in enacting the 1967 amendment to the Act of July 4, 1966, the Congress intended that the Commission would be the only Federal agency charged with the responsibility of recommending a World's Fair in 1976 assuming, of course, that such a fair is planned as a part of the program to commemorate the bicentennial of the American Revolution.

"It is pointed out, however, that there is no specific language in the legislation which would give the Commission the *sole right* to select and recommend a site for the World's Fair in 1976."

Dates and Amounts of Authorizations for Appropriations:

"In proposing the legislation enacted as Public Law 89–491 the President recommended an authorization of $200,000 for 'the 24-month period beginning on the date of the enactment . . .' (see H. Rept. 1672, 89th Congress). However, the proposed resolution was amended by the committee on the Judiciary of both the House and Senate to delete the authorization of funds. It was felt in such committees that 'because of the great interest of all Americans . . . the Commission should be privately financed by publice donations' (see S. Rept. 1317 and H. Rept. 1972, 89th Congress). It was not until December 12, 1967, when section 7(a) of the Act was amended that funds ($450,000) were authorized for the Commission for the period through fiscal 1969 (Public Law 90–187). On October 10, 1969, this authorization was extended for one additional year, through fiscal 1970 (Public Law 91–84)."

Dates and Amounts of Actual Appropriations:

"The first Federal funds available to the Commission ($150,000) were appropriated on July 9, 1968, some two years after enactment of the basic legislation (Public Law 90–392). Additional funds, $175,000, were appropriated on October 29, 1969, by Public Law 91–98. Thus a total of $325,000 of the $450,000 authorized through fiscal 1970 has been appropriated."

MILITARY ASSISTANCE TO SAFETY AND TRAFFIC

Mr. TOWER. Mr. President, last Wednesday, July 15, the Secretary of Defense and the Secretary of Transportation announced Project Military Assistance to Safety and Traffic, called MAST, which utilizes military helicopters to speed to hospitals highway traffic victims and others injured far from medical help.

The project is being tried on an experimental basis in San Antonio with the cooperation of the Army's 507th Air Ambulance Company stationed at Fort Sam Houston, the Bexar County Sheriff's Department, and the Texas Department of Public Safety.

Project MAST is designed to test the feasibility of applying to civilian life the technical expertise we have learned in speeding battlefield casualties to medical help. The Defense Department attributes rapid evacuation by helicopter as one reason for a decline in the death rate of wounded soldiers from 4.5 per 1,000 during World War II to 2.3 per 1,000 in Vietnam.

Mr. President, I am pleased to announce that it took only 2 days for Project MAST to prove its worth. At 9:30 a.m. Friday, July 17, David J. Gomez, 16, fell from a truck near Dilley, Tex., and was run over by the truck. He was rushed to a small rural hospital where a doctor determined that only more advanced intensive care facilities could save his life.

Emergency airlift was requested and 1 hour and 35 minutes later an Army helicopter had traveled the 70 miles from San Antonio to Dilley, loaded Gomez aboard, and returned to Baptist Hospital in San Antonio where Gomez underwent immediate surgery.

A hospital spokesman said Gomez would not have lived had he not received intensive care. Gomez remains in intensive care but was reported today in "fair" condition.

Mr. President, Project MAST has proved its worth. Of course, the pilot project will continue in order to assess economic feasibility and other considerations. But no one can assess the worth of a human life. In my opinion, Project MAST paid for itself several times over within only 2 days.

I am hopeful that this program may be expanded to other parts of Texas which can be served by military air ambulances, and to other parts of our Nation as well. In rural areas where intensive medical care facilities are many miles away, air ambulance service can mean literally the difference between life and death, as it was for young Gomez last Friday.

I ask unanimous consent that a newspaper article describing Friday's lifesaving activity, written by Lewis Fisher, and published in the July 18 San Antonio Express-News, be printed in the RECORD. I also ask unanimous consent that a press release issued July 15 and an article written by John Mort and published in the July 16 Houston Chronicle, both describing Project MAST, be printed following the article by Mr. Fisher.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the San Antonio Express-News, July 18, 1970]

HELICOPTER AIRLIFT SAVES YOUTH'S LIFE

(By Lewis Fisher)

A Dilley teen-ager apparently owes his life to the first flight of a military helicopter airlifting a civilian traffic victim Friday morning to a metropolitan hospital.

The military-civilian cooperative effort was announced Wednesday by Defense Secretary Melvin R. Laird and Transportation Secretary John A. Volpe. The San Antonio pilot program was the first in the nation to begin, and Friday's airlift was its first test.

David J. Gomez, 16, was in satisfactory condition Friday night at Baptist Hospital in San Antonio following his flight from Wintergarden Hospital in Dilley.

At 9:30 a.m. Friday, Gomez fell off a farm truck he was riding near Dilley and was run over by the wheels. He was taken to Wintergarden Hospital, where Dr. George Douglas decided that only more advanced intensive care facilities could save Gomez' life.

At 10:30 a.m. Dr. Douglas requested the emergency airlift from Fort Sam Houston and arranged for Gomez' care with Dr. John Williamson, a colleague at Baptist Hospital.

"We were in the air within two minutes," recalled Capt. Samuel B. McLamb, pilot of the UH–IH craft which was one of two on 24-

hour alert at the 507th Medical Company (Air Ambulance) hangar at Fort Sam Houston.

At 11:20 a.m. the helicopter arrived at Dilley. Five minutes later Gomez was inside, along with his mother, Mrs. Olivia Gomez, and his brother Richard. The helicopter took off and set down on the Baptist Hospital's specially-constructed helipad facing Madison Square at 12:05 p.m.

Within minutes Gomez, then in critical condition, was undergoing surgery in the intensive care unit.

Gomez was suffering from a broken left thigh, broken shoulder blade, an eye injury, multiple rib fractures and chest and internal injuries. Baptist Hospital spokesmen said ordinarily he would not have survived.

"Speed was imperative," said Dr. Williamson. "Airlifts like this are tremendous assets."

Co-pilot with Capt. McLamb was Capt. Gary Brownell. Crew chief was Spec. 5 Robert Bohler and corpsman in attendance was Spec. 5 Jeff Geary. All are veterans of medical airlifts in Vietnam.

Noted Capt. McLamb, who plans to enter medical school in September, "This was the same as Vietnam, without the hostile fire."

PROJECT MILITARY ASSISTANCE TO SAFETY AND TRAFFIC—MAST

The following is the substance of a news release being made today.

Secretary of Defense Melvin R. Laird and Secretary of Transportation John A. Volpe today are announcing a joint test program to determine the value of helicopters in providing medical assistance to auto accident victims and other persons needing emergency medical care.

The test program, to be conducted in the San Antonio, Texas, area from July 15 through December 31, will use Army helicopters and medical corpsmen to provide medical assistance to civilians involved in emergency situations. It will utilize techniques developed during the Korean and Vietnam Wars to provide medical aid and evacuation for wounded soldiers.

The rapidity of evacuation by helicopter has been determined as one reason for the death rate of wounded soldiers declining from 4.5 per 1,000 in World War II to 2.3 per 1,000 in Vietnam.

Most assistance is expected to be for victims of highway accidents, but the test will also provide transportation for doctors needed by critically injured or ill persons, especially in remote rural areas.

The Army's 507th Air Ambulance Company, Fort San Houston, will maintain one UH–1 "Huey" helicopter and crew on constant alert to respond to emergency calls. The UH–1 can transport three stretcher and four sitting patients plus flight crew and medical personnel.

Request for assistance by the Army will be routed through the Bexar County Sheriff's Office. Sixteen civilian and two military hospitals in the 10-county area of the test program are to be involved in the program.

It is expected that the program will help determine the effectiveness of communications and coordination systems, training requirements for civilian and military participants, number of missions during an average time period, and the feasibility of the use of reserve Army aviation units.

Decision to initiate the program was based on Departments of Defense and Transportation studies in conjunction with the Departments of Justice and Health, Education and Welfare and other federal, state and local authorities.

MILITARY TO TRY AIR AMBULANCE IN SAN ANTONIO

(By John Mort)

WASHINGTON.—Federal officials announced today a pilot project in which air evacuation methods learned in Vietnam will be applied to civilian emergencies in this country, particularly traffic accidents.

The experiment will be conducted in San Antonio beginning today and lasting until the end of the year.

Military helicopters will be used along with military medical personnel.

The program will work this way:

A law enforcement officer will radio the local sheriff's office requesting a helicopter. Military crews on a standby basis around the clock will scramble and fly to the scene of the accident, emergency aid will be administered and then the victims flown to the nearest hospital.

Medical personnel will radio ahead to the hospital emergency room what kind of injuries have been suffered.

An air ambulance company at Ft. Sam Houston will conduct the experiment in coordination with the Bexar County Sheriff's office.

Four civilian hospitals in San Antonio have helicopter landing pads. There is another at Brooke General Hospital at Ft. Sam Houston.

While the program is aimed primarily at taking care of traffic accident victims, it also would be concerned with flying doctors to treat critically sick persons in remote rural areas and also to bring these sick people in to hospitals.

The project was announced jointly by Defense Secretary Melvin Laird and Transportation Secretary John Volpe.

Laird said that trauma resulting from accidents is the greatest cause of death among persons under 35 years of age.

He said the military has learned in Vietnam that battle deaths can be cut substantially by rapid evacuation of wounded in helicopters.

Laird said federal officials will study "the cost effectiveness" of the pilot project and if it is found worthwhile, similar projects will be conducted in other areas of the nation.

The Defense Department will pay for the program.

Laird said several states and communities have experimented with using helicopters for medical emergencies but often had found the costs of training personnel and of the aircraft prohibitive.

But as the war winds down in Vietnam, he said, many helicopters will become available as surplus.

"Also, we've trained a great deal of military helicopter pilots since 1965. Many of them are returning to civilian life and will be available for this work."

Volpe said if the project works out effectively, the military may continue to provide the air ambulance service for civilian communities.

The San Antonio project will cover a 10-county area. Fifteen helicopters (UH-1s), 21 pilots and 10 corpsmen trained in medical aid and evacuation will be assigned to the test program. Almost all of the men are veterans of Vietnam.

THE TRUE STORY OF ROTC

Mr. GOLDWATER. Mr. President, it is practically impossible for the services to get favorable attention from the press and other media of the country, so in the hope that Senators might be able to know the true picture of ROTC as they see repeated stories of colleges dropping the units that I should like to offer the following statistics.

This is prompted by a report in the press that Trinity College, at Hartford, Conn., and New York University will end their ROTC programs by June of 1971, and that Princeton University and Washington University in St. Louis will end theirs in June of 1972.

To read only this part of the whole story might give the reader the impression that ROTC is in real trouble. Far from it; there are 72 schools awaiting application for Air Force ROTC and 171 have it at the present time. The Army has 279 units, and 40 colleges are awaiting applications.

As a person who acquired his commission in the Army and ultimately in the Air Force Reserve through ROTC, it has long been my suggestion to the branches of the service that any college that does not want ROTC should have it taken away immediately, and every college that we can accommodate should be allowed the privilege of a unit. It does not surprise me that some of the radical left institutions are dropping ROTC, but the services will be far better off without them, and I would not be surprised if a better product were coming forth as commissioned officers.

I ask unanimous consent that an article on this subject be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR FORCE WILL DROP ROTC AT FOUR COLLEGES

The Air Force has agreed at the request of four universities to disband reserve officer training corps units at the schools over the next two years.

Trinity College, Hartford, Conn., and New York University will end their ROTC programs by June 1971, and Princeton University and Washington University in St. Louis by June 1972.

OIL IMPORTS

Mr. GRIFFIN. Mr. President, I want to register my strong concern regarding the action taken last week by the House Ways and Means Committee, which, if adopted by Congress, undoubtedly would prevent the abolition of oil import quotas in the foreseeable future.

Of particular concern to me is the effect of such action on the temporary quota which was placed on imports of Canadian oil. While I am far from happy with the 10-month quota placed on Canadian imports, the House Committee action would, in effect, "lock in" a quota system for all oil imports, including Canadian oil, for an indefinite period of time. Despite the fact that, theoretically, the committee action would not prohibit the elimination of quotas or the establishment of high quotas, the net result is likely to be the same.

Such action is not in line with the "interim control" measures announced by the President at the time of instituting quotas on Canadian oil imports and is clearly counter to the recommendations of the Cabinet Task Force on Oil Import Control.

In announcing the imposition of quotas on Canadian oil, the President tempered his action by stating:

It is expected that discussions will continue with Canada looking toward the conclusion of an agreement permitting freer exchange of energy resources between the two countries.

The task force in recommending a changeover from a system of quotas to a

system of tariffs concluded that national security reasons do not exist for restricting Canadian oil imports indicating that such oil "is nearly as secure politically and militarily as our own." Accordingly, the task force recommended:

That, after an appropriate transition, Canadian and Mexican imports be exempt (from higher tariffs) if common energy accords can be arranged with these governments.

Since 1959 when Presidential Proclamation 3279 placed the mandatory oil import quota system into effect, the only restrictions on Canadian imports have been as the result of voluntary agreements between the United States and Canadian governments. Under the House committee action any form of control over oil imports, including voluntary agreements, would not be permissible. All flexibility to the President in dealing individually with different import situations and different national security considerations would be removed.

To underscore the disastrous effect which the House Ways and Means Committee action could have on the consumer, the employees of industries utilizing oil resources, as well as the industries themselves, let me focus on my State of Michigan.

Under the present quota system, the task force determined that the cost to consumers in Michigan in 1969 was $209 million and approximately $5 billion nationally. In other words, each person in Michigan paid $24 in 1969 as the result of quotas on foreign oil imports. For a family of four the cost would be nearly $100.

To be more specific, oil import quotas cost Michigan residents in 1969 over 10 times as much as the State spent on all environmental programs in that year and only slightly less than the total State budget for all higher education assistance or the amount allocated for all welfare payments.

On top of this burden to Michigan residents has been added the restriction on Canadian oil imports from March 1, 1970, to December 31, 1970. At the time when the quota of 395,000 barrels per day on Canadian oil imports into the Midwestern and Eastern parts of the United States was put into effect, the level of daily imports had reached nearly 550,000 barrels. While a portion of this high level is normal in the early winter months, a substantial part is also due to the decrease in the availability of domestic sources for Michigan users, as well as other users in Northern and Midwestern States.

For instance, Michigan crude oil production has declined nearly 40 percent in the last decade and at present accounts for only 27 percent of the demand for crude petroleum in the State. In addition, other domestic resources have leveled off or decreased their supplies to Michigan with the exception of West Texas. However, the cost to Michigan users from this source runs from $0.50 to $1 per barrel above Canadian costs. This oil is the most expensive domestic source for Michigan users.

With respect to gasoline prices, it has been estimated that consumers in the Midwest may have to pay an additional 11½ cents per gallon because of the quotas on Canadian oil imports.

It should also be pointed out that in some instances Canadian crude oil is the only source of supply to Michigan and other Northern States. This is particularly true with respect to manufacturers of petrochemicals, a major product in Michigan. Such producers who are denied access to low-cost Canadian petroleum are forced to pay at least 60 percent more for crude oil and, thereby, cannot realistically compete with foreign producers. In fact, to avoid the restrictions of our present policy, a number of U.S. producers have simply located their new plants abroad. The effect on employment is obvious. Furthermore, indefinite continuation of present restrictions on Canadian imports is likely to lead to the shutdown of additional plants within the State resulting in the layoff of hundreds of employees. In view of Michigan's current high unemployment level, the prospect of further layoffs is not at all pleasant.

While present oil import policies place a heavy burden on Michigan, as well as the entire country, serious adverse consequences may ensue if oil imports can be controlled only through the quota mechanism.

Although our oil import program has always been justified in terms of our national security, and we obviously need to protect our domestic petroleum supply, there should be a limit on what we have to pay for that protection.

Accordingly, I intend to oppose vigorously any measure which requires the exclusive use of quotas to control oil imports. Furthermore, I believe that a better balance can be struck between national security considerations and the economic well-being of the country by adoption of either the Cabinet task force recommendations or some similar system. The American consumer deserves no less.

AMERICAN CASUALTIES DROP

Mr. DOLE. President Nixon's efforts to wind down the war in Vietnam have resulted in not only an overall troop reduction from a high of 532,500 when he took office to the present 413,900, but they also are reflected in the substantial reduction in the number of Americans killed and wounded.

Weekly U.S. casualty reports this month continue to reflect a downward trend, evidence that the destruction of enemy supplies during the Cambodia operation and the success of the Vietnamization program have lived up to the President's expectations.

Statistics show that from the first half of 1968 to the first half of this year, American deaths in Vietnam have been reduced by two-thirds, that is 66.7 percent. The number of Americans wounded has likewise been reduced by a similar margin, 66.9 percent. Deaths for the first half of 1969 contrasted with the first half of 1968 show a reduction of 38.8 percent; and from 1969 to 1970, by 49.7 percent.

The number of Americans wounded the first half of 1969 as contrasted to 1968 shows a reduction of 25.8 percent; from 1969 to 1970, 55.4 percent. Approximately one-half of those classified as "wounded" are not hospitalized and remain in the field for treatment. The figures for the first two quarters of each year are used because 1970 is only half over.

THE ASSAULT ON AMERICAN INDUSTRY

Mr. GOLDWATER. Mr. President, because I know that Senators are deeply interested in the security of our Nation, I invite attention to an extremely fine speech relative to this subject which was delivered July 10 before the Commonwealth Club of San Francisco by Mr. Robert Anderson, president and chief operating officer of North American Rockwell Co.

Mr. Anderson declared that the United States is now in second place behind the Soviet Union in the development of new weapons at a time when the military-industrial relationship in this country is under concerted attack. He concludes with the assertion that this Nation must continue its technological leadership because to default "means the passive acceptance of major risks in our national security.

"And without security all else is fruitless," Mr. Anderson said.

America's defense shield must not be shaped by harangue and denunication and newspaper headlines. It must continue to be forged in the councils of the Presidency, within the Joint Chiefs of Staff, and in the Congress of the United States.

I believe that Senators will agree with me that Mr. Anderson places the whole subject of America's defense establishment with its industrial backing into its proper and reasonable perspective.

I ask unanimous consent that the speech be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE ASSAULT ON AMERICAN INDUSTRY

(Remarks by Robert Anderson, President and Chief Operating Officer, North American Rockwell, before the Commonwealth Club, San Francisco, California, July 10, 1970)

GENTLEMEN: The military-industrial relationship that we hear so much about in this country was not invented in 1968 or 1969.

It has existed for nearly two hundred years, but it's only become a significant factor with the advent of sophisticated weapons systems which demand the closest teamwork between industry and the government.

That teamwork has meant much to this Nation's security.

Yet, despite the high priority we all place on national survival, the defense industry today is being subjected to incredible denunciation. The attack has a violence unparalleled in American history.

Although some of the provocative headlines would have us believe otherwise, most Americans do not believe that large corporations are inherently evil, or that preparation for defense is of itself immoral.

Yet so vehement have been the attacks, that many sincere people are troubled when they read of excessive profits, cost overruns, lack of government control over expenditures, and so on.

We have a two-fold danger facing us in the continued harangue by those who oppose this relationship. The first is the undermining of public confidence in the integrity of defense procurement. The other is the destruction of morale of the dedicated men and women who are part of the defense establishment—whether in government or industry.

The critics have had the field to themselves, confident that there would be no vigorous opposition, and hoping that there would be just silent acceptance of the charges.

To refute that thought is the reason I'm here today. This is the right time and the right audience—American businessmen who can form a serious judgment, not on what is spectacular, but on what is factual.

I can't be entirely objective in my approach, for North American Rockwell is one of the nation's major aerospace contractors and was recently awarded the very large Air Force B–1 weapons system contract.

However, I do believe there are two factors that enable me to take a broad view of the entire controversy. First, North American Rockwell is one of the major aerospace companies that is substantially engaged in both commercial and government activities. Also, in my own case, because I came from the automotive industry less than three years ago, I believe I can view the matter with a new perspective.

Aerospace represents a great portion of American industry. There are one million, two hundred thousand people employed in building this country's military and commercial aircraft, its defense missiles, its space vehicles, its advanced guidance systems and its rocket engines. It's the largest manufacturing employer in the nation.

Aerospace in 1969 had sales of more than 28 billion dollars. Its export sales of more than 3.1 billion dollars made it the biggest industrial contributor to our balance of payments.

The opponents of this business, which has contributed so much to the military security and the economic growth of the country, have rallied around the phrase, "The military industrial complex," giving the words an accusatory ring.

It was General Eisenhower, as you know, who originated the phrase when he urged the nation to guard against "the acquisition of unwarranted influence by this complex," and he has been quoted out of context ever since.

Completely lost in the sound and fury created by those who picked up only the partial statement is the full meaning of his remarks. "A vital element in keeping the peace," General Eisenhower continued, "is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction . . . We can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions." End Eisenhower quote.

It is essential to keep in mind that the role of the military/industrial complex is not in making public policy, but in carrying it out. Viewed in that respect, industry and government must work together toward common goals. It would be a national disgrace if they did not.

Fortunately, the two have always worked together and practically all of us in this room have been witness to the results.

You remember the morning of April 12, 1942, when Jimmy Doolittle lifted the first of his B–25 bomber squadron from the decks of the carrier Hornet and headed for Tokyo. How do you assess the value of Doolittle's bravery combined with the military-industrial effort that placed those bombers at the right place, at the right time?

Perhaps some of you were in the B–17 bombers flying over Germany when the first of the P–51 Mustang long-range fighters drew alongside to afford protection. Who can correctly assess the contribution of the industry that developed the aircraft which helped turn the tide of the air war?

We do not confine our security contributions to aircraft alone. Many of you remember the strident urgency of 1954, 1955, and 1956 when it became known that this nation could very well be on the receiving end of Russian nuclear intercontinental ballistic missiles.

We had the Atlas ICBM propulsion system ready—on time; we had the Thor intermediate ballistic missile propulsion system ready—on time.

These achievements and events are fresh in our minds yet we are witnessing today, with these continous unwarranted attacks on our defense industry, a gradual erosion, a weakening of this nation's defense posture. That, gentlemen, is a matter of grave concern.

John Kennedy, in his inimitable manner, could alert the nation with a ringing statement.

"There can be only one possible defense policy for the United States.

"It can be expressed in one word.

"The word is first.

"I do not mean first, but.

"I do not mean First, when.

"I do not mean First, if.

"I mean First-Period."

End of Kennedy quote.

To the critics, however, the words of Eisenhower and Kennedy are nothing more than rhetoric, and rhetoric which they twist to other ends.

Let's look at some of the charges.

One of these pertains to the size of the defense and aerospace industry. "Most of the big military contractors," they say, "could not survive without weapons business,"—with the implications that corporations are influencing defense expenditures.

True, there are a handful of major aerospace companies almost entirely devoted to government work. However, according to Moody's Industrials, the defense portion of the 25 largest prime defense producers in 1969 accounted for less than one-seventh of their total business. Most aerospace companies are becoming increasingly diversified, with a wide range of commercial and industrial endeavors. Typically, they subcontract half of their prime contracts.

Let me assure you that American industry can survive without the so-called "crutch" of defense spending. Nevertheless, the defense industry is being hurt badly by the ceaseless attack on the integrity of its highly skilled employees who see years of dedicated effort being dismissed as of no importance or as of outright moral harm.

Another belief propagated is that spending for aerospace and defense needs has grown during the past five or six years at the expense of providing for health, income security, aid to the poor, education, and other social programs.

First, let me emphasize that it is the elected representatives of the people, and not industry, who rightfully set national priorities.

The significance of Congressional-established national priorities was stated with great clarity last December by Dr. Arthur Burns, now chairman of the Federal Reserve Board, who said, "The explosive increase of federal spending during (the decade of the '60s) is commonly attributed to the defense establishment, or more simply to the war in Viet Nam.

"The fact is, however," Dr. Burns continued, "that civilian programs are the preponderant cause of the growth of the federal budget. When we compare the budget of 1964 with the estimates for this fiscal year, we find that total federal spending shows a rise of $74 billion, while defense outlays are larger by only $23 billion. . . . Thus, the basic fiscal fact is that spending for social programs now dominates our public budgets.

Dr. Burns' comments are underscored by the fact that in this current fiscal year, we will spend less on defense as a percentage of our gross national product—7 percent—than in any one year in the past 20 years.

Today, an estimated 36 percent of the Federal budget is allocated for defense—this is in contrast with the 61 percent in 1952.

More than half of the defense budget of 77 billion dollars is for personnel and operating costs. Military personnel costs this year are around $23 billion. Another $22 billion goes to operations and maintenance. Less than half is used to procure equipment and services from industry.

Moreover, in those declining percentages there is a hidden fact that could spell acute danger for this nation.

This country is in second place behind the Soviet Union in the development of new weapons system. Let me repeat, we are behind the Russians at this moment.

The Soviet Union has invested the equivalent of $16 billion this year in defense-related research, development and applications. What has the United States allocated?

$13 billion dollars—three billion less than the Soviet Union.

Those figures, by the way, are taken from statements by Dr. John S. Foster, Director of DOD's Defense Research and Engineering.

Continuation of that downward trend, spurred by these relentless attacks, is a direct threat to America's long-time confidence that it can meet any challenge in defense, in atomic energy, or in space.

What adds to the seriousness of this lagging research and development effort is the certainty that never again will we have the luxury of time to catch up if an enemy attacks. Never again will we have the nearly two years between the invasion of Belgium and the sinking of the Lusitania. Never again will we have a year and more between the Battle of Britain and the disaster at Pearl Harbor.

Defense-related research and development is a vital activity.

However, the cirtics are suspicious of any activity, including research and development, because of what they contend are the "fat profits" in aerospace participation.

What IS the profit picture?

The most penetrating and exhaustive analysis of corporation profits was a study by the Logistics Management Institute, a non-profit organization, which compared the profits of 40 companies substantially engaged in defense production, with 3,500 companies not engaged in defense.

The results of this broad-based analysis showed that profit on sales for the commercial and industrial companies was almost double that for defense-related works, and profit on investment in non-defense efforts, since 1963, was 40 percent to 74 percent greater.

Last November, Congress authorized the General Accounting Office to undertake a study and review, on a selected basis, the profits made by contractors and subcontractors where there is no formally advertised competition.

The results of that study will be available at the end of this year, and I am convinced they will support the previous LMI study.

At North American Rockwell, we've had a

striking demonstration of this disparity in percentage of profits. Our Commercial Products Group, last year, had sales which amounted to only 40 percent of the $2.6 billion corporate total—yet that group contributed over 75 percent of our entire corporate earnings.

What could be more graphic than those percentage figures?

Related to this matter of profits is another popular myth about the supposedly low risk involved in aerospace programs. The critics would have the public believe there is no risk in advancing the frontiers of technology; or to the extent there is risk, that the Federal Government underwrites all the risk involved in space and defense programs.

Again, the facts just do not support this belief.

Until recently, when there was a change in the contract ground rules, financial risk had shifted so heavily to the industry side that a company could be betting its corporate existence that it would be able to remain afloat while producing the goods or services required by the Government.

As an automotive man, I was amazed by my first encounter with the Total Package Procurement Concept.

The fixed-price total package procurement process embraces the entire span of a program from concept through development, into production. The concept was supposed to eliminate both schedule slips and unpredictable cost increases. Further, it was intended to balance the contractor's commitment along the thin line between appropriate financial risk, on the one hand, and catastrophic corporate loss on the other.

In practice, the concept not only delayed the procurement of many needed systems and equipment, but it also fostered an utterly unrealistic budgeting process.

The Harvard Business Review referred to this concept as "being at war with reality." It simply did not recognize the facts of life as known by American industry.

Can you imagine an automobile manufacturer contracting at a fixed price to deliver a model 1977 automobile six years from now? And an automobile, let me add, is infinitely less complicated than a modern weapons system.

That's exactly what was asked of the aerospace industry.

Those much-publicized cost overruns were not synonymous with waste; neither were they a symbol of excessive profits. Rather they were the surface reflection of the cost uncertainties inherent in developing and manufacturing advance systems.

No business is ever perfect, of course, but what is never captured in the blazing headlines of cost overruns is the reality of endless changes, of inflation, of the costly impact of solving problems which could not be foreseen. These are the realities which accompany the advancement of technological frontiers.

It was thought in the last decade that these cost risks could be contained by the magic formula of the fixed-price contract. Many companies—and many procurement specialists within the Department of Defense—knew better. Even the procurement policies which were established—carefully read—recognized the distinction between producing a system which had been fully developed and engineered.

Unfortunately the distinction was lost sight of and the policies were applied unrealistically.

Despite all this, if a company wanted to stay in the business, it had to go along. It was like walking blindfolded in a minefield —and we've seen some of the results.

I do not need to recount the story of the many companies which have suffered a severe contraction of profits, and in some cases very large losses.

It is encouraging to note that the unrealistic policies of the past have been recognized by the Department of Defense as just that; unrealistic.

Under Deputy Secretary of Defense David Packard we have new, positive, realistic thinking on this contract question. Recently, he issued a milestone directive that talks common sense regarding improvement in the management of programs, the necessity for practical trade-offs between operating requirements and engineering design, risk assessment, and sensible program scheduling.

The Secretary placed his finger on the solution when he said, and I quote, "When risks have been reduced to the extent that realistic pricing can take place, fixed-price type contracts should be used." End quote.

With the major contracts now being let by the Department of Defense, industry will be able to fulfill its responsibilities more effectively and efficiently than in the past. They allow the latitude necessary in developing these highly complex, highly sophisticated weapons systems, while at the same time giving the Government its full dollar's worth.

The critics who err about the size and influence of defense procurement also err in assuming defense spending is out of control. In fact, one Senator's own words contradict his assertion that, quote "Military spending in the United States is out of control," unquote. This senator also says, "A great many gimmicks should be done away with. The services should reduce or stop, because of their obvious ineffectiveness, such programs as Pert, Pep, Value Engineering, Human Engineering, and the Zero Defects concept." End of quote.

Encompassed by these terms, Pert, Pep, and so on, is a tremendous achievement by both industry and the Department of Defense—the establishment of a systematic methodology to carry out extremely complex tasks. Without these techniques of program control and employee motivation this country would have been unable to field the Minuteman missile, or to land men on the moon, or to carry out a host of other difficult projects.

Let me stress that the very purpose of these advanced management concepts is to save time and money and to produce the best possible product. Their effectiveness is demonstrated by the fact that they are being adopted on almost every complex project in civil construction, and in commercial and industrial fields.

We're not trying to stamp out constructive criticism. We expect it; we can learn from it. But we are entirely opposed to the extremists who aim, not at correction, but at destruction. They want to disband our military establishment, and abandon our defense-related capacity.

John Kenneth Galbraith, for example, has stated that the solution of all our ills is nationalization of the defense industry.

What would be the consequences of nationalization? Another post office operation? In July 1969 Fortune magazine said: "There is some danger that the generally competent and innovative American aerospace industry could become simply a job shop to government." "The companies," Fortune said, "could end up in the situation of the old-fashioned American shipyards, which relegated the design function to the Navy's former Bureau of Ships or to outside naval architects, and thereby lost the production efficiencies that accrue when designs are drawn with productibility in mind." (Close quote.)

To me, nationalization would be national disaster, and I believe the best answer to Mr. Galbraith was the silence that greeted his proposal.

In this troubled world beset by man-made problems in population, in transportation, in housing, in communications, and in pollution, there is need for exactly the type of expertise demonstrated by the aerospace industry during this past year in America.

The problems facing us are gigantic, nation-wide, even world-wide in scope. Their solution will require technical skill and management skill of the highest order. The best management, in terms of inventiveness is in the industry that has built the world's foremost supersonic, trisonic, and hypersonic aircraft; the industry that has developed "miracle" guidance systems; the industry that has ringed this nation with defensive ICBM's, and bridged the gap to the moon.

But I do not want to leave you with the mistaken impression that we stand now as pillars of strength ready to take on all adversaries. We have been hurt by this endless tirade of abuse, and all of us in business must act vigorously to overcome this constant erosion of American defense capability.

We are determined to resist that erosion.

Our positive refutation to the strident, uninformed voices will be our continuing effort to furnish the most efficient and effective systems required for the defense of this nation.

This nation *must* continue its technological leadership. To default, to let that leadership slip away to Russia without further protest, means the passive acceptance of major risks in our national security.

And without security all else is fruitless.

America's defense shield must not be shaped by harangue and denunciation and newspaper headlines.

It must continue to be forged in the councils of the Presidency, within the Joint Chiefs of Staff, and in the Congress of the United States.

The need for a strong industrial base, for a strong, free American industry to help carry out their decisions, is self evident.

In this technological age, let us continue to answer the world-wide technological challenge.

Let the industry that has responded so many times before get on with the job.

Gentlemen, thank you.

GENERAL GEORGE CASEY AND GENERAL NGUYEN VIET THANH—EXAMPLES OF PATRIOTISM

Mr. TOWER. Mr. President, recently our military has received much criticism, I feel that it is important to remember that many of our military men feel a great responsibility to their country and are fine examples of patriotism. I ask unanimous consent to have printed in the RECORD a new commentary concerning Gen. George Casey and Gen. Nguyen Viet Thanh. Both men gave their lives for their countries. Their records of service help to balance the currently fashionable view of the militaristic soldier.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

FRANK REYNOLDS COMMENTARY ON ABC–TV EVENING NEWS, JULY 9, 1970

It seems fair to say that professional soldiers are not at the top of the list of the most admired men in America these days. For many people, just to hear the words, "The generals in the Pentagon", or "The generals in Vietnam", is to think of heartless types concerned only with personal glories, caring nothing about the men they commit to battle.

Perhaps that was not entirely an inaccurate image of high commands in past wars, but it is completely wrong in the present one.

In the last two months, both the United

States and South Vietnamese have lost general officers who were wholely devoted to their profession and to their troops. General Nguyen Viet Thanh of the South Vietnamese Army was killed in a helicopter crash just a few days after the Cambodia invasion began. South Vietnamese generals are generally thought of as a bunch of corrupt smugglers or black market operators and unfortunately some have fit that description.

But there are exceptions. After General Nguyen Viet Thanh died, it was discovered that his entire estate consisted of a few sets of fatigues, one dress uniform, one wife and seven children. No palatial villa by the sea, no Swiss bank account, not even a motor bike.

General George Casey, the Commander of the First Air Cavalry Division, who is now missing in Vietnam was one of those men who had "soldier" written all over him. There was no trace of the martinet in him; he was a man for whom the responsibilities of high command were much more important than its privileges. He accepted all of the first, and abused none of the second.

General Casey and General Nguyen Viet Thanh knew war and hated it, perhaps more than the rest of us. They were splendid examples of military men who are not really militaristic. We don't give them much credit these days as some of us shout and all of us long for peace now, but it is still an imperfect world and the time will certainly come when not only will the George Casey's be needed, they may even be appreciated.

AS I SEE SOUTHEAST ASIA—PAPER BY GENERAL NICKERSON

Mr. GOLDWATER. Mr. President, one of America's distinguished military leaders, after having served many years in Southeast Asia, including duty in China and Korea, culminating his service as commanding general of the 3d Military Amphibious Forces in Vietnam, has written his impressions of Southeast Asia.

He has prepared a paper which has been published by the Supreme Council, 33d degree Ancient and Accepted Scottish Rite of Free Masonry. I have known Gen. Herman Nickerson for many years, and I have watched him in service in Southeast Asia. I know of the tremendous respect and admiration that people in all branches of the service have for him.

What he has written is a short paper that I think could be well read by Senators; therefore, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

AS I SEE SOUTHEAST ASIA

Communism is and has been, from its very beginning, a world revolutionary movement.

Nevertheless, in recent years, there has been a tendency in the free world to minimize the dangers of revolutionary communism due to fragmentation in leadership, the multiplicity of states and parties, the decline in unity of the communist world, and its declining appeal to underdeveloped countries. These factors may very well have slowed the world revolutionary aspect of communism.

However, once communism became firmly established in Russia, it also became expansionistic and imperialistic with the avowed goal of world domination. These basic characteristics of communism have not changed. In fact, with the declining appeal of revolution they have concurrently so strengthened their military position that a military confrontation becomes more possible than ever. Their goal of world domination would be achieved by "peaceful means" (revolution) or, if need be, when the time comes, by the force of arms.

An inherent quality of expansionism is that it will not permit itself to lose what it has already gained, just as a dictator cannot permit himself to mellow. Witness Hungary and Czechoslovakia. The Soviets demonstrated a willingness and readiness to use force to ensure that the tide did not commence to turn against them.

In the Middle East, the Soviets are sacrificing their "ideological pride" in pursuit of their goal of world domination. They have inserted themselves and become dominant in a region where the Czars failed for centuries. They can afford to worry about ideology later. The fact is that they have supplied arms to the Arab nations, not for the sake of supporting the Arab cause, but to promote their long range goal of domination in this area of the world. Rest assured that, if there is danger of their losing their foothold in the Middle East, they will be just as willing to resort to force as they were in Czechoslovakia.

In Vietnam and Southeast Asia, it is again expansionism—whether it is Russian or Chinese type is immaterial—it is communist expansion with the goal of world domination. The Russians may pay lip service to their desires to end the war in Vietnam—but the fact is that they continue to support North Vietnam materially and there are no indications that that support has in any way diminished. The expansionist pressures become more evident every day—in Laos as well as South Vietnam, and the beginnings of the same in Thailand. Instead of debating the credibility of the "domino theory" perhaps we should start becoming concerned about the "house of cards theory"—if we withdraw, all of Southeast Asia may collapse simultaneously.

It is time we recognized the real threat of communism today—it is a godless, dictatorial, imperialistic, expansionistic movement with the goal of dominating the world and each and every success of the communists makes our position more and more vulnerable. We must develop the internal posture necessary to thwart their goal.

Now let's consider the United States' position in Southeast Asia. The U.S. involvement is in response to the plea for help from the Republic of Vietnam. Traditionally we have responded by coming to the aid of people faced with an aggressor in their land. It is a counter-insurgency involvement.

A counter-insurgency is a war of limited objectives. Even with the rules or engagement as we have seen them applied in Southeast Asia, the present action in Cambodia, aimed at eliminating sanctuaries there, is only a logical and proper tactic for the military commander to undertake.

In the northern five provinces of the Republic of Vietnam, called I Corps, the same kind of sanctuaries exist, both in Laos and in the DMZ.

The problem is to understand that the communists will not be forced to negotiate until they have suffered a meaningful military defeat. The North Vietnamese Army occupied Hue and then was completely defeated there in 1968. I know of no victories at all for these invaders unless the temporary occupation of Hue is judged as such. I don't consider Hue anything but a military and political defeat to the communist. Yet, with sanctuaries available, the enemy continues the war with the apparent assurance of their winning coming from American public opinion.

There can be no doubt that the long range objective of the communists is the political domination of Southeast Asia including the old Indo-China area as well as Thailand, Malaysia and even Burma.

Hanoi is waging an aggressive war against the South Vietnamese people in order to bring them under the communist Lao Dong party dictatorship of North Vietnam. Most people tend to forget that there are no South Vietnamese Armed Forces waging war in North Vietnam. On the contrary, the North Vietnamese communists are waging a cruel and tragic fratricidal campaign against the South Vietnamese who are trying to prevent being dominated by military force. There is also the feeble excuse that the communists merely desire to unite the two Vietnams. However, in order to subscribe to the principle of "re-unification by force" we should be made aware of other similar situations. Would it be any more or less abhorrent if West Germany attacked East Germany in order to attain the noble goal of re-unification? What if South Korea and Nationalist China executed an aggressive war against North Korea and Communist China? Are we ready to accept the same principle of forced reunification and support it militarily and financially? Naturally, the principle of forced re-unification is not a valid agreement for naked aggression.

A quick glance at the recent headlines in a daily newspaper and periodicals gives absolute proof of the dishonorable intentions of the communists in North Vietnam. I speak of the so-called "other war" in Laos and Cambodia. Anyone looking at a map of Southeast Asia can instantly see that the undeclared war by North Vietnam against the Laotian people cannot be attributed to forcibly unifying Vietnam. The 3 million Laotian people are not a threat to Hanoi under any stretch of the imagination. The Plaines des Jarres is not relevant to the Vietnam War. Nor can we look the other way with regard to the rights of the Cambodians. When Hitler took such warlike aggressive actions against his neighbors, World War II began. Yet, today lethargy and apathy are the keywords rather than espousing the principle of freedom.

Further to the west, Thailand is currently engaged in a guerrilla war with the communists supported by Hanoi and Peking. Here, North Vietnam cannot use the pretext of unification, imperialism, or any other false banner. The world sees this action as the true indication of the communists' objective to dominate Southeast Asia through wars of subjugation. The North Vietnamese Army is the best equipped and trained land force indigenous to this part of the world today. General Hoan Minh of North Vietnam was quite accurate when he said "The people's war outlook of our party is a new creative development of the Marxist-Leninist ideas of revolutionary violence and revolutionary war." This certainly supports Mao Tse Tung's classic remark that "power comes from the muzzle of the gun," which of course was based upon an old discarded western adage that "might makes right."

The communists do not entertain any illusions concerning a negotiated settlement of the problem of Vietnam. General Do, a North Vietnamese Army general, known to be commanding communist forces in South Vietnam, stated "Our basic intention is to win militarily. We use military victories as decisive factors to end the present conflict. We want to end the war through military victories and not peace negotiations. Negotiations are a form of diplomatic struggle. We are military men and we must concern ourselves with military struggles and not consider diplomatic struggles . . . and even when we are fighting diplomatically, we must multiply our military victories if we want to succeed diplomatically." Thus, it is obvious

that the communists do not desire peace but only to achieve their objective of subjugating South Vietnam.

The basic tenets of North Vietnam's prescription for victory is:

(1) That the U.S. must withdraw all troops without reciprocity.

(2) That the communist military and political forces in South Vietnam must be stronger than the forces of the government of the Republic of Vietnam.

(3) That the communists must dominate the rural areas, important strategic areas and especially the cities. They consider the city areas as the main battlefields where the ultimate decision will take place either through subversion or battles.

In order for them to achieve their goal, they must first destroy the Rural Pacification Program currently being conducted by the Republic of Vietnam Government. They are assassinating hamlet, village and district officials in order to terrorize the people and to disrupt the pacification effort. The communists will then attempt to force a coalition government, and through subversion and, at the opportune moment, seize absolute control of South Vietnam, bringing the people under the dictatorship of Hanoi.

There have been many people in the United States and in other parts of the world who expounded various beliefs and solutions to this conflict. We only have to review our newspapers of 2 and 3 years ago and we will find many who stated that the United States was intransigent and did not desire peace.

Where are the voices that emphatically stated that when the United States stopped bombing North Vietnam, there could soon be productive and meaningful negotiations?

Where are the voices that fervently said that if the United States started to withdraw its military forces fruitful negotiations would result? We stopped the bombing on 1 November 1968 and have subsequently withdrawn 115,000 troops. Where are the fruitful and productive negotiations? Even with 150,000 more troops being withdrawn, what will make the communists talk peace? In prior "wars" we have won a military victory or at least have exerted sufficient pressures on the enemy to cause meaningful talks and actions, such as the return of our prisoners. How do we reduce our strength in men and materials in the Republic of Vietnam and, at the same time, secure the release of our prisoners of war?

The intentions and objectives of the communists in Vietnam and Southeast Asia are very clear. Only the future will reveal whether we know the communists as well as they know us.

Compare all other wars, or police actions, which this Nation has engaged in over the years of our history with this counter-insurgency. How do we secure anything in the way of an honorable settlement, except a stand-off?—a draw? On one side, we will have the North Vietnamese with the Viet Cong guerrillas and infrastructure supported by the communists (Russia and China); and on the other side, the Republic of Vietnam Armed Forces with their elected government officials at hamlet-village levels, supported by the United States. That leaves Laos and Cambodia, the areas where, at present, sanctuaries are assets to the communists and are not considered a part of the counter-insurgency per se. I ask you, how do we force the communists to talk peace under these circumstances? Again, how do we secure the release of our prisoners of war? What is the minimum support for the Republic of Vietnam and for how long?

The U.S. advocates of peace in Southeast Asia at any price may be honest patriots, but I fail to understand their mental processes which conclude that the freedom of the United States is not weighing in the balance. How can these citizens of our country be so unaware of what the communists have told us? World domination is their objective; and that means the defeat of the United States by whatever means—force and violence, murder, lying, subversion of our youth by infiltrating our schools and communication media, to name but a few.

I believe that our President did what he, as Commander-in-Chief, had to do. He cannot preside over the loss of this counter-insurgency; and, at the same time, permit the communists to gain the role of world leadership.

Now that the die is cast for all the world to see, how does this Nation force the decision in its favor? And how do we calm the troubled waters within our borders? The unrest among the students is said to be the honest (emotional and otherwise) motivations and concern of patriotic Americans. I submit that these students have been partially or totally brainwashed—conditioned in their earlier years—by the "commie" line slipped into our public schools. I recall vividly that 20 years ago I became aware of the communist line of reasoning in the elementary schools in one of our very fine public school systems. Have any of you any such memories? Our awareness of communism is something like our pollution ostrich-head-in-the-sand performance, isn't it? We just don't believe that all people aren't reasonable, honorable, and law abiding. We should know better. The average U.S. citizen doesn't understand communism and doesn't care to know that the communists are dedicated to take all steps necessary to win world domination . . . to bury *us*.

Credibility is a fragile commodity but it is made more durable by an attitude of demonstrated respect—respect for the rights of all people, regardless of nationality, race, color, creed, or material wealth. Time may not be in our favor but I submit that the need for respect, demonstrated at all levels of our society, is vital for our survival during this age-gap era. We must make youth know that we, who are over 30, do respect them. The young Americans who fought and are fighting now, in Vietnam, are the bravest of the brave—worthy of the honor and respect of youth and age alike. And the vast majority of these heroes are under 30 years of age!

If we must settle for a *draw* in this counter-insurgency, we can win back part of domestic world opinion, if we can show we really care what our young servicemen and women have done for their country during these years when being in the uniform of our Nation has not been considered the "in-thing" to do.

All these words don't amount to anything without action. The pen has been the winner over the sword recently when the pen has been in the hands of the communists. Why is it that the experiences of military professionals who have dedicated their entire adult lives to the defense of our country do not have the credibility rating they have earned? When you consult a doctor and are told you need a serious operation to save your life, the most you would do would be to ask for another doctor's opinion. If they agreed, you would accept their professional judgment and have the life-saving surgery. On a far higher level in the scale of risk, our top military men have not been heeded, and our national survival *is* in the balance. Can we restore respect for the uniforms of the Armed Forces of the United States and our police in time to retain our indivisible Nation under God?

Consult your leaders. Back your Commander-in-Chief. We must win because the consequences of defeat are unacceptable. As General Eisenhower said in his last public statement: "A camouflaged surrender would result in the United States 'writing off' Southeast Asia for the foreseeable future. We could survive such a catastrophe—but our citizenry should be clear that the whole security system which has maintained peace and freedom for the past generation, would be eroded—if not destroyed—by an American retreat from our commitments in Southeast Asia."

Hanoi has not won on the battlefields of Southeast Asia. Hanoi has not won in Paris. Hanoi has persevered in this war because of its reading of American public opinion. Hanoi can win *only* by the pressures of American public opinion. We must curb our natural impatience; and we must restore credibility through educating ourselves as to the true situation. With an informed American people neither undue optimism nor undue pessimism will prevail. And a substantial majority of the American people will rally behind our President. There is no other honorable course of action.

CAPTIVE NATIONS WEEK

Mr. JAVITS. Mr. President, during this week commemorating the captive European nations, I wish to pay tribute to the courage and determination of the peoples of the captive nations for their continuing efforts to achieve their personal freedoms. In this same month of July, we Americans celebrate our own Declaration of Independence and freedom. At the same time, we do not, and cannot, forget the tragic plight of those East European peoples whose fundamental human rights are still denied them.

It has been 25 years since military hostilities in Europe were concluded and Nazi tyranny finally put to an end. Yet, today, half of Europe stills suffers under tyranny. An entire generation of East Europeans has grown up knowing nothing of individual liberty. Those who fought and sacrificed so much during World War II for their freedom have been deeply disappointed in their hopes and expectations. Even the hopes of the brave Czechoslovakian youths of 1968 have been cruelly suppressed as have the earlier movements in Poland, Hungary and East Germany. That these peoples still hope and work so fervently for release from their bondage is truly an inspiration which commands our sympathy and support.

Recent talk of some sort of European security conference, along with negotiations now proceeding between West Germany and the Soviet Union, Poland, Czechoslovakia, and East Germany, makes it especially important that the United States reaffirm its objective of ultimately seeing freedom restored to Eastern Europe. "Normalization" of relations between East and West in Europe must not be allowed to mean acquiescence in the perpetual denial of human freedom in one half of an artifically divided Europe.

The Brezhnev doctrine of limited sovereignty for Eastern Europe enunciated in 1968 after the Soviet invasion of Czechoslovakia, is not acceptable to free men. The United States needs to continue its resolve to use all the resources of diplomacy, morality, and world public opinion so that freedom is ultimately restored to the peoples of the captive nations.

THE POST OFFICE DEPARTMENT AND ITS ENVIRONMENTAL ACTION

Mr. BOGGS. Mr. President, Postmaster General Winton M. Blount today reported on his Department's efforts to combat the pollution of our environment.

This is the Postmaster General's second announcement within 24 hours concerning the quality of life in our Nation. Yesterday, he announced plans to issue a commemorative stamp that will focus attention on the environment.

This announcement by Postmaster General Blount will cause other Federal agencies to detail their activities in this field. I believe each of us would be interested in such a detailed report.

The Postmaster General has designated Assistant Postmaster General Henry Lehne to coordinate antipollution activities within our mammoth postal system. He has been assisted in this responsibility by a post office environmental coordinator, W. Norman Meyer. In a very short time, these gentlemen have produced most impressive results. I salute them and wish them continued success.

In the area of air pollution abatement, the Department has been particularly active. In many of their installations, they have converted boilers that previously burned coal and low-grade fuels to natural gas and other fuels that result in less air pollution.

This is true in my own State of Delaware. Such action has been taken in the postal facilities in Newark, Georgetown, Laurel, Lewes, New Castle, Rehoboth, and Seaford. The largest postal facility in the State, Wilmington, has not been converted, but it is under the supervision of the General Services Administration.

The Post Office Department operates a fleet of 115,000 vehicles. The majority of them currently are being equipped with modern antipollution devices. Experiments are being conducted with other new antipollution techniques.

The Department also is conducting surveys at the more than 40,000 postal facilities across the Nation to determine better ways to dispose of trash, quell noise, and cleanse air inside large, poorly ventilated buildings. In rural areas, the survey has also extended to an examination of sewage systems, in an effort to insure that the best available sewage treatment techniques are utilized.

Mr. President, again I compliment the Postmaster General and his staff. I also look forward to learning what the other agencies are doing for our environment, as well as future developments within the Post Office Department.

U.S. TECHNOLOGICAL SUPERIORITY

Mr. TOWER. Mr. President, in a recent interview, Dr. John S. Foster, Jr., Director of Defense Research and Engineering of the Department of Defense, expressed his concern that in an emotional effort to cut defense spending we might severely damage our technological and strategic superiority—both of which are vital to our national security. I feel that his remarks are timely and ask unanimous consent that they be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Air Force magazine, July 1970]

ARE WE HEADED FOR STRATEGIC SECOND PLACE? TECHNOLOGICAL SUPERIORITY—KEY TO U.S. SECURITY AND SURVIVAL

(A report on an exclusive Air Force magazine interview with the Pentagon's Director of Defense Research and Engineering, by Edgar E. Ulsamer, associate editor, Air Force/Space Digest)

The security and survival of the United States depends on strategic and technological superiority. Yet this country is perilously close to the point of being "second best" on both counts.

These sobering views were expressed to Air Force/Space Digest by the government's ranking weapons technologist, Dr. John S. Foster, Jr., Director of Defense Research and Engineering, of the Department of Defense.

Because of the need to compensate for the Soviets' ability to conduct major research and development programs in total secrecy, a tactical advantage denied the United States, Dr. Foster concludes that "we simply can't survive under parity." He illustrates the practical significance of covert Soviet technological efforts by pointing out that the U.S. intelligence community, in two consecutive years, and to a lesser extent in prior years, had "underestimated" the growth of the Soviet military effort. Ironically, public reaction to warnings by Secretary of Defense Melvin R. Laird concerning the Soviet threat, even though the warnings proved to be understated, frequently was one of incredulity. Mr. Laird was accused of saber-rattling and of overstating the strategic threat to the United States.

The Soviet military momentum, Dr. Foster points out, is manifest in two areas:

Rapidly expanding strategic capabilities. The Soviet strategic offensive inventory is currently being increased by the equivalent of about 700 Minutemen II missiles annually while the total U.S. force level is now, and will continue to be, about 1,700 land- and sea-based strategic missiles. The effect on U.S. security is immediate, and a Soviet first-strike capability by about 1975 is a real possibility.

The steady increase in military and military-related R&D by the Soviet Union, which exceed the combined levels of the Department of Defense, NASA, and the Atomic Energy Commission by about twenty-five percent. The annual rate of increase in the Soviet technological effort continues to range between ten and thirteen percent while the *shrinkage* in the comparable U.S. effort is now, and will continue to be, "several percentage points a year." The effect on U.S. security is long-term, with the Soviet Union seemingly aiming at broad technological superiority over the United States by the end of this decade.

THE STRATEGIC THREAT

The US strategic force level has remained constant since 1965, at 1,000 Minuteman and fifty-four Titan missiles, about 550 strategic bombers, and forty-one Polaris submarines. The Soviet force level, according to Dr. Foster, includes a land-based missile component "significantly larger than ours." It consists of more than 280 SS–9 missiles in operation or in the process of being deployed. SS–9 missile deployment has been averaging about fifty per year. This missile has approximately ten times the payload of the Minuteman II missile, and testing indicates the Soviets may seek to deploy three independently targeted (Multiple Independently Targeted Reentry Vehicles—MIRV) nuclear warheads on each SS–9, each one substantially larger than the single warhead of Minuteman II.

The USSR also has operational or is deploying a total of more than 830 SS–11 missiles and is increasing its inventory of this missile type at an annual rate of about 100. The SS–11 is roughly equivalent to the Minuteman missile in terms of payload.

According to Dr. Foster, the US, for the moment, enjoys a substantial lead over the Soviet Union in sea-launched ballistic missiles. This preeminence is likely to be dissipated by 1974 or 1975 because of the high rate at which the USSR is introducing "Y class" (comparable to the US Polaris class) submarines into its inventory. Nine Y class submarines are currently operational, and an additional twenty-five Y class submarines are known to be under construction. The total payload of all presently operational Soviet sea- or land-launched ballistic missiles exceeds that of the United States by a factor of two. Combined, the Soviet ballistic missile force, as presently configured, can carry three times the nuclear megatonnage that US strategic missiles can deliver.

Beyond sheer numbers, two factors—their ability to survive attack and their ability to penetrate—determine the credibility and efficiency of ballistic missiles in a deterrent role, Dr. Foster emphasizes. As for the first category, all land-based US and Soviet missiles are "hardened" while the two countries' sea-launched ballistic missiles are "dispersed," thereby achieving a form of equality so far as initial survivability is concerned. Survivability of the Soviet land-based missiles is enhanced, however, because the Russians have already deployed "a relatively complete ballistic missile defense, at least in the first phase, around the Moscow industrial area where they emplaced four facilities with about sixteen launchers each." Dr. Foster stresses that on the basis of the best available evidence there is "no reason to doubt the effectiveness of this system."

More important to the security of the United States than this Moscow industrial area system, Dr. Foster believes, is the existence of Soviet ballistic missile defense acquisition and tracking radar ("Henhouse," in NATO parlance) installations located at about "half a dozen points around the Soviet Union and arranged in much the same way that we propose to deploy Safeguard [the US antiballistic missile defense system]." Some of these radar installations are already operational, and others are still under construction, with completion of the system expected in two or three years.

In terms of sheer physical magnitude, the Soviet "Henhouse" radars are described as twice the size of the Pentagon. The fact that the Soviet system's interceptor, the Galosh missile (larger than our proposed Spartan ABM and roughly equal in size to our Minuteman ICBM), is as yet deployed only in the Moscow area, is not surprising, Dr. Foster points out. The radar installation is the long-lead-time component of any ABM system, and the interceptor force, therefore, is not deployed until the radar is close to operational status. Coverage (area defense), in terms of effective interception, extends from the "Moscow system's" phased-array radar acquisition and tracking installations along about a 500-mile radius, according to Dr. Foster.

Presumably this will be true also for the other radar sites if and when the Soviets deploy the Galosh interceptor missile, thereby creating an effective bulwark around most of their ICBM silos and bomber bases.

Somewhat enigmatic in terms of ballistic missile defense is the role of the Soviet Union's so-called Tallinn system, employing the SA–5 surface-to-air missile.

Crediting the Tallinn system with "a rather good capability against aircraft," Dr. Foster

indicates that U.S. defense planners believe it has "only a limited capability against ballistic missiles, when working in conjunction with its own, local radar system.

"I do believe, however, that if the SA–5 system is given information from the large ballistic missile acquisition and tracking radars, then it could have considerable capability in making successful intercepts of incoming ballistic missiles," Dr. Foster says.

Dr. Foster, who has been in his present Department Defense assignment since 1965, emphasizes that the high level of the Soviet ABM efforts is the "primary" reason why "MIRVing" the U.S. ballistic missiles is mandatory. If the U.S. missiles are not given a greater capability to penetrate the growing Soviet ABM system, Dr. Foster stipulates, the credibility of U.S. deterrence is jeopardized. (The secondary reason for MIRVing, he says, is to make "the surviving [after a first strike] sea-based and land-based U.S. missiles more effective.")

In assessing the ballistic missile capabilities of the U.S. and the USSR with regard to "penetrability," Dr. Foster places considerable emphasis on the superior payload and total megatonnage of the Soviets, saying "what counts most in the long run is payload. The way the Soviets have configured their force, this comes to about three times the megatonnage" of U.S. missiles.

THE BOMBER DETERRENT

The third component of the strategic, nuclear forces of the two countries is bombers. The Soviet Union has 200 long-range and 700 medium-range bombers in its inventory at this time. About 300 of the nuclear-range bombers could be deployed against the United States, "either on one-way missions, or by using half of them in a tanker role with the remainder performing two-way nuclear attack roles." In the latter eventuality, the effective Soviet bomber inventory, Dr. Foster says, comes to about 350 aircraft, compared to about 550 US bombers. Both countries either have under development or plan to develop a follow-on advanced bomber.

The Soviet Union, Dr. Foster points out, "is developing a new strategic aircraft which could perform nuclear bombing attacks against the US. The Russians don't have a strategic force of this new type of aircraft as yet, however." The Air Force has just named North American Rockwell Corp. to develop the United State's next strategic bomber, the B–1 (*see April '70 AF/SD, page 37*).

The principal "worry involving the effectiveness of the US bomber force, and I suspect this is equally true so far as Soviet thinking is concerned, is whether the strategic alert force, on warning, can be safely airborne before the missiles of the enemy submarine force, presumably located close to the bomber bases, strike," in Dr. Foster's view.

Vulnerability to submarine-launched missile attack is "more severe in our case than in that of the Soviet bomber force, for reasons of geography. The flight distances involved in [the] case of the USSR are on the order of 2,000 miles if the Russians move their bomber fields inland. This puts considerable restraint on our [range-limited] Polaris submarine missiles. By contrast, even if we were to move all our bomber bases away from the coastal areas, the maximum distance geography permits us to attain would be just about 1,000 miles," Dr. Foster emphasizes.

THE TRIAD CONCEPT OF DETERRENCE

Presently, US policy pivots on three different offensive strategic weapon systems (land-based missiles, sea-launched missiles, and strategic bombers) "employing different technologies and each one capable of providing deterrence by itself." It is the result of the twofold circumstances that "three strings on our deterrence bow are most desirable, on the basis of our experience during the past ten years, [and] because the underlying technologies can indeed give us three viable, separate systems."

Dr. Foster points out that "so far as these three weapon systems are concerned, we don't, and we can't, know everything about their underlying science and technology. From time to time, in the past, we encountered problems and difficulties [with one or the other of these systems] because of changes in Soviet capabilities or because of advances through our own studies and research. These difficulties were of a nature that could cause gross malfunction of a large portion of a particular force. Sometimes the corrections could be made in a matter of weeks or months, and sometimes this required years."

For this reason, Dr. Foster considers it "unacceptable to rest security of America on a single force which for the foreseeable future, would be prone to the same kind of vulnerability through change and technological surprise as has been characteristic of its past."

Dr. Foster, furthermore, is sanguine about "the viability of these three systems in the foreseeable future.

"Bombers can be based on alert and can have sufficient active defense to permit them time and sufficient warning to become safely airborne in case of nuclear attack.

"We have this capability today, and I believe that, through the deployment of our ABM system and the development of the B–1 bomber [which permits substantially greater dispersal and faster flushing], we will have this capability in the future," Dr. Foster points out.

"Further, the bomber has another invaluable feature: It penetrates enemy defenses in a very different way from that use by ballistic missiles. This forces the enemy to deploy an entirely different strategic defensive system."

As to extending the viability of land-based ICBMs well into the 1980s, Dr. Foster considers most "promising among the several approaches under review, a combination of active defense systems and mobility." The Safeguard system, he believes, "is the best way to approach active defense. If the threat should grow to beyond those levels that can be coped with by a full implementation of the Safeguard system around the Minuteman fields, then it would be possible to add—if and as necessary—more, but smaller radars since they don't have to be as capable [for the hard point-defense role] as the current missile site systems, and to increase the number of interceptors," he says.

"On the strength of our present calculations, the cost of intercepting incoming objects is about equal to the cost of developing new offensive systems.

"We can now provide defense systems for less expense than the cost of the Soviet offensive systems. We have to allow, however, for the future possibility of the Soviets developing new penetration techniques that might change this cost ratio around. Looking at the end gain, I suspect that over the years the cost of defense will about equal the cost of offense," Dr. Foster says.

Dr. Foster exudes a high degree of confidence that the United States can, and must, create an effective missile defense system to provide for the survival of several hundred Minuteman missiles as well as of the cutting edge of the US bomber fleet—a surviving force "capable of meting out an unacceptable level of assured destruction on an aggressor contemplating a first strike against the US."

(Dr. Foster rejects as "a complete falsehood" the claim that both sides have enough weapons to kill the other many times and that, therefore, further expansion of this country's deterrent forces is both unnecessary and provocative: "This simply is not true. What is true is the fact that the case for peace or war rests on the prevention of any serious imbalance in capabilities of the potential adversaries," he says.)

THE MOBILE MINUTEMAN FORCE

Studies of how a portion of the Minuteman force can be made mobile have shown "that the technique that looks rather feasible involves either a wheeled or surface-effect (also known as ground-effect machine—GEM) system, which enables the missiles to flee on warning to hardened, underground shelters. There would be many more shelters than there would be missiles, the end gain being that we could construct substantially more shelters than the number of reentry vehicles that the enemy can place on his missiles," Dr. Foster says.

"We consider this to be a favorable exchange ratio because we can build additional target points, *i.e.*, shelters, for considerably less than $1 million, whereas we believe that it costs the Soviets considerably more—by a factor of five to one or even higher—to provide additional warheads" according to Dr. Foster.

As yet undecided is whether such a mobile system should employ special, heavy trucks capable of speeds in the thirty- to fifty-mph range, or surface-effect machines operating in the sixty- to 100-mph range. In the case of a GEM system, about twelve months of special design work would be necessary "before we could proceed with advanced development of such a system, which some planners favor over the wheeled method which has been under study for almost a decade," Dr. Foster says.

The Minuteman missile, Dr. Foster finds, can be adapted "rather directly" to either a wheeled or GEM system, requiring only limited changes to provide for more rapid launch capability and transportability.

THE SEA-LAUNCHED BALLISTIC MISSILE

There is at this time no serious technological threat in sight that would render obsolete the US submarine-launched ballistic missiles, the third component of this country's triad of deterrences, according to Dr. Foster.

"The sea is such a difficult medium in terms of detection that Secretary [of Defense Melvin R.] Laird has concluded that for the next few years our [SLBM] missiles will continue to enjoy relative invulnerability. It is very difficult for a submarine to find another submarine, for a surface ship to find a submarine, or for an air- or satellite-based system to find a submarine. We don't, of course, dismiss the possibility that in the future some new technique might evolve which would make submarine detection easier than it is now. The one worry we have about our SLBMs is the fact that because the sea is such a *difficult* medium, it is very difficult for us to find out just how successful the Soviets are in detecting and tracking our Polaris submarines.

"To assure the continued utility of our sea-based missiles, we are proposing some actions in the Fiscal 1971 budget that will extend the relative invulnerability of the Polaris platform through the remainder of the 1970s," Dr. Foster explains.

But by the 1980s, "we believe it will be necessary to replace the Polaris system with a new platform capable of launching longer-range missiles and with improved submarine characteristics," he adds.

Current study efforts involving an Underseas Long-Range Missile System (ULMS) are "not being pushed very hard at this time," Dr. Foster points out.

THE SIGNIFICANCE OF MILITARY SPACE

The United States, in Dr. Foster's view, enjoys a considerable lead over the USSR in

terms of basic space technology and in applying such technologies to practical military requirements. US programs in the areas of "communications, mapping, warning, surveillance, weather, and other activities directly related to the military have been extremely rewarding. On a short term basis, I believe the continuation of these efforts to the degree that we now propose is well warranted," he says.

As for the requirement of manned military space operations, he theorizes that "over a longer range, we will come to realize that there are military needs in space that cannot be accomplished without placing much larger payloads in orbit [than are being planned now by NASA]. It is much more efficient, and less complex and costly, to perform the whole job in orbit. The main cost of our present communication satellite systems, for instance, is absorbed by ground elements.

"The costs of the ground terminals are determined to a major extent by the capability of the satellite, both in terms of the power that is needed on the ground and the power available in the satellite," he says, adding that for this reason an onboard system could perform the military mission better and more economically.

While he regrets the cancellation of the MOL program, Dr. Foster believes that the current, joint NASA-DoD effort involving a space-transport system, including a two-stage reusable space shuttle, "can be worked out in a manner that is mutually satisfactory." (Current differences of opinion between the Air Force—DoD's executive agency on the program—and NASA center around the military's need for larger payloads, higher orbits, and a substantially increased, so-called cross range, *i.e.*, the ability to maneuver the 707-size orbiter stage in airplane fashion following its return from space. NASA favors a low cross range to facilitate the basic design task.)

Assuming that this controversy will be resolved, Dr. Foster believes that the NASA space shuttle "should be pursued vigorously; the Department of Defense supports it strongly and we believe that, when available, it will be of great use to us."

THE MOUNTING SOVIET R. & D. MOMENTUM

Nothing is as worrisome to US defense planners as the destabilizing influence on our long-term deterrent capability that results from the present high momentum in Soviet weapons development and R&D.

To evaluate the technological capabilities of the US and the USSR, Dr. Foster employs two criteria: the status of technology today, and the current level of R&D effort and its portents.

In the first case, he believes that the United States still has an overall lead on the Soviet Union but that there are a number of specific areas of technology where the Russians are ahead of this country. Among them he cites greater Soviet efforts and experience involving high-yield nuclear weapons in the one-to sixty-megaton range, and space-based experimentation involving high-energy physics. The US lead in most areas of technology, according to Dr. Foster, ranges "from about a year to a few years, which doesn't mean that we will lose all technological superiority that rapidly, since, in certain areas, that might require five or even ten years."

Because of the "cutback in US R&D efforts by a few percentage points annually, and the Soviet increase of between ten and thirteen percent each year—plus the fact that Russia's R&D effort in the area of space, nuclear energy, and direct military matters already exceeds ours by about twenty-five percent—the US is fast approaching the point of becoming second best in terms of total technological capability," Dr. Foster fears.

In sharp conflict with these trends, Dr. Foster points out that "US security depends on our being technologically superior. I don't believe that we can maintain our national security if we have parity or are in second position with regard to research. This is so because the Soviet Union enjoys a veil of secrecy over its R&D effort and weapons deployment. To counter this advantage, the United States simply must be in a position of 'essentially having been there' technologically before the Soviets, so that we can assess the dangers to our security [of a given technological development] and take whatever action is prudent and necessary."

Accentuating the critical imbalance in Soviet and US R&D levels, Dr. Foster emphasizes, is the fact "that we are torn between encroaching Soviet technological superiority and inflation. We are finding that the weapon systems that can be designed, superior as they are to those in the field, extract such a high price in acquisition that we can't afford them. If we are to maintain our security in the years ahead, we will have to do the R&D job at less cost. In the next year or two, perhaps even for longer, we will have to rather ruthlessly squeeze out all unnecessary costs in our weapons development and procurement programs.

"In taking these belt-tightening economy moves, we will have to exercise infinite care to watch that the long-lead aspects of our research and development programs, such as basic research, exploratory research, and some advanced developments, are maintained in the important, critical areas," he stresses.

He cites as an example the explosive area of laser technology with its implication for rapid advances in terms of defense systems as well as for other applications. The U.S., in spite of present budgetary restrictions, is "undertaking an aggressive effort in laser technology," he says, adding "of course we would like to do more if additional monies were available. There is no way of establishing whether the US is ahead of the USSR in laser technology or vice versa."

"We have been running number one for so long that we have become wasteful at times. Also, part of our difficulty at the moment is that we have a larger areospace industrial base than we have budgets to support it. What we have to do is to employ some of the measures [of frugality] that are being practiced by those nations that are currently number two, three, or four, in order not to become number two, three, or four ourselves. If we fail to take those measures, then surely that fate lies ahead for us, too," Dr. Foster warns.

There is considerable room to improve the US management of technology in his view. "In a business as large and as complex as that of aerospace, there is always room for improvement" he says, adding that the Department of Defense, under the aegis of Deputy Secretary of Defense David Packard has just completed a comprehensive document that "outlines the areas where the most progress can be made." These areas, in turn, will require detailed attention by the services, he points out.

The main focus is on "the creation of first-class teams—and people are all-important—to implement the programs, and to delegate to them not only clear responsibility but also corresponding authority to manage." Basically the Department of Defense directs the services to an understanding, "as complete as possible," of any given technological problem before any action is taken and secondly, to the need to concentrate on the "necessary rather than the desirable solutions," he says.

PUBLIC DISREGARD OF THE THREAT

Yet another factor that impinges on the military technology effort of the United States at this time, in Dr. Foster's view, is the historic lassitude the American people have brought to military preparedness during periods of relative peace. This is coupled with the effect of the Vietnam War on public attitudes and the fact "that the growing threats to American security and our ability to deter are not taking shape in areas where the American people can see them.

"The American people don't see the Soviet SS–9s, SS–11s, or SS–13s; they don't see the deployment of Soviet ballistic missile defense; they don't see the Soviet Polaris-type submarines off our coasts; and they don't see the seriousness of the threat facing our allies," he points out. As a result, and in spite "of the uncommon effort by Secretary Laird to release as much tangible evidence of the Soviet threat, certainly more than any of his predecessors have made available to the public," public reaction to the current threats has been impassive, he admits.

In addition, Dr. Foster detects a basic disenchantment with and rejection of technology on the part of a portion of the public, stemming from the facile belief "that the national security situation is getting worse instead of better and that this worsening is due to technology making available weapons of ever-increasing destructiveness."

From this premise, "some people conclude that the only way out is to stop military research and development. The problem is, of course, not quite that simple. Technology, in my view, is not the source of the problem. Technology can be used for good or evil, it can be used for peace or war and, in fact, the first alternative is how America is using it," Dr. Foster explains.

"I believe that we cannot maintain our national security and our freedom without more, rather than less, technology. In order to meet the necessary military capability with a minimum expenditure of our resources and money, we need technology. The only alternative is to buy more and more weapon systems that are obsolescent, which certainly is the least effective way of achieving a given military capability," he argues with considerable conviction.

Given the validity of Dr. Foster's point of view and the persuasiveness of his presentation, this reporter cannot escape the conclusion that, in time, the Congress and the public will come to share his and DoD's thinking.

THE DANGER OF A TRADE WAR

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD the text of my testimony, as ranking Republican member of the Joint Economic Committee, which I presented on Friday, July 17, before that committee on its mid-1970 economic review.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

DANGER OF A TRADE WAR LOOMS OVER U.S. INTERNATIONAL ECONOMIC POLICY

Mr. JAVITS. Mr. Boggs and I have been asked to appear this morning to give our impressions as to the overall international economic situation. The Foreign Economic Subcommittee of the Joint Economic Committee, of which Mr. Boggs is the Chairman and I am the ranking minority member has been holding a series of hearings on various aspects of the international economic scene. These hearings will reconvene shortly after concluding the 1970 mid-year economic review to consider the multinational corporation. The purpose of our appearance here today is to outline for the members of the Committee how the international economic situation appears to us.

The international economic picture presently faces a strange and delicate paradox.

On one hand, there are grounds for optimism, which on the other, a protectionist tide seems to be sweeping the world which, if allowed to go unchecked, will bring only grief and disaster to the world in the form of an international trade war. For while some optimism in the world's financial affairs is warranted, it is so precariously balanced as to be susceptible of being swept aside easily by the angry tide of a trade war. Such a trade war could wreck the structure of international economic cooperation established since World War II and the institutions which have grown up under it. It could destroy the hope for political unity in Western Europe, erode the foundations for political cooperation with Latin America, and make the whole world vulnerable to a depression, to disorganization and to a resurgence of Communist influence in the affairs of men.

This threat overshadows the following recent optimistic developments. A major new international monetary initiative has become operative early this year and seems to be functioning well in its assigned task of facilitating international liquidity. I refer to the creation of Special Drawing Rights, and I note that the United States has received its initial allocation of $217-million in SDRs. Trade relations between surplus and deficit countries appear to be moving towards correction and adjustment reflecting the West German and Canadian revaluations and the French devaluation. Lessening inflationary pressures in the United States and our declining economy and the increased inflationary pressures facing European economies have resulted in a greater U.S. trade surplus in the first five months of this year. This surplus totals $1.13 billion through May of this year or approximately double the 1969 surplus of $638 millions in the first five months of 1969. Some Japanese moves towards the liberalization of their onerous trade restrictions in turn should have the gradual effect of reducing the internationally intolerable surplus position of Japan and alleviating the deficit position of other nations such as the United States.

The Eurodollar market has weathered well the immediate crises of the past year in which the repressive monetary policy in the United States caused massive Eurodollar borrowings by U.S. banks and corporations to meet their liquidity needs. The Eurodollar market proved itself up to the task of keeping the all-important flow of international trade and investment moving.

On the negative side, the balance of payments position of the United States remains weak. The main reason for this is that our trade surplus position is not great enough to cover our other foreign commitments which include Vietnam, foreign military and economic assistance, tourism and foreign direct investment among other items.

But again the picture is not totally dark since we are withdrawing from Vietnam and hopefully the balance of payments saving that will accrue from this troop withdrawal will not be spent in military action or military support in other Southeast Asian countries. As I mentioned, our trade surplus is improving and I look for it to continue to improve since we are farther advanced in our battle against inflation than other industrialized countries. Also, the Federal Reserve's recent wise decision to lift the interest ceilings on certain categories of CD deposits is likely to encourage dollars to stay at home since they can now earn returns comparable to those that can be earned by Eurodollars.

It is also clear that the world has been willing to bear the balance of payments deficit of the United States assuming it does not get out of hand. Dollar redemptions for U.S. gold have not been running at a high rate. Perhaps this deficit can be viewed as the service charge that the world is willing to bear for the use of the dollar as a reserve currency and the Eurodollar as the international currency.

Mr. Chairman, I make this brief survey solely to indicate that the international economic picture is far from being grim. It appears to be far healthier than does our own domestic economy. This has resulted in what can be called a transference of anxieties and scapegoatism in which many people who are afraid of losing their jobs because of the domestic showdown and many firms which are caught in a profit squeeze are blaming their very real woes on the foreigner. This is basically irrational and not borne out by the facts. Rather than to indulge in such fantasies, let us rather take the necessary steps to get this economy moving again, to pass the manpower programs needed to train and employ the unemployed, and to provide the Presidential powers and the trade adjustment assistance to help those individuals and firms genuinely hurt by imports, among other matters.

I emphasize that certain American industries have legitimate grievances in the trade area. Certain American industries are being hurt by a sudden impact of imports; and it is the duty of this Administration and the Congress to assist such industries. However, given today's general economic conditions, there are many other American firms that are being injured not by the sudden impact of imports but by the sudden impact of restrictive fiscal and monetary policies, by rampant inflation in wages, prices, by record interest rates and by a stagnation in productivity and in the vaunted American competitive spirit. For this, foreign nations are not to blame.

This irrationality, this propensity to look for the worst in one's neighbor's yard because one's own yard is undergoing temporary difficulties, this move into quasi-isolationism in an increasingly interdependent world, could result in bringing down the economic system that has served us so well over the past 25 years.

I would now like to outline four areas of specific concern:

1. An ill-advised Administration decision to support quota legislation at the behest of the textile industry, followed by tentative House Ways and Means Committee decisions on the trade bill, are threatening to reverse the liberal trade policies which this nation has followed for approximately 40 years. The result is that the world has moved a step closer to a devastating world trade war, all of this triggered by Japan's past persistence in ostrich-like, head-in-the-sand foreign economic policies.

2. An historic opportunity to re-direct and re-vitalize U.S. foreign aid.

3. The urgent need for a review of U.S. private investment abroad, the magnitude of which has stirred resentment but little understanding at home and overseas. This legislation has led to the growing support of punitive, inward-looking legislation, both in the United States and the European Common Market. This, combined with the retention of outmoded anti-trust laws by the United States, results in a policy combination which may be very harmful to not only U.S. business, but our international balance of payments position as well.

4. International monetary policy stands at the crossroads, and the present calm should be a spur to action designed to prevent future and recurring parity crises and balance of payments disequilibriums that could again threaten the smooth functioning of the international monetary system.

(The following are excerpts of the remainder of Senator JAVITS' testimony.)

TRADE POLICY

While I share Representative Byrnes concern that "political clout" should not be the principal factor which determines which industries secure or do not secure relief from rising imports, I must consider the tentative decision of the Ways and Means Committee to authorize a general restrictive new quota mechanism as unwise and potentially dangerous.

If this indeed does come to pass, the United States will face retaliation—Western Europe and Japan and perhaps other countries already have discussed the specifics of such retaliation—a chain of events that will not redound to the interest of any nation.

Those promoting protectionist legislation are not promoting in my judgment a national interest, but as is their right, of course, a sectional specific business interest.

I must also express my concern about the Ways and Means Committee's tentative decision concerning the American Selling Price (ASP). Repeal of the ASP is a firm commitment made by the Executive Branch of the United States Government. It is widely viewed abroad as the litmus test of the United States' intent as regards non-tariff barriers. The question must be asked how the Congress can even contemplate the opening of general negotiations on non-tariff barriers, if we don't live up to the one commitment we have made to eliminate American non-tariff barriers.

The one ray of light is the announcement that the United States has now agreed to multilateral talks with its main trading partners to discuss the crises in the world's textile markets and that the President's Special Trade Representative and the Under Secretary for Economic Affairs of the Department of State will represent the United States in these talks. These talks perhaps represent the last hope the industrialized nations of the world have to avert a trade war. I urge the representatives of all nations to seek a solution to the difficult problem of textiles in accord with the trade laws that have so well governed the expanding world trade that has benefited us all over the past 25 years.

FOREIGN ASSISTANCE POLICIES

There is growing international concern that foreign assistance is not a priority concern of this Administration and that the lack of Administration leadership will result in further cuts in the already low levels of our foreign assistance programs. This concern is partially attributable to the fact that the President has not yet submitted to the Congress the Report requested in my amendment to the Foreign Assistance Act of 1968.

At this time, I do not feel that this international concern about the Administration's future policies in the foreign assistance area is warranted and I have been assured by the Administration that the President's Report will be forthcoming in the very near future. Also the Overseas Private Investment Corporation, a significant new instrument designed to better promote our foreign economic policies, has already been authorized by the Congress and will come into being in the very near future.

In my view, because of the growing sense of quasi-isolation in the United States which is related to the Cambodian decision and reflected in the trade decisions now being made, it is very important that the President outline for the nation and the world, positive suggestions for a continuing fruitful and meaningful involvement with the developing world through a continuing developmentally oriented foreign assistance program. I am further convinced that Western Europe and Japan are increasingly willing to share the burdens of such a program which will primarily address itself to the growing gap between the have and have not nations. Thus, in the foreign assistance field the President and the Administration now have a rare opportunity to take positive action which over

time would significantly redound by improving the image of the United States in the world.

THE MULTINATIONAL CORPORATION

I suggest that we are lagging in our understanding of the importance of the role of the multinational corporation and the interconnection between American investment overseas and the health of our economy at home. This "lag" in understanding could result in decisions that we could live to regret.

These are not empty words since the Ways and Means Committee seriously considered language which would materially harm the operations of our American subsidiaries overseas without ascertaining the effect this legislation could have on the health of our own economy. I refer to the proposed repeal of Items 806.30 and 807.0 of the Tariff Schedules of the United States which provide that American articles which are exported for assembly and processing abroad are dutiable on their return to the United States only on the value of foreign costs and charges incurred; the American component of the produce is not presently dutiable. I have been informed that through the use of these sections in our Tariff Laws, American companies have found a way to compete with foreign manufacturers. Assembly abroad of American components may have saved and increased American jobs and afforded American companies an opportunity to hold a sizable portion of a market that will otherwise go to manufactuers by default.

To give an idea of the magnitude of our business investment overseas, during the period 1950–1968, U.S. private investment abroad grew from $19 billion to $101.9 billion and overseas private investment in the U.S. grew from $8.0 billion to $40.3 billion; annual growth rates of 10%. Servan-Schreiber forecasts that by the end of 1975 the third biggest industrial power in the world will be United States owned industry in Europe.

This indicates the extent to which the operations of the multinational corporations with their world-wide marketing and production concepts are creating an interdeveloped world economy and are outdistancing the legal framework which still is dwarfed by the rapid growth of the world economy.

INTERNATIONAL MONETARY CONSIDERATIONS

Because of the dollar's role as a reserve currency, and the fact that it is the standard of value for virtually all of the free world's currencies, the United States must assume a passive role in the exchange rate adjustment process. This is to say, we cannot devalue or revalue the dollar in order to improve our position vis-a-vis other currencies. The U.S. economy which might justify an exchange rate adjustment under other circumstances cannot be corrected by the United States through a change in the par value of the dollar.

The Republican members of this Committee, in the JEC Annual Report, stated that any improvements in the situation "must provide for more automatic and less discretionary means for exchange rate adjustment, both upward and downward, in order to harmonize international exchange rates". This is a sound policy.

The need for the growth in global reserves beyond that which could possibly be attained through conventional means is precisely the fact which lay behind the recent ratification and activation of the Special Drawing Rights facility. This Committee can rightfully take credit for helping develop a realization of this fact, and promoting the U.S. position on Special Drawing Rights; I foresee continued leadership by the Committee in this regard in the future. Therefore, I believe the Committee should consider the possible serious consequences of the failure of world reserves to keep pace with accelerating global needs.

One might ask what is the proper level of reserve creation, and what are the consequences of failure to expand world reserves.

The SDR facility marks a breakthrough in reserve creation and in theory should assure us of a means for guaranteeing the growth in world liquidity according to the needs of world trade and payments equilibrium. However, the present rate of SDR creation appears insufficient to do anything more than blunt the further deterioration in this liquidity situation. Estimated needs for additional reserves run as high as $6-billion per year, while the rate of SDR creation is running at an annual rate of slightly over $3-billion. Creation of total new reserves *including* SDR's is also running significantly lower than the need for new reserves.

Perhaps it is expecting too much of SDR's to solve the world's liquidity problems at once, but the demonstrated needs are so great that serious consideration ought to be given to wider use of SDR's when the amounts to be created are next decided upon.

In perhaps a more ominous development, our balance of payments problems now coincide with a growing realization among economists that the U.S. has little control over its balance of payments and that developments in the international monetary scene show a gradual shift away from dependence upon the dollar as a reserve.

What these facts imply is that the world's surplus countries might find it difficult in the future to tolerate continued heavy outflows of U.S. dollars.

The whole area of international capital flows is grossly unregulated, and was never treated thoroughly in the Bretton Woods Agreements. The fact that countries readily turn to a wide variety of capital controls whenever they feel slightly threatened on the international front attests to the need for greater coordination and knowledge in this important field.

Therefore, I would like to commend to this Committee a proposal by former Treasury Undersecretary Robert Roosa, that the United States call for a systematic attempt to formulate some "rules of the game" on international capital flows. This attempt would supplement work which has already been done in the OECD on the liberalization of capital movements; it would address itself to the modern conditions characterized by the increased amount of international business activity and the uncertainties regarding our payments position.

MEDIA MYTHS ON VIOLENCE

Mr. BROOKE. Mr. President, at a time when crime and civil disorders are primary concerns of every American, I believe it is most helpful for us to understand the role which the media can play in building our image of these phenomena.

A particularly useful study in this regard was recently concluded by Miss Terry Ann Knopf, of the Lemberg Center for the Study of Violence, at Brandeis University. Miss Knopf has presented some of her findings in an exceptionally "readable" article in the spring edition of the Columbia Journalism Review.

Through the use of some lively examples, the author demonstrates how misconceptions arise and how the use of "code words" can shape and often distort our understanding of an event. The article offers some suggestions for readers and the working press alike. I commend it highly to the attention of Senators and, indeed, of all Americans. I ask unanimous consent that the text be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDIA MYTHS ON VIOLENCE

(By Terry Ann Knopf)

Several years ago a resident of a small Northern town kept insisting to a local newspaper reporter that a policeman had been shot and killed during a racial disturbance there. The reporter checked and rechecked but was unable to substantiate the story. In fact a policeman had been killed, but in another city. The man simply had heard a garbled version of the story—not an unusual occurrence in the confusion that prevails during crises.

Crisis situations increase the need for news. During most serious disturbances, news media are bombarded with calls from anxious citizens wanting information, clarification, verification of what they have heard. So important is the flow of news through established channels that its continued absence can help precipitate a crisis. In 1968 in Detroit the absence of newspapers during a protracted strike helped create a panic: there were rumors in the white community that blacks were planning to blow up freeways, kill suburban white children, and destroy public buildings; in the black community, that white vigilantes were coming into the area to attack the residents. Gun clubs sprang up in the suburbs; black leaders urged preparation of survival kits. On March 7—nearly four months after the strike began—Mayor Cavanagh had to go on TV to plead for calm.

As racial disorders have become a familiar part of the national scene the media have demonstrated a growing awareness of their responsibilities and a healthy willingness to experiment with new policies and procedures. Technical improvements also have been made. The City of Detroit, for example, has built a press room large enough for 150 people, with independent telephone lines. Operational techniques have been modernized—the Pittsburgh police, among others, have on occasion provided a helicopter for the press. And central headquarters or "press centrals" have been established to help eliminate conflicting reports. Moreover, a number of cities have adopted or revised guidelines for reporting. These guidelines—sometimes formal, sometimes informal—urge that unnecessary interpretation be minimized, rumors be eliminated, unverified statements be avoided, and superlatives and adjectives in "scare" headlines be excluded. One set of guidelines put the matter simply: "Honest and dispassionate reporting is the best reporting."

In accordance with these guidelines, newspapers have tended to move away from the "shotgun" approach—the front-page buildup, complete with splashy pictures and boxscores of the latest "riot" news. Dramatic but meaningless predictions have also largely disappeared. In May, 1967, *U.S. News & World Report* declared that Newark was "not expecting trouble," while Cleveland was voted the city "most likely to explode—again." Cleveland failed to erupt in 1967, but Newark experienced one of the most massive outbursts in our country's history. This kind of journalism is much less common today.

There is also evidence of greater sympathy and sensitivity toward blacks. How far have we come? Consider the following comment from the New York *Times* on July 23, 1919, concerning the violent disorder in Washington, D.C.:

"The majority of the negroes (sic) in Washington before the great war were well

behaved. . . . More of them admitted the superiority of the white race, and troubles between the two races were undreamed of. Now and then a negro intent on enforcing a civil rights law would force his way into a saloon or a theatre and demand to be treated the same as whites were, but if the manager objected he usually gave in without more than a protest."

These changes represent considerable improvement. But serious problems remain. Glaring instances of inaccuracy, exaggeration, distortion, misinterpretation, and bias have continued at every level—in newspapers and newsmagazines large and small, Northern and Southern, liberal and conservative.

The wire services are probably the most under-examined segment of the media, although as much as 90 per cent of the news in some newspapers on a given day may come from the wires. One error in a wire service report from one city may be repeated in hundreds of newspapers and newscasts. In York, Pa., in mid-July, 1968, for instance, incidents of rock- and bottle-throwing were reported. Toward the end of the disturbance UPI in Harrisburg asked a stringer to get something on the situation. A photographer took a picture of a motorcyclist with an ammunition belt around his waist and a rifle strapped across his back. A small object dangled from the rifle. On July 18, the picture reached the nation's press. The Washington *Post* said:

"Armed Rider—Unidentified motorcyclist drives through heart of York, Pa., Negro district, which was quiet for the first time in six days of sporadic disorders."

The Baltimore *Sun* used the same picture and a similar caption:

"Quiet, but . . . An unidentified motorcycle rider, armed with a rifle and carrying a belt of ammunition, was among those in the heart of York, Pa., Negro district last night. The area was quiet for the first time in six days."

The implication of this photograph was clear: The "armed rider" was a sniper. But since when do snipers travel openly in daylight completely armed? Also, isn't there something incongruous about photographing a sniper, presumably "on his way to work," when according to the caption the city "was quiet"? Actually the "armed rider" was a sixteen-year-old boy who happened to be fond of hunting groundhogs—a skill he had learned as a small boy from his father. On July 16, as was his custom, the young man had put on his ammo belt and strapped a rifle across his back, letting a hunting license dangle so that all would know he was hunting animals, not people. Off he went on his motorcycle headed for the woods, the fields, the groundhogs—and the place reserved for him in the nation's press.

More recently, an AP man in Dallas filed a story on a student takeover at Southern Methodist University. The Fort Worth *Star-Telegram* in its evening edition last May 2 put the story on the front page and gave it a banner headline:

"BLACKS SEIZE OFFICE OF S.M.U.'S PRESIDENT—POLICE ARE CALLED TO STAND BY

"DALLAS (AP).—Black students with some support from whites took over the office of the president of Southern Methodist University today and swore to remain until their demands are met. . . .

"Reports from the scene said from thirty to thirty-five students were in control of [President] Tate's office.

"The takeover occurred during a meeting of Tate and a campus organization, the Black League of Afro-American and African College Students."

The story had one major flaw—it wasn't true. While about thirty-five students had met with the university president, they were not "in control" of his office; nor had they "swore to remain" until their demands were met. No such "takeover" had occurred. Glen Dromgoole, a staff writer for the *Star-Telegram*, later reported what really happened. The black students had met with the president for more than five hours discussing recent demands. The talks were more friendly than hostile. (At one point hamburgers were brought in.) By the end of the meeting, agreement had been reached on most of the issues. Apparently the wire service reporter had accepted the many rumors of a student takeover.

Martin Hayden of the Detroit *News* has suggested "an almost mathematical relationship between the level of exaggeration and the distance of news transmission." Edwin Guthman of the Los Angeles *Times* maintains that the early wire service report "is at the crux of the news media's problem." However, it is more likely that instances of misreporting remain a problem at *every* media level. The Lemberg Center for the Study of Violence, in investigating twenty-five incidents in which the news media had alleged sniping, found that, along with the wire services, local and nationally known newspapers bore a heavy responsibility for imprecise, distorted, and inaccurate reporting.

While treatment of racial disorders is generally more restrained today, the news media continue to overplay the more violent or sensational aspects of a story. The central media concern during the disorder at Cornell University last April, for example, was the emergence of the blacks from the student union. A picture of the students carrying rifles and shotguns, splashed across the nation, had a distorting effect on public opinion. The New York *Times* put the picture on page 1, and *Newsweek* used it on its cover the following week. Certain facts were largely ignored: prior to the disorder a cross had been burned in front of a black women's dormitory; the students had heard radio reports that carloads of armed whites were moving toward the campus; when the students emerged from the building their guns weren't loaded. What was basically a defensive response by a group of frightened students came across in the media as a terrorist act by student guerrillas.

Aspects of the disorders are dramatic and do merit extensive coverage. But the media still tend to equate bad news with big news and to confuse the obvious with the relevant. Thus when sixty-five students at Brandeis University took over a building last year it rated a story on the front page of the New York *Times*—despite the fact that there was no violence, that classes continued, and that the university suffered only minor inconvenience. I was on campus then. My only recollection of anything unusual was that on the first day or two an attendant asked to see my identification, and for the next week and a half I noticed large numbers of reporters, press cars, cameras, and other equipment. I sometimes wondered if there weren't more reporters outside than students inside the building.

The *Times*, along with most newspapers, missed the unusual climax at Brandeis. In a war of nerves with the students, President Morris Abram showed consummate skill in handling the situation, remaining flexible on the issues, mobilizing the support of the student body and faculty, and, above all, refusing to call in police. Eleven days after the crisis had begun the students quietly left the building—a dramatic victory for the Brandeis community, a dramatic example of how to handle a university crisis in contrast to fiascoes at Columbia and San Francisco State. Yet the students' departure merely merited a *Times* story about three inches long, well off the front page.

Disparities between the headlines and news stories are another problem. Often much less occurs in the story than the headline would indicate. Last year, for example, some concerned parents in Jacksonville, Fla., removed their children from Kirby Smith Junior High School after a local radio station had broadcast an exaggerated report of a fight between black and white students. The school principal later indicated that "classes continued and there was no panic." Nevertheless the Miami *Herald* headlined its story last April 25: "Moms Mob School After Riot 'News.'" Sometimes no violence occurs in the story, dramatic headlines to the contrary, A story appearing in the Boston *Globe* last May 10 told of a peaceful rally by a small group of students at a local theological seminary. According to the *Globe*, the rally was "brief and orderly." But the headline above the story read "Newton Campus Erupts."

The use of the word "riot" presents another problem because it has no precise meaning in terms of current disorders. *Webster's* defines a "riot" as a "tumultuous disturbance of the public peace by three or more persons assembled together and acting with a common intent." The difficulty is that "riots" have become so frequent and come in so many sizes and shapes as to render the word meaningless. There is something ludicrous about lumping together as "riots" Detroit, with forty-three deaths, 7,000 arrests, and $45 million in property damage, and an incident in which three people break a few store windows. Yet this is precisely what the news media still do. The continued media use of the term contributes to an emotionally charged climate in which the public tends to view every event as an "incident," every incident as a "disturbance," and every disturbance as a "riot." Journalists would do well to drop the word from their vocabulary altogether.

No law says the media have to interpret and not simply report the news, but having assumed this responsibility they have an obligation to make reasonable judgments based on careful analysis. Unfortunately, journalistic attempts in the direction of social science research have been rather amateurish, particularly where new trends and patterns are concerned. The case of the Cleveland "shoot-out" is a good example. On July 23, 1968, an intense gun battle broke out between the police and a group of black nationalists led by Ahmed Evans. Before the disorder was over 16,400 National Guardsmen had been mobilized, nine persons had been killed, and there was property damage estimated at $2.6 million. The Cleveland *Press* on July 24, 1968, compared the violence to guerrilla activity in Vietnam:

"It didn't seem to be a Watts, or a Detroit, or a Newark, Or even a Hough of two years ago. No, this tragic night seemed to be part of a plan."

A reporter writing in the New York *Times* of July 28, 1968, stated:

"It marks perhaps the first documented case in recent history of black, armed, and organized violence against the police."

More recent reports have revealed that the "shoot-out" was something less than a planned uprising and that the situation was considerably more complicated than indicated initially. Unfortunately, following the events in Cleveland, disorders in which shots may have been fired were immediately suspected by the press of being part of a "wave." A series of errors involving a handful of cities became the basis of a myth—that the pattern of violence in 1968 had changed from spontaneous to premeditated outbreaks. Few of the nationally known newspapers and newsmagazines attempted to verify sniping reports coming out of the cities and over the wire services; few were willing to undertake independent investigations; and far too many

were overly zealous in their assertions of a new "trend" based on limited and unconfirmed evidence. Unwittingly or not, the national media had constructed a scenario on armed uprisings.

Although having more time to check and verify reports than daily newspapers, the newsmagazines were even more vocal in their assertions of a "new pattern." On September 13, 1968, *Time* took note of an "ominous trend" and declared that the violence "appears to be changing from spontaneous combustion of a mob to the premeditated shootouts of a far-out few." The story went on to indicate that "many battles" had begun with "well planned sniping at police." Nearly a year later, on June 27, 1969—long after investigation by a task force of the National Commission on the Causes and Prevention of Violence, by the Lemberg Center, and by the New York *Times* (which reversed itself on the Cleveland question) had cast serious doubt about premeditated outbreaks in Cleveland and elsewhere—*Time* still was talking about the possibilities of a "guerrilla summer" and reminding its readers of the time in Cleveland when "police were lured into an ambush." Once started, myths are difficult to extinguish.

The most recent myth created by the media involves an alleged "shift" in racial disturbances from large to small cities. Last July 25 a syndicated reporter for the News Enterprise Association (NEA) noted:

"The socially sizzling summer has begun—but unlike recent history, it seems to be the minor, not the major, cities which are sweltering."

In an article entitled "Riots, 1969 Style," *Newsweek* declared on August 11:

"The traditional riot scenario is still being played out this summer—with one major difference. This season the stage has shifted from the major population centers to such small and disparate communities as Kokomo, Ind., Santa Ana, Calif., Cairo, Ill., Middletown, Conn., and Farrell, Pa."

Last September 9 the New York *Times* captioned a picture:

"New riot pattern: Rioting in Hartford, Conn., last week . . . underscored the fact that smaller cities this summer have had more racial trouble than the big ones."

Similar stories appeared about the same time in scores of other newspapers, including the *Wall Street Journal*, the Baltimore *News American*, the Woburn, Mass., *Times*, and the Pittsburgh *Press*.

In fact, racial disorders occurring over the past few years—not just this past summer—have been concentrated in smaller cities. About 75 per cent of all outbreaks recorded in 1968 by the Lemberg Center's Civil Disorder Clearinghouse occurred outside the 100 largest cities. For the first six months of 1969 and also for the summer no appreciable change in the percentage was noted. Furthermore, many of the cities cited as prototypes of this latest "new pattern"—Hartford and Middletown, Conn., Cairo, Ill.—have had disorders in previous years. The difference is that such outbreaks were completely overshadowed by a few enormous outbreaks in large cities such as Newark and Detroit.

Discovering the origin of these and other myths would be useful—a faulty wire service report, an inept reporter, an unreliable source. But aside from the fact that such a task would be almost impossible, it would miss a central point—that the system of reporting ensures that errors of fact and interpretation may be repeated, compounded, and reformulated as myths. In recent years the various components of the media have become extremely intertwined and dependent upon one another. The wire services, the nationally known newspapers, and the newsmagazines feed one another news and information. While the system undoubtedly speeds the flow of news to the public, it has encouraged a parrot-like character in which the various media segments tend to reproduce rather than examine one another's views.

In this respect the New York *Times'* caption proclaiming a NEW PATTERN assumes greater significance. Prior to its appearance in the *Times*, I talked with Jack Rosenthal, who had been working on a story on the relatively cool summer. When the subject of a new "shift" in violence came up I indicated that such allegations were false and misleading. Rosenthal wrote a thoughtful story, dwelling on police-community relations, civic programs, and the new community spirit among blacks. His story made no mention of a "new riot pattern." Apparently the caption writer had paid more attention to what *Newsweek* and the *Wall Street Journal* were saying than to his colleague at the *Times*.

The failure of the media to tell the complete story in the case of Cornell or the right story in the case of Cleveland goes beyond a lack of initiative or an inclination to sensationalize. It also indicates a bias—one which, notwithstanding Vice President Agnew's declarations, cuts *across* political and geographical lines. The media are not more aware of this bias than is the general public aware of its own. In part, we call it a class bias in that those who comprise media staffs—reporters, editors, headline writers, etc.—are part of the vast American middle class and, as such, express its views, values, and standards.

Both the general public and the media share the same dislike of protestors; both are unable to understand violence as an expression of protest against oppressive conditions; both prefer the myth of orderly, peaceful change, extolling the virtues of private property and public decorum. People are expected to behave in a certain way: they just don't go around yelling and cursing or throwing rocks. Both will grant that it took a revolution to secure our independence and a civil war to end slavery (at least officially), but that was all long ago and somewhat different. The bias also has elements of racism in that color is never far from the surface. It is difficult to say where the class bias begins and racist bias ends. These elements are inseparable and reenforce each other, and both manifest themselves in the thinking of the public and media alike.

A growing body of research shows that racial disorders are a part of the social process. The process includes an accumulation of grievances, a series of tension-heightening incidents such as police harassment, and a precipitating event such as an arrest which crystallizes the tensions and grievances that have mounted—the "last straw" that triggers the violence. The "typical rioter" is young, better educated than the average inner-city black, and more dissatisfied. He wants a better job but feels that prospective employers will discriminate against him. He is likely to be a long-term resident of the city. (In a survey in Detroit, 90 per cent of those arrested were from Detroit, 78 per cent lived in the state, and only 1 per cent lived outside the state.) He is extremely proud of his race and is politically conscious. He is more interested in and informed about politics than blacks who are not involved in a disorder. He is also more inclined toward political activism. (In one survey, nearly 40 per cent of the participants in the disorder—as compared to only about 25 per cent of the nonparticipants—reported having been involved in civil rights activity.) Finally, he receives substantial support from the rest of his community, which does not participate but regards the violence as necessary and beneficial.

As important as the findings in these studies are, they have made virtually no impact on the vast majority of the public. Most Americans continue to believe that violence is caused by a tiny and insignificant minority, that "outside agitators" and "criminal elements" are mainly responsible for isolated outbursts that have little or no social significance. Intellectuals must share a portion of the blame for this situation. Having completed their studies, they have been notoriously reluctant to roll up their academic shirtsleeves and assume leadership in presenting their ideas to the public. There is a trace of condescension in their assumption that good ideas from above will somehow trickle down to the "masses of asses," as one academic I know calls them.

Greater responsibility for the failure to confront the public's resistance rests with the news media. They have failed to commit their power and prestige on behalf of such studies. They have failed to place the ideas before the public and push for reform in an aggressive, effective manner—settling for a splash of headlines and stories initially, and little followup. Instead the media have opted for the status quo, reflecting, sustaining, and perpetuating outworn beliefs of their predominantly white audience.

Historically the notion of plots and conspiracies has always had great currency in this country—and in other countries, too. Prior to the Civil War, Southerners frequently viewed abolitionists as "outside agitators" trying to stir up the happy slaves. Violent interracial clashes during World War I were said to have been instigated by the Bolsheviks, and the outbreak in Detroit in 1913 was attributed to an "Axis plot." The current wave of disorders has been blamed on individuals such as Stokely Carmichael and H. Rap Brown or, for those who like a more international flavor, "Communist infiltrators." In a survey of six Northern cities by the Lemberg Center, 77 per cent of all whites interviewed believed that "outside agitators" were a major contributing cause of disorders. When Los Angeles Mayor Sam Yorty recently blamed a rash of school disorders on a conspiracy of the Black Student Union, the Students for a Democratic Society, Communist sympathizers, and the National Council of Churches, he was following a long—though not very honorable—tradition.

Such allegations are usually made without a shred of evidence, except for an occasional "someone told me so." Nevertheless the media have frequently taken their cues from the public in formulating and circulating such reports. Misinterpretations of the events in Cleveland, along with assertions of a "new pattern" of premeditated violence, are blatant examples of this form of bias. But more often the bias is expressed in more subtle ways. For example, when rumors circulated that "outside agitators" were involved in a disturbance in Omaha, Neb., a news story appearing in the Arkansas *Gazette* last June 27 made reference to the rumors but also mentioned that the mayor had no evidence to support such reports. Yet, the headline above the story read "'Outsiders' Linked to Omaha Rioting."

A look at the way in which the disorders are written up reveals, tragically, that the majority of the media and the public share essentially the same view of the violence—as meaningless, purposeless, senseless, irrational. Media treatment of the disorders following the assassination of Rev. Martin Luther King, Jr., illustrates the point. The sense of loss and injury among blacks at the time of the assassination was extremely great—far greater than among whites. The unprecedented wave of disorders—approximately 200—was expressive of the anger, bitterness, resentment, frustration that black people everywhere felt.

How did the media handle the disorders? Stories in just two newspapers analyzed—the Buffalo *News* of April 9, 1968 (the day of Dr. King's funeral) and the Trenton *Times-Advertiser* one day later—are fairly

typical. No attempt is made to place the violence in a social context. The reference to the assassination of Dr. King is perfunctory, with only a passing mention of his funeral and a few shouts about his death. Value-laden words receive unusual emphasis. The participants are "marauders," not men; they "rove" instead of run; they move in "gangs," not groups; they engage in "vandalism," not simply violence.

We have all grown so used to viewing blacks as stereotyped criminals that it is difficult to picture them in any other role; hence such frequent press concoctions as "roving gangs," "roving vandals," "roving gangs of rampaging teenagers," or, for variety, "a window-smashing rampage of roving gangs of Negro youths." The New York *Times* assertion last July 1 that "roving bands of ruffians" were involved in a disturbance in Middletown, Conn., seems somewhat feeble by comparison. The effect of such treatment by the media is to pander to the public's prejudice, reenforcing stereotypes, myths, and other outmoded beliefs. The media not only frighten the public but confuse it as well.

And let us not forget the effects on the news media. The proliferation of underground newspapers, radical publications, black journals, as well as underground radio stations on FM bands held by churches and universities, indicates that the media are failing to reach certain groups, and that they still lack sensitivity, sophistication, and skepticism commensurate with their important and strategic position.

LAW AND LOYALTY

Mr. HATFIELD. Mr. President, I invite the attention of Senators to the award-winning editorial given by John Salisbury, the director of news and special projects at Portland's KXL radio station. This editorial comment, broadcast over KXL on May 1, 1969, was selected by the Freedoms Foundation at Valley Forge to receive their principal award in the editorial category last February 22.

During a time in our Nation's history when patriotism and loyalty to God and country seem to be discussed only as virtues behind closed doors and in the privacy of one's home, I wish to commend Mr. Salisbury's forthright expression of conviction in these realms. As Mr. Salisbury points out in a refreshing manner, all Americans should avoid the pitfalls of accepting polarization from either the extreme right or the extreme left. Rather, it is time that we as a nation reaffirm our loyalty and trust in the ideals, upon which this country was founded, and redouble our efforts in reestablishing those ideals in the daily affairs of our Nation and our own personal lives.

I ask unanimous consent that Mr. Salisbury's editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHN SALISBURY NEWS COMMENTARY

This is Law Day. It is also Loyalty Day.

Tune me out and turn me off, if you so desire, because I'm going to talk about law—and about loyalty.

It won't hurt much, because I've already been tuned out and turned off by the bullies, brigands and braggarts who have decided law is no longer necessary in America, and who scoff at the very concept of loyalty.

I'm tuned out and turned off by young people in their smart pants and dirty beards who believe, somehow, they've been gifted by a God they claim is dead with some kind of omniscience which gives them sole mandate to cure the world's ills and to rule it by their own laws.

I'm tuned out and turned off by the black militants who believe guns leveled at the wrongs of bigotry will win the rights of equality.

I'm tuned out and turned off by the burners of draft cards and the tramplers of flags who denounce in cowardice the names of the brave who fall in battle—the young men who didn't choose to be there but went anyway, and fought their hearts out and sometimes died believing that if their country was wrong, it went wrong trying to do right.

I'm tuned out and turned off by the far right which suspects everyone else of being disloyal—and by the new left which believes in overthrowing our government, preferring anarchy even above communism.

I'm tuned out and turned off by boys who look like girls and girls who look like ladies of the night—and by members of my generation who think long hair, sideburns and beards really open the lines of communication to their kids.

I'm tuned out and turned off by men who've lost respect for women, and women who've lost respect for themselves—and by the new sophistication which makes it permissable to tell dirty jokes in mixed company.

And I'm absolutely turned off by Polish jokes—or any others which poke unwarranted fun at race, nationality or faith.

I'm tuned out and turned off by educators who can find no way to defend their institutions except by allowing the rabble to take them over—and by professors who prefer the rabble to self-respect.

I'm tuned out and turned off by men of God doing the Devil's work because they're no longer certain where, why or how God works.

I'm tuned out and turned off by the pornographers who use liberty as a cloak for license, proclaiming their right to peddle filth as freedom of the press.

I'm tuned out and turned off by dope pushers destroying a generation of youth while proclaiming marijuana should be legalized and a trip on LSD the only way to fly.

These are some of the things which turn me off.

And what turns me on?

Whites and blacks working together to make things better for everybody.

Kids who organize decency rallies.

Students who go to school to get an education, and educators who educate.

Preachers who identify with God, and are humbled by Him.

Authors who write good books.

Clean-cut boys and pretty girls.

And people to whom law, loyalty, justice and patriotism are not dirty words—people like the great majority of Americans, young, old and middle-aged, who care and will do something about it, like tuning in and turning on to what's right with America, using it as the inspiration for overcoming what's wrong with America.

People who pledge not anarchy—but allegiance!

CAPTIVE NATIONS WEEK

Mr. HRUSKA. Mr. President, this month marks the 11th consecutive year in which we have observed Captive Nations Week, an unfortunate but necessary occasion in which we call to mind once again the plight of 100 million Europeans who suffer political imprisonment at the hands of the Soviet Union.

While we deplore their predicament, we rejoice at their perseverance, their undaunted spirit, and their determination one day to find freedom again.

It was 11 years ago that the Congress enacted a joint resolution inaugurating Captive Nations Week. The late President Eisenhower was the first Chief Executive to proclaim the week.

Since then we have seen a continuation of Communist domination of the countries of east and central Europe. We have seen a callous eradication of the spark of freedom wherever it threatened to burst into flame. We have been oppression which would have long ago subdued a less hardy people.

We know that while the Communists can stamp out the flame of revolt, the spark of freedom continues to live in the breasts of Czechs, Hungarians, Poles, Lithuanians, Latvians, Estonians, Ukrainians, Bulgarians, and Slavs. We know that they await the day when they will rise up and throw off the yoke of tyranny.

These citizens of the captive nations believe as we believe that the most precious freedom is the freedom of self-determined government. The Europeans who settled vast areas of this country, including my own State of Nebraska, cherished this freedom heartily. Their brothers and sisters in Europe have no less love for it, but unhappily are deprived of an opportunity to enjoy the benefits of freedom which we have scrupulously erected and protected in the United States.

We, therefore, observe Captive Nations Week in the hope that our demonstration of concern will hasten the day in which the peoples of these countries join the family of free nations.

None of us will be completely free, Mr. President, until the valiant people of these nations are free.

It would be good for us to stop in our daily tasks and ask ourselves if we really appreciate our inalienable rights. I fear too many of us take them for granted, a most unfortunate assumption. We might consider the pattern of our life in America if we were deprived of the rights of free speech, petition, press, or religion; if our prisons were filled with political prisoners; if few would dare to rise in criticism of their government.

Despite all these impediments to freedom, its stirrings continue to rise in the countries of east and central Europe. The brutal extermination of dreams in Poland, Hungary, and Czechoslovakia will not long deter the people from further attempts to achieve their birthright.

While the Communists rail about freedom in the United Nations, they continue to flaunt its charter proclaiming the principle of "equal rights and self-determination of peoples." At home they continue their hypocritical charade of denying individual liberties and fundamental rights, all in the name of "freedom."

It is not possible to pay a tribute too high, or describe in words too glorious, however, the spirit of the enslaved millions. Their spirit has not been broken, nor will it ever be. The spark of resistance burns fiercely and is bound to break into full-fledged flame again, somewhere, sometime. When it does, I pray,

Mr. President, that it will find support among the free world and among men of principle everywhere.

As we pay tribute once again to these valiant people, hoping that our inadequate words somehow reach across the waters and demonstrate that they are not forgotten, we reassure them they are not forgotten, that they have not been written off as a lost cause, that another day will come in which a stand may be made, and freedom may be won.

When that day comes, Mr. President, we want the people of the captive nations to know we will stand proudly by their side.

TOPSY-TURVY OIL PICTURE

Mr. TOWER. Mr. President, the Sunday, July 19, 1970, Dallas Morning News contains an article entitled "Oil's 'Topsy-Turvy' Picture Poses Federal Action Need," written by Clyde La Motte. In my opinion, the article correctly stated the present world oil situation.

The article pointed out the convergence of several important international factors which should profoundly affect our thinking about our domestic oil policies.

These factors, which are enumerated in the article, have caused a serious national shortage of some types of fuel oil and have caused an increase in the price of virtually all forms of imported oil. I ask unanimous consent that this article be printed in the RECORD.

Thus, the Nation is now "paying the fiddler" for the past "cheap imports" dance. As I have warned on numerous occasions, the Nation must not rely too heavily on cheap imported petroleum. If we should become too reliant on cheap imported oil, I warned that not only would our domestic exploration industry suffer and perhaps even become unable to supply our domestic needs, but also that we could expect long-run shortages and increased prices of this imported crude oil.

I hope that the present shortage will not be alleviated merely by increasing oil imports. This should be only a temporary measure. Rather, we need to increase the economic incentives for our domestic exploration industry to increase its efforts to explore for and develop our abundant reserves.

This will best serve the interests of our national security and at the same time work to alleviate this and future shortages of oil and natural gas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL'S "TOPSY-TURVY" PICTURE POSES FEDERAL ACTION NEED

(By Clyde La Motte)

WASHINGTON.—A series of rapid-fire developments, including a sudden runaway in tanker rates, may have a profound impact on the oil import control program and on the federal government's handling of petroleum-related issues generally.

Changes, substantial changes, may be made in the very near future to adjust to a topsy-turvy situation.

Several factors have converged in recent months to create energy problems which are now demanding governmental attention.

One of these is the worsening situation in the Middle East which has resulted in a sharp cutback in Libyan oil production and the disruption in the flow of oil through the Tapline system to western markets.

This has caused the soaring tanker rates which have virtually nullified the value of import "tickets" held by U.S. inland refining firms.

That is, there is no advantage at this time in buying "cheap" crude oil in the Eastern Hemisphere because the cost of transporting it by tanker now results in an east coast delivery price of $4 a barrel or more.

Suddenly, domestic crude oil has become more attractive and companies are going all-out to obtain available supplies.

This competition for U.S. crude is likely to force the price of domestic oil up quickly.

Another emerging factor stems from the impact of new, tough antipollution regulations involving standards difficult for much of the domestic supply of coal and heavy fuel oils to meet.

This has sent Midwest utilities and industrial plants in particular scurrying about for the fuel they need to continue in operation.

The near-critical industrial fuel supply in the Midwest has been further tightened by action of natural gas pipelines in that area to reduce or cut off sales to those firms because of the tight gas supply.

The Oil Import Administration recently moved to ease the pinch by setting aside a "kitty" of 9.5 million barrels of residual fuel oil import "tickets" for use by Midwest utilities.

However, the utilities are having difficulty in locating overseas supplies of low-sulfur residual oil. Furthermore, with the high tanker rates, such imports would be highly costly.

One immediate possibility is the importation of crude oil from Canada to be used as a fuel by the utilities and the big industrial plants in Chicago, Detroit, Cleveland and elsewhere in the Midwest.

The crude oil could be brought in despite the ceiling applied earlier this year to imports of Canadian crude into Districts 1-4 because its use as fuel without any processing would enable it to be classified as a product rather than as crude oil. (There is no ceiling in overland imports of products.)

Indications are that this use of crude oil as fuel in the Midwest might result in an increase of shipments from Canada by as much as 200,000 barrels daily. It would be transported from Canada to U.S. Midwest markets through the existing Interprovincial-Lakehead Pipeline System, which currently has some spare capacity.

Ironically, the cost of the crude oil used as a fuel may run higher than the cost of crude for conventional use as feedstock at refineries. The reason is that residual fuel oil prices in the Midwest are already running around $4 a barrel and apparently are headed even higher.

The mounting pressure for more oil generally may well result in some temporary suspension of import controls applying to Canada and Venezuela.

Even this may not help a great deal. There is a question as to how much spare producing capacity Venezuela has available, and there is a similar question regarding transportation capacity to move any large increase of Canadian crude to U.S. markets.

Although the ceiling of shipments from Canada was specified earlier this year to be 395,000 barrels daily for the remainder of 1970, actual shipments have run nearer 600,000 barrels daily into Districts 1-4.

This has been made possible because the ceiling applies to the average for the entire allocation period. Thus, companies could be—and are—importing at a higher rate at present by "borrowing" from the level to be imported later in the year.

In any event, government officials in Washington appear to be convinced now that the country is facing an energy shortage and that vigorous steps will have to be taken to avoid critical disruptions.

Right now there is the prospect that some Midwest steel mills and other industrial plants may be forced to close down temporarily if they are unable to obtain needed fuel supplies. Such a development would put many workers out of a job and would have a big impact on the economy of the comunities involved.

Up until very recently, some government officials have held to the view that the domestic petroleum industry has been crying "wolf" concerning possible oil and gas shortages.

That no longer appears to be the case.

VOLUNTEER ARMED FORCES

Mr. HATFIELD. Mr. President, recently I introduced proposed legislation amending H.R. 17123. The amendment if adopted, would implement the recommendations of the Gates Commission effecting an all-volunteer military. At present, the amendment is cosponsored by Senators GOLDWATER, CRANSTON, SCOTT, MCGOVERN, PACKWOOD, YOUNG of Ohio, DOLE, STEVENS, HARTKE, SCHWEIKER, GOODELL, and MANSFIELD. When the amendment is called up I will offer various modifications to it which will not change the substance of the bill but will merely make it a title of the Military Procurement Authorization Act. So that there not be any confusion I would like to ask unanimous consent that the amendment (No. 765) as it will be modified be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

TITLE VI—VOLUNTEER ARMED FORCES

SEC. 601. The Congress hereby finds that—

(1) the Armed Forces of the United States can be materially improved and strengthened by increasing and improving the economic and educational benefits of the members thereof, by elevating the status of military personnel generally, and by developing and maintaining a system of military manpower procurement based on the free choice of the individual;

(2) involuntary service in the Armed Forces is a discriminatory tax-in-kind upon those persons required to serve because it falls upon a relatively small number of the total population;

(3) the military manpower requirements of the Nation can be adequately met through the effective administration of a voluntary system;

(4) a voluntary system should be instituted and given a fair test as soon as practicable while providing necessary safeguards in the event that unforeseen circumstances create a need for additional military manpower;

(5) the President, the Secretary of Defense, and the Secretaries of the military departments should exercise all authority available to them to promote the success of a voluntary system of meeting the military manpower needs of the Nation; and

(6) the Reserve forces should be maintained at adequate strength levels and should be better trained and equipped to meet emergency combat assignments.

CONTINUED REGISTRATION

SEC. 602. Notwithstanding the delimiting date specified in section 17(c) of the Military Selective Service Act of 1967, the President shall provide for the continued registration under such Act of all male persons in the United States between the ages of eighteen and twenty-six years in order that the involuntary induction of persons under such Act may be reinstituted without serious de-

lay in the event the President determines pursuant to section 603 of this title that such action is necessary and legislation authorizing conscription is enacted pursuant to such deterimnation.

ACTION FOR REINSTITUTING CONSCRIPTION

SEC. 603. If at any time after the termination of induction of persons into the Armed Forces under the Military Selective Service Act of 1967 the President determines that the military manpower needs of the Nation are not being adequately met through a voluntary system and that conscription is necessary for the national security, he shall promptly notify the Congress of such determination, and of the facts upon which such determination is based, and submit to the Congress such recommendations for legislation as he deems necessary and desirable to provide for the involuntary induction of persons into the Armed Forces.

CONGRESSIONAL DIRECTIVES RELATING TO THE IMPROVEMENT OF THE ARMED FORCES

SEC. 604. (a) The President, the Secretary of Defense, and the Secretaries of the military departments shall exercise the authority vested in them by law to provide for the military manpower needs of the Nation through a voluntary program of enlistments. In the exercise of such authority, the Secretaries of the military departments shall, under the direction and supervision of the Secretary of Defense, specifically provide for—

(1) the inducements necessary to take fullest advantage of career selection motivations in attracting persons to military careers;

(2) the improvement and expansion of the program for utilizing civilian personnel in lieu of military personnel for noncombatant service;

(3) the improvement and expansion of programs under which the education of specialists, such as doctors and dentists, is paid for by the Armed Forces in return for an obligated period of military service by the person receiving the educational assistance;

(4) the improvement and expansion of officer training programs, particularly programs to facilitate the qualifying and training of enlisted members who wish to become officers;

(5) the improvement and expansion of military recruiting programs;

(6) a more effective incentive program for recruiting personnel under which (A) successful recruiting personnel would be afforded the opportunity to earn extra pay or bonuses as well as accelerated promotions, and (B) quota systems would no longer be in effect; and

(7) the institution of any other appropriate actions designed to upgrade the conditions of military service and the States of military personnel generally.

(b) In implementing subsection (a)(2) of this section, relating to increased utilization of civilian personnel, the Secretary of Defense shall, as soon as practicable, (1) conduct a position-by-position analysis of all military jobs within the Department of Defense with a view to determining which jobs should be performed by military personnel and which should be performed by civilian personnel, and (2) develop accurate and current data for determining whether it is less expensive to have any such job performed by military or civilian personnel. The position-by-position analysis and the development of data required under this subsection shall be completed not later than eighteen months after the date of enactment of this title.

(c) Not later than eighteen months after the date of enactment of this Act, the Secretary of Defense shall submit to the Congress a detailed report regarding the operation of the voluntary system of meeting the military manpower needs of the Nation and for the improvement of the Armed Forces, and shall include in such report such recommendations for legislation to improve such system as he deems appropriate.

INCREASE IN PAY RATES FOR MEMBERS OF THE UNIFORMED SERVICES

SEC. 605. The Secretary of Defense shall formulate as soon as practicable after the date of enactment of this title a revised basic pay schedule for members of the uniformed services incorporating the increases in the basic pay of enlisted personnel and officers listed in the table below and such adjustments in the basic pay of other personnel as the Secretary deems necessary and appropriate to insure equitable pay differences between different grades.

	Enlisted personnel	Officer personnel
Years of service:		
1	$1,700	$1,504
2	1,544	2,031
3	804	1,142
4	727	----------
5	347	----------
6	344	----------
7	233	----------
8	344	----------
9 to 10	258	----------

SPECIAL PAY FOR PHYSICIANS, DENTISTS, AND VETERINARIANS MADE PERMANENT; INCREASE IN SPECIAL PAY FOR PHYSICIANS AND DENTISTS

SEC. 606. (a) Sections 302 and 302 of title 32, United States Code, are amended by striking out "and before July 1, 1971." each time it appears in such sections.

(b) Section 302(1) of such title is amended by deleting the comma after "1947" the second time such date appears therein.

(c) Section 302(b) of such title is amended to read as follows:

"(b) The amount of special pay to which an officer covered by subsection (a) of this section is entitled is—

"(1) $150 a month for each month of active duty if he has not completed two years of active duty in a category named in that subsection;

"(2) $200 a month for each month of active duty if he has completed two years of active duty in a category named in that subsection;

"(3) $450 a month for each month of active duty if he has completed three years of active duty in a category named in that subsection;

"(4) $600 a month for each month of active duty if he has completed four years of active duty in a category named in that subsection;

"(5) $750 a month for each month of active duty if he has completed five years of active duty in a category named in that subsection;

"(6) $900 a month for each month of active duty if he has completed six years of active duty in a category named in that subsection; or

"(7) $1,050 a month for each month of active duty if he has completed seven years of active duty in a category named in that subsection."

MORE EFFECTIVE USE OF PROFICIENCY PAY FOR ENLISTED MEMBERS

SEC. 607. (a) The Secretary of Defense shall, at the earliest practicable date, promulgate regulations under which the Armed Forces will increase the utilization of proficiency pay authorized by section 307 of title 37, United States Code, for the purpose of attracting and retaining enlisted members who are specially proficient in military skills.

(b) Section 307 of title 37, United States Code, is amended by redesignating subsection (d) as subsection (e) and inserting after subsection (c) a new subsection (d) as follows:

"(d) Proficiency pay under subsection (a)(1) or (a)(2) of this section shall be made available to enlisted members with critical skills after such members have satisfactorily completed their training in such skill. Proficiency pay under this section shall be paid to enlisted members who qualify therefor without regard to whether they are career members or not."

HOSTILE FIRE PAY INCREASE

SEC. 608. Section 310(a) of title 10, United States Code, is amended by striking out "$65" and inserting in lieu thereof "$200."

COMBAT ZONE PAY

SEC. 609. (a) Chapter 5 of title 37, United States Code, is amended by adding after section 310 a new section as follows:

"§ 310a. Special pay: duty in a combat zone

"(a) Except in time of war declared by Congress, and under regulations prescribed by the Secretary of Defense, a member of the uniformed services may be paid at the rate of $65 a month for any month in which he was entitled to basic pay and was serving in a combat zone.

"(b) A member may not be paid special pay under this section for any month for which he receives special pay under section 310 of this title, but may be paid special pay under this section in addition to any other pay and allowances to which he may be entitled.

"(c) The provisions of section 310(c) of this title relating to determination of fact under that section shall apply in the case of the determination of fact under this section.

"(d) The Secretary of Defense shall report to the Congress by March 1 of each year on the administration of this section during the preceding calendar year.

"(e) As used in this section the term 'combat zone' means any area which the President by Executive order designates as an area in which Armed Forces of the United States are engaged in combat."

(b) The table of sections at the beginning of chapter 5 of such title is amended by inserting immediately below

"310. Special pay: duty subject to hostile fire."

the following:

"310a. Special pay: duty in a combat zone.".

EXTENSION OF TIME WITHIN WHICH REENLISTMENT BONUSES MAY BE PAID

SEC. 610. Section 308(a) of title 37, United States Code, is amended by striking out "within three months" and inserting in lieu thereof "within six months".

TRAVEL AND TRANSPORTATION ALLOWANCES AND DISLOCATION ALLOWANCES FOR ENLISTED MEMBERS IN LOWER GRADES

SEC. 611. (a) Section 406(a) of title 37, United States Code, is amended by inserting ", including a member in pay grade E–4 (four years or less service), E–3, E–2, or E–1," immediately after "A member of a uniformed service".

(b) Section 407(a) of such title is amended by striking out "uniformed service—" and inserting in lieu thereof "uniformed service, including a member in pay grade E–4 (four years or less service), E–3, E–2, or E–1—".

ENLISTMENTS AND DISCHARGES

SEC. 612. (a) Section 505(c) of title 10, United States Code, is amended to read as follows:

"(c) The Secretary concerned may accept original enlistments in the Regular Army, Regular Air Force, Regular Marine Corps, or Regular Coast Guard, as the case may be, (1) of male persons for the duration of their minority or for a period of two years, and (2) of female persons for a period of two years. The Secretary concerned may accept an original enlistment in the case of any person for a specified period longer than two years, but not more than four years, where the cost of special education or training to be af-

forded such person would make a shorter enlistment period impracticable."

(b) Section 505(e) of such title is amended to read as follows:

"(e) The Secretary concerned may accept reenlistments in the Regular Army, Regular Navy, Regular Air Force, Regular Marine Corps, or Regular Coast Guard, as the case may be, for unspecified periods and for periods commensurate with the cost of any special education or training to be received by any member, as may be prescribed in regulations of the Secretary concerned. In no case shall the Secretary concerned specify a period of more than four years of obligated service because of special education or training to be received by any member."

(c) Section 509(a) of such title is amended by striking out "Under" and inserting in lieu thereof "Subject to the provisions of section 505(e) and".

(d) The Secretary of Defense shall promptly conduct a comprehensive study to determine the term of service which should be required of enlisted members who receive various types of special education or training programs. The Secretary concerned shall, on the basis of the conclusions reached in such study, prescribe by regulation the term of service required to be performed by enlisted members who receive special education or training.

(e) Section 1169 of such title is amended to read as follows:

"§ 1169. Regular enlisted members: limitations on discharged

"Any enlisted member who has completed his original period of enlistment and who has been reenlisted for an unspecified period shall be discharged upon written request, except that—

"(1) the Secretary concerned may refuse to grant a discharge during any period of war or national emergency;

"(2) a member shall be required to fulfill a term of service commensurate with the cost of any special education or training received by him, as prescribed in regulations of the Secretary concerned;

"(3) the Secretary concerned may refuse to grant a discharge to any enlisted member who has been assigned to sea duty or duty outside the United States; or

"(4) as otherwise provided by law."

RESERVE OFFICER TRAINING CORPS SCHOLARSHIP PROGRAM INCREASE

SEC. 613. Section 2107(h) of title 10, United States Code, is amended to read as follows:

"(h) Not more than the following number of cadets and midshipmen may be in the financial assistance programs under this section at any one time:

"Army program: 10,000

"Navy program: 10,000

"Air Force program: 10,000."

GREATER UTILIZATION OF CIVILIAN MEDICAL FACILITIES AND PERSONNEL

SEC. 614. (a) The Secretary of Defense shall, as soon as practicable after the date of enactment of this Act, formulate plans for utilization, to the maximum extent practicable, of civilian medical facilities and personnel to serve the medical needs of military personnel and their dependents. In formulating such plans the Secretary shall give consideration to more extensive use of a medical insurance program for retired personnel and their dependents and for the dependents of active duty personnel.

(b) The Secretary of Defense shall submit to the Congress the plans formulated pursuant to this section not more than nine months after the date of enactment of this title together with such recommendations for legislation as may be necessary to effectuate such plans.

FORMULATION OF NEW SALARY STRUCTURE FOR THE UNIFORMED SERVICES

SEC. 615. (a) The Secretary of Defense shall formulate as soon as practicable after the date of enactment of this title a new pay structure for the uniformed services. Such pay structure shall—

(1) provide salary schedules of pay which combine basic pay rates and present allowances for quarters and subsistence;

(2) provide for cash contributions to a retirement system similar to the civil service retirement system provided for Federal civilian employees; and

(3) take into account the amount lost as the result of the termination of separate allowances for quarters and subsistence and the amount which will be contributed to a retirement system, including the loss of any tax advantage realized under current law.

The Secretary is authorized to include such other features in any new pay structure as he determines necessary or appropriate to make such pay structure fair and equitable and to attract qualified personnel to the uniformed services.

(b) The Secretary of Defense shall submit to the Congress the new pay structure formulated by him pursuant to this section not later than nine months after the date of enactment of this title.

EFFECTIVE DATE

SEC. 616. The Act shall become effective upon the date of enactment, except that sections 605, 606, 607, 608, 609 and 610 shall become effective on the first day of the first calendar month in which this title is enacted.

EXPLANATION OF WITHDRAWAL OF NOMINATION OF DR. J. RICHARD LUCAS TO BE DIRECTOR OF BUREAU OF MINES

Mr. JACKSON. Mr. President, on July 17 the President withdrew the nomination of Dr. J. Richard Lucas, whose name he had previously submitted to the Senate for its advice and consent to be Director of the Bureau of Mines in the Department of the Interior.

The nomination of Dr. Lucas was greeted with a great deal of interest by many people both in and out of Congress, some of whom opposed him and most of whom supported his nomination.

However, in order to clarify the record concerning this nomination, I ask unanimous consent to place in the RECORD at this point in my remarks a letter of July 8 from Dr. Lucas advising me that he had requested that his name be withdrawn since he did not feel he could meet the committee's requirements relating to the disposal of certain securities he held, my reply to him, and a press release issued following an executive committee meeting on this matter.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

VIRGINIA POLYTECHNIC INSTITUTE,
Blacksburg, Va., July 8, 1970.

Senator HENRY M. JACKSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JACKSON: Regarding my nomination to be Director of the Bureau of Mines pending before the Senator Interior and Insular Affairs Committee, I have now been informed that it is the view of the committee that I will be required to dispose of my foreign, as well as domestic, mining securities so as to avoid any possible conflict of interest.

Initially I was advised by the Solicitor of the Interior Department, both orally and later by letter dated June 22, that I would be required to dispose of my domestic securities, but that in his view he saw no conflict of interest in my retaining my foreign securities during the period I would be serving as Director of the Bureau of Mines. He pointed out, of course, that the final decision in this matter would rest with the Senate Interior and Insular Affairs Committee.

After careful consideration I wish to state that the proposed sale of my foreign securities would represent a substantial financial hardship to myself and to my family.

Under these circumstances and in view of the Committee's decision, I have regretfully requested Mr. Harry Flemming of the White House to advise the President that my nomination be withdrawn.

During the public hearing on my nomination before the Senate Interior and Insular Affairs Committee on May 25, certain charges were made by a newspaper columnist concerning plagiarism in my doctoral thesis. In your position as Chairman of the Committee, you announced that the committee would investigate charges, which I stated at the time were completely unfounded and with not the slightest basis in fact whatever. Because of the important bearing such unfounded charges might have on my future professional and academic career, I would appreciate it very much if you as Committee Chairman, would state for the public record the results of the investigation conducted by your committee into these charges.

Your consideration of the request will be appreciated.

Sincerely yours,

J. RICHARD LUCAS.

JULY 13, 1970.

Dr. J. RICHARD LUCAS,
Department of Mining Engineering, Virginia Polytechnic Institute, Blacksburg, Va.

DEAR DR. LUCAS: Thank you for your letter of July 8 advising this Committee that you have requested the President to withdraw your nomination to be Director of the Bureau of Mines.

The Committee understands the reasons for your decision and we regret the inconvenience that this matter has caused you. We certainly understand the financial hardship the disposal of your securities would represent.

I am enclosing a copy of a press release issued today by the Committee following our meeting this afternoon.

With best wishes.

Sincerely yours,

HENRY M. JACKSON,
Chairman.

PRESS RELEASE OF SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

At an executive meeting of the Senate Committee on Interior and Insular Affairs today, Senator Henry M. Jackson, Chairman, and Senator Gordon Allott, Ranking Minority Member, announced that a letter had been received from Dr. J. Richard Lucas advising Chairman Jackson that he had requested the President to withdraw his name as nominee for the post of Director of the Bureau of Mines.

As is the custom of the Committee when considering nominations, the financial holdings of a nominee are reviewed. Despite the fact that a majority of his securities were foreign, the Committee felt that it would be wise for Dr. Lucas to divest himself of all of

his present stock holdings to avoid even the appearance of a potential conflict-of-interest. Dr. Lucas stated that he was not in a position to make such a divestiture, and the following is quoted from his letter:

"After careful consideration I wish to state that the proposed sale of my foreign securities would represent a substantial financial hardship to myself and to my family."

Senator Jackson said, "The Committee is well aware of the fact that sometimes its requirements for divestiture and adjustment of investments place a heavy financial burden upon nominees; however, we do feel these financial requirements are good public policy and in the long-run best interests of the nominee and the Nation."

At the public hearing on his nomination, the Committee had also taken note of certain newspaper reports referring to allegations of plagiarism in connection with his doctoral dissertation. The Chairman and the Ranking Republican member of the Senate Interior Committee emphasized that not only did their review of the F.B.I. report reveal there was no substance to the allegations, but also, the independent investigation of the Committee yielded further confirmation of the fact that these allegations are totally without foundation, having no basis in fact. The Committee, by unanimous action, felt that it was important that it be made abundantly clear to the public that all of its investigations have revealed nothing that reflects adversely upon the character, integrity, or professional qualifications of Dr. Lucas.

CRITICISM OF THE PRESIDENT

Mr. GOLDWATER. Mr. President, on July 14, I delivered a speech on the Senate floor relative to the problems created by the tremendous size of the Federal bureaucracy. At that time I stated that I did not believe a person who is making government his career and is blanketed under civil service has an automatic right to permanent employment. I stated further that I agreee that every individual, Federal employee or not, has the right to reach a decision on policy matters and give voice to that opinion as an individual and a U.S. citizen. As I put it in my July 14 speech:

Understand, I have no objections to any government worker expressing in the proper forum his feeling or belief about any policy. I object most strenously, however, to the practice of a government official using his position as a government employee to oppose or undermine or refuse to work for the policy of that government.

It will be recalled, Mr. President, that I raised a particular question about a mass meeting held by employees of the Department of Health, Education, and Welfare to protest the administration's policy in Cambodia.

Up until now my opposition has been to the practice of Federal employees openly criticizing the polices for which they work. Now, Mr. President, my criticism is directed also at the propriety of Federal employees making personal attacks upon the President for whom they work.

In this instance we again hear from the Department of Health, Education, and Welfare. According to last night's Washington Star, the Vietnam Moratorium Committee at the National Institute of Health in its latest publication ridicules Mr. Nixon's performance as President in a mock appraisal such as that to which HEW workers are subjected.

President Nixon's performance as Chief Executive was judged as follows:

Quality of work: His work frequently contains an unacceptable percentage of error or shows poor judgment.

Interest in work: Appears bored with his work.

Attendance and punctuality: Takes longer or more frequent breaks than most; tends to take advantage of leave privileges.

Subordination of personal interests: Puts his own interests first, frequently to the detriment of his work.

Flexibility: Very rigid and opinionated; once he gets an idea, it's almost impossible to change him.

Resourcefulness: Has considerable difficulty in dealing with anything out of the ordinary routine.

Judgment: Very erratic in his ability to reach logical conclusions.

Knowledge required by the job: Handicapped quite often in his work because of his lack of knowledge, understanding or information.

Degree of supervision required: Requires constant supervision or direction.

Initiative: Seems to aspire to nothing higher; frequently shirks responsibility.

Productivity: Tends to be a bottleneck in getting the work out.

Persistence: Frequently fails to finish work he has started.

Attempts to improve: Content to drift; generally unresponsive to efforts to help him develop.

The last part of the "performance appraisal" contains the "reviewing officer's" comments, including:

"He has had no new idea in 22 years . . . Talks in cliches . . . Progress on many national problems (e.g., hunger, poverty, racism, pollution, health, etc.) is being held up . . . Requires, but, unfortunately, does not get good supervision or direction . . .

"He has always put Richard Nixon first. His Southern Strategy means that he puts his re-election ahead of racial justice . . . His Cambodia speech was very illogical, clutching at every rationale and excuse in sight to justify his intervention . . . In particular, his having Spiro Agnew smear opponents shows that he has learned nothing in the past 22 years."

Mr. President, I presume this is all meant to be very funny. Certainly nobody could expect any group with such poor taste to be a competent judge of any kind of worker performance, let alone that of the man who holds the toughest, most important job in the entire world. This is a man who passed muster with the American voters and does not hold his job as the result of an appointment or a civil service classification.

But the ridiculing of the President certainly should raise grave questions as to how far Government employees can go in questioning the official policies of the Government and whether, as Government workers, they have the right to criticize the President personally. I am not unmindful of the fact that the whole issue involves the question of freedom of speech and expression. And there certainly is no suggestion here that these precious freedoms be obstructed for any reason whatsoever. The question here is whether this freedom of expression extends to the length of Federal employees using the prestige of their employment to gain greater circulation for their individual views.

Not being an attorney, I do not know how much leeway civil service status gives to Government employees who make it a practice to criticize in public the President and the administration for which they work.

But I can assure you that it is long past time for the Nixon administration to look into this situation. I cannot understand why the administration has not moved to censor or discipline these dissatisfied workers. How long is the White House likely to put up with this kind of insulting insubordination? I am convinced that there is some method through which these workers may be made to realize that they owe a responsibility to the people of the United States who chose the man they so freely criticized. It would be a fine thing if means could be found to rid the government of these troublemakers permanently. They have asked to be fired by their actions, and if they were working for any enterprise other than the government, they would already be out on their ears.

CHURCHES AND THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, at the hearings on the Genocide convention recently completed by a Foreign Relations Subcommittee, some of the most compelling testimony in support of the convention came from religious organizations. These are the same organizaitons that provided strong testimony in behalf of the convention 20 years ago, when the Foreign Relations Committee first opened its inquiry on this subject.

Unfortunately, Mr. President, their testimony was not heeded then. I hope it will be heeded now.

I ask unanimous consent that the testimony given by the United Methodist Church at this spring's hearings be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE UNITED METHODIST CHURCH

The churches of the United States were deeply shocked and aroused by the terrible toll in suffering and death inflicited by the Nazis upon the Jewish people of Europe and upon other racial, ethnic, national and religious groups just prior to and during World War II. These actions were highly offensive to the religious conviction that, as creatures of God, all persons are possessed of essential human rights which are inherently theirs and which no government or group has the right to violate.

Therefore, The United Methodist Church and its predecessors (The Methodist Church and The Evangelical United Brethren Church) have consistently supported the protection of human rights internationally as well as nationally. The following statements are the position of The United Methodist Church as set forth by the General Conference, the highest authoritative organ of the denomination. The General Conference of The United Methodist Church is a representative body composed of some 1,000 delegates equally divided between laymen and clergy.

"We commend the United Nations for its success in reconciling differences, promoting human rights, lifting the levels of health, education, and welfare, and advancing self-government among the nations . . .

"We urge the early ratification by all nations of the fourteen conventions on human rights developed and approved by the United Nations or its specialized agencies. . . ."

Adopted by the General Conference of The United Methodist Church, Dallas, Texas, May 9, 1968.

An earlier statement of the General Conference of one of the predecessor denominations, The Methodist Church, is even more specific:

"We urge the early ratification by all nations of the conventions on human rights developed and approved by the United Nations, including: The Genocide Convention, The Convention on the Abolition of Slavery, The Convention on the Political Rights of Women, The Convention of the Stateless Person, The Convention on the Abolition of Forced Labor."

Adopted by the General Conference of The Methodist Church, Pittsburgh, Pennsylvania, 1964.

In the light of the preceding statements, we join in urging the Senate Foreign Relations Committee and the Senate as a whole to consent to the accession of the United States of America to the Convention on the Prevention and Punishment of the Crime of Genocide.

BISHOP CHARLES F. GOLDEN,
President.
A. DUDLEY WARD,
General Secretary.
Board of Christian Social Concerns of The United Methodist Church.
BISHOP LLOYD C. WICKE,
President.
TRACEY K. JONES,
General Secretary.
The Board of Missions of The United Methodist Church.

TIME OF CRISIS AT THE SMITHSONIAN

Mr. GOLDWATER. Mr. President, yesterday I was privileged to appear before the House Subcommittee on Library and Memorials, presided over by Mr. FRANK THOMPSON. Amazing as it sounds, his subcommittee is conducting the first legislative oversight hearings which Congress has held on the Smithsonian Institution in over a century.

To my mind, this series of hearings presents a fine opportunity for Congress and the American public to learn more about the Smithsonian and thereby to be in a better position to judge whether it is living up to its obligations to the American taxpayer.

Not many people realize how large the Smithsonian has grown. Few are aware that Congress now appropriates over $40 million each year to finance the Institution's operations. Even fewer people know that the Smithsonian has more than 3,400 employees on its staff, most of whom are paid from Federal funds.

It is the strength of the House hearings that all these facts can be brought into the open. The committee is allowing the inquiry to be made across the board, into every aspect of the Smithsonian's activities, both Federal and private; and I want to congratulate the committee members for the thorough and honorable way the meetings are being conducted.

Yesterday I sought to aid the committee by raising several questions concerning the Smithsonian. In general, my questions were: What is the Smithsonian doing with its approximately 3,400 employees? Where have the increases in positions and appropriations gone? And, have any units at the Institution been overlooked during the term of the current Smithsonian management—a period when the Smithsonian's Federal budget has doubled and the number of permanent employees authorized by Congress has risen by more than 700 positions?

Mr. President, my study of these questions indicates that the Smithsonian has slipped off course a few degrees in its list of priorities. The evidence squarely points to the concluson that both the National Air and Space Museum and the National Museum of Natural History are seriously undermanned and underfunded.

It was my purpose yesterday to call this situation to the attention of the committee in the belief that public exposure of these problems will lead to some constructive steps being taken to solve them.

In order that the large audience that reads the RECORD may be familiar with this subject, I ask unanimous consent that my testimony and related documents be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

TIME OF CRISIS FOR NATIONAL AIR AND SPACE MUSEUM

Mr. Chairman and Members of the Subcommittee:

Please allow me to say at the outset that I think the Committee is doing a significant public service by holding the present series of hearings. By allowing the true character of the Smithsonian to be discussed and examined openly at this forum, in a reasonable and decent way, you and your colleagues are contributing to the advancement of public knowledge about the Smithsonian, as well as providing the opportunity to identify areas where the Institution might better fulfill its national responsibilities.

For indeed it has a heavy debt to the American taxpayer. The direct Federal monies which Congress will appropriate for the Smithsonian's operations, for the 1971 fiscal year, is over $40 million. This includes an increase of $7.6 million for salaries and expenses alone—a rise of 25% in one year.

Since 1964 when the current Smithsonian Secretary took office, the total Federal budget for the Institution has doubled. The number of permanent employees authorized by Congress has jumped from 1348 to 2077—a growth of more than 700 positions in 6 years. What is more, the number of part-time employees has gone up from 18 to 240. On top of this, the Smithsonian employs over 1100 people who are paid from private funds.

The question is, what is the Smithsonian doing with its approximately 3400 employees? Where have the increases in positions and appropriations gone? Have any units of the Institution been overlooked during this period of amazing growth?

Mr. Chairman, the facts must be faced. The Smithsonian has seriously neglected two of its major components. Both the National Air and Space Museum and the National Museum of Natural History are the victims of a shocking lack of attention by the Smithsonian's Top Brass.

This is not a conclusion that I could have reached as late as a few weeks ago. But recently my aides held a meeting with Doctor Ripley's top assistants. The discussions at this conference revealed that the Smithsonian management has little comprehension of the pressing needs of the nation's Flight Museum or the Natural History Museum.

They simply do not understand that each of these museums is going through a time of crisis. Neither the funding nor the personnel of either museum is anywhere near where it should be for these important branches to live up to the role which the American public and their respective professional fields demand of them. In fact, as far as personnel is concerned, these museums are going downhill.

Mr. Chairman, these charges can be documented. First, I will discuss the National Air and Space Museum.

The cogent facts are as follows:

1. The National Air and Space Museum receives an extremely meager share of the Smithsonian's Federal Budget—about 1.7%.

2. The professional and support departments of the Flight Museum are seriously undermanned. It has only 31 people on board.

3. The Museum attracts at least one-third of the visitors to the Smithsonian Park. In fact, an in-house survey by the Smithsonian reveals that nine out of every ten visitors interviewed at the Mall had been to see the Air and Space Museum—a shocking contrast with the miniscule share of funds and employees which the Museum receives.

4. The Museum has no Director. It has had no Director for nearly a year, even though it has been 24 months since the last Director gave notice of his planned retirement.

5. For many years, the Air and Space Museum was not considered to be one of the Institution's science and technology components. Rather it was put into the arts and humanities wing of the Institution.

6. It can be proven that in 1969 the Smithsonian management threatened the Flight Museum and its exhibits with expulsion from the Mall. The Assistant Secretary for History and Art proposed to "get rid of the tin shed" and "get the missiles out of our view."

7. Most Flight Museum exhibits are badly housed, and deteriorating rapidly. The building labeled "National Air and Space Museum" is actually a World War I "temporary" hanger erected in 1917. The other building used for Air and Space exhibits is 90 years old.

8. The program for construction of a permanent Air and Space building is at dead center. In the words of Paul Johnston, the last Director of the museum, the project "may never get off the ground."

Mr. Chairman, I would like to review these facts and to document each of them.

There is no question that the Air and Space Museum is given less than a 2% slice of the Smithsonian's Federal budget. According to end-of-the-year figures, the Museum's budget was cut by the Smithsonian to under $500,000 for the 1970 fiscal year. This is all that the Museum received out of $28.1 million which Congress appropriated for Smithsonian salaries and expenses.

In terms of the Smithsonian's employment picture, the Flight Museum's share is even smaller.

At the April hearings, Under-Secretary Bradley stated that the actual number of permanent employees on the Federal payroll was 1889. At this time the number of employees at the National Air and Space Museum was 30, counting curators, administrators, secretaries, and the support team at Silver Hill. This amounts to 1.6% of the overall Smithsonian staff.

Mr. Chairman, the Smithsonian claims that the Flight Museum had the equivalent of 39 positions filled in 1970 because the Office of Exhibits performed work on some air and space projects. But this completely overlooks the fact that the Office of Exhibits has its own appropriations. This work has been justified before Congress as a separate item in the Smithsonian's budget.

When Congress appropriated money for 41 positions at the Flight Museum, it did not think it was paying for the salaries of peo-

ple in the Office of Exhibits. To turn around now and claim that the Museum had the equivalent of 39 employees muddies the waters. The next thing I know the Institution will be charging janitorial help and guard services against the Museum as well.

Mr. Chairman, the employment picture looks incredible when it is viewed in comparison with the responsibilities of the Museum.

The Historical Research Center of the Museum, which supports the curatorial and exhibits staff by documenting the authenticity of artifact acquisitions, by answering 6000 public inquiries annually, and by running a reference library, has 3 employees. In 1967 it had 5.

The Preservation and Restoration Division at Silver Hill, which handles the assemblage and retrieval of aircraft and astronautical specimens, the maintenance of Museum collections, and the inventory and cataloging of these collections, had 15 employees several years ago. It was down to 14 early this year.

The Curators' professional staff has decreased 50% in the Aero Section—from 4 employees to 2.

And, on it goes. While the Museum could easily justify the need for 50 or more positions at present, the actual number of hands on board is less now than it was in 1966.

If the Smithsonian management intends more than lip service when it calls for the Flight Museum to be the "nation's center for exhibition, education, and research in the history and principles of air and space flight" and the home of the "world's greatest collection of objects related to flight," then I believe the management should release to the Museum the positions that Congress has authorized.

Turning to the visitor statistics, the Smithsonian Information Office reports that 12.4 million visitors came to see the Smithsonian Park in calendar year 1969 and that at least 4.1 million of these persons went through Air and Space Museum exhibits.

Unfortunately, this word does not seem to have gotten through to the Secretariat. At page 894 of the recent House appropriation hearings, Doctor Ripley spoke of only 2 million visitors a year seeing "our air and space displays."

But in truth, there were more than 4 million visitors to these displays in 1969. Approximately 2.3 million persons came to see the exhibits at the Arts and Industries building, and another 1.8 million visitors went through the Air and Space building.

The most striking evidence of the popularity of the Air and Space Museum is found in a "Visitor Survey" conducted by the Smithsonian itself. I can disclose today that the Smithsonian collected over 700 questionnaires from visitors to the Museum of Natural History and the Museum of History and Technology during the winter of 1968. No interviews were taken at the Air and Space Museum.

And yet this survey turned up the following finding:

"In responding to the question on points of interest in Washington, 87.2% had been to the Air and Space Building as compared to 54.4% who had visited the Museum of History and Technology, and 47.1% who had visited the Museum of Natural History."

Here we have a study that was openly biased in favor of visitors to the two museums where persons were being interviewed. Even so, almost 9 out of every 10 persons questioned said they had been to the Air and Space displays. In other words, the Flight Museum had drawn more visitors than either of the two museums where the questions were asked.

All in all, I think the Air and Space Museum has played a remarkable role in drawing visitors to the Smithsonian Park. It does not have a puppet show or other unrelated attraction to bring in an audience, but it is demonstrating a unique capacity to hold public interest on its own merits. The fact that Britain's royal visitors, Prince Charles and Princess Anne, chose to tour the Air and Space collections during their first visit to the Smithsonian is further proof of the remarkable popularity of these exhibits.

Mr. Chairman, one fact that disturbs me greatly is that the Flight Museum does not have a full-time Director. Nor has the Smithsonian ever said what requirements have been set for the position.

The last Director, S. Paul Johnston, was a distinguished fore-sighted individual. A graduate of MIT, he had held a number of prominent positions both in industry and Government as an aeronautical engineer and advisor before joining the Flight Museum team.

Anticipating his retirement, he furnished the Secretary with notice of his planned retirement thirteen months in advance of his target date. By letter dated July 30, 1968, Mr. Johnston informed Doctor Ripley of his decision to retire "as of September 1, 1969."

Uppermost in Mr. Johnston's mind was his wish to pave the way for a successful transition for his successor. His letter specifically asked "that a successor be brought aboard as my Deputy not later than May 1, 1969, to allow for at least four months of overlap."

And yet, as of today the Museum is still without a Director. This fact alone can be interpreted as a lack of interest by the Smithsonian in its Air and Space Museum.

Another fact that offers a clue as to the stature of the Flight Museum is that until a few months ago it reported to the Assistant Secretary for History and Art.

How in the world flight ever got mixed up with the "arts" at the Institution is beyond me. Aeronautics and astronautics derive from, and incorporate, several of the sciences including: mathematics, physics, fuel chemistry, metallurgy, physiology, psychology, biology, astronomy, astrophysics, geology, and geophysics.

The Air and Space Museum should have been put in the Smithsonian's science and technology wing from the start. It is to the credit of the present acting Director that he at last succeeded in having the Museum transferred to the Science branch of the Institution.

There is one more incident that causes me grave concern about the attitudes of the Smithsonian toward the Air Space Museum. The management has denied this to my staff, but I can document the fact that the Assistant Secretary for History and Art wanted to expel the Flight Museum and its exhibits from the Mall. This proposal was made in a memorandum sent by the Assistant Secretary to Doctor Ripley on March 20, 1969.

Please remember that this is the officer who then held the power of supervision over the Flight Museum. His plan expressly called for "using the middle of the Pension Office Building as the next temporary location for Air and Space exhibits, in place of the tin shed, the driveway, and the A & I building."

The idea was to send the Museum to the dilapidated Pension Building where it would be separated from the Mall. Once away, it may never have come back.

Another indication of the rank of the Air and Space Museum within the Smithsonian is the condition of its public exhibits. These displays have not been brought up to modern Smithsonian standards as applied to its other components.

On January 3, 1968, an official report was submitted to Doctor Ripley, which reads: "All NASM exhibits are badly housed, and deteriorating rapidly under heavy visitor wear and tear."

On July 30, 1968, Doctor Ripley was given the following Museum report:

"Most present exhibit areas are a hodgepodge of hardware with little rational relationship, are largely out-of-date and are so shop-worn that they constitute a public embarrassment to the Smithsonian."

Things finally got so bad that the Smithsonian broke the problem at the 1970 fiscal year hearings. The justification sheets of the Institution, dated March 14, 1969, warn that: "The Smithsonian's air and space exhibits have not received a major refurbishing since 1958. They are outdated and shabby and a source of disappointment to many of a million visitors interested in air and space exploration."

Mr. Chairman, there are some positive steps now being taken by the Smithsonian to revitalize these exhibits and I will be watching closely to see that they continue.

The next matter is the most difficult problem confronting the Museum. It is not one that can be solved overnight by a change in priorities, as I believe the others can be.

This is the problem of getting funds for the construction of a permanent building to house the Air and Space Museum.

The problem boils down to money. If Congreses had allowed the project to get started in 1966, when it authorized construction of the building, the total cost would have been in the neighborhood of $40 million. This compares favorably with the $34 million which Congress allowed ten years earlier for construction of the Museum of History and Technology.

But Congress did not permit the building to go forward. The reason for deferring the project is found on page 4 of the report by the Senate Committee on Rules and Administration. The language reads as follows: "The Committee expressly recommends . . . that appropriations should not be requested pursuant to H.R. 6125 unless and until there is a substantial reduction in our military expenditures in Vietnam."

That is it. That is the only legislative holdup on the project. It was written in June of 1966, before the first manned lunar landing.

Now that this landmark in the history of mankind has occurred and public excitement about space achievements has catapulted, I believe that there are new and persuasive reasons for moving ahead with the new facility.

In particular, I believe the time is at hand when the American people want to have a decent home for the national Museum where their country's exciting story in air and space can be told.

America's accomplishments in the field of aerospace are monumental. The true value of the inspirational feeling which the story of these achievements can give is beyond any dollar estimate.

Who can place a value on the meaning of the Wright Brothers flight at Kitty Hawk? Who can say the true worth of preserving for future Americans the opportunity to behold the actual aircraft in which Lindberg crossed the Atlantic or the Apollo 11 Spacecraft in which man reached the Moon?

Is the display of our accomplishments and future in air and space worth $40 million? Or $60 million in inflation-swollen dollars?

Mr. Chairman, I believe it is. I believe the American people will agree with me. And, I am hopeful that friends of the Flight Museum can get this story across to Congress.

After all, there is no connection between events in Vietnam and the construction of the Hirshhorn Museum. There was no tie to Vietnam holding up the $2.6 million which Congress appropriated to refurbish the Smithsonian's administrative quarters to look as they did in 1855.

No one proposed a relationship between Vietnam and the $2.4 million which Congress is appropriating for renovation of the Rendick Gallery. No one is suggesting that we

wait until the Vietnam conflict settles down before Congress authorizes $6 million that the Smithsonian management is seeking to build two Bicentennial Pavilions.

In short, it is my contention that the Flight Museum should not be singled out from all other Smithsonian projects and told that its new building must be deferred until Vietnam expenditures ease off.

Furthermore, it is my belief that since Congress imposed this restriction, it is Congress who should bear the moral obligation to provide the additional funds that are required because of the delay. This is important because I believe strongly that the new facility should be constructed exactly as it was planned.

It is a beautiful design. It has been approved by the necessary planning and art commissions. And, architects generally believe it would be a valuable asset to the Nation's Capitol.

But if the building were to be redesigned, all the questions of its size, its relationship to other structures on the Mall, and, perhaps even its very location at the Smithsonian Park, would be reopened. The critics of technological museums would be given a fresh opportunity to tie the project down in a web of new hearings and proceedings. This is why I disagree with the Smithsonian management and the Regents on this important matter.

What I am proposing will not be easy. It will require the participation of the aerospace industry. It will require encouraging Congress to recognize that $60 million is not too large an investment for our Government to make in preserving the heritage of our people in the mainstream of aviation, rocketry, and space history.

But I am convinced that this is a cause that is right. It is a cause that deserves a fight to be made for it. It is a cause that I believe will prevail once Congress is shown how reasonable and worthwhile it is.

Above all else, it is a cause that will require the most energetic, whole-hearted efforts that the Smithsonian itself is capable of mustering. The Smithsonian must convince the American people and Congress that the Flight Museum enjoys a top-priority status within its organization.

Mr. Chairman, at this point I wish to clarify my purpose. It is not to criticize the development of new Smithsonian activities. It is not to say that the Institution should not broaden its interests in the fields of arts, humanities, and public awareness.

The art field is one in which I am deeply committed. For example, I enthusiastically support the National Foundation on the Arts and Humanities. In fact, this year I spoke out three times on the Senate Floor to endorse the extension of the Foundation's life and to urge substantial increases in the funds appropriated to it.

My interest in art dates back as far as I can remember. The Kachina Doll Collection which Rink Kibbey and I gave to the Heard Museum in Phoenix is only one instance of my personal participation in the arts.

My true aim today is limited to inquiring whether the Smithsonian's list of priorities has slipped off course. I ask whether the same level of attention should be given to the National Air and Space Museum that the Institution gives to so many other of its projects?

This question may also be asked in behalf of the National Museum of Natural History. For the evidence is all too clear that this museum, as well, is suffering from a decline in support.

The principal facts are these:

1. The present Director of the Museum of Natural History claims that "Our museum has its back up against the wall." In fact, he warns that "our survival is at stake."

2. The Smithsonian Council, which is a grass-roots body of advisors appointed by Doctor Ripley, has informed the Secretary in writing that "the Council is deeply concerned with the present trend relating to systematic biology as it affects the Museum of Natural History and strongly urges the allocation of additional resources to the Museum to promote this field."

3. The Council of the Senate of Scientists, which represents the professional staff at the Museum of Natural History, has confronted Doctor Ripley with sharp complaints about the decline of support to that museum.

4. The Smithsonian has severely restricted the services provided to the Museum by the Smithsonian's Buildings Management Department. This unit provides indispensable help, such as moving equipment, installing shelves, or dividing an office or work area.

5. The scientific staff of the Museum of Natural History has fallen below the level it was at three years ago.

6. The number of laboratory technicians available to assist the Museum's research scientists has also declined since the 1967 fiscal year forcing individual scientists to lose a heavy part of their time doing manuscript typing, slide preparations, and other work that should be done for them by a support staff.

7. The Institution's Foreign Currency Program request for first priority research projects of the Museum of Natural History is down by 53% from last year—from $336,000 to $220,000.

8. The Museum's research departments are being deprived of several hundreds of thousands of dollars a year in overhead monies which are brought into the Institution through research grants and contracts performed by the Museum's scientific staff, but are spooned off for the benefit of some other Smithsonian components.

9. The Smithsonian's Press Office is unable to provide adequate support help to researchers in natural history because editors who are paid from Federal funds are directed to spend much of their time working on books sold by the Smithsonian to make money for its private funds.

10. The condition of exhibit animals on display at the Natural History building is deplorable.

Mr. Chairman, I would like to offer the following evidence in support of my remarks:

First and foremost, I am impressed with the strong plea that has been made on behalf of the Museum of Natural History by its present Director, Doctor Richard Cowan.

Doctor Cowan was the one shining star at a meeting that my staff held with representatives of the Smithsonian. The fervor with which he promoted the cause of his museum, and his willingness to bare its problems in front of top officials of the Institution, showed me how very important it is to have a strong force at the head of the Smithsonian's museums.

He made no bones about it. As I have mentioned, he announced to all those assembled that the Museum of Natural History "has its back up against the wall."

Mr. Chairman, with a director who is willing to push for the cause of his museum and fight for his men inside the upper echelons of the Smithsonian the way Doctor Cowan does, I do not think it will be long before the Museum of Natural History sees some improvements in its picture. His leadership points up better than anything else the need for a strong director to head the National Air and Space Museum as well.

Mr. Chairman, there is little to add to the recommendation which the Smithsonian Council has made except to say that its action demonstrates a growing sense of concern by the Council. Indeed this may have been the first time they have ever adopted any resolutions.

The fact that the Council felt it had to urge the Secretary to allocate additional resources to the Museum of Natural History is by itself a good reason for Congress to examine the situation.

As Paul Oehser points out in his new book, *The Smithsonian Institution:* "Nearly all the professional staff of the Museum of Natural History engage in systematic research in one form or another."

Thus, increased support for the field of systematic biology, as urged by the Council, would pretty well overlap into every department of the Museum.

Mr. Chairman, with your consent, I will offer a copy of the Council's report for your files with the request that it appear in the record.

Next, I would like to send to the desk a copy of the letter which the Council of the Senate of Scientists presented to Doctor Ripley on May 15th. I also ask that it may be printed in the record.

Mr. Chairman, you will see that the grass-roots scientists are extremely concerned about the trend of events at the Museum.

The scientists mention many of the specific conditions which cause their distress. These include "sharp reductions in services and supplies provided by other Smithsonian units such as the Supply Division and the Library, the continued attrition of supporting personnel, and the failure of our operating budgets to keep pace with overall inflation."

They add: "We respectfully submit that growth in staff has not been taking place within the National Museum of Natural History during the past three years. We therefore see no reason why the already minimal budgetary allowances for collection care should be endangered because of the phenomenal growth in personnel we have witnessed in other Smithsonian offices and bureaus during the same three years. It is unfortunate enough that we have lost many staff positions to other parts of the Smithsonian in this way over the years, but it could be catastrophic to allow the funds allocated for collection maintenance to be cannibalized in the same fashion."

Mr. Chairman, these criticisms can be substantiated.

As to the drop in support services, we can examine the situation at the Buildings Management Department, which provides craftsmens' services, such as carpenters, electricians, and movers. To understand the problems here, I suggest that the Committee ask the Smithsonian to discuss a reported $1.5 million budget overrun in that Department, meaning that this amount of BMD resources went out unbudgeted for certain projects. If this report is accurate, the money had to be taken out of the hide of other projects for which the money had been planned.

As to the decline in positions at the Museum, I would like to quote from the hearings on Smithsonian funds for the 1967 fiscal year. At page 163, Doctor Ripley states: "We have about 111 scientists working in natural history. We have about 90 technicians. All the surveys made by scientific organizations throughout the Government and in the Nation say at the very minimum two technical aides should be assigned to each scientist."

And yet, as of today the number of scientists has dropped to 103. The number of technicians has fallen to 87.

Doctor Ripley has admitted this decline. On page 757 of the April hearings by the House Appropriations Committee, Doctor Ripley's statement reads: "[S]cientific research and curatorial activities in some museums may not be faring as well now as they were in 1968. A good example would be the National Museum of Natural History."

The drop in Foreign Currency research funds is easy to document. My figures are calculated from the Smithsonian's own list

of research projects which are identified at pages 954 through 976 of the recent House hearings on Smithsonian funds.

Another interesting question that the Committee may wish to explore is what happens to the overhead monies that flow into the Smithsonian as a result of research grants and contracts awarded to scientists at the Museum of Natural History.

According to a recent GAO report, the total amount of money derived by the Smithsonian from research grants and contracts runs in excess of $11 million. The question is, where does the overhead portion of these funds go? Is any sizable amount plowed back into the departments and Museum whose reputation attracts the grants and contracts in the first place and whose labors accomplish the assigned research?

Serious doubt has been raised from many different quarters as to whether these overhead monies—which amount to hundreds of thousands of dollars annually in the case of natural history—are used for the support of the Natural History Museum or are transferred into other projects more popular with the Smithsonian management. I think it would be helpful to the morale of the Museum's staff if the Committee could discover the true answer to this question.

Mr. Chairman, the next problem may be one which can best be examined by the Comptroller General. This is the issue of when it is proper to use Federally-appropriated funds to support programs that are intended to make money for the Smithsonian's private funds.

The situation is this. All the editors at the Smithsonian Press are on the Federal rolls. Yet the same people are required to divert a portion of their time to working on books that are for sale by the private side of the Smithsonian. These books are intended to generate revenues for the private funds of the Institution. But there is a serious question whether it is proper for the Smithsonian to use Federal funds to finance its own revenue-producing activities.

The thing that makes this situation curious is that lines had been carefully drawn between Federal editors and private editors under the previous administration.

When Doctor Carmichael was Secretary and Paul Oehser was in charge of the Smithsonian publications arm the editors were clearly identified as being either private or Federal. However, the publications office has been reorganized by the present Secretary and there are no more privately-funded editors left at the office.

Mr. Chairman, the final problem which I hope the Committee will examine relates to the condition of exhibits at the Museum's Hall of Mammals. Many collectors have asked me to protest about the sad shape that these displays are in.

We should remember that a great many of these specimens have been donated to the Smithsonian together with the money to mount them. Also, I believe several of these animals were acquired from Teddy Roosevelt's African safari.

With this important historical tie, and with the knowledge that the exhibits represent the visible side of the Smithsonian to many visitors, I feel this matter is worthy of being reviewed by the Committee.

Again, the answer may lie in a shortage of personnel. As a result of another reorganization done by the current management, I am informed that there is no longer any taxidermic unit attached to Natural History. There used to be one, but it was first moved out of the Museum and then abolished.

Mr. Chairman, I want to close my remarks on a positive note because of my high admiration for the Smithsonian. It is an important force for public awareness, enjoyment and service. It is a great and honored institution, whose reputation opens doors world-wide.

My purpose is not to condemn the Institution or its management. I am merely asking that a fresh look be given to its operations to see if it has steered off course a few degrees. If Congress or the Smithsonian finds that there is some truth in the questions I have raised, then I am confident that responsible and fair men will be ready to take whatever steps are needed to restore a balance to the Smithsonian's list of priorities.

In keeping with this spirit, I would like to offer for printing in the committee's record the full text of two letters which I have received from Dr. Ripley relative to this subject.

REPORT BY SMITHSONIAN COUNCIL, MEETING OF APRIL 25–27, 1970

Resolution One: That the Council continue its examinations of the pattern of objectives and the inter-relations of programs of the Smithsonian so as to advise the principal officers of the Institution and to foster the development of a critical dialogue regarding basic policies in scholarship, education, and national service.

Resolution Two: That the Council should have a Chairman selected from its membership and a secretary chosen from the staff of the Institution.

Resolution Three: In view of the present need to protect and appreciate the diversity of the environment the Council is deeply concerned with the present trend relating to systematic biology as it affects the Museum of Natural History and strongly urges the allocation of additional resources to the Museum to promote this field.

Questions which exemplify the interest and concern of the Council are the following:

1. May the Council receive information on a regular basis about trends in resource allocation and also an analytic digest of the recently concluded visitor survey?

2. Might the Council be brought into a defined relationship with other Smithsonian advisory boards and also the Board of Regents?

3. How does the Smithsonian coordinate its museum activities (in art, for example and with regard to acquisitions especially) with other Washington museums?

4. What shall be the prerogatives and responsibilities of curators regarding exhibits? How can maximum participation be achieved in advance planning of exhibits?

5. How may the Institution guarantee that the objectives announced when new projects are established are not later frustrated through lack of support?

6. How can basic concepts of science (molecular biology, differing cosmologies, puzzling astrophysical objects, continental drift) be communicated to museum visitors?

7. How may the Institution improve communication among its principal officers and professional staff members?

Members of the Council again expressed their appreciaton to the staff of the Belmont Conference Center and to the members of the Smithsonian staff who participated in discussions at this meeting.

Submitted by:

PHILIP C. RITTERBUSH,
Acting Secretary to the Council.

COUNCIL OF THE SENATE OF SCIENTISTS, NATIONAL MUSEUM OF NATURAL HISTORY, MAY 15, 1970

Mr. S. DILLON RIPLEY,
Secretary, Smithsonian Institution,
Washington, D.C.

DEAR MR. RIPLEY: The Council of the Senate of Scientists, National Museum of Natural History, is distressed by the recent announcement that the deficit in Smithsonian funding would be made from reductions in the operating budgets of the various bureaus, with a considerable amount representing the share of the National Museum of Natural History.

Those members of the professional staff at the divisional and departmental levels, charged with the immediate, day to day maintenance and care of the national collections of natural history and anthropological specimens, have felt, perhaps more strongly than any other employee of the Smithsonian, the effects of increased stringency in budget allocations for equipment and supplies, sharp reductions in services and supplies provided by other Smithsonian units such as the Supply Division and the Library, the continued attrition of supporting personnel, and the failure of our operating budgets to keep pace with overall inflation. We feel strongly that our budgetary allocations are currently at an absolute minimum and, therefore, must not be reduced further. The collections are too important a part of our national and scientific heritage, and scientific research and publication are too important a part of the Smithsonian's mission, for us to stand by and witness their derogation in favor of other activities more highly emphasized by the Smithsonian administrators.

We respectfully submit that growth in staff has not been taking place within the National Museum of Natural History during the past three years. We therefore see no reason why the already minimal budgetary allowances for collection care should be endangered because of the phenomenal growth in personnel we have witnessed in other Smithsonian offices and bureaus during the same three years. It is unfortunate enough that we have lost many staff positions to other parts of the Smithsonian in this way over the funds allocated for collection maintenance to be cannibalized in the same fashion. We strongly recommend that deficiencies because of over-staffing in recent years be remedied by reduction of staff in those same areas which have shown extraordinary growth during that time.

LETTERS RECEIVED FROM
DR. S. DILLON RIPLEY
SMITHSONIAN INSTITUTION,
Washington, D.C., June 5, 1970.

HON. BARRY M. GOLDWATER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GOLDWATER: I have read your long statement about the Smithsonian, and in particular about the National Air and Space Museum, with very great interest. I regret that I did not have an opportunity to discuss with you your concerns before you delivered your speech. I would have been able to tell you of our continuing efforts in seeking to move forward on this front, and of some of the concrete steps we have taken.

The ultimate construction of a suitable building to house the Nation's air and space collections will be the successful culmination of 24 years of Congressional encouragement and legislative action in the interest of air and space science and history.

Starting with the Act of August 12, 1946, the Congress established the National Air Museum as a part of the Smithsonian Institution. The Congress included provisions for selecting a site for a National Air Museum building to be located in the Nation's Capital. By the Act of September 6, 1958, the Congress designated a site for a building to be on the Mall from Fourth Street to Seventh Street, Independence Avenue to Jefferson Drive. Planning appropriations in the amount of $511,000 and $1,364,000 have been made available to the Smithsonian by the Congress for the fiscal years 1964 and 1965, respectively. One of my first official acts as Secretary was to testify before the Congressional Committees in support of the planning appropriation for the fiscal year 1965.

I recall with pleasure that at the time of my letter of May 25, 1964, on S. 2602, 88th Congress, addressed to Senator Pell, the Chairman of the Subcommittee on the Smithsonian Institution, it appeared that the building might soon be approved for construction. It was so recommended but the bill was not passed by the House after it had been approved by the Senate.

The Congress subsequently enacted legislation approved on July 19, 1966, authorizing the construction of the National Air and Space Museum.

In connection with this authorization, P.L. 89–509, the Senate Committee on Rules and Administration in its report to the Senate stated:

"In reporting favorably on H.R. 6125, the Committee on Rules and Administration noted with satisfaction the letter of May 13, 1966, from Secretary Ripley, giving assurances that funds would not be requested in this session of Congress pursuant to the authorization in H.R. 6125. The committee expressly recommends that funding for the National Air and Space Museum should be deferred even further, if need be, and that appropriations should not be requested pursuant to H.R. 6125 unless and until there is a substantial reduction in our military expenditures in Vietnam."

Rather than assume the responsibility for interpreting the wording, "substantial reductions in military expenditures in Vietnam," the Smithsonian Institution continued to seek appropriations for the Air and Space Museum. Funds for construction were then requested in the fiscal year 1966 and fiscal year 1967 budget submissions to the Bureau of the Budget in the amount of $40,045,000 and $40,331,000 respectively, as estimated by the General Services Administration. Both requests were deleted by the Administration prior to submittal of the budget to the Congress. During preparation of the fiscal year 1968 budget, it was decided that an incremental request for construction funds for the foundation and underground parking garage might be more acceptable, following the precedent used by the Public Buildings Service of the General Services Administration to start the FBI Building and the new Labor Department Building. Funds in the amount of $9,500,000 were therefore requested for this purpose in both the fiscal year 1968 and fiscal year 1969 budget submittals to the Bureau of the Budget and each time the item was deleted and not submitted to the Congress.

With the passage of time and unusually sharp increases in construction costs, the GSA was requested to update the construction cost estimate. In January 1968 we were advised by GSA that the building would now cost nearly $56,000,000 and in the next few years would increase to $65 million, if the then planned planetarium were added to the project. This substantial increase in cost led to consideration of reducing the cost by reducing the size of the building and even completely redesigning if necessary.

The Chancellor of the Smithsonian Institution then wrote to the President on November 19, 1969, to inform him of the resolution approved by the Board of Regents on November 5, 1969, as follows:

"Voted that the Board of Regents of the Smithsonian Institution recognizes the intense interest of the American people in the national air and space programs and in the historic flight of Apollo 11 to the Moon and return. The Regents recognize that by Public Law 89–509 the Nation's Air and Space Museum is authorized to be constructed on the Mall on a site designated by Act of Congress. The Regents further recognize that because of substantial increases in construction costs, the building as now designed should be scaled down from its present level of $65 million to a cost level not to exceed $40 million. The Regents, therefore, most respectfully and most urgently request that the President include in his budget for the fiscal year 1971 an amount of $2 million to finance the necessary redesign of this great educational and exhibition center for our air and space exploration."

The Assistant to the President for Domestic Affairs responded to the Chancellor's letter on December 10, 1969, and stated that funds for redesign had not been included in the 1971 budget by the Bureau of the Budget because of budgetary constraints, but that it would be included in a list of appealed items to be presented to the President during his review.

After a discussion of these efforts with me, Regent William A. M. Burden wrote to the President, urging that redesign funds be inserted as an amendment to the Presidential Budget. He stated that his concern "arises from our intense desire to complete the National Air and Space Museum within the years of your incumbency as President. In order to complete such an historic structure in time for 1976 at the earliest, it will be necessary to commence planning for a rescaling downwards in cost of the present approved structure. The nation can save perhaps more than $20 million in completed costs by spending $2 million for replanning now."

"Mindful of the vital need which the Administration faces in cutting costs, it seems to us that this planning item, which could be inserted as an amendment to the Presidential Budget, would be viewed as a prudent investment for the future."

In the interim, the architect has been authorized to prepare a feasibility study to show in outline form the maximum size and arrangement for a building estimated to cost $40 million. This study will be completed in June 1970.

The Smithsonian was subsequently advised that the Senate had requested in 1966 that appropriations for this purpose not be sought "unless and until there is a substantial redirection in our military expenditures in Vietnam." While the military effort in Vietnam is certainly redirected, we were advised, unfortunately the military expenditure level has not lessened appreciably. We were further advised that the President has directed very drastic cuts in all budgets for FY 1971 and that there is no possibility of reinstating this request under the circumstances.

In our submission of the fiscal year 1972 budget to the Bureau of the Budget, we will again request an appropriation of $2,000,000 for planning. We believe that the investment of redesign costs will result in a substantial decrease in ultimate construction costs and thereby increase the prospect of starting construction at the earliest possible date. We consider that an appropriation for redesign would not be in conflict with the previously stated position of the Senate Committee on Rules and Administration. We base this statement on the fact that the reference to the then pending legislation, H.R. 6125, was related to an authorization for construction of the building. Planning had been authorized earlier by the Act of September 6, 1958. Accordingly, I am writing to the Chairman of the Senate Committee on Rules and Administration, asking his concurrence in this interpretation and for his support of our proposed request for planning funds.

In order to provide additional exhibition space for the National Air and Space Museum, pending the construction of a proper museum building for this purpose, a substantial part of the Arts and Industries Building has been assigned to the Air and Space Museum. The exhibitions in this area are of great interest to our visiting public and serve admirably to complement the exhibitions in the adjoining Air and Space Museum hangar.

A number of potential candidates for the position of Director of the National Air and Space Museum have been interviewed. The search continues and we have called upon several of the Regents to assist in suggesting names and in evaluating applicants. The recent appointment of Mr. James E. Webb as a member of the Board of Regents by the Act of May 18, 1970, will provide another Regent with a strong interest in the Air and Space Museum and in the selection of a Director.

In the meantime, Mr. Frank A. Taylor, the senior museum director in the Institution, is serving as Acting Director.

In regard to the proposed Museum of Man, let me say that it was my hope that we could re-establish the Institution's primacy in the field of anthropology that prevailed from the late nineteenth century through the 1930's. I undertook, therefore, to consolidate the Bureau of American Ethnology and the Department of Anthropology to form an intellectual critical mass. In late 1968, sufficient progress had been made in evolving our anthropological programs to warrant the conversion of the transitional Office of Anthropology to the Center for the Study of Man. The Center reinforces and supports the more traditional, collection-based, scholarly activities that go on in the Department of Anthropology with an infusion of scholarship by distinguished ethnologists, social biologists and the like from outside the Smithsonian, including scholars from abroad.

A National Museum of Man would further strengthen the Smithsonian's contributions in the broad area of anthropology, a field that is rapidly undergoing a fundamental change both in the attitudes of its practitioners and in their sightings of new scholarly objectives.

Concerning the personnel of the National Museum of Natural History, I should say that when I came to the Smithsonian I was concerned with our inability to compete with other institutions for highly qualified scientists because of salary levels. Now we have succeeded in attracting a number of highly competent, indeed distinguished scientists to the professional staff in the National Museum of Natural History.

In 1965 we were able to convince both the Bureau of the Budget and the Congress of the merit of providing the Smithsonian with a direct appropriation for research. The appropriation was designed to offset the decline in support that we had been receiving from the National Science Foundation. Since that time, Congress has continued to appropriate funds for scientific research, but unfortunately the level of support has remained static. Nonetheless, the largest percentage of funds from that appropriation has been awarded to scientists in the National Museum of Natural History. In addition, our scientists have been the principal beneficiaries of funds brought into the Institution through our Office of Environmental Sciences, including the units in ecology and oceanography. Also, they have benefited from the Institution's Foreign Currency Program. Finally, there has been the support for research and curation that I have been able to provide from the Institution's limited private resources.

With gratitude, I recall that the Congress provided $18.636,000 for the addition of 512,000 square feet of laboratory space to the National Museum of Natural History. These additions, completed in 1963–65, provided a major expansion in the facilities for scientific research in this museum.

I am most grateful for your interest in the National Air and Space Museum and I would indeed welcome an opportunity to discuss with you the development of a new museum at the earliest possible time.

With all good wishes.

Sincerely yours,

S. DILLON RIPLEY,
Secretary.

(P.S.—A copy of my letter of October 10, 1969, to Senator Jordan on this subject is enclosed.)

IDENTICAL LETTER TO HON. CLAIBORNE PELL, CHAIRMAN, SUBCOMMITTEE ON THE SMITHSONIAN INSTITUTION, COMMITTEE ON RULES AND ADMINISTRATION

OCTOBER 10, 1969.

Hon. B. EVERETT JORDAN,
Chairman, Committee on Rules and Administration, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Widespread public interest in our Air and Space program has been further enhanced by the historic flight of Apollo 11 to the Moon and its return to Earth.

It appears to be appropriate therefore to recall that Public Law 89–509 which was favorably reported by the Senate Committee on Rules and Administration on June 28, 1966, authorizes construction of the National Air and Space Museum. Funds for construction have not been appropriated. In its report to the Senate, the Committee included the following provision:

"In reporting favorably on H.R. 6125, the Committee on Rules and Administration noted with satisfaction the letter of May 13, 1966, from Secretary Ripley, giving assurances that funds would not be requested in this session of Congress pursuant to the authorization in H.R. 6125. The committee expressly recommends that funding for the National Air and Space Museum should be deferred even further, if need be, and that appropriations should not be requested pursuant to H.R. 6125 unless and until there is a substantial reduction in our military expenditures in Vietnam."

Current actions to reduce the scale of military operations by the United States in Vietnam now being reported in the press, together with evidence of the strong public interest in the air and space program, lead me to ask for your further consideration of the possibility of initiating construction of the National Air and Space Museum in the fiscal year 1971 or 1972.

The President's deferment of certain Federal construction in the fiscal year 1970 is recognized as a present barrier to Federal construction in general. Nevetheless, the message from the Bureau of the Budget on this subject does not at this time project the deferment beyond the fiscal year 1970.

Construction when started will require four or more years, so that the budgetary effect of the estimated cost of about $50 million will be spread over a time span of five years. The development could be achieved also through successive physical and funding stages, thereby avoiding budgetary peaking. Under this plan of development, there would be undertaken first the substructure, largely occupied by a garage, which could be utilized for public parking as soon as completed, on a fee basis. As a second stage, the central bay of the super structure of the building could be erected and utilized by the public as a major exhibition and educational hall for air and space achievements. As a third stage, the end bays of the superstructure could be undertaken to complete the building as now designed.

Another possibility would be a total redesign to produce plans for a different building of smaller proportions costing less than $40 million.

We are convinced that this great exhibition and educational center will be visited by more than five million of our citizens each year. When constructed, it will serve admirably to record for our people, especially the young, the history of the air and space age as it is being made.

With all best wishes.

Sincerely yours,

S. DILLON RIPLEY,
Secretary.

(P.S.—The visitation to the specimen of Moon Rock now in our old exhibition building amply confirms the vast public awareness and excitement of our space accomplishments.)

SMITHSONIAN INSTITUTION,
Washington, D.C., July 16, 1970.

Hon. BARRY GOLDWATER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GOLDWATER: Thank you for your letter of June 17, 1970, to which I would like to respond in the same spirit of constructive and helpful criticism you have presented.

I, too, am deeply interested and committed to the goal of achieving a balanced program for the Smithsonian.

I have been concerned since joining the Smithsonian with the need to strike a balance by reasserting the Institution's leadership in a number of fields of scholarship and public service in which I believe we have strong historical responsibilities and potential for the future. I believe that in the long term we will be able to achieve the level of recognition and support from both the private and public sectors for our research and curatorial activities that are so badly needed and so well deserved. It has been difficult to win essential budget increases for our fundamental scientific research. It is this fact, I believe, that led the Smithsonian Council to formulate a supporting resolution that was touched on in your letter; we welcome this resolution.

At the same time that we have been trying earnestly to make progress in the sciences, as well as in history and art, the Congress during the last decade has enacted some 20 pieces of major legislation which place additional responsibilities on us. For all of these we are grateful and intend to strive ever harder to support.

In addition to supporting the National Museum of Natural History and the National Air and Space Museum, we have had to stretch our resources to help alleviate some of the very serious problems confronting other scientific units of the Smithsonian, including the Smithsonian Tropical Research Institute, the Smithsonian Radiation Biology Laboratory, and the Smithsonian Astrophysical Observatory. In fact, the portion of available funds applied to our scientific programs is very substantially greater than the amounts made available for programs in history and art.

In any event, I heartily concur in your estimation that the Museum of Natural History needs a sizeable increase in the number of professional and technical aides and for associated expenses.

With regard to the Institution's relationship with the National Science Foundation, let me state clearly that the Smithsonian did not initiate any plan to discontinue the National Science Foundation's grant support for the scientists in the National Museum of Natural History or any other unit of the Institution. On the contrary, this action was initiated in the National Science Foundation, with the consent of the Bureau of the Budget, as a direct consequence of NSF's interpretation of the Independent Offices Appropriation Act for the Fiscal Year 1964. I am enclosing copies of several letters and memoranda to document this fact, including a copy of a personal letter that I sent to a representative of the National Science Foundation while I was still the Director of the Peabody Museum at Yale. That letter was but the first of many efforts on my part to reestablish a full financial relationship between the National Science Foundation and the Smithsonian Institution. In all fairness to the NSF, I need to point out that the Institution has been the recipient of substantial sums annually from the Foundation, despite the restrictive interpretation that has persisted in regard to individual research projects. Currently, we are preparing several additional, carefully conceived programs for consideration by NSF.

Concerning employment at the National Air and Space Museum, I offer the following table and explanation:

POSITIONS

Fiscal year	Allowed by Congress	Apportioned by the Smithsonian	Service provided by Office of Exhibits (equivalent to man-years)	End of the year employment (exclusive of summer tempos)
1968	41	41	----------	45 including 6 on private roll.
1969	42	42	8	34 including 5 on private roll.[1]
1970	41	[2] 33	8½	31.[3]

[1] On July 1, 1968 (start of fiscal year 1969) the National Air and Space Museum (NASM) had a staff (exclusive of temporary summer employees) of 39 fulltime Federal employees and 6 private roll employees. The private roll employees were engaged on the program to select, assemble, and circulate historical spacecraft and related NASA materiel. This was supported by a grant from NASA.

The staff included 10 persons engaged on the design, production, and maintenance of exhibits. During fiscal year 1969, it was decided to transfer the NASM exhibits personnel to the Smithsonian Office of Exhibits (OE) with the understanding that the OE would perform exhibits work for NASM in volume equivalent to or greater than the capability of the section transferred. It was also agreed that in fiscal year 1970 the OE would assume the payment of the salaries of these employees out of the OE budget. The salaries and benefits funds remaining in the NASM as the result of this transfer would be used to convert the private roll employees of the space program to Federal employment at the planned termination of the NASA's support of the program in 1969.

The transfer of the NASM exhibits personnel was made in the interest of efficiency. The immediate supervision of the OE supervisory personnel and the closer scheduling of the services of the central OE shops and supporting units are estimated to have resulted in more work produced. A museum education specialist in NASM was also transferred to the Office of Academic Programs with the understanding that he would work on educational projects of the NASM. At the end of fiscal year 1969, the employment of the NASM was down 11 positions from the start of the year as the result of these transfers.

[2] The apportionment of positions to the NASM by the Smithsonian at the start of fiscal year 1970 was 33 positions which included 28 former Federal positions and 5 new positions funded from savings to the NASM from salaries and benefits formerly paid the transferred exhibits workers.

During fiscal year 1970, the personnel of the Office of Exhibits worked on 12 exhibition projects of the National Air and Space Museum including the continuing replacement of units in the Air and Space Building, counted as 1 project. These projects absorbed 8½ man-years of effort and cost $112,000. It should be mentioned that 2 men on the payroll of the Office of Exhibits are now assigned full time to the maintenance of NASM exhibits which are the best maintained exhibits in the Mall museums.

[3] Through most of fiscal year 1970, the NASM had 31 employees at work and 2 vacancies (the Director and the Director's Administrative Officer). However, as shown, the exhibits work performed at no cost to the NASM means that in 1970 the NASM had the equivalent of 39 positions filled and 2 vacancies.

I fully expect that a new director of the National Air and Space Museum will be selected in the near future. He should begin immediately to plan research and educational programs which can be placed high on the Institution's list of priorities and for which we plan to request appropriations beginning with fiscal year 1972.

Your interest is most welcome and we hope sincerely that you will help us in our efforts to provide adequate support for both the National Air and Space Museum and other scientific bureaus of the Institution.

Sincerely yours,

S. DILLON RIPLEY,
Secretary.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

The PRESIDING OFFICER. (Mr ALLEN). The hour of 1 o'clock having arrived, the Chair now lays before the Senate the pending business which the clerk will state.

The assistant legislative clerk read as follows:

The report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS

Mr. BYRD of West Virginia. Mr. President, I move that the Senate stand in recess subject to the call of the Chair, with the understanding that the recess not extend beyond 2 p.m.

The motion was agreed to; and (at 1:08 p.m.) the Senate took a recess subject to the call of the Chair.

At 1:34 p.m., the Senate reassembled, when called to order by the Presiding Officer (Mr. ALLEN).

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. EAGLETON. Mr. President, no one doubts that there is a crime problem in the District of Columbia.

No one doubts that there is a serious breakdown of the criminal justice system in the District of Columbia.

And no one doubts that it will take legislative action to improve this situation in the District of Columbia.

But the question that responsible public officials must ask is this: Is the District crime conference bill a sound, effective, appropriate, constitutional response to this situation?

As a former prosecutor, an attorney, a member of the Senate District Committee, and a member of the crime conference committee, I emphatically believe that it is not.

I am not seeking to place the blame for this bill on anyone's shoulders. This conference report is the product of a great deal of time and effort. Much of the report is essential to improving the crime situation in this city—and these provisions have been preserved in the District crime substitute bill.

It is nonetheless a bad piece of legislation. Some provisions of the conference report add chaos to confusion, run counter to modern penological theory and smack of repression.

I find somewhat extraordinary the rationale that the "overwhelming bulk" of the bill is noncontroversial—as though the shorter, troublesome portion of the bill will somehow affect District residents less.

Many of the objectionable features of the conference report have become familiar to my colleagues. Preventive detention, juvenile provisions, and mandatory minimum sentences have been debated at length the past several days.

I find still another aspect of the conference report—not so well publicized—which makes it impossible for me to give it my support: the funding provisions.

The conference report provides a one-time Federal payment of $5 million to help defray the costs of the bill. That means that in fiscal year 1971, $3.9 million will be used to pay the costs of the initial phase of the reorganization of the judicial system. The remainder—$1.1 million—is to be used for the treatment of narcotics addicts.

Lest this appear to be a generous authorization, let's examine it a bit more closely.

In 4 years, when the final phase of the court reorganization has been completed and the new judicial system is fully operative, the District of Columbia government will have an annual cost of $8 million for debt service, operating expenses, and the like—costs directly resulting from the court reorganization.

The costs to the city will be $8 million every year for over 30 years. This bill provides only $5 million—and that sum for only 1 year.

Let me emphasize that this is an authorization measure, not an appropriations bill. If we were to provide a reasonable authorization, the Appropriations Committee could—and no doubt would—appropriate below the authorized level in the years preceding full operation of the new court system.

We are asked to approve a permanent reorganization plan. Why then should we stop short of a permanent authorization of sufficient size to pay for it?

Let me turn now to the second critical area for funding in the much publicized fight against crime.

There is no longer any dispute about the intimate connection between drug addiction and crime. That individuals addicted to hard drugs will—indeed, must—steal to support their habits is a truism. Acting on this premise, the Senate passed a major Drug Abuse Control Act last January as part of the President's crime program. But we have yet to face head on the difficult question of treatment and rehabilitation.

The District of Columbia has approximately 10,000 addicts. One local judge has estimated, conservatively, that these 10,000 addicts steal $300 million in money and merchandise each year to support habits averaging $47 per day.

It costs the people about $5,000 to keep an addict in jail for a year—where he receives little or no treatment for his addiction. By contrast, it costs only $2,000 per year to provide him with treatment on an outpatient basis. Consider these facts for a moment: It costs less than half as much to treat a man as to jail him—and the chance that the addict inmate will return to a life of crime upon release is nearly certain.

In recent hearings before the Senate District Committee, Mayor Washington testified that the city will need $20 million to treat each of its 10,000 addicts. If indeed we are dedicating ourselves to eradicating crime in the District, surely this is a primary and essential commitment.

Once again, I remind you that this is an authorization bill, not an appropriations measure. Dr. Robert DuPont, head of the District's Narcotics Treatment Agency, has testified that his Agency's capacity for treatment will be 5,000 to 7,000 addicts by July 1971. I believe that the $10 to $14 million needed to treat these addicts should be appropriated for this program in this fiscal year.

But let us look ahead to the actual needs of this city—to the 10,000 addicted residents—and authorize the funds necessary to eliminate addiction as a cause of social disorganization and crime in the District of Columbia.

To tout any bill as the key to crime control in the District is hypocrisy unless the funds to carry out the court reorganization plan and to deal effectively with drug addiction are provided. The conference report on the District crime bill simply does not meet this requirement.

This failure is yet another reason for rejecting the conference report—and supporting the substitute bill. The substitute measure offers an opportunity to enact the major portion of the conference report without accepting the unwise features. In addition, it provides the fiscal authorization essential to making inroads into the crime problem in this city.

Mr. BROOKE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 2043. An act for the relief of Keum Ja Franks;

H.R. 5655. An act for the relief of Low Yin (also known as Low Ying);

H.R. 10150. An act for the relief of certain individuals employed by the Department of the Air Force at Kelly Air Force Base, Tex.;

H.R. 12400. An act for the relief of Tae Pung Hills;

H.R. 13895. An act for the relief of Mrs. Maria Eloisa Pardo Hall; and

H.R. 15478. An act for the relief of Mrs. Fernande M. Allen.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (S. 3889) to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 1 year the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury, and it was signed by the President pro tempore.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred to the Committee on the Judiciary:

H.R. 2043. An act for the relief of Keum Ja Franks;

H.R. 5655. An act for the relief of Low Yin (also known as Low Ying);

H.R. 10150. An act for the relief of certain individuals employed by the Department of the Air Force at Kelly Air Force Base, Tex.;

H.R. 12400. An act for the relief of Tae Pung Hills;

H.R. 13895. An act for the relief of Mrs. Maria Eloisa Pardo Hall; and

H.R. 15478. An act for the relief of Mrs. Fernande M. Allen.

RECESS

Mr. BYRD of West Virginia. Mr. President, I move that the Senate stand in recess subject to the call of the Chair, with the understanding that the recess not extend beyond 2:30 p.m. today.

The motion was agreed to; and (at 1:47 p.m.) the Senate took a recess subject to the call of the Chair.

At 2:21 p.m., the Senate reassembled, when called to order by the Presiding Officer (Mr. FANNIN).

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

Mr. HOLLAND. Mr. President, I understand the business that is ready for transaction is germane to the pending business; am I correct?

Mr. HART. The pending business, I believe, is the consideration of the conference report.

Mr. HOLLAND. Does the Senator intend to speak on that matter?

Mr. HART. Yes, I do.

Mr. HOLLAND. The only reason I raise the question is that the acting majority leader was called from the Chamber temporarily and he asked me to be sure that the rule of germaneness was safeguarded, which I have done.

I thank the Senator.

The PRESIDING OFFICER. The Senator from Michigan is recognized.

Mr. HART. Mr. President, I begin by calling to the attention of Senators a telegram that I believe was dispatched to each of us today. The telegram is signed by Roy Wilkens, on behalf of the Leadership Conference on Civil Rights, which is a coalition of 125 national civil rights, labor, religious and civic groups. The telegram was sent to each of us urging rejection of the conference report on the District of Columbia crime bill. The text of the telegram is as follows:

Leadership Conference on Civil Rights urges you vote against Conference Report on the D.C. Crime Bill which exceed all bounds of fairness and constitutionality.

Mr. President, several weeks ago, I voiced my concerns about the House-passed District of Columbia crime bill, then pending in conference along with the Senate's proposals. I stressed my opposition, particularly to the provision dealing with preventive detention, no-knock entry, juveniles, mandatory sentences, and wiretapping.

Now we have the conference report. It is readily apparent that the able chairman of the District Committee and the other Senate conferees have labored long and arduously on behalf of their colleagues. They have obtained a large number of deletions or modifications in the objectionable House provision.

If this were an ordinary program authorization or appropriation bill, Mr. President, all of us would acknowledge that such a conference requires compromise and accommodation. But this is not such a bill. Its provisions endanger the most basic precepts of our constitutional system and implement regressive policies of criminal justice.

Despite repeated claims of a Senate victory, the provisions of the report are still fundamentally unacceptable.

This Senate does not sit to "accept half a loaf" when constitutional guarantees of our individual liberties are at stake. Such moments call for conviction, not compromise.

Mr. President, the present debate should be placed in perspective. Let us remember what is not at issue in the vote on the conference report.

It is not a test of our commitment to the fight on crime. That commitment will be tested far more accurately in a few weeks, when we debate and vote on the nature and extent of Federal assistance to Washington and other cities under the Safe Streets Act of 1968—and when we consider legislation for funding narcotic addiction treatment and rehabilitation centers.

Nor is the vote on the report a test of our willingness to achieve court reform for the District.

No one seriously suggests that those of us opposed to the conference report are any less vigorously committed to the desperate need for such reform. It is not we who are seeking to hold the vital reorganization and expansion of the judicial system hostage to controversial and offensive experiments in criminal law.

Several of my colleagues and I have sponsored S. 4080 as a substitute court reform bill. It includes essentially all of the provisions on court reorganization and the bail agency included in the conference report. It has also been introduced by us as amendment No. 777 to H.R. 914, a House-passed private bill now before the Senate.

Further, we have introduced a strong, but constitutional, series of criminal and juvenile law provisions for the District, S. 4081—which has also been introduced as amendment No. 776 to H.R. 914. Our bill includes those provisions from the conference report which we can, in good conscience, support. It deletes those elements which even the pressing need for court reform cannot justify: First, preventive detention; second, no-knock searches; third, wiretapping; fourth, mandatory minimum sentences; and, fifth, certain undesirable juvenile procedure provisions.

PREVENTIVE DETENTION

Mr. President, no provision of this bill has caused more alarm among those vigilant against erosion of our liberties than has the administration's proposal for preventive detention, which is essentially preserved in the conference report.

By now, the Senate is well aware of the basic issues at stake. Those opposed to such imprisonment for crimes not committed have already reviewed its basic defects:

The grave constitutional questions regarding right to bail; the presumption of innocence until proven guilty; and other elements of due process;

The lack of empirical evidence to justify such a drastic departure from our traditions of criminal justice; and

The inevitable burden of double trials on the already strained judicial system, aggravating the very problem addressed.

I urge my colleagues, before they vote, to reflect once more upon these issues. This Senate has met the challenge of exercising the Nation's conscience before in this session. It must do so again.

At this time, Mr. President, I wish to call particular attention to two specific dangers of the conference report's proposal for preventive detention, which perhaps have not received adequate scrutiny: the possibility of perpetual detention and the scope of detention on the basis of past conduct.

PERPETUAL DETENTION

Proponents of the report have claimed that it limits detention of an accused to 60 days, and that, if he has not then been tried, he would be released pursuant to section 1321, governing conditional release. I submit that the plain language of the conference bill permits the prosecution to seek successive, prolonged periods of detention, and that this loophole sharply reduces the supposed safeguards of the report.

Section 1322, dealing with preventive detention, does state that if the accused has not been tried after 60 days, he shall be treated in accordance with section 1321 which deals with conditions of release. But that is the beginning of the problem, not the answer. The prisoner is still detained at this point. Section 1321 permits his release only if a condition or combination of conditions will ensure the safety of members of the community—the statute speaks of those "conditions of release, if any."

If the court finds that no conditions provide such assurance, and the accused falls within one of several categories, then section 1322 comes into play again,

and the court can entertain a new prosecution motion for another 2-month detention. There is not one word in the statute preventing this, or otherwise suggesting that the accused shall, in fact, always be released after 60 days.

Further, even if the accused is conditionally released under section 1321, the prosecution can seek ex parte to commence another detention hearing under section 1322(c)(2), whenever it subsequently appears appropriate.

Mr. President, I ask unanimous consent that sections 1321 and 1322 of the report be printed in the RECORD at this point.

There being no objection, the sections were ordered to be printed in the RECORD, as follows:

"SUBCHAPTER II—RELEASE AND PRETRIAL DETENTION

"§ 23–1321. RELEASE IN NONCAPITAL CASES PRIOR TO TRIAL

"(a) Any person charged with an offense, other than an offense punishable by death, shall, at his appearance before a judicial officer, be ordered released pending trial on his personal recognizance or upon the execution of an unsecured appearance bond in an amount specified by the judicial officer, unless the officer determines, in the exercise of his discretion, that such a release will not reasonably assure the appearance of the person as required or the safety of any other person or the community. When such a determination is made, the judicial officer shall, either in lieu of or in addition to the above methods of release, impose the first of the following conditions of release which will reasonably assure the appearance of the person for trial or the safety of any other person or the community, or, if no single condition gives that assurance, any combination of the following conditions:

"(1) Place the person in the custody of a designated person or organization agreeing to supervise him.

"(2) Place restrictions on the travel, association, or place of abode of the person during the period of release.

"(3) Require the execution of an appearance bond in a specified amount and the deposit in the registry of the court, in cash or other security as directed, of a sum not to exceed 10 per centum of the amount of the bond, such deposit to be returned upon the performance of the conditions of release.

"(4) Require the execution of a bail bond with sufficient solvent sureties, or the deposit of cash in lieu thereof.

"(5) Impose any other condition, including a condition requiring that the person return to custody after specified hours of release for employment or other limited purposes.

No financial condition may be imposed to assure the safety of any other person or the community.

"(b) In determining which conditions of release, if any, will reasonably assure the appearance of a person as required or the safety of any other person or the community, the judicial officer shall, on the basis of available information, take into account such matters as the nature and circumstances of the offense charged, the weight of the evidence against such person, his family ties, employment, financial resources, character and mental conditions, past conduct, length of residence in the community, record of convictions, and any record of appearance at court proceedings, flight to avoid prosecution, or failure to appear at court proceedings.

"(c) A judicial officer authorizing the release of a person under this section shall issue an appropriate order containing a statement of the conditions imposed, if any, shall inform such person of the penalties applicable to violations of the conditions of his release, shall advise him that a warrant for his arrest will be issued immediately upon any such violation, and shall warn such person of the penalties provided in section 23–1328.

"(d) A person for whom conditions of release are imposed and who, after twenty-four hours from the time of the release hearing, continues to be detained as a result of his inability to meet the conditions of release, shall, upon application, be entitled to have the conditions received by the judicial officer who imposed them. Unless the conditions of release are amended and the person is thereupon released, the judicial officer shall set forth in writing the reasons for requiring the conditions imposed. A person who is ordered released on a condition which requires that he return to custody after specified hours shall, upon application, be entitled to a review by the judicial officer who imposed the condition. Unless the requirement is removed and the person is thereupon released on another condition, the judicial officer shall set forth in writing the reasons for continuing the requirement. In the event that the judicial officer who imposed conditions of release is not available, any other judicial officer may review such conditions.

"(e) A judicial officer ordering the release of a person on any condition specified in this section may at any time amend his order to impose additional or different conditions of release, except that if the imposition of such additional or different conditions results in the detention of the person as a result of his inability to meet such conditions or in the release of the person on a condition requiring him to return to custody after specified hours, the provisions of subsection (d) shall apply.

"(f) Information stated in, or offered in connection with, any order entered pursuant to this section need not conform to the rules pertaining to the admissibility of evidence in a court of law.

"(g) Nothing contained in this section shall be construed to prevent the disposition of any case or class of cases by forfeiture of collateral security where such disposition is authorized by the court.

"(h) The following shall be applicable to any person detained pursuant to this subchapter:

"(1) The person shall be confined, to the extent practicable, in facilities separate from convicted persons awaiting or serving sentences or being held in custody pending appeal.

"(2) The person shall be afforded reasonable opportunity for private consultation with counsel and, for good cause shown, shall be released upon order of the judicial officer in the custody of the United States marshal or other appropriate person for limited periods of time to prepare defenses or for other proper reasons.

"§ 23–1322. Detention prior to trial

"(a) Subject to the provisions of this section, a judicial officer may order pretrial detention of—

"(1) a person charged with a dangerous crime, as defined in section 23–1331(3), if the Government certifies by motion that based on such person's pattern of behavior consisting of his past and present conduct, and on the other factors set out in section 23–1321(b), there is no condition or combination of conditions which will reasonably assure the safety of the community;

"(2) a person charged with a crime of violence, as defined in section 23–1331(4), if (i) the person had been convicted of a crime of violence within the ten-year period immediately preceding the alleged crime of violence for which he is presently charged; or (ii) the crime of violence was allegedly committed while the person was, with respect to another crime of violence, on bail or other release or on probation, parole, or mandatory release pending completion of a sentence; or

"(3) a person charged with any offense if such person, for the purpose of obstructing or attempting to obstruct justice, threatens, injures, intimidates, or attempts to threaten, injure, or intimidate any prospective witness or juror.

"(b) No person described in subsection (a) of this section shall be ordered detained unless the judicial officer—

"(1) holds a pretrial detention hearing in accordance with the provisions of subsection (c) of this section;

"(2) finds—

"(A) that there is clear and convincing evidence that the person is a person described in paragraph (1), (2), or (3) of subsection (a) of this section;

"(B) that—

"(i) in the case of a person described only in paragraph (1) of subsection (a), based on such person's pattern of behavior consisting of his past and present conduct, and on the other factors set out in section 23–1321 (b), or

"(ii) in the case of a person described in paragraph (2) or (3) of such subsection, based on the factors set out in section 23–1321 (b),

there is no condition or combination of conditions of release which will reasonably assure the safety of any other person or the community; and

"(C) that, except with respect to a person described in paragraph (3) of subsection (a) of this section, on the basis of information presented for proffer or otherwise to the judicial officer there is a substantial probability that the person committed the offense for which he is presently before the judicial officer; and

"(3) issues an order of detention accompanied by written findings of fact and the reasons for its entry.

"(c) The following procedures shall apply to pretrial detention hearings held pursuant to this section:

"(1) Whenever the person is before a judicial officer, the hearing may be initiated on oral motion of the United States attorney.

"(2) Whenever the person has been released pursuant to section 23–1321 and it subsequently appears that such person may be subject to pretrial detention, the United States attorney may initiate a pretrial detention hearing by ex parte written motion. Upon such motion the judicial officer may issue a warrant for the arrest of the person and if such person is outside the District of Columbia, he shall be brought before a judicial officer in the district where he is arrested and shall then be transferred to the District of Columbia for proceedings in accordance with this section.

"(3) The pretrial detention hearing shall be held immediately upon the person being brought before the judicial officer for such hearing unless the person or the United States attorney moves for a continuance. A continuance granted on motion of the person shall not exceed five calendar days, unless there are extenuating circumstances. A continuance on motion of the United States attorney shall be granted upon good cause shown and shall not exceed three calendar days. The person may be detained pending the hearing.

"(4) The person shall be entitled to representation by counsel and shall be entitled to present information by proffer or otherwise, to testify, and to present witnesses in his own behalf.

"(5) Information stated in, or offered in connection with, any order entered pursuant to this section need not conform to the rules

pertaining to the admissibility of evidence in a court of law.

"(6) Testimony of the person given during the hearing shall not be admissible on the issue of guilt in any other judicial proceeding, but such testimony shall be admissible in proceedings under sections 23–1327, 23–1328, and 23–1329, in perjury proceedings, and for the purposes of impeachment in any subsequent proceedings.

"(7) Appeals from orders of detention may be taken pursuant to section 23–1324.

"(d) The following shall be applicable to persons detained pursuant to this section:

"(1) The case of such person shall be placed on an expedited calendar and, consistent with the sound administration of justice, his trial shall be given priority.

"(2) Such person shall be treated in accordance with section 23–1321—

"(A) upon the expiration of sixty calendar days, unless the trial is in progress or the trial has been delayed at the request of the person other than by the filing of timely motions (excluding motions for continuances); or

"(B) whenever a judicial officer finds that a subsequent event has eliminated the basis for such detention.

"(3) The person shall be deemed detained pursuant to section 23–1325 if he is convicted.

"(e) The judicial officer may detain for a period not to exceed five calendar days a person who comes before him for a bail determination charged with any offense, if it appears that such person is presently on probation, parole, or mandatory release pending completion of sentence for any offense under State or Federal law and that such person may flee or pose a danger to any other person or the community if released. During the five-day period, the United States attorney or the Corporation Counsel for the District of Columbia shall notify the appropriate State or Federal probation or parole officials. If such official fail or decline to take the person into custody during such period, the person shall be treated in accordance with section 23–1321, unless he is subject to detention under this section. If the person is subsequently convicted of the offense charged, he shall receive credit toward service of sentence for the time he was detained pursuant to this subsection.

Mr. HART. Mr. President, in either case, whether a request for additional detention is made prior to release, or subsequent to release, how likely is it that a judge—who has already held the accused subject to detention—will find that during 60 days' detention he has somehow become less dangerous to the community? The answer is all to evident.

The Senate conferees sought to restrict the House proposal that those charged with——

Mr. TYDINGS. Mr. President, will the Senator yield at that point?

Mr. HART. I yield.

Mr. TYDINGS. Does the Senator wish to imply by his remarks that if the trial does not go forward within 60 days, the individual is not conditionally released?

Mr. HART. Yes; that he may not be; that he may be further detained.

Mr. TYDINGS. If the Senator will read page 194 of the conference report, he will see the clear language which I have brought out in the debate time and time again, which says that:

The following shall be applicable to persons detained pursuant to this section.

Going down to paragraph (A): "upon the expiration of 60 calendar days, unless the trial is in progress or the trial has been delayed at the request of the person other than by the filing of timely motions," such person shall be treated in accordance with section 23–1321.

Section 23–1321 is the release section under the subchapter II, "Release and Pretrial Detention." Section 23–1321 is "Release in Noncapital Cases Prior to Trial." This was brought out clearly by Mr. Kleindienst, Deputy Attorney General, before the Senate Judiciary Subcommittee. It was spelled out as clearly as possible that section 23–1321, the object of the reference, is the section on pretrial release, not detention. Section 23–1322 is on detention.

I have brought it out here time and time again in the debate. I do not know how much clearer it can be made.

Mr. HART. Section 1321, as I have suggested, is the beginning of the problem, but it does not contain the answer. The prisoner is in detention; is that right?

Mr. TYDINGS. Section 1321 contains the provisions for conditional release. The whole subchapter II is related to release and pretrial detention; 1321 relates to the conditions of pretrial release, as where the issue of dangerousness is brought before the court and the court determines if a pretrial conditional release will protect the community—a release, say, in which the person has to report back to jail every evening, or a release subject to the custody of the bail agent, or a release subject to custody of a priest or a lawyer. All that 1321, of itself, relates to is release.

We do not get to detention until we get to section 23–1322, which is the section having to do with detention.

That is the reason why we specify that, at the end of 60 days, a detained person shall be treated in accordance with section 23–1321, the release provisions. If we meant detention, we would have said in accordance with section 23–1322, the pretrial detention-provision, or 23–1321 and 23–1322.

Mr. HART. Section 1321 permits his release only if a condition or combination of conditions will insure the safety of the community.

In determining which conditions of release, if any, will reasonably assure the appearance—I refer to section 23–1321 (b)—down in subsection (h), which is on page 192, it states:

The following shall be applicable to any person detained pursuant to this subchapter.

Which is part of 1321.

Mr. TYDINGS. I do not know how much clearer we can make it.

Mr. HART. The words I just read are part of this section.

Mr. TYDINGS. I know, but the words the Senator has just read are only part of the overall subsection, the overall section, which relates to the conditions of release.

Mr. HART. If any.

Mr. TYDINGS. Relating to actual pretrial detention, one has to go to section 23–1322. When it comes to these cross-references, one has to take the section as a whole. Release in noncapital cases prior to trial—that is what section 23–1321 is about. That is the first half of subchapter II. Subchapter II is release, on the one hand, and pretrial detention on the other.

Mr. HART. If the court finds that no conditions provide the assurance that is required, what in the statute prevents one from going to the next section? Why is the language so conditional in the release section the Senator emphasizes?

Mr. TYDINGS. Because on page 194 we specify that in the event that the trial does not come on in 60 days, he shall be treated in accordance with the provisions of the release section—not in accordance with the provisions of subchapter II which relate to release and pretrial detention as well. This was spelled in the legislative history before the Senate subcommittee by the Deputy Attorney General. It has been spelled here on the floor time and time again.

I do not see how it is possible to think that the reference to section 23–1321 in the provision on page 194 really means 1321 and 1322 together.

Mr. HART. The Senator from Michigan has just explained how his reasoning gives him that understanding, but let us go on. Even if a person is conditionally released under 1321, the district attorney can seek, ex parte, under 1322(c), detention whenever it appears appropriate. Is not that what the language says?

Mr. TYDINGS. That would be contrary to the direct language on page 194.

Mr. HART. That does not have anything to do with the language on page 194; it has to do with the language on page 193:

The following procedures shall apply to pretrial detention hearings held pursuant to this section:

* * * * *

(2) Whenever the person has been released pursuant to section 23–1321 and it subsequently appears that such person may be subject to pretrial detention, the United States attorney may initiate a pretrial detention hearing.

Mr. TYDINGS. The language the Senator is talking about refers to a person released initially. The language he is talking about does not apply after a person has been held following a pretrial detention proceeding under section 1322, and where the trial has not gone on in 60 days.

Mr. HART. I am reading from the language:

Whenever the person has been released pursuant to section 23–1321 and it subsequently appears.

Mr. TYDINGS. I know. The language the Senator is talking about applies if a person is initially released under 1321. After he has been held for 60 days, if, for some reason or another, the trial has not come about, he is absolutely subject to release under 1321. The Senator is reading about where there has been no pretrial detention under 1322.

Mr. HART. Why does it not say so?

Mr. TYDINGS. It does say so.

Mr. HART. Where?

Mr. TYDINGS. Right here.

Mr. HART. Cite me the page and line.

Mr. TYDINGS. Page 194, subsection (d):

The following shall be applicable to persons detained pursuant to this section.

I do not know how it can be made clearer.

Mr. HART. I hope the court will read the Senator from Maryland and not the statute.

Mr. TYDINGS. All I urge is that they read the statute, page 194.

Mr. HART. Mr. President, I have cited and asked to have included in the RECORD sections 1321 and 1322. I ask additionally now that section 1322(c) be printed in the RECORD.

There being no objection, the section was ordered to be printed in the RECORD, as follows:

"(c) The following procedures shall apply to pretrial detention hearings held pursuant to this section:

"(1) Whenever the person is before a judicial officer, the hearing may be initiated on oral motion of the United States attorney.

"(2) Whenever the person has been released pursuant to section 23–1321 and it subsequently appears that such person may be subject to pretrial detention, the United States attorney may initiate a pretrial detention hearing by ex parte written motion. Upon such motion the judicial officer may issue a warrant for the arrest of the person and if such person is outside the District of Columbia, he shall be brought before a judicial officer in the district where he is arrested and shall then be transferred to the District of Columbia for proceedings in accordance with this section.

"(3) The pretrial detention hearing shall be held immediately upon the person being brought before the judicial officer for such hearing unless the person or the United States attorney moves for a continuance. A continuance granted on motion of the person shall not exceed five calendar days, unless there are extenuating circumstances. A continuance on motion of the United States attorney shall be granted upon good cause shown and shall not exceed three calendar days. The person may be detained pending the hearing.

"(4) The person shall be entitled to representation by counsel and shall be entitled to present information by proffer or otherwise, to testify, and to present witnesses in his own behalf.

"(5) Information stated in, or offered in connection with, any order entered pursuant to this section need not conform to the rules pertaining to the admissibility of evidence in a court of law.

"(6) Testimony of the person given during the hearing shall not be admissible on the issue of guilt in any other judicial proceeding, but such testimony shall be admissible in proceedings under sections 23–1327, 23–1328, and 23–1329, in perjury proceedings, and for the purposes of impeachment in any subsequent proceedings.

"(7) Appeals from orders of detention may be taken pursuant to section 23–1324.

DETENTION BASED ON "PAST CONDUCT"

Mr. HART. The Senate conferees sought to restrict the House proposal that those charged with "dangerous crimes" be detained solely on the basis of the instant charge. Nonetheless, the final conference report still offers the prosecution a field day for obtaining detention of such defendants on the basis of derogatory information short of any criminal record.

The statement of the Senate managers observes that the court must find a "prior pattern of dangerous behavior." But what does this mean? The report itself permits detention if the court finds danger to the community on the basis of "such persons' pattern of behavior consisting of past and present conduct, and on other factors set out in section 23–1321(b)."

Section 1321(b), in turn, lists many factors, including past convictions, and "any record of appearance at court proceedings," and also lists separately "character" and "past conduct." What do "character" and "past conduct" include, in this context, Mr. President?

During the House debate preceding its acceptance of the conference report, Representative HOGAN, for the express purpose of establishing legislative history, gave the "solid position of the House conferees"—unchallenged—on this provision. He said:

It is important to understand just what this new provision requires. It does not require a prior conviction or even arrest for a felony or misdemeanor on the part of the defendant. As explained in the House report, past conduct need not consist of prior involvement with the law.

Mr. HOGAN goes on to sum up the "restricted scope" of this provision as follows:

Through testimony and other reliable sources of information, a judicial officer may be informed of conduct on the part of the defendant which while dangerous to the community never resulted in his arrest or conviction.

Shall we, then, permit a man to be imprisoned before trial on the basis of hearsay information about his character, his companions, or, perhaps, his political activism, which a court finds "dangerous" to the community? No wonder the statement of the Senate managers was constrained to suggest that the "serious constitutional questions raised by any legislatively sactioned pretrial detention" on such grounds "should be fully aired in the decision to adopt the conference report."

The statement goes on to say that the conferees were not convinced that a "narrowly limited and fully protected" scheme of detention was unconstitutional. Mr. President, even assuming that incarceration for crimes never committed could ever pass constitutional muster, this is not my idea of a narrowly restricted, carefully safeguarded system of preventive detention.

It is, rather, a wide open, extremely dangerous departure from the most fundamental principles of our criminal system. It should not be accepted by this body, no matter what the rationale, excuse, or pressure put forth on its behalf.

STATUTORY DETENTION AS AN ALTERNATIVE TO MANIPULATION OF MONEY BAIL

Proponents of preventive detention who are sensitive to these fundamental vices have ultimately been forced to defend it on the ground that the present bail system is just as bad. They argue that detention based on danger to the community is already accomplished through manipulation of high money bail—in clear violation of the Bail Reform Act.

The first answer to this contention is simply that the conference report would supplement, not replace the present improper practices.

Mr. TYDINGS. Mr. President, will the Senator yield at that point?

Mr. HART. I yield.

Mr. TYDINGS. The Senator realizes that the Bail Reform Act pertains only to Federal courts, does he not?

Mr. HART. Yes, I do.

Mr. TYDINGS. The Senator realizes further, that in some States, for example, the State of New York, any person charged with a felony can be held under pretrial detention, with no statutory hearings and no pretrial procedures whatsoever?

Mr. HART. I learned that a few days ago here, when the Senator from Maryland and the Senator from New York had an exchange on it.

Mr. TYDINGS. The Senator is aware that a great many States have pretrial detention, with none of the safeguards we have here, for any person charged with a felony?

Mr. HART. If one State or 48 States do it, it is unfortunate.

Mr. TYDINGS. Is the Senator aware that the First Congress of the United States, which drafted the Constitution, lifted word for word from the British bill of rights that excessive bail provision, and the very first bail law provided that persons charged with very serious crimes—all capital crimes, and in those days capital crimes covered a very broad spectrum—need not be released on bail or need not be released prior to trial?

Mr. HART. Capital offenses have always been nonbailable.

Mr. TYDINGS. And the Senator is aware that capital crimes once included everything from armed robbery to burglary to rape to counterfeiting?

Mr. HART. I accept the Senator's statement. Despite some precatory language, there is no reason to believe that bail manipulation—which has gone on in clear disregard of congressional intent and common law limitation on the use of bail—will be seriously inhibited in the case of those who are not detainable under this statute. Nor, for that matter, is there any reason why courts would not be even more likely to attempt such manipulation for persons against whom formal detention had been unsuccessfully sought.

On a more fundamental level, I reject the suggestion that when an act of Congress is flouted, and constitutional rights denied in the bargain—that we must knuckle under, codify these violations and say, in effect, "okay, let us at least make it official and clean it up a bit."

The answer, rather, must be to pose more explicit standards to aid reviewing courts which can check improper use of bail, and, at the same time provide other alternatives to the problem, including speedy trial legislation and expanded supervisory release.

CONCLUSION

Mr. President, these defects, and others which my colleagues have detailed in the conference report cannot be swept aside by efforts to "make legislative history" on the floor of this Chamber. We cannot change the plain language of the report—

even apart from competing "history" laid down in the House—to read as the Senate conferees would have preferred it to read.

Beyond this, the whole concept of preventive detention of the kind proposed in this report is so antiethical to our basic traditions, that no legislative history or specific statutory language would make it acceptable.

The Senate Judiciary Committee has only recently completed the kind of thorough hearings which preventive detention demands, before we are asked to approve it. The administration and the proponents of preventive detention in the House gave it a fast shuffle in the District bill reported by the other body. The full Senate has not yet had a chance to study and debate fully the results of the hearings before its Judiciary Committee.

On such a critical issue, Mr. President, the Members of this body should be able to work their will free from the pressures for court reform which have been used to ram preventive detention through Congress.

Once more, the Nation is watching our action. As I warned several weeks ago, "it is easy to conclude, through frustration or fear, that we must adopt whatever anticrime proposals are offered—and the sooner the better. Attempts to encroach upon the Bill of Rights always invoke the claim of necessity and criminals on the fringe of society may seem less worthy of the Constitution's protection. Yet the peril of each of us lies in the precedent of eroding the rights of any of us."

Mr. President, I urge my colleagues to reject the conference report and to vote for the substitute District of Columbia crime bills which are now ready to be acted upon.

Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "District of Columbia Crime Bill Assaults Freedom and Intelligence," published in the Detroit Free Press of Sunday, July 19, 1970, which comments unfavorably on the bill now pending before the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS WE SEE IT DISTRICT OF COLUMBIA CRIME BILL ASSAULTS FREEDOM AND INTELLIGENCE

The administration's bill to combat crime in the District of Columbia is so chilling in its implications that it is incredible that it has advanced so close to passage. Though it is an unvarnished assault on basic American freedoms, it has passed the House and is moving toward approval in the Senate.

The bill includes (1) a provision that permits an accused person to be jailed for up to 60 days before his trial if his record shows in the opinion of a judge, that he would be a crime risk during the pretrial period; (2) a broadening of the wiretapping practices of government; and (3) an extension of the authority of policemen to enter a house without knocking or identifying themselves.

Sen. Sam Ervin, a North Carolina Democrat and a conservative, has had the forensic last word on the bill: "This . . . is as full of unconstitutional, unjust and unwise provisions as a mangy hound dog is full of fleas . . . a garbage pail of some of the most repressive, nearsighted, intolerant, unfair and vindictive legislation that the Senate has ever been presented . . . an affront to constitutional principles and to the intelligence of the people of the United States."

Never mind the splendid hyperboles. Sen. Ervin makes his point. The bill ought to make any thoughtful American even more purple with rage than the acts of violence and crime that have made members of Congress so willing to restrict our liberties. This, indeed, is a bill to shout down from the house tops.

Are we so frightened of crime that we are willing to sacrifice the sanctity of our home to a policeman's suspicions? Do we really care so little for the privacy of conversations that we are willing to see the tapping of telephones extended? Do we really mean to give a judge the right to slap a man with a previous criminal record into jail without trial if he is considered "dangerous?"

These are questions that must be asked, and they are not academic for any of us. No American can afford to assume that such laws will be used only against clearly definable "criminal types" and not against him. Who is dangerous and who is not? Will a conservative Washington homeowner, for instance, be classed as dangerous and therefore subject to the kinds of police activities being authorized for the district? Will someone who wears his hair long?

We had always felt that the idea of the sanctity of the home would protect Americans from inordinate invasions of privacy. From colonial days we have resisted the nosy intrusions of government into our lives. We have looked on with horror at the reality and later the movie depictions of the invasions by the state into homes in Nazi Germany.

Yet here is the Congress of the United States, urged on by the attorney general and the President, about to pass a bill that is straight out of 1930 Germany. True, it only affects the crime-ridden District of Columbia. But the pattern is spreading.

Somehow it must be stopped, in Congress or in the courts. Surely we cannot approach our 200th anniversary—celebrating Mr. Jefferson and his conferees and the freedom they proclaimed—in such a spirit of repression. It is too much.

Mr. HRUSKA. Mr. President, during the past few days those of us who have listened to the debate on the District of Columbia crime bill have heard numerous charges leveled against the bill by its opponents. Others have answered some of these points. The Senator from Maryland (Mr. TYDINGS) made an excellent defense of the bill yesterday in a speech on the Senate floor. Today I would like to discuss three charges made against the bill which warrant special interest: First, that the no-knock provision in the bill is a departure from well-established practice in this country; second, that section 23–111 of the conference bill is unconstitutional in that it denies a right to a jury trial by permitting the court to make a factual determination as to whether a person has been convicted of a prior offense; and, third, that preventive detention is a recent development, designed especially to cope with the crime problem in the District of Columbia.

First. With regard to the question of no-knock, I ask unanimous consent to have printed in the RECORD a chart which shows that some 30 States in the country, either by statute or by court decision, permit some form of no-knock entry. This indicates to me that no-knock is rather the rule than the exception.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

APPENDIX.—STATES REQUIRING ANNOUNCEMENT OF AUTHORITY AND PURPOSE BEFORE FORCED ENTRY TO EXECUTE SEARCH WARRANTS OR ARRESTS (WITH OR WITHOUT A WARRANT)*

State	Search warrant	Arrests (with or without warrant)
Alabama	Notice required (Code of Ala. 15.108)	Notice required (Code of Ala. 15.153, 15.155).
Alaska	No-knock permitted (Alaska Stat. 12.35.040)	Notice required (Alaska Stat. 12.25.100).
Arizona	Notice required (State v. Mendoza—454 P.2d 140 (1968) allows "no-knock" for destruction exception) (Ariz. Rev. Stat. 13–1446(B)).	Notice required (Ariz. Rev. Stat. 13–1411).
Arkansas	No statute, common law applies	Notice required (Ark. Stat. 43–414).
California	Notice required [1] (Calif. Penal Code, sec. 1531)	Notice required [1] (Calif. Penal Code, sec. 844).
Colorado	No statute, common law applies	No statute, common law applies.
Connecticut	No statute, common law applies (State v. Marino, 152 Conn. 85, 203 A. 2d 305 (1964) allows no-knock for destruction exception to common law announcement rule).	Do.
Delaware	No statute, common law applies (Dyton v. State, 250 A.2d 383 (1969), allows no-knock for destruction exception to common law announcement rule).	Do.
District of Columbia	Notice required (D.C. Code Ann. 25–129(g) (liquor) D.C. Code Ann. 33–414(g) (narcotics) 18 U.S.C. 3109. But an annotation to sec. 23–301, par. 6 states that for search or arrest that the police can break in after an announcement of identity and purpose. There are no exceptions. "Breaking and entering premises without an announcement is clearly illegal and an improper entry renders a subsequent search invalid.")	No provision, common law applies.
Florida	Notice required (Fla. Stat. 933.09) (Benefield v. State, 160 So. 2d 706 (1964) allows no-knock for destruction exception).	Notice required (Fla. Stat. 901.19).
Georgia	Notice required (Code of Ga. Ann. 27–308). The arrest provision states that the police may use force to break into a building and does not require any announcements prior to the breaking. The new search statute does require an announcement before breaking.	No-knock permitted only with warrant (Code of Ga Ann. 27–205).
Hawaii	No-knock permitted if door to house is open. Notice required if door is closed. (Hawaii Rev. Stat., title 37, sec. 708.37)	Notice required (Hawaii Rev. Stat. title 37, sec. 703.11).
Idaho	Notice required (Idaho Code 19–4409)	Notice required (Idaho Code 19–611).
Illinois	No-knock permitted (Ill. Ann. Stat., title 38, sec. 108–8). The arrest statute states that no notice or announcement required for arrest but People v. Barbee, 35 Ill. 2d 407, 220 N.E. 2d 401 (1966) requires announcement before arrest. The search warrant section concludes that notice is not necessary if constitutional standards (of reasonableness) are met. People v. Harfield, 94 Ill. App. 2d 421, 237 N.E. 2d 193 (1968). People v. Macias, 39 Ill. 2d 208, 234, N.E. 2d 783 (1968) allows no-knock for destruction exception.	No-knock permitted (Ill. Ann. Stat. title 38 ,sec. 107–5(d)).

Footnotes at end of table.

APPENDIX.—STATES REQUIRING ANNOUNCEMENT OF AUTHORITY AND PURPOSE BEFORE FORCED ENTRY TO EXECUTE SEARCH WARRANTS OR ARRESTS (WITH OR WITHOUT A WARRANT)*—Continued

State	Search warrant	Arrests (with or without warrant)
Indiana	No statute, common law applies Hadley v. State, 238 N.E. 2d 888, 906 (1968), allows no-knock for destruction exception to the common law rule of announcement.	Notice required (Ind. Ann. Stat. 9-1009).
Iowa	Notice required (Iowa Code Ann. 755.9)	Notice required (Iowa Code Ann. 751.9).
Kansas	No statute, common law applies	Notice required (Kansas Stat. Ann. 62-1819).
Kentucky	do	Notice required (Ky. Rev. Stat. 70.077 and 70.073).
Louisiana	No-knock permitted (La. Code of Crim. Pro. title V(Art. 164)) the new statute on arrests without warrants is broader now and not limited only to felonies.	Notice required (La. Code of Crim. Procedure title V (Art. 224)).
Maine	No statute, common law applies [2]	No statute, common law applies.[2]
Maryland	do [3]	Do.[3]
Massachusetts	No statute, common law applies (Commonwealth v. Rossetti, 211 N.E. 658, 665 (1965) court referred to no-knock for destruction exception to the common-law rule of announcement in dictum).	No statute, common law applies.
Michigan	Notice required (Mich. Stat. Ann. 28-1259 (6)) the search provision had not be included previously	Notice required (Mich. Stat. Ann. 28.880).
Minnesota	No statute, common law applies (State v. Parker, 283 Minn. 127 166 N.W. 2d 347 (1969))	Notice required (Minn. Stat. Ann. 639.33 and 639.34).
Missouri	No-knock permitted (Vernon's Ann. Mo. Stat. 542.390)	Notice required (Vernon's Ann. Mo. Stat. 544.200).
Mississippi	No statute, common law applies	Notice required (Miss. Code of 1942, 2472).
Montana	No-knock permitted [4] (Rev. Code of Montana 1947 (95-809))	Notice required [4] (Rev. Code of Montana 1947 (94-6011)).
Nebraska	No-knock permitted [5] (Rev. Stat. of Neb. 29-411)	No-knock permitted [5] (Rev. Stat. of Neb. 29-411).
Nevada	Notice required (Nev. Rev. Stat. 179.090)	Notice required (Nev. Rev. Stat. 171.138).
New Hampshire	No statute, Common Law applies	No statute, common law applies.
New Jersey	do [4]	Do.[6]
New Mexico	No statute, common law applies	No statute, common law applies.
New York	No knock permitted. (The officer may break open an outer or inner door or window of a building, or any part of the building, or anything therein, to execute the warrant, (a) if, after notice of his authority and purpose, he be refused admittance, or (b) without notice of his authority and purpose, if the judge, justice, or magistrate issuing the warrant has inserted a direction therein that the officer executing it shall not be required to give such notice. The judge, justice, or magistrate may so direct only upon proof under oath, to his satisfaction, that the property sought may be easily and quickly destroyed or disposed of, or that danger to the life or limb of the officer or another may result, if such notice were to be given. As amended L. 1964, c. 55, eff. July 1, 1964.) (N.Y. Code Crim. Procedure, sec. 799.)	Notice required (N.Y. Code of Crim. Procedure, sec 175—arrest with warrant—and sec. 178—arrest without warrant).
North Carolina	No statute, common law applies	Notice required (Rev. Stat. of N.C. 15.44).
North Dakota	No-knock permitted if judge so provides (N.D. Code 29-29.1-01)	Notice required (N.D. Code 29-06-14).
Ohio	Notice required U.S. v. Blank, 251 F. Supp. 166 (1966) and State v. Johnson, 10 Ohio Misc. 278, 240 N.E. 2d 574 (1968) allow no-knock for destruction exception). (Ohio Rev. Code Ann. 2935.12).	Notice required (Ohio Rev. Code Ann. 2935.12).
Oklahoma	Notice required (Okla. Stat. Ann. Title 22, Sec. 1228)	Notice required (Okla. Stat. Ann. title 22 sec. 194 (arrest with warrant) sec. 197 (arrest without warrant).
Oregon	Notice required (State v. Cortman, 466 P. 2d 681, 683 (1968) allows no-knock for destruction exception; cites People v. Maddox (Calif.)) (Oreg. Rev. Stat. 141.110).	Notice required (Oreg. Rev. Stat. 133.290 arrest with warrant) 133.320 (arrest without warranty)).
Pennsylvania	No statute, common law applies (Manduchi v. Tracy, 350 F.2d 658 (1965) cert. denied, 382 U.S. 943 allowed no-knock for destruction exception to common law rule of announcement).	No statute, common law applies.
Rhode Island	No statute, common law applies (State v. Johnson, 230 A.2d 831, allows no-knock for destruction exception to common-law rule of announcement.)	Do.
South Carolina	No-knock permitted (S.C. Code Sec. 17-257)	Notice required (S.C. Code Sec. 53-192).
South Dakota	Notice required (S.D. Comp. Laws. Ann. 1967, Sec. 23-15-14) [7]	Notice required (S.D. Comp. Laws Ann., 1967, Sec. 23-22-19).
Tennessee	Notice required (Tenn. Code. Ann. 40.509)	Notice required (Tenn. Code Ann. 40.807).
Texas	No-knock permitted (Vernon's Tex. Stat. Ann. Code of Crim. Proc., art. 18.18)	Notice required (Vernon's Tex. Stat. Ann. Code of Crim. Proc. Art. 15.25).
Utah	No-knock permitted 1967 Amendment to search warrant provisions reads: "Officer may break door or window to execute warrant—Authority. The officer may break open any outer or inner door or window of a house, or any part of a house or anything therein, to execute the warrant: (1) if, after notice of his authority and purpose, he is refused admittance; or (2) Without notice of his authority and purpose, if the judge, justice, or magistrate issuing the warrant has inserted a direction therein that the officer executing it shall not be required to give such notice. The judge, justice, or magistrate may so direct only upon proof under oath, to his satisfaction, that the properly sought is a narcotic, illegal drug, or other similar substance which may be easily and quickly destroyed or disposed of, or that danger to the life or limb of the officer or any other may result, if such notice were to be given." Also see State v. Louden, 15 Utah 2d 64, 387 p. 2d 240 (1963).) (Utah Code Ann. 1953, 77-54-9).	Notice required (Utah Code Ann. 1953, 77113-12).
Vermont	No-knock permitted (Vermont Stat. Ann. 24.302)	No-knock permitted (Vermont Stat. Ann. 24.302).
Virginia	No statute—common law applies	No statute, Common law applies.
Washington	do [8]	Notice required [7] (Rev. Code of Wash. Ann. 10.31.040).
West Virginia	No-knock permitted for structures other than a "dwelling" (W. Va. Code 62.1A-5)	No statute, Common law applies.
Wisconsin	No statute. Common law applies	Do.
Wyoming	Notice required	Notice required for arrest with warrant (Wy. Stat. Ann. 7-165) No statute for arrest without warrant—Common law applies.

[1] People v. Maddox, 204 P. 2d 6 (1956) allow no-knock; people v. Gostelo, 432 P. 2d 706 (1967) for destruction; People v. Rosales. 437 P. 2d 489 (1968) exception.

[2] State v. Martello, 252 A. 2d 316 (1969) allows no-knock as an exception to the common-law rule of announcement "An officer * * * is bound, on demand to make known his authority, but his omission to do so can do no more than deprive "him" of the protection which the law throws around its ministers, when in the rightful discharge of their duty."

[3] Henson v. State, 236 Md. 513, 204 A. 2d 516 (1969) and Waugh v. State, 3 Md. App. 379, 230 A. 2d 596. Both cases allow destruction exception to the common law rule of announcement.

[4] The general arrest statute and the search statute give the right to break in without the requirement of notice. The arrest with or without warrant statutes require notice unless notice would jeopardize the arrest.

[5] "Warrants: execution; powers of officer; direction for executing, in executing a warrant for the arrest of a person charged with an offense, or a search warrant, or when authorized to make an arrest for a felony without a warrant, the officer may break open any outer or inner door or window of a dwelling house or other building, if, after notice of his office and purpose, he is refused admittance;" or without giving notice of his authority and purpose, if the judge or magistrate issuing a search warrant has inserted a direction therein that the officer executing it shall not be required to give" such notice, but the political subdivision from which such officer is elected or appointed shall be liable for all damages to the property in gaining admission. The judge or magistrate may so direct only upon proof under oath, to his satisfaction that the "property sought may be easily or quickly destroyed or disposed of, or that danger to the life or limb of the officer or another may result, if such" notice be given; but this section is not intended to authorize any officer executing a search warrant to enter any house or building not described in the warrant.)

[6] State v. Juliano, 97 N.J. Super. 25, 234 A. 2d 236 (1967) allows No-knock for destruction exception to common law rule of announcement.

[7] South Dakota recently enacted authority for no-knock warrants.

[8] State v. Young, 76 W. D. 2d 212, 455 p. 2d 595 (1969) allows No-knock for destruction exception.

*From an article to be published in the St. John's Law Review.

Note.—The citations listed in the above appendix are illustrative only and in no way are to be considered as all inclusive.

Mr. HRUSKA. My own State of Nebraska is one that permits limited forms of "no knock." Section 29-411 of the Revised Statutes of Nebraska says:

In executing a warrant for the arrest of a person charged with an offense, or a search warrant, or when authorized to make an arrest for a felony without a warrant, the officer may break open an outer or an inner door or window of a dwelling house or other building, if, after notice of his office and purpose, he is refused admittance; or without giving notice of his authority and purpose, if the judge or magistrate issuing a search warrant has inserted a direction therein that the officer executing it shall not be required to give such notice, but the political subdivision from which such officer is elected or appointed shall be liable for all damages to the property in gaining admission.

Those who decry "no knock" for the District of Columbia go against the practice in a majority of the States of this Nation as well as against the ruling of the Supreme Court of the United States in *Ker* v. *the State of California*, 374 U.S. 23 (1963), which has already been discussed at length by both the proponents and the opponents of this bill. Not only do the States and the courts approve "no knock," but so does the Senate. Three times since December 1969 this body, the U.S. Senate, has approved of "no knock" warrants. It seems to this Senator to be time to stop the argument concerning "no knock" and to move on to other matters.

Second. Last Friday the Senator from North Carolina (Mr. ERVIN) stated that section 23-111 of the conference bill violates section 1 of article III of the Constitution by permitting the court, rather than the jury, to make a determination concerning whether a person has been convicted of a prior offense. This determination, under the terms of the provision, would be made only after a finding of guilt by a jury and would be used only for the purpose of setting the proper sentence.

The practice which section 23-111 would codify is currently the practice in

the District of Columbia. Today, in this jurisdiction, after a jury has ruled on the question of guilt or innocence, it is the court which examines documentation submitted to prove that the defendant has previously been convicted of an offense. The very recent case of United States against Marshall in three separate sections of the majority and minority opinions recognizes that such is the practice in the District of Columbia at the present time. I ask unanimous consent that excerpts from the opinion and concurring opinion in this case by the U.S. Court of Appeals for the District of Columbia Circuit be printed in the RECORD with the relevant portions italicized.

This case indicates to this Senator that the constitutional objection raised against this provision of the conference bill is without substance; but rather that similar practices are engaged in daily by the courts with the approval of the appellate reviewers of these actions.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

[United States Court of Appeals for the District of Columbia Circuit, No. 22,485]

UNITED STATES OF AMERICA *v.* ERNEST M. MARSHALL, APPELLANT

(Appeal from the United States District Court for the District of Columbia, on reconsideration en banc)

Decided June 30, 1970

II

A question arises as to the sentence. The crime of carrying a pistol without a license, of which appellant was convicted, is punishable under the terms of 22 D.C. Code § 3204 in the manner prescribed by Section 22–3215. This calls for a fine of $1,000 or imprisonment for not more than one year, or both, unless the defendant has been convicted of the same offense in this jurisdiction or of a felony in any jurisdiction. In such a case the sentencing court has the discretion to impose a sentence of not more than ten years, although the increased term of imprisonment is only authorized and not required. Under these provisions appellant was sentenced as a second offender for a term of imprisonment from two to six years.

The contention is that proof of a prior conviction was not adduced properly. To decide this question the court sua sponte has considered the case en banc.

In *Jackson* v. *United States*, 95 U.S. App. D.C. 328, 221 F. 2d 883 (1955), where, as in the present case, the sentence was imposed under Section 3204, but without proof of the previous conviction in the presence of the accused, we vacated the sentence and remanded for resentence for not more than one year, "unless the Government introduces evidence in Jackson's presence *which convinces the court that*, when he committed the offenses of which he was convicted, he had theretofore been convicted of a similar violation or of a felony."

Jackson, supra, 95 U.S. App. D.C. at 330–31, 221 F.2d at 885. We find no significant distinction between this case and *Jackson*, and we think the position there adopted is sound. The indictment, which we assume was served on Jackson as required by law, recited a prior conviction. His counsel stipulated to the court, though out of Jackson's presence, that the accused had previously been convicted of a felony, and also waived proof of the conviction should the jury find him guilty of the charge on trial.

In the course of its opinion the court stated that the stipulation of counsel was not a substitute for actual proof of a fact which so drastically increases the maximum imprisonment. Such proof which so largely shapes the sentence should be introduced in the defendant's presence, just as the sentence itself must be pronounced in his presence." 95 U.S. App. D.C. at 330, 221 F.2d at 885.

This was the position of the court notwithstanding, as the court pointed out, ". . . Jackson does not expressly attack the sentence as being in excess of that authorized by law, and although he did not move in the District Court that it be corrected, as he might have done under 28 U.S.C. § 2255, the matter of the legality of the sentence may nevertheless be determined on this appeal." 95 U.S. App. D.C. at 330, 221 F.2d at 885.

What occurred in the present case was that the then United States Attorney filed with the Clerk a document called an "Information of Prior Conviction." There is a notation on the Clerk's docket of service of this paper. The document recites that Marshall had previously been convicted twice of carrying a dangerous weapon. During the sentencing proceedings, however, there was no mention of this information or of the fact of prior conviction, and there was no proof of such a conviction in the presence of the defendant.

We are persuaded to adhere to the procedure adopted in *Jackson*. In addition to the reasons there expressed there is another. When the proof is introduced in the presence of the defendant meaningful opportunity is afforded, which might otherwise be unavailable, to enable the accused in the exercise of his right of allocution to advance any reasons he might have why the court should not enlarge the sentence because of his past record.

Rule 32(a), Fed. R. Crim. P., presently provides in part:

"Before imposing sentence the court shall afford counsel an opportunity to speak on behalf of the defendant and shall address the defendant personally and ask him if he wishes to make a statement in his own behalf and to present any information in mitigation of punishment."

In *Green* v. *United States*, 365 U.S. 301, 304 (1961), it is pointed out that the legal provenance of this Rule was the common-law right of allocution. The Court there interpreted Rule 32(a) as it then existed to require the trial court to enable the defendant—not only his counsel—the opportunity to address the court. The result of this ruling, reaffirmed in *Hill* v. *United States*, 368 U.S. 424 (1962), was that by the 1966 amendments, this requirement was made a part of the Rule. Section 3204 permits but does not require the sentence of a recidivist to be enlarged. A discretion resides in the sentencing judge whether to enlarge the sentence at all or, if enlarged, to what extent within the great range between a one and ten year term. The judge accordingly should consider, inter alia, the circumstances of the prior offense as well as other aspects of the defendant's life. Particularly when a prior offense may permit the sentence to be enlarged tenfold, it is difficult to see how the sentencing can proceed with a meaningful allocution without anything being said concerning the prior offense, as here occurred. Proof in the defendant's presence of the prior conviction, with knowledge thus brought home to him in the courtroom of its possible significance in determining his sentence, alerts him to the opportunity at sentencing of addressing the judge directly with respect to the prior conviction. Even when the fact of conviction is not disputable he may adduce whatever he deems appropriate for the judge to consider in connection with it. As the Supreme Court stated in *Green, supra*, 365 U.S. at 304:

"The most persuasive counsel may not be able to speak for a defendant as the defendant might, with halting eloquence, speak for himself."

We do not deem it essential, in adhering to the procedure adopted in *Jackson*, to determine whether or not it is required by due process of law. *See Oyler* v. *Boles*, 368 U.S. 448, 452 (1962), and *United States ex rel. Collins* v. *Claudy*, 204 F. 2d 624 (3d Cir. 1953).

The judgment of conviction is affirmed. The sentence is vacated and the case is remanded for resentence for no more than one year unless the United States introduces evidence in Marshall's presence *which convinces the court that* when he committed the offenses of which he was convicted he had theretofore been convicted of a similar violation or of a felony.

It is so ordered.

MACKINNON, *Circuit Judge*, concurring in part and dissenting in part: I concur in the affirmance of the conviction and with Part I of the majority opinion but I am unable to concur in the vacation of the sentence and the remand for resentencing as ordered by Part II of the opinion. To do so, in my opinion, would be a completely useless ceremony.

Rule 52(a) of the Federal Rules of Criminal Procedure provides:

"Any error, defect, irregularity or variance which does not affect substantial rights shall be disregarded."

In my opinion no substantial right of appellant has been affected. He has never claimed that he is not the same person as the Ernest M. Marshall convicted of the two offenses described in the Information and he makes no showing or claim of any kind that on remand he would be able to introduce any fact that might in any way serve as a basis to compel any alteration in his sentence. Under such circumstances the remand appears as an "idle ceremony" and contrary to the rule announced by our decision in *Kendrick* v. *United States*, 99 U.S. App. D.C. 173, 176, 238 F. 2d 34, 37 (1956), which was written by Judge Miller. I would accordingly affirm the trial court's judgment.

In doing so it should be pointed out that the better practice, which would be prescribed for all future cases, would be for the issue of identity to be satisfied by affirmative admission, stipulation or proof entered on the record in open court in the presence of the defendant prior to sentencing. If the United States Attorney did not take the initiative in this respect the trial judge should determine in an appropriate manner that the defendant is the same person as the one previously convicted. If the defendant denies the prior conviction, or stands mute, *the Government should prove the prior offense to the court by* evidence adduced in the presence of the accused.

Then, having disposed of this case so far as the record before this court justifies, it should be pointed out to appellant that if he believes he has any justifiable basis to question the validity of his sentence (which is not apparent to us on this record) he may do so by motion before the trial court under 28 U.S.C. § 2255. For this purpose his present counsel would be directed to continue to represent him. Upon such motion, if the evidence shows that appellant is in fact the same Ernest M. Marshall who was previously convicted, the trial court may dismiss the motion; if, however, the evidence does not prove that he is the same person as the one previously convicted under the same name, the trial court should then vacate its prior sentence and resentence appellant properly.

In my view the majority opinion mistakenly asserts that this case is controlled by *Jackson* v. *United States*, 95 U.S. App.D.C. 328, 221 F.2d 883 (1955), and not by *Kendrick* v. *United States, supra*.

In this case, Marshall was sentenced by the court on the basis of an "Information of Prior Conviction" filed and served by the Government on September 11, 1968 some 23 days prior to the imposition of sentence on October 4, 1968. The Information stated that appellant had twice before been convicted

of carrying a concealed weapon in violation D.C. Code § 22-3204 (1967). At the time of sentencing counsel for Marshall indicated knowledge of the probation report, termed it "a complete and comprehensive probation report" and recognized its serious implications by observing, "I think the most we can ask is that Your Honor be as lenient as possible under the circumstances." Marshall also personally addressed the court at the time of his sentencing, indicated full knowledge of the probation report and pointed out that ". . . the probation officer hasn't ascertained that I had a probation report written up in Maryland." Thus, since both Marshall and his counsel by their comments indicate they had knowledge of the contents of the probation report, they most certainly had full knowledge that the court had been advised of the two prior convictions. Neither indicated surprise at the sentence of two to six years. After sentence was imposed, it was apparent that Marshall's counsel was not inhibited by the court's action as he immediately requested the court to set appeal bond. So there does not seem to be any more reason to vacate Marshall's sentence than there did the sentence that was involved in Judge Miller's opinion in *Kendrick*.

In *Kendrick* v. *United States, supra,* 99 U.S.App.D.C. at 176, 238 F.2d at 37, the defendant was convicted under the D.C. Code of (1) assault with a deadly weapon and (2) carrying a dangerous weapon. He was sentenced respectively to consecutive sentences of 3 to 9 years and 2 to 8 years. The assault count did not allege that Kendrick had been previously convicted of a similar offense and no such fact was proved on the trial of the case, but after conviction and before sentencing the Government filed an Information alleging two prior convictions of assault with a dangerous weapon. Prior to sentencing no proof was introduced of these convictions or that the Kendrick named therein was identical with the defendant in the proceeding before the court.

On appeal, Kendrick contended that under *Jackson* v. *United States, supra,* he could not be sentenced to imprisonment in excess of one year unless the Government in his presence proves the prior crimes and his identity. However, Judge Miller, who had written the opinion in *Jackson,* also wrote the opinion in *Kendrick* and held that such procedure was not necessary. He pointed out that Kendrick on cross examination during the trial had admitted the two prior offenses, that the same trial judge had presided during one of the prior convictions, that the defendant had not been denied his right of allocution and that there was no showing that Kendrick denied that he had been previously convicted as stated in the Information. Under such circumstances, Judge Miller's opinion concluded, "[T]he production of evidence after verdict and before sentence to show these previous convictions would have been an idle formality." 99 U.S. App. D.C. at 176, 238 F. 2d at 37.

This holding is applicable here and the fact that Kendrick had been previously tried before the same judge on one prior conviction and had admitted both convictions on cross examination does not distinguish it from this case because neither circumstance in *Kendrick* occurred in the context of informing the defendant that such prior convictions were to be used against him to increase his punishment for the instant offense. If certainty that Kendrick had committed the prior offense was the essential feature to the decision in the case that dictated affirmance, then *Jackson* (written by the same judge) would not have been reversed because there was no substantial doubt that Jackson committed the prior stated offenses to which his counsel stipulated and which Jackson at no time denied. The principal fact that distinguishes *Kendrick* (and this case) from *Jackson* is that in *Kendrick* (and *Marshall*) there *was filed and served* an Information prior to sentencing setting forth the prior convictions the Government intended to rely upon to support the enhanced sentence and in *Jackson* no such Information was served or filed. Thus Kendrick (and Marshall) was placed on notice that the court could in its discretion impose an enhanced sentence and this was not done in *Jackson*.

In *Jackson* v. *United States, supra,* appellant's grounds for reversal were twofold: (1) that he was entitled to a jury trial on the issue of the prior conviction and (2) that his trial counsel had improperly represented him to his prejudice by stipulating without his knowledge or consent to the prior conviction. Appellant raised both of these points *affirmatively* on his appeal. On the first point the court held he was not entitled to a jury trial. On the second point that his attorney had improperly represented him *and* because of the absence of any proof of the prior offense, the court placed Jackson in the position he occupied prior to the sentencing by remanding the case for resentencing. Since he had new counsel on the appeal, resentencing thus wiped out the prejudice he claimed had arisen by the improper stipulation of his prior counsel. Thus *Jackson* sought primarily to correct an alleged improper representation by counsel and is plainly distinguishable from *Marshall* on that ground and on the ground previously pointed out that Jackson was never served prior to sentencing with any Information alleging any prior conviction. Also, the premise of the majority opinion that affirmance of *Marshall* would overrule *Jackson* is completely undercut by the fact that the record in *Jackson* indicates that the sentencing on remand was handled in the same manner as in this case. Marshall here makes no claim of improper representation by this trial counsel nor does he claim he was not previously convicted. This latter fact was not considered controlling in *Jackson,* which rather turned on the point that the proof of this point was improperly waived by counsel without appellant's knowledge or consent. *Jackson* v. *United States, supra,* 95 U.S. App. D.C. at 330, 221 F.2d at 885.

Two cases in the Seventh Circuit are also in point on the issue here. *United States* v. *Scales,* 249 F. 2d 368 (7th Cir. 1957) involved a sentence on a narcotics conviction to an enhanced punishment as a second offender under the recidivist provisions of the Boggs Act. Following the conviction the United States Attorney filed an Information in open court setting forth a prior conviction of the defendant on a narcotics violation. As a second offender aggravated penalties were provided for by 21 U.S.C. § 174 (now 26 U.S.C. § 7237(a)). The defendant and his attorney were present in court when the Information was filed but the trial judge addressed no inquiries to the defendant or his attorney and instead immediately proceeded to impose a sentence of seven years' imprisonment which exceeded by two years the maximum punishment provided for a first offense. At no time during the hearing did the defendant or his attorney make any statement relative to the Information or any denial that the defendant was the same person as the one previously convicted. However, following sentencing defendant's counsel requested the court to consider a reduction of sentence on the grounds that defendant was physically handicapped and that there was no evidence he had sold narcotics.

At the time Scales was sentenced the Boggs Act prescribed the sentencing procedure to be followed before the enhanced penalties could be adjudged. Such required the court to be advised by the United States Attorney whether the conviction is the offender's first or a subsequent offense, and in the event it were not a first offense the United States Attorney was required to file an Information setting forth the prior convictions. The statute then specifically required that:

"The offender shall have the opportunity in open court to affirm or deny that he is identical with the person previously convicted. 26 U.S.C. § 7237 (68A State. 860)."

If he denied the identity a trial was required. Following his sentence Scales moved under 28 U.S.C. § 2255 to vacate his sentence on the ground that the above quoted portion of the statute required the court to directly question him on the subject in a manner similar to that on formal arraignment and that since he and his attorney stood mute their silence must be resolved in his favor.

The situation is thus a stronger one than is presented here by Marshall since the statute specifically requires that the defendant have an "opportunity in open court" to refute his alleged identity. There is no similar statute applicable to Marshall's situation. In denying Scales' attack on his sentence, the court's decision stated:

"The court had no obligation to proceed further or more formally unless and until the identity of appellant as the man previously convicted was denied.

"The record also shows that appellant and his counsel were fully aware of what was transpiring in court since counsel immediately asked for a reduction of the sentence *on other grounds.* Appellant had an obligation to inform the court that the allegations of his prior conviction were untrue if he expected to rely upon this for reduction of the sentence at any time. *He had no right to remain silent and later claim that the court should have required him to speak out.*" (Emphasis added). *United States* v. *Scales, supra,* 249 F.2d at 370.

The decision is substantially on all fours with Marshall's case.

In *United States* v. *Kapsalis,* 214 F.2d 677, 685 (7th Cir. 1954), the same court had previously pointed out that the 1951 amendments to the narcotics statutes (the Boggs Act) had simplified the procedure in showing prior convictions of prior offenders by removing the statutory requirements of more formal requirements.

These two cases are also authority for the fact that more formal procedures are not required in the absence of statute.

On this appeal, Marshall contends that the sentence in excess of one year is invalid because the prosecution failed to present any *evidence* that he had a prior felony conviction for robbery.

It is settled law in the District of Columbia that the offense proscribed by D.C. Code § 22-3204 is carrying an unlicensed pistol, and the fact of prior conviction is not an element of the offense, but merely serves to enlarge the penalty and therefore is a matter with which the jury is not concerned. *Jackson* v. *United States, supra.* The existence of the previous conviction in such circumstances is a fact that goes only to punishment. *McDonald* v. *Massachusetts,* 180 U.S. 311 (1901).

Sentencing under such statute to meet the required standard of fairness must be preceded by notice to the defendant of the prior conviction upon which the court may rely in imposing the enlarged sentence and be followed by an opportunity to be heard. Marshall and his counsel had both such notice and opportunity. The notice was contained in the Information duly served on defendant's counsel and the opportunity to be heard was afforded both parties at the time of the allocution immediately prior to sentencing. In the absence of statute, due process with respect to sentencing under this recidivist statute does not demand more. *Compare* sentencing procedures under the Boggs Act, 26 U.S.C. § 7237(c) (2), before and after the 1951 amendments, ch. 666, 65 Stat. 767; *United States* v. *Kapsalis, supra.*

We recognize that the determination of a prior conviction as a basis for an enlarged

penalty is distinct from the determination of guilt of the substantive offense. *United States* v. *Claudy*, 204 F. 2d 624 (3d Cir. 1953); *Moore* v. *Missouri*, 159 U.S. 673 (1895); *McDonald* v. *Massachusetts*, *supra*. This is a proceeding that falls in between the requirements for a full scale criminal trial and a sentencing upon the basis of information contained in a probation report without disclosing any of the information to the one convicted. *See Williams* v. *New York*, 337 U.S. 241 (1949). If, at the time of sentencing under the District of Columbia statute here involved, a convicted defendant denies that he is the same person who committed a prior crime, the Government has the burden of proving such fact. Marshall could have had such proof adduced in his presence if he had denied at any time prior to sentencing that he was the Marshall who had been previously convicted of the robbery offense described in the Information. Furthermore, Marshall and his counsel had an obligation to inform the court when they were before the court for sentencing that the allegations of his prior conviction were denied by him if he expected to rely upon this for reduction of the sentence. They had no right to remain silent, refuse the opportunity afforded them to bring such matter to the court's attention and later claim the court should have required them to speak out. *United States* v. *Scales*, *supra*.

There has never been a denial by either Marshall or his past or present attorney that the Information of Prior Conviction was served prior to sentencing and that they were thus advised of the aggravated sentence that Marshall was facing. Nor was there any intimation by either Ernest M. Marshall or his counsel that the Ernest M. Marshall who was before the court for sentencing was not the Ernest M. Marshall with the two prior convictions described in the Information. Having failed to deny the prior conviction when he and his counsel had the opportunity to do so, the court was entitled to rely upon the Information of Prior Conviction filed with the court and of which appellant had notice by proven service upon his counsel.

For the foregoing reasons it is submitted that the case should be affirmed on the authority of *Kendrick* v. *United States supra; and see United States* v. *Scales*, *supra*, and *United States* v. *Kapsalis*, *supra*. Actually, it seems incredulous that any person would contend that any substantial right of Marshall was infringed at his sentencing when an Information of Prior Conviction had been duly served well in advance of sentencing and was not contested then *or now* by Marshall or his attorney, when Marshall had filed with the court a detailed written statement concerning his conviction and never denied the prior convictions and when both Marshall and his counsel indicated by their remarks at the time of sentencing in open court that they had knowledge of the contents of the probation report which was required to include the prior convictions. To remand a case under such circumstances seems entirely useless.

I am authorized to say that Circuit Judge McGowan concurs in this opinion.

Mr. HRUSKA. Mr. President, there may be some Members of the Senate and, surely, a substantial part of the public who believe that pretrial detention, whatever its merits, is a recent development designed to cope with special crime problems in the District of Columbia.

On two counts, this impression is incorrect. While it is certainly true that the incidence of serious crime in the District has given impetus to recent legislation, pretrial detention is not new, and crime on bail is clearly historic.

From the enactment of the Federal Judiciary Act of 1789, bail has been discretionary in capital cases. Many capital defendants have been detained before trial. One reason for this was that defendants charged with capital offenses had a strong motivation to flee, inasmuch as the alternative to flight could well be death. However, it is also true that capital offenses were generally serious offenses, involving personal injury and violence. Charles Ares, dean of the University of Arizona College of Law, has remarked that:

> No doubt part of the justification for this historic practice [of denying bail to capital defendants] is the fear of further harm to other persons.

In the 1790's, most serious offenses were capital offenses. For example, in addition to murder, capital punishment was imposed for rape, arson, burglary, and robbery in the States of Connecticut, Delaware, Massachusetts, New Hampshire, New York, and Rhole Island. Kidnaping has long been a capital offense. Pretrial detention of persons charged with these offenses is clearly not foreign to American experience. Rape and kidnaping are still capital offenses in many States. Although capital punishment has gradually disappeared, the seriousness of these offenses has not changed.

There is substantial evidence that dangerousness was a frequent consideration in denying bail for capital offenses. Some state constitutions permit the denial of bail for specific offenses regardless of whether they are capital or noncapital. For example, the Constitution of Maine provides in article I, section 10, that:

> No person before conviction shall be bailable for any of the crimes which now are, or have been denominated capital offenses since the adoption of the Constitution, when the proof is evident or the presumption great, whatever the punishment of the crimes may be.

Life imprisonment offenses are not bailable in some States. The Constitution of Rhode Island provides in article I, section 9, that:

> All persons imprisoned ought to be bailed by sufficient surety, unless for offenses punishable by death or by imprisonment for life, when the proof of guilt is evident or the presumption great.

An equivalent provision appears in the model State constitution, in the Constitution of Florida, and in the constitution that was proposed for the State of Oregon. The new Oregon Constitution was rejected by voters on other grounds.

Bail has been discretionary in New York from colonial times. The New York Code of Criminal Procedure provides in section 553 that:

> If the charge be for any offense other than as specified in section five hundred and fifty-two he may be admitted to bail, before conviction, as follows:
>
> 1. As a matter of right, in cases of misdemeanor, violation and traffic infraction;
>
> 2. As a matter of discretion, in all felony cases; the court may revoke bail at any time where such bail is discretionary with the court.

This statute has been upheld on numerous occasions. See *United States ex rel. Covington* v. *Coparo*, 297 F. Supp. 203 (S.D.N.Y. 1969).

The American Law Institute included a provision for discretionary bail in serious felonies in section 70 of its Code of Criminal Procedure—Official Draft, June 15, 1930. The official reporters for the code were Profs. Edwin R. Keedy and William E. Mikell of the University of Pennsylvania Law School. Advisers included Henry W. Stimson of New York, Floyd E. Thompson of Chicago, Prof. Justin Miller of the University of Southern California Law School, and Prof. John B. Waite, of the University of Michigan Law School.

Professor Waite wrote an article in the American Bar Association Journal discussing the bail provisions of the code. Waite, Code of Criminal Procedure: The Problem of Bail, 15 ABA J. 71 (1929). The relevant text appeared as follows:

> JUDICIAL DISCRETION
>
> The first and fundamental problem is whether courts should be allowed any discretion in respect to release on bail and, if any, of what nature and to what extent.
>
> What discretion judges had at common law does not clearly appear. So early as Edward I a statute forbade judges to release on bail persons charged with certain offenses.[1]
>
> On the other hand, the latter part of this statute, the Habeas Corpus Act[2] and possibly the common law seem to have deprived the courts of any power of discretion to refuse release in case of bailable offenses.[3]
>
> However, under the present English law, courts have practically complete discretionary power as to whether or not they will release an offender on bail.[4] "In exercising their discretion with regard to bail the justices have to consider the nature of the offense, the strength of the evidence, the character or behavior of the accused, and the seriousness of the punishment which may be awarded if the accused is found guilty."[5]
>
> In this country the matter of judicial discretion in respect to releasing on bail is covered by constitutional provision in all but a few states.[6] These provisions are affirmative of the right to bail, rather than restrictive of it, and in general provide that accused persons *must* be released on bail in any and every case, unless the offense charged is treason, murder, or other capital offense. Even in such excepted cases the courts can not refuse to release unless the proof of guilt is evident or the presumption great.
>
> In those states not having such constitutional provisions, a varying amount of discretion is left with the courts. Thus, in New York release on bail is a matter of discretion in all but cases of misdemeanor before conviction.
>
> The framers of the Code had excellent precedent, therefore, for either policy. In England and such states as New York, Maryland and Georgia the judges have a large measure of discretion. In other states they have no discretion. Which policy of the law is the better?
>
> "A man was arrested in Detroit on the charge of picking pockets; he secured release on bail and while the first case was pending he was arrested four additional times for picking pockets and secured bail each time."[7] There have been other equally scandalous instances of continued release of men whose freedom was obviously dangerous to the public.[8] But under laws, such as that of Michigan, *compelling* judges to release, regardless of the circumstances, the courts could not refuse. They can not even protect the public by making the amount of bail required so high as to be prohibitive. The law prohibits setting the amount at more than enough reasonably to assure the presence of the accused. If an accused shows no sign of

Footnotes at end of article.

"jumping" previous bail there is no legal excuse for raising the amount. The court must release him a third or a fourth time.

On the other hand, no particular evil appears to have developed in those jurisdictions where courts are permitted to refuse release when circumstances warrant refusal.

The Code is drawn therefore to permit judges a reasonable extent of discretion.

Section 66 prohibits release of anyone charged with a capital offense if the proof is evident or the presumption great. This is simply the accepted rule, though there are differences of phrasing in the various states. "Capital offense," for instance, might properly be changed to "treason or murder" in states where capital punishment does not exist. A notation in the Code itself calls attention to the propriety of certain changes. Where the proof is not evident or the presumption not great the accused "may" be released on bail in the discretion of a judge of the court having jurisdiction of the offense.

As to offenses less than capital, section 70 reads:

"Any person in custody for the commission of an offense not capital [9] shall, before conviction, be entitled as of right to be admitted to bail, except:

"(a) When he is in custody for the commission of murder, treason, arson, robbery, burglary, rape, kidnapping, or any offense against the person likely to result in death committed under such circumstances that if death should result the offense would be murder.

"(b) When he has been previously convicted of any of the offenses enumerated in clause (a), and such conviction has not been reversed.

"(c) When he was, at the time he was taken into custody, at large on bail charged with any of the offenses enumerated in clause (a).

"(d) When he has been previously released on bail for any of the offenses enumerated in clause (a), and there has been a breach of the undertaking.

"In all cases excepted under this section admission to bail shall be a matter of discretion." [10]

It will be observed that even this investiture of the judges with discretion to release on bail in certain cases would not prevent the Detroit situation referred to above, because pocket-picking is not mentioned as one of the crimes excepted from the general rule that release on bail is a matter of right. It would, however, enable the courts to avoid a similar situation in case of any of the crimes mentioned in the exception. The pick-pocket situation would, however, be *partly* remedied by section 89 which declares that, among other things, "if a person applies for admission to bail who within two years last prior to such application has been, to the knowledge of the person taking bail, convicted of a felony, the undertaking shall contain a condition that such person will not commit any felony during the period of his release on bail."

FOOTNOTES

[1] 3 Edw. I, c. 15, 1275. "And forasmuch as sheriffs and others which have taken and kept in prison persons detected of felony, and incontinent have let out by replevin such as were not replevisable, and have kept in prison such as were replevisable, because they would gain of the one party, and grieve the other; and forasmuch as before this time it was not determined which persons were replevisable, and which not—(certain persons are declared not to be replevisable, and others)—shall from henceforth be let out by sufficient surety, whereof the sheriff will be answerable, and that without giving ought of their goods. . . ." But as to the right of certain courts to release on bail for *any* offense, see 4 Blackstone's Commentaries 299.

[6] Such statements as these are made upon the authority of the annotation of the Code, to which readers of this article are referred for specific citation. The annotation contains an admirably complete collocation of constitution and statute references on all phases of this subject.

[7] Sutherland, Criminology, p. 213.

[8] Sec. 11 Jr. of Crim. L., 386, 393.

[9] Section 67 provides that in capital cases where the proof is not evident, etc., the courts "may" release on bail, in their discretion.

[10] An annotation suggests changes in phraseology, appropriate to particular constitutions.

The Code recognizes that even such limited judicial discretion would be unconstitutional in most states and if such constitutions are not changed, offers a substitute, section as follows: "All persons in custody for the commission of an offense not capital shall, before conviction, be entitled, as of right, to be admitted to bail." For citation of the various state constitutions, see the Code, p. 263.

Quite apart from the historic practice of detaining defendants through high money bond, the material cited above demonstrates that proposals to effect pretrial detention are not only widespread but of some vintage.

Moreover, crime on bail has long been a problem. Witness the following paragraph reported in the Journal of the American Institute of Criminal Law and Criminology in 1920:

The case of Frank Rio and his associates is typical. On May 28, 1918, two indictments for larceny were returned against him, his bail fixed at $3,000.00, but on July 2 was reduced to $2,000.00 which he obtained. After being in court 8 times the case was stricken off call on November 5, 1918. Apparently satisfied with this treatment he tried his hand at burglary and on May 7, 1919, was indicted on 3 counts for that. The grand jury having in mind that his former case was not disposed of when he was alleged to have committed the burglaries, went to some length and instructed the State's Attorney to fight any reduction in his bail which was fixed at $25,000.00 on each charge or a total of $75,000.00. Notwithstanding this expressed desire to keep him in custody, the bail was reduced to $10,000.00 in each case and Rio was again free to pursue his profession. On May 28, 1919, he added another indictment to his list—this time for robbery with bail fixed at $5,000.00. This bail he furnished. On July 9, 1919, he was again indicted on one count for burglary and one for larceny with bail fixed at $6,500.00. These cases were running concurrently until he dropped the robbery charge on a verdict of not guilty on October 22, 1919. Thus encouraged he took another chance and on November 14, 1919, was again indicted for burglary and bail fixed at $3,500.00. On March 9, 1920, he was found not guilty of the burglary charge of July 9. The other 7 cases are still awaiting disposition. Had bail been made difficult in the first instance he would not have been free to commit the crimes following and the many continuances granted on motion of his attorney would not have been so desirable had he been living in jail.

In my judgment, the pretrial detention provision in the District of Columbia crime bill is the culmination of many years of study and development. Recent experience has revealed that it is particularly needed in this city at this time.

Mr. JAVITS. Mr. President, I have not addressed myself, except in a very preliminary way, to the District of Columbia crime bill, the conference report of which is before the Senate, because I wished to give myself adequate opportunity to study the bill very carefully as it emerged from the conference. I have now done that.

I have decided to note "no" on the conference report, and I say to the Senate that it is a very close decision and that I am influenced by the following facts.

One, the fact that I do not consider that if we turn down this conference report, that is the end of the matter. I believe that others may controvert it, but it is my profound conviction that within a very short period of time we will get court reorganization, expansion of the bail agency, the public defender system, and certain other administrative and criminal law changes which are, I believe, essential tools in the fight against crime in the District—even if this conference report is rejected. We will find the way to do it.

Two, this is by no means an open and shut case. It is a question of balance as to whether the concern on issues of civil liberties and constitutional law preponderate over the fundamental thrust of a bill designed to deal with a very grave public emergency in the District of Columbia. I have decided the issue on the ground that civil liberties and constitutional rights dictate that my vote should be against it; but I can understand perfectly that the judgment is a qualitative one and is by no means open and shut.

With those statements preliminarily, I should like to submit for the RECORD—and I ask unanimous consent that it be printed in the RECORD—a letter written by the district attorney of Queens County, the second most populous county in New York City, whose name is Thomas J. Mackell, to Senator ERVIN, stating the grounds of his opposition to the preventive detention provisions in the bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DISTRICT ATTORNEY OF
QUEENS COUNTY,
Jamaica, N.Y., July 20, 1970.

Hon. SAM J. ERVIN, Jr.,
Chairman, Subcommittee on Constitutional Rights of U.S. Senate Committee on the Judiciary, Old Senate Office Building, Washington, D.C.

DEAR SENATOR ERVIN: I write this letter in opposition to the Preventive Detention Provision in the pending crime bill for the District of Columbia.

Grounds of my opposition are three-fold.

(1) There is a presumption of innocence for all defendants prior to conviction and this is an essential ingredient of due process of law in the administration of American criminal justice. No one can sanely question the revocation of bail and remand to prison

of any defendant who is arrested for any crime committeed while on bail.

(2) Determination of likelihood of danger to society or self is made to depend on virtually identical criteria as those specified for control necessary to secure court attendance. Thus a defendant who is likely to attend court when required is also a defendant who is not likely to be a danger to society, or himself, under the criteria specified by statute. The converse is also the case: the defendant not likely to attend court when required is also a defendant likely to be a danger to society or himself. The "preventive detention" provision is in effect a repetition, restatement and duplication of the factor of necessary control to secure court attendance. The provision adds nothing but rhetoric to the proposed law of bail in this State.

(3) There are no known standards commanding general acceptability under which it is possible to separate all defendants arrested for felonies (there were 63,566 such defendants in New York City in 1968) into two groups: Those likely to be dangerous to society and those not so likely. Many violent crimes—and particularly murder—are committed by first offenders.

I would suggest three measures to prevent the commission of crime by persons awaiting trial, and at the same time preserve the presumption of innocence prior to conviction.

(a) All cases denied bail while awaiting trial must be disposed of within 60 days, unless a showing of extraordinary circumstances can be made to the court. Such defendants should be permitted release for reasonable periods in the custody of their lawyers for the sole purpose of preparing their defense.

(b) A mandatory additional penalty should be imposed for crimes committed while awaiting trial and released on bail. This would obviate the anticipation of concurrent sentences for such crimes to be served along with the sentence for the original charge. No defendant once arrested and released on bail ought to be permitted to entertain any notion that he has a "free pass" to commit additional crimes prior to disposition of the original charge with no additional measure of punishment in prospect.

(c) A speedy disposition of a criminal case in any State or Federal court is now mandated by the Federal Constitution (*Klopfer* v. *North Carolina*, 386 U.S. 213 (dec. March 13, 1967)).

The major problem in the administration of criminal justice is its non-administration. This happens because of postponement, delay and adjournment, time and again, and still again. The huge investment of community resources; in court, correction, police, probation and prosecution is based upon the faith that subjecting actual offenders to some sort of compulsory treatment will deter would-be offenders. In this manner, prosecution should prevent crime in the long run. The first article of this faith is that there be some relationship in time that is within reason between the arrest of an alleged offender and the disposition of his case. When the arrest-disposition gap becomes an arrest-disposition interval of tiresome months and years, deterrence of potential offenders is nullified. Prevention of crime ceases to be an outcome of prosecution. Crime rates continue to spiral, even though assistant district attorneys appear in courtrooms every day.

It is my experience that cases that are not disposed of within 90 days after arrest are cases that will have unsatisfactory dispositions from the point of view of the People of this State. This is so because over 90 percent of all felony indictments are disposed of by plea of guilty. After three months, a defendant released on bail—even the defendant with a long record captured *in flagrante delicto*—by a curious process of self-hypnosis and suggestion is convinced beyond a reasonable doubt that he is as pure as the driven snow and has never committed the slightest infraction in his entire life. The defendant whose case has aged more than 90 days is not likely to accept a plea of guilty. More delay is occasioned by the necessity of selection of a jury and trial.

The goal of 90 day disposition for all bail cases would go a long way toward preventing post arrest crimes by persons on bail. The current major obstacle to attaining this goal is judicially authorized adjournments.

Very truly yours,

THOMAS J. MACKELL,
District Attorney, Queens County.

Mr. JAVITS. I also ask unanimous consent to have printed in the RECORD a telegram to the same effect from the Committee on Federal Legislation, of the Association of the Bar of the City of New York, by its chairman, Sheldon H. Elsen, also objecting to the bill, especially the preventive detention provisions.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK,
NEW YORK, N.Y.,
July 20, 1970.

Senator JACOB K. JAVITS,
Senate Office Building,
Washington, D.C.:

We strongly urge defeat of D.C. Crime Bill in present form particularly preventive detention provisions and commend your efforts in opposition.

SHELDON H. ELSEN,
Chairman, Committee on Federal Legislation.

Mr. JAVITS. Mr. President, I believe that Senators will be interested in the views of these very informed and very distinguished New York lawyers and a public official, in the case of District Attorney Mackell, on this very important question.

Briefly, the things that trouble me about the bill as we have it in the conference report are, as follows:

PREVENTIVE DETENTION

The House bill provided that a person may be detained prior to trial when a judicial officer determines, after a hearing, by clear and convincing evidence, that no condition or combinations of conditions of release will assure the safety of any other person or the community.

Persons subject to the provisions must either be first, charged with a dangerous crime; second, charged with a crime of violence if the crime was allegedly committed while the person was on bail or other release from another crime of violence or was convicted of such a crime within the last 10 years; third, any offense if threats to jurors or witnesses are involved; or fourth, a narcotics addict charged with a crime of violence.

At the hearing, representation by counsel is afforded and there is a right to testify, present evidence, examine and cross examine witnesses. However, the traditional rules of evidence would not apply and testimony given by the defendant could be used for impeachment purposes in any subsequent proceeding.

Persons detained under the bill's provisions, to the extent possible, are to be given an expedited trial. After the expiration of 60 days, the person must be treated in accordance with the provisions of the Bail Reform Act. In certain cases, this would result in the further detention of an individual.

The conference bill modifies the House bill slightly to try and expedite trials of those detained and to eliminate certain minor crimes from the list of dangerous crimes for which preventive detention is provided. However, the conference proposals are not significantly different from the House bill.

The preventive detention proposals raise serious constitutional questions in the areas of due process and the right to bail in noncapital cases. The issue of the constitutional right to bail under the eighth amendment has not been fully resolved by the Supreme Court, although the Court has recognized the traditional importance of bail.

However, serious fifth amendment questions of due process are raised whatever may be the resolution of the eighth amendment question. The proof required at the detention hearing will not be based on objectively reviewable evidence but rather on evidence which can be assembled quickly and which can be speculative since the rules of evidence do not apply. The finding will be a productive one based on that evidence. Preventive detention should not be based on this type of evidence and finding.

Another drawback to the preventive detention proposals is that the courts will undoubtedly become even more congested, with the additional hearings required and attempts to get 60 day trials for all who are detained. The conferees have called for expedited trials and the addition of 25 prosecutors to the U.S. Attorney's office but if trials were to be dramatically expedited as is clearly necessary preventive detention becomes unnecessary. In fact, the conference bill provides for only 17 new judges for the new superior court when the Senate bill called for 23 new judges.

Furthermore, based on the study commissioned by the Department of Justice, preventive detention is not justified. The study shows that 17 percent of all persons charged with a felony and released before trial are rearrested, but only 7 percent are rearrested for a second felony; and only 5 percent of those charged with a violent or dangerous crime under the new standards of the preventive detention provisions were rearrested for a second violent or dangerous crime. It should also be pointed out that these figures deal only with arrests and not convictions.

A final drawback to the preventive detention proposals was pointed out by Charles V. Bennett, former Director of the U.S. Bureau of Prisons who stated that confining people to prisons and jails would only add to the crime problem because of the deplorable conditions that exist, affecting the future behavior of all who are committed.

One possible alternative would be some type of civil commitment with the use of a petit jury. This type of system is used in New York for commitment of the mentally ill, and perhaps it might

dispense with the grave problems of due process and of the eighth amendment with respect to the right to bail, which trouble so many of us in connection with this particular type of relief—preventive detention. However, the New York commitment law has recently been challenged and its legality is in question.

NO KNOCK SEARCHES

The conference bill contains a no-knock provision which authorizes breaking and and entering into premises by law enforcement officers or persons aiding those officers without any prior notice to the occupant with a warrant, or without a warrant if the officer or other person has probable cause to believe that first, the notice would be a useless gesture, second, the notice would likely result in the evidence being destroyed or concealed, or third, the notice would likely endanger the life of the officer or would likely enable the party to escape.

The claim has been made that the case of *Ker* v. *California*, 374 U.S. 23 (1963) justifies the provisions contained in the bill. That case was a 5 to 4 decision which upheld the authority of California police to enter an apartment with a key and without knocking for the purpose of making an arrest. The California statute called for announcement and knocking by police officers but the California courts held that the police conduct came within judicial exceptions which had been superimposed upon the statute.

The majority opinion in the Supreme Court held that the officer's method of entry to make an arrest, which was sanctioned by California case law, was not unreasonable under the fourth and 14th amendments. The opinion was based on the common law exceptions to the notice requirement where exigent circumstances are present, which exception was recognized by the California courts.

The dissent examined the deep historical basis for the rule protecting individuals against unannounced police entries. As early as *Semayne's Case*, 77 Eng. Rep. 194, in 1603 it was recognized that the sheriff should signify his presence and request that the door be opened before breaking in. The courts in the United States have also recognized the fact that a police officer must notify the occupants of a dwelling before he can break down the door. See, for example, *Accarino* v. *U.S.*, 179 F. 2d 456 (D.C. Cir. 1949).

The dissent did recognize that there could be certain exceptions where a prior warning would not be necessary and these were: First, where the persons inside already know of the officers authority and purpose; second, where the officers are justified in the belief that persons inside are in imminent danger of harm; or, third, where persons within are made aware of the presence of the officers and are engaged in activity which justifies the belief that there is an attempt to escape or destroy evidence. The dissent goes on to state that the above exceptions should be confined to those situations where there is a showing that those within were or had been made aware of the presence of the police officers.

I do not believe the Ker case, which was decided by a narrow 5-to-4 margin should serve as a precedent for new wide authority to enter homes without any advance notice. In the first place, the case concerned a situation where an arrest was to be made after observation over a period of time. There was also a search incident to the arrest. Second, the Supreme Court indicated that fourth amendment questions should be decided on a case-by-case basis as the situation arose, which argues against drawing loose rules for the police to follow when breaking into homes to make searches or arrests. Finally, the exceptions to the general rule of announcement before breaking ought to be narrowly construed and should not be codified in language such as "is likely to" which will encourage the police to break in many more cases than at the present time.

The "useless gesture" provision appearing in the Conference report is based on the case of *Miller* v. *U.S.*, 357 U.S. 301 (1958) which held that an entry without a previous announcement was in violation of the law of the District of Columbia and declared the arrest unlawful. The Supreme Court did say that in certain cases, the facts known to the officers would justify them in being virtually certain that the person within knew their purpose so that an announcement would be a useless gesture. However, the officers in the Miller case were found not to have met the test.

It seems apparent that the use of the words "virtually certain" by the Supreme Court meant to restrict the scope of the "useless gesture" doctrine. The conference bill dispenses with an announcement if the officer had probable cause to believe that it would be a "useless gesture" but says nothing about virtual certainty. This seems to go beyond the doctrine referred to in the Miller case.

In view of the long tradition of safety and privacy in one's home from unannounced break-ins on the part of law enforcement officers, it seems ill advised to codify rules for not announcing the presence of police officers which will inevitably be construed quite loosely by the officers on the scene. I believe the better solution would be for the law to remain as it is with those exceptions which have been recognized at law.

WIRETAPPING

The conference bill contains provisions to allow wiretapping and other interception of communication after permission is obtained from a judge. Judicial authority can be sought for any number of offenses such as arson, blackmail, burglary, destruction of property in excess of $200, obstruction of justice, receiving stolen property in excess of $100 and other specified offenses. In "emergency situations," or when an authorization to wiretap is not broad enough, the tap can be conducted by the officer, on his own, with approval sought after the fact. While some protections have been added to the conference bill to protect doctors, lawyers, and clergymen, the provisions would expand considerably the present wiretap authority which has heretofore been used primarily in national security and in organized crime cases. Under the bill, wiretaps can be used in a variety of offenses which are not generally planned in advance and do not lend themselves to detection by the use of such taps. I believe that this is an unwarranted invasion of privacy which will not materially aid in reducing crime.

MANDATORY SENTENCES

The conference bill provides that upon a first conviction of a crime of violence while armed with a pistol or other firearm or imitation thereof, the offender may be sentenced to a term up to life imprisonment. After the first conviction, the bill provides that the offender, upon a subsequent conviction shall be sentenced to a minimum of 5 years and a maximum of three times the minimum sentence normally imposed for the offense, up to life imprisonment. In cases where the maximum is life imprisonment, the minimum sentence may not exceed 15 years.

I believe that it is most unwise to remove discretion in sentencing from judges and to preclude consideration of the individual's background in sentencing. There is no evidence that longer sentences deter crime. In fact, the evidence seems to be that prison inevitably keeps individuals locked into a life of crime. For these reasons the mandatory sentence provisions are most unwise and should not have been in the bill.

JUVENILE PROCEEDINGS

The conference bill proposes that any child 16 or over who is charged with murder, forcible rape, armed robbery, first degree burglary or assault with intent to commit one of these offenses be treated as adult and taken out of the jurisdiction of the juvenile court. There is no reference made to the past record of the child or to the strength of the evidence against the child. The bill also provides for a waiver to criminal court of juveniles 15 years or older who are alleged to have committed what would be a felony if committed by an adult. In order to avoid waiver, it must be shown that there are reasonable prospects for rehabilitation and this places a heavy burden of proof on the child, even though the bill purports to do otherwise. Once waived to the criminal court, the juvennile court loses jurisdiction over the child for all future delinquent acts of any kind unless the case results in no determination of guilt in the criminal court.

In light of the Supreme Court decision in the case of in re Winship, the standard of proof to determine guilt in juvenile cases was changed to require proof beyond a reasonable doubt. However, in hearings to determine whether a child is in need of supervision, the standard of proof is reduced to a preponderance of the evidence. I believe that the same standards of proof should be used in all proceedings relating to the disposition of a juvenile case.

The juvenile provisions of the conference bill also are unsatisfactory in the areas of eliminating the right to demand a jury trial, making unclear the time when the right to counsel attaches, elimination of the provision requiring dismissal of petition when time limitations as to the hearing are not met and providing for preventive detention of juveniles.

In short, the provisions relating to juvenile offenders attempt to treat these offenders more harshly and tend to deemphasize the rehabilitative aspects upon which the juvenile court system is based. I do not believe that crime will be reduced by treating young children as adults and subjecting them to adult prisons. Therefore, the above provisions in the bill relating to juvenile offenders should have been eliminated.

MENTAL COMMITMENT

The conference bill provides that a defendant who is acquitted by reason of insanity shall be automatically committed to a mental hospital. Within 50 days of his confinement, a hearing will be held to determine whether he is to be released from custody. The person confined shall have the burden of proof and shall only be released if the court finds by a preponderance of the evidence that the person confined is entitled to be released from custody.

This provision places a heavy burden on any defendant who raises the question of his sanity at the time of the trial. The proper procedure would be to hold a separate hearing to determine whether a defendant acquitted by reason of insanity should then be committed to a mental hospital. It is quite unfair to require the defendant to prove he is sane in order to avoid commitment to a mental hospital for an undetermined length of time.

IMPEACHMENT OF WITNESSES

The conference bill overturns the rule in the District of Columbia established in the case of *Luck* v. *U.S.* 348 F. 2d, 763 (D.C. Cir. 1966) which allowed the trial judge discretion in admitting evidence of past conviction for impeachment purposes. This present rule allows the trial judge to decide in a case where the defendant takes the stand whether the truth could best be served by allowing the defendant to testify and limiting impeachment by prior conviction or whether the risk of prejudice is so great as to require the exclusion of the convictions. The conference bill would require that the judge admit all felony convictions for impeachment purposes and all misdemeanor convictions reflecting on honesty and veracity, if they are offered for impeachment purposes.

I would not overrule the doctrine of the Luck case which merely gives the trial judge discretion.

COMMUNICATIONS WITH BAIL AGENCY

The conference bill contains a provision which permits information received by the bail agency to be used for impeachment purposes, in perjury proceedings and in trials for offenses committed during the period of pretrial release. This provision would, it seems to me, undermine the effectiveness of the bail agency since defendants would be reluctant to say anything that conceivably could be used against them. The value of this type of information appears small since much other information is usually available for the purpose of impeachment. Thus, this provision probably will do a great deal of harm to the bail agency with a small benefit to be gained in return.

CONCLUSION

I have listed some of the provisions of the conference bill which I find objectionable and generally, while the Senate conferees have worked long and diligently to remove many of the undesirable features of the House bill, the conference substitute still creates too many problems to be acceptable on constitutional grounds. I firmly believe that repressive measures are not the solution to the District of Columbia crime problem but that what is needed are more police and greater use of the many weapons which are already available to the courts, the police, and law enforcement agencies and court reorganization and criminal law changes which can be enacted easily.

Finally, it should be pointed out that the black community of the District, which represents over 70 percent of the population, greatly fears, and distrusts many provisions of the conference bill on the basis of their long experience with the police. The fact that many of the provisions in the bill will be used only in the District at this time tends to them to confirm their suspicions. Police-community relations play a vital role in law enforcement and this bill may tend greatly to undermine whatever good relations may exist at the present time.

For all the reasons I have stated, I believe the proper course is to reject the conference report and to pass S. 4080 and S. 4081 which have also been introduced as amendments Nos. 776 and 777 to H.R. 914. S. 4080 contains the provisions relating to court reorganization, the District of Columbia Bail Agency and the interstate compact on juveniles. S. 4081 deals with criminal law changes and eliminates preventive detention, no-knock searches, wiretapping, and mandatory sentences. It also makes the desired changes in the juvenile provisions and other criminal provisions. The measures will allow the District of Columbia to have an effective crime bill without unduly jeopardizing individual rights. There is good reason to believe that these bills could be expedited through the Congress so that the District would have the benefit of the enlightened provisions contained therein.

ORDER FOR ADJOURNMENT TO 11 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 11 o'clock tomorrow morning.

The PRESIDING OFFICER (Mr. FANNIN). Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the pending business be temporarily laid aside.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17619) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes; that the House receded from its disagreement to the amendments of the Senate numbered 6, 7, 39, 40, 57, 62, and 63 to the bill, and concurred therein; and that the House receded from its disagreement to the amendments of the Senate numbered 3, 5, 14, 25, 26, 33, 34, 38, 42, 53, 56, and 60 to the bill, and concurred therein, severally with an amendment, in which it requested the concurrence of the Senate.

INTERIOR DEPARTMENT APPROPRIATIONS BILL, 1971—CONFERENCE REPORT

Mr. BIBLE. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17619) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1971, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER (Mr. SCHWEIKER). The report will be read for the information of the Senate.

The assistant legislative clerk read the report.

(For conference report, see House proceedings of July 21, 1970, pages 25232–25235, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER (Mr. SCHWEIKER). Is there objection to the present consideration of the conference report?

There being no objection, the Senate proceeded to consider the report.

Mr. BIBLE. Mr. President, as this bill passed the Senate it provided for appropriations totaling $2,028,397,500 for the agencies and bureaus of the Department of the Interior, exclusive of the Federal Water Quality Administration, the Bureau of Reclamation and the power marketing agencies, and various related agencies, including the U.S. Forest Service and the Division of Indian Health.

The conference committee bill provides appropriations totaling $2,028,524,700 for the programs and activities of these agencies. This total is under the budget estimates of $2,034,871,600 by $6,346,900; over the House bill of $1,-

801,226,700 by $227,298,000; and over the Senate bill of $2,028,397,500 by $127,200. The bill as passed by the Senate was greater than the House bill by $227,170,800. However, the Senate considered budget estimates amounting to $229,267,000 which were not considered by the House. If these estimates are disregarded, the bill as it passed the Senate was $2,096,200 under the House bill.

I ask unanimous consent to have included in the RECORD, at the conclusion of my remaks, a tabulation setting out the appropriation for fiscal year 1970, the fiscal year 1971 budget estimate, the House allowance, the Senate allowance, and the conference allowance for each appropriation in the bill.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

(See exhibit 1.)

Mr. BIBLE. Mr. President, the major changes from the Senate bill were an increase of $521,500 for the Bureau of Indian Affairs; a reduction of $100,000 in the amount allowed for the Bureau of Outdoor Recreation; an increase of $1,150,000 for the Bureau of Mines; an increase of $660,000 for the Office of Coal Research; an increase of $1,621,000 for the Bureau of Sport Fisheries and Wildlife; a reduction of $1,240,000 for the National Park Service; an increase of $1,576,700 for the Forest Service; a reduction of $1,245,000 for Indian Health Services; and a decrease of $2,000,000 for the National Foundation on the Arts and the Humanities. Even with this last reduction, the amount for the National Foundation is very nearly twice as large as the appropriation for last year.

When the Interior Department appropriation bill was before the Senate the matter on which most time was spent was Indian education and health. A total of $5,339,500 was added to the committee's recommendation by the Senate. The House agreed to $3,226,000, or a bit more than 62 percent of that amount. The increase agreed to in conference is primarily for Indian health, especially funding additional personnel and hospital supplies. The increase in the Indian mental program and one-half of the Senate increase for sanitation facilities was also approved.

The appropriation approved for education and welfare services is $24,670,000 over the amount for fiscal year 1970. The amount for Indian health is $9,756,000 greater than the appropriation for last year.

I do think that the position of the Senate on these items was well received and that the Senate conferees were quite successful in maintaining the position of the Senate.

Mr. President, the conference, as has been my good fortune to witness it, was an amicable one. Each side was interested in agreeing on a good bill that would enhance the development of the human and natural resources of our country and not simply in insisting on the allowances of the respective Houses. I appreciate the friendliness of the House conferees, particularly their chairman who was most cooperative.

I pay special tribute to my distinguished colleagues on the other side of the aisle, both the Senator from North Dakota (Mr. YOUNG) and the Senator from Delaware (Mr. BOGGS), who were extremely helpful throughout the course of this particular conference. In addition, I pay tribute to the staff members on both sides of the aisle.

I move that the conference report be approved.

[9] S. Doc. 91-68, May 11, 1970.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. BIBLE. I am delighted to yield to the distinguished Senator from Montana.

Mr. MANSFIELD. Mr. President, when this bill passed the Senate, it included $600,000 for magnetohydrodynamics coal research. In addition, there was $400,000 for this purpose in the Bureau of Mines. Will the distinguished chairman advise me whether this amount was approved by the conference?

Mr. BIBLE. Both items were held in conference.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. BIBLE. I yield.

Mr. MANSFIELD. Mr. President, as I understand it, this will permit appropriate executive agencies to initiate this research in the immediate future, even in advance of the final report of the Electric Research Council task force which is mapping out the long-term MHD program. Is this correct?

Mr. BIBLE. It is my understanding that it is correct.

Mr. MANSFIELD. I have one more question. As I mentioned previously, I think that it is very important that this program be conducted so that funds are used in a concentrated fashion aimed at a pilot plant to demonstrate the feasibility of this process of generating electricity. I would hope the distinguished chairman would agree with me.

Mr. BIBLE. I certainly do. We will follow it closely. I do agree with what the Senator said.

Mr. MANSFIELD. I thank the distinguished Senator.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point an excerpt from the RECORD of July 1, 1970, which reflects a colloquy between the distinguished Senator from Nevada (Mr. BIBLE) and me.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Mr. MANSFIELD. Mr. President, the Interior appropriations bill is traditionally one of the more important money bills for Montana.

I am very pleased that this appropriation for fiscal 1971 includes $600,000 for magnetohydrodynamics coal research and development in the Office of Coal Research. I am also informed there is $400,000 for this purpose in the Bureau of Mines. While my colleague, Senator METCALF, and I had hoped that amount would be larger, we recognize the stringent budget limitations under which we are now operating. I know you will agree that this program, with its promise of coal utilization, lower-cost electricity, and reduction in pollution, deserves larger support as it becomes possible. And I hope you agree that it is very important that this work be begun as rapidly as possible, even in advance of the final report of the Electric Research Council task force which is mapping out the long-term MHD program. The fiscal 1971 appropriation can be put to work right away to begin this important project, and when the task force reports, the long-term program can take up from there.

And I hope you agree, Mr. President, that it is very important that this program be

conducted so that the funds are used in a concentrated fashion aimed at a pilot plant to demonstrate the feasibility of this process of generating electricity. I think it is appropriate for the Government to take the lead in this vital program.

Mr. BIBLE. Mr. President, I agree with the distinguished majority leader. We were very happy to add the item. I think it is a very worthwhile amendment.

Mr. MANSFIELD. I thank the distinguished Senator from Nevada.

Mr. BIBLE. Mr. President, I yield to the Senator from North Dakota.

Mr. YOUNG of North Dakota. Mr. President, of the several regular major appropriation bills that have passed the Senate thus far, this is the only one that is under the budget and it probably will be one of the few to pass the Senate this year under the budget.

I believe this is due to the very fine work of the distinguished chairman of the committee, Mr. BIBLE, the distinguished ranking minority member, Mr. BOGGS, and Mr. Paul Eaton, one of the ablest staff members I know; Mr. Edmund King, the minority staff member too has been very helpful through all our consideration of this bill. I also want to commend the chairman of the House committee, Mrs. JULIA BUTLER HANSEN, Representative BEN REIFEL, the ranking minority member and their very able staff.

Mr. President, this committee worked long and hard on this bill and dealt fairly with all the interests. In doing so they still kept the bill under the budget which is a real accomplishment.

I commend the distinguished Senator from Nevada.

Mr. BIBLE. I thank the distinguished Senator. In all these bills that move forward in the Committee on Appropriations we have splendid relationships with our counterparts on the other side of the aisle and also our staff members, Mr. Paul Eaton on our side, and Mr. Ed King on the other side.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. BIBLE. I yield.

Mr. MANSFIELD. Mr. President, I wish to aline myself with what the distinguished senior Senator from North Dakota, the ranking member of the Committee on Appropriations, has just said, with one exception. He points out this is the first appropriation bill reported showing a figure below that which was requested by the administration. There will be other bills with reference to which that will be true. And, of course, our work on last year's requests netted the Congress $1.4 billion in savings on items that were requested for this fiscal year.

Beginning Thursday next we will take up the military procurement bill. The distinguished Senator from Mississippi (Mr. STENNIS), the chairman of the committee handling that bill, informs me that that measure authorizes a total that will be $1.3 billion below the budget sum requested by the administration.

May I point out again, just for emphasis, that Congress last year reduced not the Johnson budget request but the Nixon budget request by $6.4 billion—Republicans and Democrats alike—and to say it again—we made allowance for another $1.4 billion cut in requests covering this fiscal year.

I anticipate that the total cuts this year will equal at least those achieved last year by Congress. I must say I am very proud of the part the Senate has played in bringing about these reductions and on this score I do not look and have never looked critically upon this Congress or the preceding 10 Congresses covering the last 20 years. In each of these Congresses, major reductions were taken from administration annual budget requests no matter who happened to be in the White House. So instead of finding fault and pointing a finger at a so-called spendthrift Congress, I wish each Member would stand to commend and congratulate the Senate and the Congress for the diligence and scrutiny exhibited when faced with the budget not only of this President but of every President in the past 20 years. Traditionally, it is a fine record. This Congress will continue and uphold that tradition.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. BIBLE. I yield.

Mr. HOLLAND. Mr. President, first, I thank the distinguished Senator for the able handling he has given this bill in company with the ranking minority Member, the Senator from Delaware (Mr. BOGGS) and particularly to congratulate them on the fact that except for the District of Columbia bill, this will be the first annual appropriation of the session to go to the White House. I think the Senator is entitled to congratulations on that point, aside from the fact that it is a conservative bill in amount and a constructive bill in the things it has accomplished.

I wish to thank the Senator particularly for insisting upon the inclusion of the budget item of $1.5 million for the purchase of lands which I believe will complete the "Ding" Darling Wildlife Refuge on Sanibel Island in Florida. As the Senator knows, I have a little personal interest in that because in a former position, as an executive of the State of Florida, I had the privilege of helping to see that some of the State lands which were badly needed to initiate that project were made available and are still almost the heart of that project.

I want to say that not only does this project bear a distinguished conservationist's name but it happens to be so peculiarly located—on salt water, brackish water, and fresh water, with various types of vegetation, on migration routes, and adjoining a beach which is said to be the best shelling beach on the North American Continent by reason of the peculiar shape of the island and the prevailing winds and the offshore shallows and bars and shallow water. I think this will be one of the outstanding, but small, wildlife refuges in our Nation.

I want the record to show that I think the Senator from Nevada and his distinguished committee are entitled to a large amount of the credit for completing and making available to the American public and to the world this very fine refuge, the "Ding" Darling Wildlife Refuge on Sanibel Island, Fla.

I thank my colleague.

Mr. BIBLE. I appreciate the sentiments of my distinguished colleague from Florida. I think the amount of $1.5 million was completely justified. The House conferees obviously thought the same. That is why the amount is preserved in the bill which we are about to send to the White House.

Mr. BOGGS. Mr. President, will the Senator yield?

Mr. BIBLE. I yield.

Mr. BOGGS. I just want to join my colleague the Senator from North Dakota (Mr. YOUNG) in expressing my appreciation to the distinguished chairman of the subcommittee, the Senator from Nevada (Mr. BIBLE), for the outstanding job he has done as chairman of the subcommittee.

It has been a privilege to serve on the subcommittee with him. He certainly has handled the whole matter and all the hearings and the conference in a very businesslike and expeditious way. It has been a great personal pleasure and privilege to serve with him on the committee. I also want to join in the commendation to the staff, Mr. Paul Eaton and Mr. Edmund King, for their kind and always helpful assistance, no matter what the subject was.

I think it is a good bill. The sentiments about it have been well expressed. I am happy we are bringing it to the point where the conference report can be accepted and forwarded to the White House.

Mr. BIBLE. I appreciate the sentiments expressed by the Senator from Delaware. He has been a most helpful ally. This area is completely nonpartisan, and we always operate in that manner.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. BIBLE. I yield.

Mr. BYRD of West Virginia. Mr. President, I want to associate myself with the remarks made by Senators who have complimented the able chairman of the Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies. He is a very diligent, able, and effective chairman. He conducts a very pleasant conference. Those of us who have served as conferees so many times know that conferences can be not only boring but also distasteful and enervating, and we dread them; but, to the contrary, the conference on yesterday was one of the most pleasurable conferences I have ever attended. It lasted a little over an hour. The able chairman of the conference on our side and the able chairman of the conferees on the House side, Mrs. JULIA HANSEN, are both very knowledgeable and congenial, and, as a result, on items of disagreement, they and all conferees worked together well. They and the other conferees tried to be considerate and understanding. So it was an agreeable and enjoyable conference, with everyone working together in a spirit of cooperation and harmony.

The able Senator from Nevada has served his State and the Nation well.

I join in the compliments also to the staff, and particularly to Mr. Paul Eaton, who has been most helpful to all of us.

I thank the Chairman for yielding.

Mr. BIBLE. I thank the Senator from West Virginia.

I, too, want to emphasize, as I did in my opening statement, the very fine, cooperative spirit, particularly of the marvelous and capable and competent Congresswoman from Washington, JULIA BUTLER HANSEN. It was a pleasure to work on the conference with her and other members of the conference. It is a kind of pleasant conference to work on. We all come out feeling better, rather than being angry at each other. I think that is a rewarding experience, particularly in these days.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Nevada that the conference report be agreed to.

The motion was agreed to.

The PRESIDING OFFICER. The clerk will now state the amendments in disagreement.

The assistant legislative clerk read the amendments in disagreement, as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 3 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$217,615,000".

Resolved, That the House recede in its disagreement to the amendment of the Senate numbered 5 to the aforesaid bill, and concur therein with an amendment as follows: In lieu of the sum proposed by said amendment, insert "$19,885,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 14 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$96,600,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 25 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$46,422,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 26 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$17,160,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 33 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$56,840,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 34 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$4,983,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 38 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$57,990,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 42 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$16,259,000".

Resolved, That the House recede from its disagreement to the amendment of the Senater numbered 53 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the first sum proposed by said amendment, insert "$15,467,700".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 56 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$891,000".

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 60 to the aforesaid bill, and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$34,702,000".

Mr. BIBLE. Mr. President, I move that the Senate concur in the amendments of the House to the amendments of the Senate, as stated, en bloc.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Nevada.

The motion was agreed to.

Mr. BIBLE. Mr. President, I yield the floor.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. LONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

LIMITATIONS ON SULFUR IMPORTS

Mr. LONG. Mr. President, on July 10, 1970, I introduced a bill (S. 4075) to provide for limitations on the importation of sulfur, which was referred to the Committee on Finance. Since that time, the junior Senator from Texas (Mr. TOWER) has expressed his desire to be a cosponsor of that bill. I, therefore, ask unanimous consent that the name of the Senator from Texas be added as a cosponsor of S. 4075.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, it is so ordered.

Mr. LONG. On June 17, I called the attention of the Senate to the critical situation in which the U.S. sulfur industry has been put, with loss of sales, mine shutdowns, unemployment, and the virtual cessation of exploration for new sulfur reserves. The legislation I have introduced is based upon clear and compelling evidence that, unless corrective steps are taken, events are leading toward the closing of other U.S. sulfur mines and the drying up of the domestic sources of sulfur upon which the Nation now relies.

Mr. President, before discussing the way in which my bill proposes to alleviate this critical situation, let me point out how important sulfur is to our economy. It is a vital raw material for all segments of industry and agriculture. In elemental form or as sulfuric acid, it enters into the production or processing of fertilizers, chemicals, titanium and other pigments, pulp and paper, rayon and film, iron and steel, dyestuffs, vulcanized rubbers, insecticides, fungicides, and many other products. Our country consumes annually more than 100 pounds of sulfur for each man, woman, and child. We use twice as much sulfur as aluminum, five times as much as copper, eight times as much as lead or zinc, and 70 times as much as nickel.

Although vital to our economy, sulfur represents a minute part of the cost of most of the final products it helps to make. For example, a $1 per-ton reduction in the price of sulfur would reduce the cost of a ton of newsprint by only 2 cents, the cost of a ton of galvanized steel by less than a cent, the cost of four passenger tires by only a half cent and the cost of a gallon of exterior paint by only one-tenth of a cent. This same $1 per-ton reduction in the price of sulfur would reduce the price of diammonium phosphate, a popular fertilizer which retails for $80 to $85 per ton, by only 39 cents.

Consequently, changes in sulfur prices do not affect the level of sulfur consumption. Nor do they affect the prices of the end products paid by the consumer. He neither gains nor loses from reductions or increases in sulfur prices. As a matter of fact, although sulfur prices have been declining, fertilizer producers recently issued new price lists increasing the prices of fertilizers.

However, fluctuations in the price of sulfur do have a demonstrable effect on sulfur supply. Historically, higher prices have resulted in stepped-up exploration efforts and the development of new domestic sources. Lower prices, conversely, have retarded exploration and development, and in time have caused shortages.

For a great many years, our domestic sulfur industry has taken good care of the requirements for sulfur of U.S. industry and agriculture. In World War II sulfur was one of the very few products that never had to be rationed or allocated. Our domestic mines supplied U.S. needs in full—and also a considerable part of the needs of our allies. In the Korean war, our domestic sulfur industry again supplied a considerable part of the needs of our allies, although it was necessary to allocate sulfur here at home in order to do so.

U.S. sulfur has long competed successfully against the sulfur mined in foreign countries and has done so without the help of tariffs, quotas or other government support. Now, however, it is facing a new and unfair kind of competition—competition that has nothing to do with efficiency of operation, productivity of workers, wage rates or the other elements generally involved in foreign competition. This competition is that created by the rapidly increasing production of large quantities of sulfur derived as a byproduct from sour natural gas in Canada and being forced into United States and other markets. It is this pressure of Canadian sulfur that is creating chaos in U.S. sulfur markets and providing the U.S. sulfur industry with the most serious threat of its three-quarter century life.

Because the Canadian sulfur must be removed from the natural gas to make the gas salable, the amount produced is dictated not by the demand for sulfur but by the demand for gas. Although sulfur

recovery from sour gas is not new, never before has it occurred as a byproduct in such volume or has it been forced into markets at such diminishing prices.

From the start of 1968, the first year of the current sulfur oversupply, the daily production rate of Canadian recovered sulfur has increased by nearly 75 percent. Canadian production has tripled in the last 6 years and Canada has surpassed the United States as the world's largest exporter of sulfur.

Figures provided by the Department of Commerce show imports of Canadian sulfur in 1969 of 929,000 tons as compared to 655,000 tons in 1965. Production from the Western Canadian oil and gas fields is expected to increase from 3,700,000 tons in 1969 to 4,300,000 tons in 1970. At the present rate, Canadian shipments of sulfur into the United States this year will exceed one million tons.

The large increase in the production of Canadian sulfur, virtually all of which is produced in the province of Alberta, has had an impact on sulfur prices far out of proportion to the quantity involved. Canadian producers and their brokers—in an effort to sell ever-increasing amounts of sulfur in markets which are already fully supplied—have steadily cut prices. According to the monthly reports of the Alberta Oil and Gas Conservation Board, the average net price f.o.b. plant for sulfur produced in Alberta has declined from $33.73 per ton—Canadian dollars—in January of last year to $9.33 per ton in March of this year This is a drop of nearly 75 percent in only 14 months.

The record of what has happened to sulfur prices in the U.S. Midwest market illustrates the effect of this price cutting. According to data provided to me by a U.S. producer, there have been 10 successive price reductions—all instigated by Canadian producers—in this market since June 1968. U.S. sulfur producers, in order to hold what business they could, have had to meet these insistently lower prices of Canadian sulfur.

I understand that the price cutting is continuing and, with the anticipated increase in production of Canadian sulfur, the effects can be calamitous in U.S. sulfur markets.

Already, six sulfur mines in Louisiana and Texas have shut down, with a loss of productive capacity of a million and a quarter tons a year. If the plummeting price situation could be corrected and demand improved, three of these mines might be reactivated. In all probability, the others will never reopen, and we will permanently lose the reserves of sulfur in the ground at those locations. In addition, there are believed to be at least six other U.S. sulfur mines which are operating marginally at existing price levels and which may be required to shut down. Most of the mines still operating have had to cut back. More than 1,000 jobs have already been lost in the U.S. sulfur industry and the jobs of thousands of other sulfur mineworkers are in jeopardy.

In addition, our previously favorable balance-of-payments situation with respect to sulfur has been reversed. The United States in 1969 changed from a net exporting nation to a net importer of sulfur.

Even more important, in the long view, is the curtailment of exploration for new reserves of sulfur in the United States. This curtailment is seriously endangering the national interest with respect to future supplies of a vital raw material. The U.S. Government, which does not stockpile sulfur but depends upon domestic producers' production and inventories, has long recognized the essential nature of sulfur to the national defense and economic well-being.

Mr. President, it seems to me that what we have here is an important domestic industry being threatened with being put out of business by the unfair competition of a foreign byproduct being offered at extremely low prices without regard to production cost or market demand. This domestic sulfur mining industry provides employment and tax revenue to my State, Louisiana, and also to Texas. There is the possibility that—under proper economic conditions—sulfur deposits may be found and developed in other States. New Mexico and Mississippi for example. In all, 25 States produce sulfur from one source or another. The industry, moreover, has nationwide significance for another reason—the paramount importance to U.S. industry and agriculture of having a large and dependable source of sulfur production within our borders. We must not let this industry be destroyed by the caprice of producers whose main concern is not sulfur but rather the products of which sulfur is a minor sideline.

I have attempted to deal with this critical problem by the introduction of S. 4075 to provide for limitations on the importation of sulfur. The limitation would be accomplished by either one of two means: First, quantitative limits on imports based on price levels and allowing for growth in domestic consumption or second, international arrangements or agreements under Presidential action.

Mr. President, I ask unanimous consent that the text of the bill (S. 4075) be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 4075

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SEC. 101. The Congress finds that increasing imports of sulfur into the already fully supplied United States markets have caused grave injury to the domestic sulfur industry and may jeopardize its very existence if permitted to continue unchecked. Such imports have caused mine closings, resulting in unemployment to large numbers of workers. It has also brought to a virtual halt exploration for, and development of, new sulfur reserves. Several sulfur mines are now operating on a marginal basis, may be required to be closed. Because sulfur is an essential item, vital to the well-being of the United States, an immediate remedy for the intolerable conditions prevailing in the sulfur industry must be provided.

SEC. 102. It is the policy and purpose of this Act to provide for the regulation of commerce in sulfur among the several States and with foreign nations so as to foster the maintenance and expansion of an economically strong sulfur industry in the United States and to avoid undue disruption of the markets for sulfur in the United States. This regulation shall be accomplished by the imposition of quantitative limitations on imports of sulfur in accordance with the provisions of section 103 of this Act, or by agreement with other governments or instrumentalities providing separately for limiting imports of sulfur from such nations or instrumentalities into the United States in accordance with the provisions of section 104 of this Act.

SEC. 103. Except as provided in section 104:

(a) The total quantity of sulfur originating in any country which may be entered, or withdrawn from warehouse, for consumption during the calendar year beginning January 1, 1971, shall be limited to the average annual quantity of sulfur originating in such country which was entered, or withdrawn from warehouse, for consumption during the three calendar years 1965–1967.

(b) Beginning with the calendar year 1972, the total quantity of sulfur originating in any country which may be entered, or withdrawn from warehouse, for consumption during that calendar year and during each succeeding calendar year shall be increased or decreased in amounts proportionate to increases or decreases in domestic consumption of sulfur, as determined in accordance with this subsection. Increases or decreases in domestic consumption of sulfur shall be determined by comparing the domestic consumption of sulfur during the preceding calendar year with the average domestic consumption thereof during the two calendar years immediately preceding such calendar year.

(c) All determinations required by this section shall be made by the Secretary of Commerce and shall be published in the Federal Register not later than December 31 of the year preceding that for which a limitation on sulfur imports is established Determinations of consumption for a then current year may represent the Secretary's best estimate.

SEC. 104. The President is authorized to enter into international arrangements or agreements with foreign governments or instrumentalities separately regulating the quantities of all sulfur originating in such nations or instrumentalities which may be entered, or withdrawn from warehouse, for consumption. The provisions of each such arrangement or agreement entered into hereunder shall substantially carry out and implement the declared purposes and findings of this Act and assure the avoidance of undue disruption of the markets for sulfur in the United States. The President shall make such arrangements or agreements effective by proclamation, and is authorized to issue regulations necessary to carry out the terms thereof. The total quantity of sulfur which may be entered, or withdrawn from warehouse, for consumption from any country which has entered into such an arrangement or agreement hereunder shall not be subject to the provisions of section 103 while such agreement is in force and effect.

Mr. LONG. Mr. President, this bill recognizes the grave injury that has been done to the U.S. sulfur industry by the effect of under-priced, byproduct sulfur moving into domestic markets from foreign sources. In its three-quarter century of production in this country, the U.S. sulfur mining industry has never had Government assistance in the regulation of sulfur imports. It has been able to operate productively despite a veritable jungle of restrictions which it encounters in world markets outside of North America. More than 25 countries impose tariffs on U.S. sulfur, some of which merely restrict imports, such as the proposed act would do, or are imposed as revenue-raising agents. Other

foreign restrictions are so high that they constitute a complete embargo against U.S. sulfur. In addition to tariffs, foreign trade barriers encountered by U.S. sulfur include blockade by tariff, embargo on sulfur, discriminatory tariff, restrictive import licensing, and onerous deposit bond requirements. If, in the home market, U.S. sulfur companies are damaged by unfair competition to the extent that they cannot compete, we may well see the demise of the U.S. sulfur mining industry.

I have offered my bill in the hope that, given assistance, the U.S. sulfur mining industry will be able to continue to contribute to the Nation a vital raw material in a sound economic environment.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate resume the consideration of the unfinished business.

The PRESIDING OFFICER (Mr. SCHWEIKER). Without objection, the Chair lays before the Senate the unfinished business, which will be stated.

The unfinished business was stated as follows:

The report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

The Senate resumed the consideration of the conference report.

Mr. ERVIN. Mr. President, on yesterday I inserted in the RECORD a number of letters and telegrams contending that the District of Columbia crime bill conference report is contrary to basic American principles.

The Nashville Tennessean of July 18, 1970, published an editorial, entitled "Crime Bill Full of Danger." The editorial reads in part:

Some features of President Nixon's crime bill now being considered by Congress would strike at basic constitutional guarantees and should be rejected.

Perhaps the most dangerous recommendation is one that would permit police in some instances to enter homes without first knocking at the door or identifying themselves.

This measure is proposed for effectiveness in the District of Columbia only, but it is being advanced as a model law, possibly to be extended to the rest of the country at a later date.

If there were any valid reason for singling out the District of Columbia for the initiation of this oppressive law, it has not been made clear what it is. Certainly there is no justification for believing the nation should begin to give up its constitutional protections for the purpose of providing short cuts to law enforcement.

I will omit a compliment it pays to me, and I will continue:

It is too early to tell whether Senator Ervin can turn the tide against this unwise bill. But he deserves the gratitude of those who believe it is still possible to have effective law enforcement in the U.S. without chipping away at the basic principles on which the nation was founded.

I have a letter from Mr. D. A. Smith of the Department of History of Yale University, addressed to me, and reading in part as follows:

I want to tell you how fervently I hope your opposition to the "no-knock" preventive-detention anti-crime bill succeeds. The civil liberties which it invades were won after centuries of struggle against arbitrary power, both in Britain and America. To sacrifice them on the altar of "law and order" is a travesty of what law and order ought to mean.

Please accept by heartfelt thanks and best wishes.

Yours sincerely,

D. A. SMITH.

I have a telegram from Mr. Joseph T. Byrne, of Philadelphia, addressed to me, reading as follows:

Re: Anticrime legislation. I strongly implore you and all Senate Members not to vote for this legislation. More positive results may be found in the recommendation of the Commission on the Causes and Prevention of Crime chaired by Dr. Milton Eisenhower. Letter to follow.

Sincerely,

JOSEPH T. BYRNE.

I have received a telegram from the president and executive secretary of the board of directors of the American Civil Liberties Union, of Tennessee, addressed to me, reading as follows:

The board of directors of the American Civil Liberties Union of Tennessee strongly urge that you oppose and vote against the District of Columbia Crime bill, S. 2601. This bill incorporates extended police wiretapping, no-knock policy entry, and preventive detention. All severe and intolerable infringements on individual freedom.

JOHN CLEVELAND,
President.
Mrs. R. W. CHILDERS,
Executive Secretary.

I have received a telegram from the executive director of the Wisconsin Civil Liberties Union, of Milwaukee, Wis., addressed to me, reading in part as follows:

We strongly support your efforts to defeat conference commitee report on District crime bill, especially preventive detention.

EDWARD M. MCMANUS,
Executive Director, Wisconsin Civil Liberties Union.

I have received a letter from Prof. Albert J. Rosenthal, professor of law at Columbia University addressed to me, reading as follows:

I should like to congratulate you for your valiant efforts in opposing the preventive detention and "no-knock" provisions of the District of Columbia Crime Bill.

As a student of constitutional law I believe that both are of doubtful constitutionality. At least as important, however, is the fact that, whether constitutional or not, these provisions are unfair, cruel and completely out of place in a democratic nation.

There is much that needs to be done to reduce crime, both in the District of Columbia and in the nation at large. Such constructive measures as the court reorganization plan are urgently needed. What we do not need, however, are intrusions upon the civil liberties of the citizens, which in the view of most experts won't even contribute materially to a solution of the crime problem.

I would add to what Professor Rosenthal says that attempting to solve the crime problem through the agency of preventive detention is about as wise and practical as attempting to empty the Atlantic Ocean with a quart cup.

Mr. President, last Friday I delivered a speech in the Senate in which I read various provisions of the Constitution. I read the provision in article III which says that all crimes, except charges of impeachment, shall be tried by jury. I read the provisions of the Bill of Rights which declare that unreasonable searches and seizures shall be prohibited and a search warrant can issue only on probable cause. I would say inferentially that probable cause is something that exists at the moment and does not exist sometime in the future, as the no-knock provision of this bill provides.

I also read the fifth amendment which provides that no person can be required to answer for a capital or otherwise infamous crime except upon an indictment by a grand jury.

I also read the provision of the Constitution which declares, in section 6, that in all criminal prosecutions, the accused is entitled to a speedy trial by jury.

I also read the provisions of the fifth amendment which provides that no person shall be compelled to be a witness against himself in any criminal prosecution.

I also read the due process clause and gave its interpretation, as it has been interpreted by the Supreme Court.

So I was somewhat surprised to find in the RECORD this morning the statement by the able and distinguished senior Senator from Maryland, in a speech he delivered, that:

The clear implication of Senator Ervin's remarks was that the provisions on pages 142, 143, 154, and 155 of the conference report constitutes a clear departure from precedent and right thinking.

I did not imply that. I charged that to be true. But the thing that I was rather intrigued about was the next statement of the distinguished Senator from Maryland. He said:

Such, of course, is fiction.

I do not know what the Senator from Maryland meant when he said that what I had said was fiction. I had been reading the Constitution of the United States. I hope the Senator was not referring to the Constitution of the United States as being fiction. I would dislike to believe that any Senator regards the Constitution of the United States as fiction, even if he advocates the passage of a bill that provides that notwithstanding the declaration of the Constitution of the United States that no person shall be held to answer for any capital or infamous crime, except upon an indictment of a grand jury, that a person can be tried for an infamous crime and

sentenced to infamous punishment without ever being indicted by a grand jury.

Let us see whether what I was talking about is fiction. I invite the attention of Senators to the provisions of this bill which appear on page 142. Subsection (a) of section 201 reads:

SEC. 201. (a) Section 907 of the Act entitled "An Act to establish a code of law for the District of Columbia", approved March 3, 1901 (D.C. Code, sec. 22–104), is amended to read as follows:

"SEC. 907. (a) If any person—

"(1) is convicted of a criminal offense (other than a non-moving traffic offense) under a law applicable exclusively to the District of Columbia, and

"(2) was previously convicted of a criminal offense under any law of the United States or of a State or territory of the United States which offense, at the time of the conviction referred to in paragraph (1), is the same as, constitutes, or necessarily includes, the offense referred to in that paragraph.

such person may be sentenced to pay a fine in an amount not more than one and one-half times the maximum fine prescribed for the conviction referred to in paragraph (1) and sentenced to imprisonment for a term not more than one and one-half times the maximum term of imprisonment prescribed for that conviction.

This provision says that if a man is convicted of a criminal offense under law applicable exclusively to the District of Columbia, and was previously convicted of a similar criminal offense under the laws of the United States, or any State or territory, he can be punished by imprisonment for 1½ times the maximum term of imprisonment prescribed for the offense.

Under Federal law, a misdemeanor cannot be punished by imprisonment for more than 1 year. Under Federal law, a man cannot be tried for a crime punishable by more than 1 year in prison unless he is indicted by a grand jury.

This first provision of the section provides that where an accused is convicted of a simple misdemeanor punishable by imprisonment for not to exceed 1 year, and he had a prior conviction for a similar misdemeanor in the District, he would be liable to a punishment of one and a half years imprisonment.

The second provision of this section says:

If such person was previously convicted more than once of an offense described in paragraph (2), he may be sentenced to pay a fine in an amount not more than three times the maximum fine prescribed for the conviction referred to in paragraph (1) and sentenced to imprisonment for a term not more than three times the maximum term of imprisonment prescribed for that conviction.

This provides that if a man has committed two previous offenses of the character described in subsection (a) of section 201, he can be sentenced to three times the imprisonment which would be authorized for one conviction, and that would make many cases, under the Code, subject to a punishment in excess of 1 year. If an accused commits a misdemeanor punishable by 1 year's imprisonment after two previous convictions for misdemeanors he would be converted into a felon and be subject to 3 years' imprisonment.

Then it has another provision which says:

No conviction with respect to which a person has been pardoned on the ground of innocence shall be taken into account in applying this section.

This is another one of the curiosities in this bill. This provision says by implication that if a man has been pardoned for a prior offense on any ground other than the fact that he was innocent of such crime his prior offense will be taken into consideration in determining his punishment. That is a flat violation of the provisions of the Constitution dealing with the pardoning power of the President and, some provisions of State constitutions dealing with the pardoning power of Governors. This is so because a pardon wipes out all future consequences of the crime for which the man is pardoned; notwithstanding this fact, the District of Columbia crime conference report says that unless the pardon is granted on the ground that a man was wholly innocent of the crime for which he was convicted, it will count that crime in determining his punishment despite the decisions of the courts holding that a pardon annuls all the future consequences of the crime. The Supreme Court so held in respect to a presidential pardon in the Klein case.

The third subsection (b) provides:

"(b) This section shall not apply in the event of conflict with any other provision of law which provides an increased penalty for a specific offense by reason of a prior conviction of the same or any other offense."

(b) Such Act is amended by adding after section 907 the following new section:

"SEC. 907A. (a) (If—

"(1) any person (A) is convicted in the District of Columbia of a felony, and (B) before the commission of such felony, was convicted of at least two felonies; and

"(2) the court is of the opinion that the history and character of such person and the nature and circumstances of his criminal conduct indicate that extended incarceration or lifetime supervision, or both, will best serve the public intent,

the court may, in lieu of any sentence otherwise authorized for the felony referred to in clause (A) of paragraph (1), impose such greater sentence as it deems necessary, including imprisonment for the natural life of such person.

Thus, the various subsections of section 201 of the District of Columbia crime conference report provide for increased punishment for habitual criminals. Under it the increase in one category is to the maximum imprisonment for a second conviction an additional 50 percent of the original authorized punishment; and, in a second category an accused who had a conviction of two prior convictions, would be subject to as much as three times the original punishment prescribed for the offense on a conviction for a third offense.

Another provision stipulates that if one is convicted of a felony and at the time of his conviction has been previously convicted of two other felonies, he can be imprisoned for life under this conference report.

The section which undertakes to implement these provisions of the bill is section 23–111. It says:

§ 23–111. Proceedings to establish previous convictions

(a) (1) No person who stands convicted of an offense under the laws of the District of Columbia shall be sentenced to increased punishment by reason of one or more previous convictions, unless prior to trial or before entry of a plea of guilty, the United States attorney or the Corporation Counsel, as the case may be, files an information with the clerk of the court, and serves a copy of such information on the person or counsel for the person, stating in writing the previous convictions to be relied upon. Upon a showing by the Government that facts regarding previous convictions could not with due diligence be obtained prior to trial or before entry of a plea of guilty, the court may postpone the trial or the taking of the plea of guilty for a reasonable period for the purpose of obtaining such facts. Clerical mistakes in the information may be amended at any time prior to the pronouncement of sentence.

(2) An information may not be filed under this section if the increased punishment which may be imposed is imprisonment for a term in excess of three years, unless the person either waived or was afforded prosecution by indictment for the offense for which such increased punishment may be imposed.

There are some curiosities in section 23–111 which are designed to implement Sec. 201. In the first place, it says that the question of prior conviction can be raised by an information, even in cases where punishment will run as much as 3 years. That is a clear violation of the provision of the Constitution which declares that no man can be tried or punished for an infamous offense except upon indictment by a grand jury. Furthermore, it seems to provide for the correction of the charge when made by an indictment, despite the rulings that an indictment cannot be corrected without the consent of the grand jury which returned it.

This provision in subsection (b) of section 23–111 relates to a conviction for a new offense—an offense one has just been tried for and been convicted of. It says:

If the prosecutor files an information under this section, the court shall, after conviction but before pronouncement of sentence, inquire of the person with respect to whom the information was filed whether he affirms or denies that he has been previously convicted as alleged in the information, and shall inform him that any challenge to a previous conviction which is not made before sentence is imposed may not thereafter be raised to attack the sentence.

In other words, after the accused has been convicted the prosecution serves an information on him charging that he has been previously convicted of other crimes, and in calling upon him to plead to the information, the court informs him that he must set out anything that invalidates his previous conviction before the sentence.

Then it proceeds in subsection (c) (1):

If the person denies any allegation of the information of previous conviction—

Senators will notice that it says "denies any allegation." This is the information setting out previous convictions and it necessarily sets out that this is the man who was previously convicted.

I continue to read:

(c) (1) If the person denies any allegation of the information of previous conviction, or

claims that any conviction alleged is invalid, he shall file a written response to the information.

I submit that this violates the provision of the Constitution which declares that a man cannot be compelled to be a witness against himself in any criminal case. This provision makes him a witness against himself because it further stipulates, in substance, that unless he denies the allegations of the information about his having been previously convicted, they shall be taken as proved. In other words, he cannot stand mute. He cannot plead not guilty. But if he does not deny them, then his denial is to be taken as a confession on his part that he is guilty of the previous convictions.

Now mark this: The Senator from Maryland says that I was mistaken when I said that this provision places the burden of proof on the accused to show that he is not the man involved in the previous convictions or that the previous convictions were invalid.

Section (c) (1) reads further:

If the person denies any allegation of the information of previous conviction, or claims that any conviction alleged is invalid, he shall file a written response to the information. A copy of the response shall be served upon the prosecutor. The court shall hold a hearing to determine any issues raised by the response which would except the person from increased punishment.

One of the things that would except the accused from increased punishment would be that no such previous convictions were ever suffered by anyone. Another would be that the accused was not the man previously convicted. And if the previous conviction were invalid, he would have to set out in his response the facts showing it to be unconstitutional or invalid.

The court must hold a hearing to determine where the accused is subject to increased punishment. The Conference Report provides that the hearing shall be by the court without a jury and either party may introduce evidence.

That is the hearing upon a charge that the accused has been convicted of previous offenses. And it is a hearing that might result in the accused being sent to prison, for life if he has been convicted of a felony, and has a record of two previous felony convictions.

In other cases, he could be sent to prison for far in excess of 1 year's imprisonment. The report authorizes up to 3 years' imprisonment in cases where the accused has not been indicted by a grand jury. It stipulates that the trial of the prior offense allegations shall be by a judge without a jury.

Mind you, Mr. President, that is a provision under which a man could be sentenced to life imprisonment on a trial by a judge without a jury. And this is a criminal case—not a civil proceeding.

When a man is charged as an habitual offender, he is not being tried a second time for his original crimes of which he has been previously convicted. He is being tried for a new crime whose punishment is increased because he has been previously convicted.

I inserted in the RECORD on Thursday opinions and citations of cases—somewhere in the neighborhood of 25 State cases—which had provisions guaranteeing the right to trial by jury in criminal cases. Those cases hold that the question of whether previous offenses had been committed and whether the present accused was the person who committed those previous offenses were questions of fact for a jury.

Furthermore, those cases hold that those facts had to be proved beyond a reasonable doubt by the testimony. But when the able and distinguished Senator from Maryland replied to what I had said, he said that I was just speaking fiction. If the Senator will read the cases that I had printed in the RECORD, he will find that there is no fiction in what I said. He cannot contend that any provisions of the Constitution of the United States are fiction.

The Senator said I was mistaken when I said that the report put the burden of proof on the accused in violation of the due process clause.

Here is what the report says on that point—subsection (c), subdivision (1) of section 23–111:

If the person—

That is the accused—

denies any allegation of the information of previous conviction, or claims that any conviction alleged is invalid, he shall file a written response to the information.

I have also read the provision which stipulates that the hearing on the issues raised by the response to the information will be held by a judge without a jury.

The Senator from Maryland said I was mistaken when I said that the burden of proof was placed upon the accused.

Subsection (c) of section 23–111 states in words as plain as are to be found in the English language that if the person denies any allegation of the information of previous convictions, or claims that any conviction alleged is invalid, he shall file a written response to the information.

Then it says:

The court shall hold a hearing to determine any issues raised by the response which would except the person from increased punishment.

Manifestly, if the response said that no such previous crimes were ever committed by anyone or that if they were committed, they were not committed by the accused, it would raise those issues. If it said the previous convictions were unconstitutional or invalid, it would raise another issue. All these issues would be issues of fact.

Subsection (1) of subsection (c) of section 23–111 states:

Except as otherwise provided in paragraph (2) of this subsection, the prosecuting authority shall have the burden of proof beyond a reasonable doubt on any issue of fact.

Now, mind you, Mr. President, that states "except as otherwise provided in paragraph (2)" the burden is on the prosecuting attorney. What does paragraph (2) state? It states:

A person claiming that a conviction alleged in the information was obtained in violation of the Constitution of the United States shall set forth his claim, and the factual basis therefor, with particularity in response to the information.

The preceding paragraph had already stated, in substance, that he must set forth that the previous offenses had not been committed or that he had not been convicted of them, or that the previous conviction was invalid. This section states:

The person shall have the burden of proof by a preponderance of the evidence on any issue of fact—

Any issue of fact—what this clearly states as an exception to paragraph (1) or subsection (1) is that the burden of proof is on the accused in respect to any issue of fact. If this is not an exception to the paragraph (1), it is a flat contradiction of paragraph (1) and controls because it is the last legislative provision on the subject.

One of the issues of fact would be denial of previous convictions; another would be denial of the identity of the accused as the person previously convicted; and the third would be any fact or circumstance which invalidated the previous conviction if the accused had been previously convicted. So we have a contradiction. I do not think it is a contradiction because it is stated in paragraph 1 that:

Except as otherwise provided in paragraph (2) of this subsection, the prosecuting attorney shall have the burden of proof beyond a reasonable doubt on any issue of fact.

But paragraph (2) states that the burden of proof shall be on the accused, so that comes within the exception of paragraph (1) and the burden is placed upon the accused to show what is, in effect, his innocence of being a habitual offender and he has to show that he is not a habitual offender by the greater weight of the evidence.

I say that this states what is means when it states in paragraph (1) that the burden is on the prosecution, except as otherwise provided in paragraph (2); and when paragraph (2) states that the burden of proof is on the defendant, that that is in harmony with paragraph (1); but if it is a mere contradiction this shows how careless this act was drawn. Its drafters paid no more attention to its words than they did to the Constitution when they drafted it.

This act is sought to be imposed on the people of the District of Columbia against their will. I have received petitions from over 6,000 people of the District of Columbia opposing the proposal that the Senate approve the conference report. I hold them in my hand.

The Senator from North Carolina asserts that the Constitution of the United States is not fiction. It is not fiction that the Constitution provides in the fourth amendment:

The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

I assert that a search warrant cannot issue, a no-knock warrant cannot issue, except upon probable cause, and probable cause consists of facts and circumstances

existing at the moment the officer makes an affirmation or oath to get a search warrant. A search warrant cannot issue on the basis of a prophecy of what will exist at some time in the future when the officer undertakes to serve the warrant. Yet that is exactly what the no-knock provision of this statute provides.

The proposal states that the officer must set out facts showing that at the later time when he arrives at the door to serve the search warrant certain conditions are likely to be existing. How can a man know what is likely to be existing in the future?

I have served in the Senate for a long time and I have been watching Senators for a long time. I am well acquainted with the political philosophies of most Senators. This bill states a search warrant can be issued on the prophecy of an officer as to what is to happen in the future. It states a man can be preventively detained on the prophecy of a judge of what the man is going to do in the future.

As well as I know the Senators, I would not undertake to prophesy how any Senator is going to act in the future. I would not even undertake to prophesy how Senators are going to vote on this conference report. There are many peculiarities in the conduct of Senators. In saying this I mean nothing personal. When we were having a hearing before the Subcommittee on Constitutional Rights on preventive detention proposals, the executive officer of the Washington bureau—if that is the correct term—of the American Civil Liberties Union said:

> You cannot exactly pin men down by labels.

Take the Senator from Maryland (Mr. TYDINGS). He is in favor of preventive detention, and he is said to be a liberal. The Senator from North Carolina is against preventive detention, and he is said to be a conservative. So I do not think anyone can predict how Senators are going to act. And I do not think judges can predict how people are going to act in the future. I do not think any officer can prophesy at the time he applies for a search warrant, which may be served hours later and miles away, what is going to happen inside the house after he gets there.

If he had been required to make such predictions as the report requires judges and officers to make, old Jeremiah would have had to go out of business. Law enforcement procedures ought not to require prophesying.

The truth is the provisions of this bill which authorize the issuance of no-knock search warrants upon the affidavit of an officer as to things which are going to happen in the future when he attempts to execute the search warrant is nothing in the world except an effort to nullify and render ineffective the fourth amendment which states:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized.

The fourth amendment is clearly violated when an officer of the law breaks down a door to gain entrance to a building without any notice to its occupants.

Such action is unreasonable. It is an unreasonable search. Human beings are mysterious beings.

I have told this story before on the floor of the Senate. It appears in a book by Marquis James. Archibald, a cockroach, lived in a house inhabited by human beings. When the human occupants of the house had retired for the night, Archie would go into the study, and get on top of the typewriter and dive down on the typewriter keys and write his observations about human beings. On one occasion he wrote this story. He said that during the afternoon the master of the house was coming home and saw a ravenous wolf seize a little lamb and attempt to devour it to satisfy his hunger. The master was so infuriated by the cruelty of the wolf that he slew the wolf and picked up the little lamb and carried it gently home in his bosom. When he got home he slew the little lamb, cooked it, and ate it for supper. Having had a good meal of lamb's meat, he sat down before the fire to meditate upon the universe. While he was meditating upon the universe, he happened to think of how cruel hungry wolves are to lambs and broke down and wept.

Senators speak much about the freedoms of Americans. They boast that every American's home is his castle. They are rightly much incensed by burglars who enter the homes of American citizens without notice to them and against their will. Despite this, Senators arise on the floor of the Senate and advocate a law to make it legal in the United States of America, in the year of our Lord 1970, for officers of the law to enter dwelling houses of residents of the District of Columbia in exactly the same manner that burglars enter those dwellings. They remind me of the man who sat down, after having his supper of lamb's meat, and wept on account of the cruelty of wolves to lambs.

We are going to continue to make it illegal for burglars to break into people's houses in the nighttime without their consent and without notice, but we are going to make it legal for officers of the law to emulate the example of burglars and break into people's houses without their consent and without advance notice to them.

What is a poor occupant to do when he hears someone breaking into his house in the middle of the night? Is he going to wait to determine whether it is an officer of the law or a burglar? I fear not. He is going to be tempted to make a natural human response against the unwarranted intrusion into his house.

Last Thursday I read the concurring opinion of Justice Jackson in a case which arose here in the District of Columbia. In that case officers of the law suspected that certain men who lived in a boardinghouse in the District were operating a lottery. So they went to this house one night and they wanted to surprise the men. The roominghouse was operated by a woman. They pried open the window of that woman's bedroom to enter the house to catch the people that they suspected were running a lottery. They caught the men and they did get some evidence indicating that they were running a lottery.

When the case was tried, a motion was made to suppress the evidence on the ground that the officers of the law had entered the house in violation of the fourth amendment. The Supreme Court sustained the point. Justice Jackson wrote a concurring opinion stating that when officers of the law engage in conduct like that, they bring the enforcement of the law into contempt. He also expressed the opinion, by way of dicta, to the effect that if the woman had shot the plainclothes officer when she saw him prizing up the window of her bedroom to come into her house, her act would not have been punishable because it would have been justifiable homicide. Then he stated that officers of the law should acquaint the occupants of houses of their presence and purpose before entering a house for their own protection. He said if the officer of the law on that occasion had noticed the woman drawing a gun to shoot him, he might have been tempted to shoot her. Justice Jackson added that if the officer had done so he—that is, Justice Jackson—would have disliked to have had the responsibility of persuading the jury that that officer was not guilty of murder.

Why should the Congress pass a bill to encourage officers of the law to break into dwelling houses in the nighttime, without acquainting the occupants of the houses of their presence and their purpose? Why should the Congress do that? Would it not be better for a few narcotic peddlers or a few narcotic addicts or a few criminals to escape justice than to destroy the proud boast of the American law that every man's home is his castle?

Moreover, by passing a law of this nature, Congress would place officers of the law in jeopardy. They would be in danger of being killed by occupants of houses when they undertook to invade the homes of those occupants without identifying themselves as officers of the law. If fired upon, officers would be tempted to reply in kind. By the passage of a law like that embodied in the conference report, Congress would encourage homicides. It would place officers of the law in constant jeopardy of their lives.

I shall not dwell on the other provisions of the bill. I reiterate, however, that I placed in the RECORD last Thursday citations and opinions and decisions of State courts, which declare that when a person is charged with being a habitual criminal because of his convictions upon previous criminal charges, he had a right to have a trial by jury on the question of whether there were such prior convictions and whether he was the man who was convicted on those prior occasions, and that the burden was on the prosecution to satisfy the jury beyond a reasonable doubt from the testimony that the facts on those issues were adverse to the accused.

Why should Congress pass laws in the name of law and order which violate

fundamental principles of our Constitution, freedoms which were purchased for us at a great cost in blood? The American Revolution was fought in large part because officers of the Crown used general warrants as no-knock warrants for invading the homes of the people of Boston.

John Adams attributed the birth of the American Republic to the eloquence of James Otis in opposing such tyrannies upon the American people. He said the eloquence of James Otis in resisting those no-knock provisions that the officers of the Crown were imposing upon the people of Boston breathed the breath of life into the nostrils of the 13 Colonies and that in consequence the child independence was born.

We rebelled against England because its Government imposed no-knock laws upon our people. Many of our people fled from France because they abhorred preventive detention in the Bastille. Despite these things, the Senate is being asked in the year 1970, that it establish no-knock laws and abolish the principle that every man's home is his castle; yea, more, that the United States actually make it legal for an officer of the law to invade the home of a private citizen just as burglars invade those homes, and that, in addition to that, we establish a system like that which provoked the French people into destroying the Bastille, a place which was used by the French Government as a place for preventively detaining persons in France who offended the government.

I have said—and I have had no one point out a single syllable in this bill which shows me to be incorrect in my interpretation—that there is nothing in this bill which provides that any man who is preventively detained is going to be released from preventive detention after 60 days' imprisonment.

All this bill says on that subject is that upon the expiration of 60 days, unless his trial is in progress, the accused will be restored to his status at the time of his arrest and have a judicial officer pass upon the conditions once again whether he is to be released.

Page 194 says this—and this is the only thing it says about what happens to a man after 60 days of preventive detention:

"Such person—

That is, the person who has been preventively detained—

(2) Such person shall be treated in accordance with section 23–1321—

(A) upon the expiration of sixty calendar days.

Now, what does it mean when it says that he is going to be treated in accordance with section 23–1321?

Section 23–1321 says he will go back and be treated just like he was treated originally; that the judge will release him upon his own recognizance, or upon an appearance bond, unless the judge finds that such release will not assure his appearance at the trial, or such release will not reasonably assure the safety of any person or the community

Since a judicial officer has already found those conditions against the accused, he will have no chance of release unless the judicial officer reverses the holding made 60 days before. Indeed, section 23–1321 expressly forbids the judicial officer to release the accused on his personal recognizance or upon an appearance bond, if he finds that such action will not reasonably assure the safety of any person or the community.

Section 23–1321 then specifies that if he finds that, the judicial officer will then determine whether other prescribed conditions, "will reasonably assure the safety of any person or the community." If the judicial officer determines again what was determined 60 days previously, namely, that none of these conditions will reasonably assure the safety of any person or the community, he cannot release him. If this redetermination is made, the provisions of section 23–1321 are exhausted, and the next section 23–1322, comes into play. This section provides for nothing except another preventive detention if none of the specified conditions will reasonably assure the safety of any person or the community.

So under these provisions an accused can be held under one preventive detention order after another, until he is tried or until he dies, or, if he happens to be immortal, until the last lingering echo of Gabriel's horn trembles into ultimate silence.

That is the kind of legislation Congress is being asked to apply to the District of Columbia to enforce the law in the District of Columbia. Instead of providing for reasonable law enforcement, this legislation makes a mockery of the Constitution. It makes a mockery of the fourth amendment's prohibition against unreasonable searches and seizures. It makes a mockery of the provision of the Constitution saying that no person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury. It makes a mockery of the provision of the Constitution which says that all criminal cases shall be tried by a jury. It makes a mockery of the provision of the Constitution which says that no man shall be compelled, in any criminal case, to be a witness against himself.

We are told that this is necessary, that conditions have got so bad here in the District of Columbia that it is essential for such legislation to be enacted. I do not believe this.

The complete answer to that plea was given by one of the greatest statesmen of all time, William Pitt, in the British Parliament, back in 1783, when he said:

Necessity is the plea for every infringement of human freedom. It is the argument of tyrants; it is the creed of slaves.

Let us not accept the argument of tyrants, and destroy in the District of Columbia some of the basic rights for which our forefathers died in order that we might enjoy them, just because some people may commit some crimes in the District of Columbia.

Instead of doing that, let us implement the constitutional provision which guarantees the right of a speedy trial by jury. Instead of adopting preventive detention for persons charged with crimes in the District of Columbia, let us provide an adequate number of judges, an adequate number of prosecuting attorneys, and an adequate number of supporting personnel, and then detain the prosecuting attorneys in their offices long enough for them to prepare cases for trial, and detain the judges in the courthouses long enough for them to try the cases. By so doing, we will have prompt administration of justice, and there will be no occasion for preventive detention of the citizens of the District of Columbia.

Mr. President, just one brief further statement. A book has been written about the history of Nazi Germany entitled "The Order of the Death's Head." It contains a chapter entitled "Heydrich And the Gestapo," which includes this statement:

The authority to issue warrants for preventive arrest, and consign men to concentration camps placed a murderous weapon in the hands of the Gestapo. It undermined the rule of law in Germany and all the machinery of judge, solicitor and defence counsel was unable to prevent men suddenly disappearing behind the barbed wire of the concentration camps.

Let us not convert the police officers of the District of Columbia into a Gestapo.

Mr. TYDINGS. Mr. President, the Senate has been debating the President's District of Columbia crime legislation for a week. We who support the legislation have tried calmly and fully to explain the provisions of the bill and answer the criticisms which have been levelled against it.

It is indispensable for reasonable debate that we proceed on the basis of the facts of the bill and not on the basis of fiction.

Time does not permit me to rebut the dozens and dozens of factual errors which have been asserted by critics of the conference report. I trust that my colleagues will reach back yet again and study the conference report, the Senate statement of managers, and the extensive rebuttal which I delivered yesterday afternoon—printed in the CONGRESSIONAL RECORD of July 21, 1970, at pages 25201 through 25212.

I feel that it is my obligation to the Senate, nevertheless, to point out a sample of the plain errors that continue to plague this debate:

My distinguished colleague, the senior Senator from North Carolina, introduced into the RECORD of yesterday afternoon a letter from 12 Yale University law professors, including the outgoing Dean Louis Pollack, attacking, and I quote, "the District of Columbia anticrime bill in the form in which it was reported out by the House-Senate conference committee on July 13."

Mr. President, of the five so-called unconstitutional, unjust, and unwise items mentioned by the professors, three—three out of five—amount to flat misstatements of the facts of what the conference report contains. Much as I respect all of the gentlemen from Yale who authorized this letter, I must warn the Senate once again to measure every statement about the pending report against the actual report language itself and the official explanation contained in the statement of managers:

First, the conference report on S. 2601 does not contain weakened procedural protections for juveniles. Except as to the issue of jury trial—where the modern tendency, endorsed by the action of four-fifths of all the States is to eliminate juries in juvenile cases—the new juvenile code represents in every respect a substantial improvement over the procedures and protections available to juveniles under existing District of Columbia law.

Second, the conference report on S. 2601 does not "establish new categories of harsh mandatory minimum sentences." As I have explained to the point of exhaustion, there is but one mandatory minimum sentence set forth in the entire conference report—the 5-year minimum sentence which applies to second and subsequent armed violent crimes and which is comparable to the 1968 Federal Firearms Act as well as S. 849 passed by the Senate this year.

Third, the conference report on S. 2601 does not require plaintiffs in wrongful arrest actions to pay the attorneys' fees of the defendant police officer, as Senator ERVIN, in introducing the letter into the RECORD, admitted.

On page 25224 of yesterday's CONGRESSIONAL RECORD, Senator ERVIN suggested to the Senate that the criminal law section of the American Bar Association opposes the no-knock provision in this bill. This suggestion is 100 percent unfounded, Mr. President. On the very same page in the CONGRESSIONAL RECORD the verbatim recommendations of the criminal law section are spelled out: Recommendation No. 10 is that the Congress adopt the Senate version of no-knock and also extend the provision to include arrests. Mr. President, the conference report on S. 2601 follows the ABA recommendation precisely.

The distinguished Senator from North Carolina, Senator ERVIN, since the beginning of this debate has suggested that a person may be detained beyond the 60-day maximum simply by repeating the detention procedure. This claim, Mr. President, is contrary to the plain language and clear intent of the conference report. The conference report provides that a detained person's trial must begin within 60 days of arrest or he must be released. Section 23–1322(d)(2) requires that upon the expiration of 60 days, if the trial is not in progress, the defendant must be treated under the release section—I repeat, the release section, section 23–1321, not the detention section 23–1322. This point also, Mr. President, which is as plain as can be, is one which I have made over and over.

Another of the many possible examples of plain misstatements of the bill's provisions by its opponents can be found in criticism directed against the juvenile court provisions of the conference report earlier this week by my distinguished colleague from Maryland (Mr. MATHIAS).

In a chart my colleague inserted in the RECORD of July 20, 1970, at page 25055, the very first item states that under the bill 16- and 17-year-old first-offenders are "irrevocably" sent to adult court. This is untrue. Only 16- and 17-year-olds charged with murder, forcible rape, armed robbery, and first degree burglary—and felonious assault with intent to commit one of these—are sent to adult court for trial. What is most important, they are not sent "irrevocably" to adult trial or anywhere else. Juvenile court jurisdiction is retained as to any other subsequent offense, even if the juvenile is found guilty of the original charge which led to automatic transfer.

Mr. President, of the 12 points mentioned on the chart, four, that is, one-third are in error on the facts.

Mr. President, I respect the concern of those Senators who have spoken out against this bill. I too have shared many of those concerns during the past year and a half I have labored over this legislation. In the process of Senate amendment of the President's legislation and in the conference with the House, we pursued these concerns, eliminated the unwise provisions and produced a solid, effective constitutional piece of legislation which ought to be enacted.

While I understand the concern of the critics, I am at a loss to understand the continued misstatement of many of the bill's provisions, and the unreasonable interpretation placed on others for the sake of argument. I have been severely disappointed by the flagrantly emotional, thoroughly irresponsible and frequently inflammatory rhetoric which has been substituted for reason in too much of the discussion of the bill.

The debate regarding so-called no-knock entry and pretrial detention has been particularly emotional and ironic. Two of the most formidable critics of these proposals—the distinguished Senators GOODELL and MUSKIE—represent States where both these practices are sanctioned by their own State's laws. New York's laws permit widespread pretrial detention and no-knock entry without any of the safeguards provided by this bill. Maine authorizes pretrial detention, without safeguard, in a number of serious cases. And, I am informed that the common-law no-knock entry is not only permitted under Maine's law, but generally practiced in narcotics cases there.

I think a serious study of this legislation and the laws of most States in the Union, including the States which the most vocal critics represent, will indicate that this legislation is a reasonable response to a grave problem clearly consistent with State practice, the Constitution, and individual liberties.

There is repression in this city; but it is not repression by the government and it is not repression by this bill. It is the repression of fear and crime and violence which is destroying homes and families and businesses within the shadow of the Capitol itself. It is the repression which leads people to bar their windows and flee the streets at dark. It is the repression which leads people to keep arsenals and police dogs in their homes for fear of being assaulted, not by the police, but by vicious killers and thieves.

We have an enormously difficult and tragic crime problem to deal with in this city. Its victims know it better than any of us ever can. Our responsibility is to address that crime problem rationally, calmly, and deliberately, and to formulate effective answers to it within the framework of our Constitution and our concept of individual rights and liberties. This bill is that kind of response.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS obtained the floor.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. COOPER. Mr. President, I have not engaged in the debate on the pending conference report. I have not heard all of the speech the distinguished Senator from North Carolina has made today. I have read carefully the full text of the first speech he made in the course of this debate on Friday, July 17.

The Senator from North Carolina should be commended for the tremendous analytical work he has done on this report and for providing the Senate with legal precedents from the Federal courts and many of the State courts.

We have all come to know that the Senator from North Carolina loves the Constitution. He is a deep student of the Constitution. He understands the history of the Constitution—even beyond that, the causes which led to its adoption, and its philosophic basis. He knows Locke and Montesquieu and the great writers and legal scholars of our own country.

I know that we all have a problem on bills such as this, because we are aware of the crimewave in this country. We are very conscious of its depth in the District of Columbia. We are torn by the feeling that we should do everything possible to ameliorate its causes, to provide strict enforcement and speedier justice, and bring to punishment those who are guilty. But we are faced also with the question of whether in trying to deal with this situation, we surrender or abridge the most precious liberties that have been accorded the people of this country or of any other country.

I served as a State judge, both county and circuit, years ago and had some experience with respect to search and seizure and rights in our State constitution, patterned on those embodied in the fourth, fifth, and sixth amendments to the Constitution of the United States. It was during the time of prohibition, and almost every case we passed upon dealt first with the validity of the search warrants.

I have read the section on preventive detention. I know the argument is made that, to a degree, the process will supersede present practices of refusing bail to the accused when considered dangerous is termed a hypocritical system. But there is a distinction when a person is charged with a crime, a grand jury has found probable cause that an offense has been committed by the accused and the question of bail arises.

In the case of preventive detention, no specific crime is charged, but it is a question of whether or not the person is so dangerous that he cannot be permitted to be free. I agree with the Senator from North Carolina that this raises the specter, as he has stated, of the early history in England and of our colonial days, of the detention of ones person by the State, without due process of law.

We have had recent examples. I do not want to exaggerate, because I know they are not entirely analogous, but we saw preventive detention in Germany, under the Nazi rule, and it prevails in Communist countries throughout the world—Russia and in non-Communist totalitarian countries.

I do not know what the courts would hold if this section ever became law, but if it should be held constitutional, it would deny the great principles for which we have stood and which are embodied in the Bill of Rights.

The fourth amendment to the Constitution provides for the right of the people to be secure in their persons as well as in their property—person, as a physical entity, as an intellectual being, a spiritual being, cannot be detained, except by due process of law.

This is one of a series of bills which have applied to the District of Columbia.

When I first served in the Senate it was for only 2 years. The first year I was here—1947—I served on the District of Columbia Committee and the Judiciary Committee. As I recall, in that year a bill was proposed which would have authorized arrest procedure, something which would not have been considered in any State in the United States. That was a bill to authorize an officer to arrest a person, as I recall, practically on suspicion. We were able to defeat it.

It will be recalled that later in the early 1950's a great effort was made to permit the detention of a person for 8 hours before arraignment, and that was defeated.

Now we have the proposal of detention for 60 days and, as the Senator from North Carolina has said, under certain conditions even longer.

I voted against the crime bill 2 years ago with regret because it did have many good provisions in it, because it had some provisions which, in my view, challenged the Bill of Rights and the concept of due process and of human liberty as we have nurtured it in our country.

I believe, with the Senator from North Carolina, that the best method of controlling crime is the quick and sure trial. Many provisions in our codes and some holdings of the courts have the effect of postponing trial. But great improvements can be made by reorganization of the courts to remedy this situation.

Mr. President, this is the only statement I have made during the course of this debate. I see the distinguished Senator from Maryland (Mr. TYDINGS) coming into the Chamber. I have great respect for him. I know what a faithful worker he has been on behalf of the District of Columbia and how faithful his work has been on the Judiciary Committee in trying to reform many phases of our judicial system. He has had great success and he deserves great credit, the commendation of the Senate and the country as a whole.

But for the reasons I have just outlined inadequately, I cannot vote for the conference report.

In closing, let me say again that we owe a great debt of gratitude to the distinguished Senator from North Carolina (Mr. ERVIN).

Mr. ERVIN. Mr. President, let me resume the floor merely to thank the distinguished Senator from Kentucky (Mr. COOPER) for his gracious and generous remarks concerning me.

One of the proudest experiences I have ever had in the Senate was several years ago, when the Senator from Kentucky and I stood together in the fight to make the first amendment to the Constitution effective.

SURVEILLANCE OF DEFENSE PROCUREMENT

Mr. STENNIS. Mr. President, I believe that the Senate will be interested in the activities of the Armed Services Committee during the past year in monitoring defense procurement activities.

Defense procurement has become one of the most controversial and discussed subjects of the day. Its importance is highlighted by the tremendous cost of modern weapon systems and the maintenance of a close surveillance over defense programs authorized by the Congress is a challenging task that has been compounded in recent years by technological difficulties and cost growths associated with the procurement of sophisticated major weapon systems in a period of rapidly rising prices.

To fulfill its responsibility in this field, the Committee on Armed Services, through its Preparedness Investigating Subcommittee, has taken positive action to provide continuous surveillance over the progress of weapon systems procurement.

In January 1969, the subcommittee initiated action to establish a reporting system by the Defense Department covering the cost, performance, and schedule status of major weapon systems. These reports, submitted quarterly, are intended to provide basic data to keep us informed of any significant changes or slippages in cost estimates, production schedules, performance characteristics or other important items connected with the programs and contractual obligations. While these reports do not provide the everyday detailed data needed by a project manager, they are supplemented regularly by requests for additional data. I will discuss this later.

The initial reports were of benefit during last year's consideration of the authorization bill. Improvements were made during the year and the reports now contain useful and valuable data reflecting a fairly accurate status of the programs. Notable improvements made were: the establishment of a consistent basis for acquisition costs; the addition of other costs directly related to the program; a more complete analysis of the cost, performance, and schedule variances; and highlights of recent significant program events. We are continuing to work to make further improvements in the reports.

We now receive quarterly reports on 36 major weapon systems selected as significant ongoing programs, with an aggregate projected program cost of $100 billion. The Department of Defense has expanded the reporting system to cover programs in addition to these selected by us, and these reports are reviewed as the occasion warrants.

These quarterly reports are also distributed to the House and Senate Appropriations Committees, the House Armed Services Committee, and the GAO. The Department of Defense believes that these reports have made a significant contribution in providing timely procurement information and improving its management controls.

After reviewing the data on these reports, the Preparedness Investigating Subcommittee staff has further analyzed a number of the programs.

Mr. President, we now have on the committee highly competent men trained in this field, working under the direction and control of the committee, and I can say that we do have an objective analysis of the status of such programs by competent personnel.

As a result, the committee has obtained an objective analysis of the status of such programs. In selected instances this past year, we were assisted by the General Accounting Office by detailed analyses of several programs prior to hearings on the fiscal year 1971 budget authorization, including the Minuteman and Poseidon missiles and the P–3C and F–111 aircraft programs.

It was my idea from the beginning, when we took up this additional activity, that we could make the greatest contribution by keeping an eye on the progressive developments at each stage of the new contracts and, in that way, I believe, we are exerting a far-reaching influence.

I would like to update the Senate on the latest quarterly report data on the 36 weapon systems. As I have previously stated, these programs have a projected total cost of about $100 billion, and include a projected cost growth of about $19 billion. I do not in any way condone these cost growths, but I do believe that the Senate should understand the situation with respect to them. The fact is that, through fiscal year 1970, only about 34 percent of the projected $100 billion cost has been funded by the Congress. At the same time, some programs are reporting and projecting costs into the 1980 time period. Therefore, while there are certain programs with cost growths that have been funded nearly to completion, the greatest part of the funding for the programs being monitored has yet to be authorized or appropriated. Thus the Congress will have ample opportunity in the future to consider and reconsider the funding of the major portion of the defense procurement activities which we are monitoring.

The quarterly reporting system provides one means for surveillance of major weapons programs, but the committee has other activities to assist in monitoring defense procurement activities.

During the past year the Prepared-

ness Investigating Subcommittee has been looking for improvements by the Department of Defense in procurement contract practices. In view of the controversial aspects of the contracts on the C–5A and F–111 programs, the Preparedness Subcommittee is performing analyses of the contractual aspects of some of the newer programs authorized, including the F–14 and F–15 aircraft contracts. In this we have the able assistance of the General Accounting Office, which is providing an independent analysis of the contractual features. We have also initiated analysis work on the contractual features of the S–3A and AWACS—airborne warning and control system—aircraft programs and plan to follow through on other programs in the next fiscal year.

Finally, Mr. President, I would like to discuss again the findings of the committee during the past year regarding weapon systems cost growths. As I mentioned previously, the cost growth of about $19 billion that we find projected on the 36 weapon systems involved is a projection of costs anticipated to be incurred sometime through the 1980 time period on programs that the Congress will have ample opportunity to review.

Our reviews and analyses, this past year, have helped the committee recognize that a significant problem in this area lies in the "initial planning estimate." In many cases, the estimated cost, performance, and scheduling data being used as a basis for computing cost growths were established long before full agreement was reached within the Department of Defense or information received from potential contractors on the specific design or concept to be used in a particular weapon system. They were merely guesses of cost and performance which had little or no validity.

They were merely guessing—I emphasize that word "guessing"—because they were not even estimates but guesses on cost and performance which have had little or no validity.

I am not trying to assess blame for that. That goes with part of the system. This is an imaginary weapon, existing only in the imagination of our engineers and military men as to what they would like to have here, without any real concept of whether such a weapon could be built, much less its actual cost. The initial figure which finds its way onto the books, being nothing more than a guess—it is not even an estimate—could lead to troublesome situations in the future with reference to that weapon.

With some lack of patience at times, I have called on the Department of Defense to try to be more accurate and concrete with reference to these so-called estimates, but I am convinced now that it is a difficult, one might call it almost impossible, job to get anything to start with about an imaginary ship, an imaginary plane, an imaginary tank, or any other kind of imaginary weapon, to get anything that is respectable at the beginning as to an estimate of its dollar cost.

Mr. President, the committee, during the current year, plans to delve deeper into the establishment of the baseline cost performance and schedule requirements on major new programs that will be presented for next year's authorization, and to examine other problems, such as concurrency, which contribute to real or apparent cost growths on weapon programs.

Mr. President, I can give assurance that the Committee on Armed Services is meeting its responsibility in the surveillance of the procurements of major weapon systems and monitoring the expenditure of funds authorized and appropriated by the Congress in a responsible manner. I believe that the committee is approaching the problem in the procurement of these systems objectively and properly. We have made great strides in the past year. I believe we will continue to make significant strides in the future.

Mr. President, I believe this is part of the responsibility of the committee, to follow through on the funds recommended here on this floor for approval by the Senate. That is exactly what we are trying to do in this colossal undertaking, especially in the Department of Defense. The Department of Defense is trying to cooperate. A great deal has been learned about the wrong type of contracts which have led to so much trouble in the past. The GAO is rendering an outstanding service in connection with its duties and responsibilities in this field.

Mr. President, I yield the floor.

ORDER OF BUSINESS

Mr. ALLOTT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. HUGHES). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ALLOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, there are one or two questions which I would like to discuss with the manager of the bill.

The first question relates to the no-knock provision. I am concerned about one facet of that provision, even though it is my intention to support the conference report. It concerns a situation where an officer holds a valid no-knock warrant but mistakenly enters the wrong abode.

I refer the Senator from Maryland to the incident that occurred recently in his own State when policemen entered the wrong home by breaking down the door. I am sure that there will be mistakes as time goes on. They are bound to occur. I mention this specific incident only for illustrative purposes. The question is in two parts.

What civil remedy does the innocent party have to correct any damage which occurred?

Mr. TYDINGS. Mr. President, the remedy would be the same as the remedy today in the event of a common law no-knock entry under the existing District of Columbia law.

It would be a suit for a wrongful arrest which would be brought against the Metropolitan Police Department, the District of Columbia, and the policemen involved.

As we know, the bill does not enlarge the conditions under which any no-knock entry may be made. It codifies the existing common law and accepts the general rule under which one always announces himself, identifies himself, and states his purpose before executing the warrant. It codifies the present law, but takes the decision out of the streets and puts it in the hands of the court.

Insofar as a wrongful arrest which might ensue, the remedy would be the same as if a wrongful arrest were to occur today under the common law in the District of Columbia. A suit would lie against the Metropolitan Police, the police officer, and the District of Columbia itself. The District would be responsible to pay any damages arising out of the action to the same extent that it is today.

Mr. ALLOTT. It would lie against the individual who did it?

Mr. TYDINGS. The Senator is correct.

Mr. ALLOTT. I was speaking not so much of the wrongful arrest, but rather of the damages that might occur from breaking down a door. The Senator's answer would be the same.

Mr. TYDINGS. That would be part of the provable damages involved in the wrongful arrest.

Mr. ALLOTT. The second part is, Does the Senator know whether the District has established a claims section to handle matters of a similar nature?

Mr. TYDINGS. My understanding is that such a claims procedure does exist, and that it has handled claims along these lines in the past.

Mr. ALLOTT. Mr. President, my second question deals with section 23–1322(b). In that section the drafters have set out numerous criteria for the trial judge to consider in reaching his decision regarding pretrial detention.

I am concerned that even with the considerations provided in the statute, an individual may not receive the personal attention which is so important in arriving at a decision to release on bond or to detain, but rather that the process could evolve into a sort of rubberstamp operation.

I know that the Senator has given this matter much thought. I would appreciate his comments, particularly on this facet of it.

Mr. TYDINGS. The concern of the Senator from Colorado was shared by the Senator from Maryland and all members of the conference between the Senate and the House. For that matter, we incorporated into the bill, when we rewrote it, some 18 important safeguards in the pretrial release and detention section to protect against the fears of the Senator from Colorado, the Senator from Maryland and others.

Let me simply list them for the record.

The first is that the detention eligibility is restricted to persons charged with one of a limited number of specific offenses.

The second is that detention eligibility is further conditioned upon a showing of

prior criminal activities, at the very least consisting of a provable pattern of dangerous behavior.

The third, detention cannot be ordered unless the court holds an adversary hearing.

The fourth, the defendant has the right to counsel at the hearing.

The fifth, the court must find at the conclusion of the hearing, and so state with written findings of fact and conclusions of law subject to appeal, that no condition or combination of conditions of release will reasonably assure the safety of the community.

As a matter of fact, if the Senator will look at pages 191 through 195, he will note that subchapter II is entitled "Release and Pretrial Detention." A substantial part of page 191 and most of page 192 is with respect to release in noncapital cases.

Prior to trial, it provides different kinds of conditional release for dangerousness which will, when the bill is enacted, be realistically available to the judges of the District of Columbia.

Today, the judges of the District of Columbia are forced to make the decision either to completely release an individual, no matter how dangerous he might be, or set the money bail so high that the judge knows the individual cannot reach it. The judge today does not ever face the factor of dangerousness head on.

We spell out in the law that the judge must find that no condition or combination of conditions of release will reasonably assure the safety of the community.

Those conditions include release subject to the supervision of a bail agency, a minister, or other suitable person or organization, the requirement of employment, narcotics testing, or periodic reporting, or release for the working hours of the day but providing that the defendant has to report back in the evening. The court must find that none of these conditions and no conceivable combination of conditions of release would reasonably assure the safety of the community before detention may be imposed.

The sixth, then, is that in making such finding, the court must exhaust a searching list of possible release conditions which, as I indicated, include third-party custody, restrictions on travel, association, or place of abode, daily narcotics use testing, employment requirement, daytime release, and so forth.

The seventh, the expansion of the Bail Agency will make third-party custody a realistic, as well as the preferred, alternative when release on personal recognizance is insufficient.

The eighth, use of money bond in dangerousness cases is prohibited.

So we get away from the hypocrisy existing where defendants do not have any right to counsel or appeal and where the judge arbitrarily sets a high money bail which happened last year in 40 percent of the cases in the District of Columbia. The bond is set so high that the defendant cannot get the money. He must content himself with cooling his heels in jail with no right to appeal for 6, 8, 10, or 12 months until the case comes up for trial.

The ninth. The prosecution must establish that there is a substantial probability of conviction on the preferred charge.

The 10th. An immediate and expedited appeal from a detention order is afforded the defendant.

The 11th. Detention orders are limited to a nonrenewable 60-day maximum period, unlike the 6, 10, or 12 months now faced by persons who sit in jail on high money bond and where the consideration of dangerousness is not visible on appeal.

The 12th. The maximum detention, the 60-day period, is not tolled by timely defense motions. In other words, time consumed by motions count as part of the 60-day period.

The 13th. An expedited trial calendar must be provided for all cases involving pretrial detention.

The 14th. Both the House and Senate Statements of Managers urge appropriations adequate to provide at least 25 additional assistant U.S. attorneys for the District of Columbia, to assure trial in 60 days.

The 15th. A new and expanded public defender service will assure readily available defense counsel to promote speedy trial. Greatly expanded judicial manpower will contribute to the same speedy trial goal.

The 16th. Pretrial detainees must be confined apart from convicted persons.

The 17th. Liberal access to counsel while in detention is assured.

The 18th. Even in detention cases, the defendant may be released for short periods of time under custody to assist counsel in preparation of the defense.

Mr. President, I have tried to outline some of the 18 specific safeguards which I enumerated in my speech yesterday. I went into further detail yesterday. In the drafting of this section we drafted it at every step of the way to provide every type of protection possible. We were not satisfied with the British system or the Canadian system. We wanted to go further. We were not satisfied with the New York State system, where the criminal code allows pretrial detention of any person charged with a felony. We were not satisfied with the system the First Congress adopted in the first bail bill which permitted the automatic detention of anyone charged with a capital crime, and at that time capital crimes included many offenses.

Mr. President, a fair reading of the bill by an objective person will support the statement I make; namely, that the provisions of the bill will actually protect the rights of the defendant as well as provide protection for the public as a whole; that in the long run we will have less people detained in the District of Columbia; the right people will be detained, but they will have had their day in court with an adversary proceeding, as well as a speedy trial within 60 days; and there will not be the hypocrisy of the present system where 40 percent of these accused in felony cases cool their heels because they do not have the money to meet the bond.

Mr. ALLOTT. Mr. President, I thank the Senator for his comprehensive answer, and particularly in delineating the safeguards that have been set up around the preventive detention section of the bill. I think the key to it lies in the adversary proceedings, which goes directly to the question which I posed, dealing with the rubberstamp problem. I feel this is as acceptable an answer as we can come up with in this matter.

Mr. President, in recent days, several prominent newspapers have spoken out in support of the pretrial detention provision in the District of Columbia Court Reorganization and Criminal Procedure Act of 1970. Other newspapers have expressed general support for the bill.

I would like to highlight several salient comments in these editorial statements.

The St. Louis Globe-Democrat remarked that limited authority for "pretrial detention is the only sensible answer to the extremely serious problem of dangerous defendants who have a history of repeating crimes or who are considered dangerous to be at large for other valid reasons."

The Portland Oregonian observed:

> The potential of danger inherent in the pretrial release of some defendants is real. A National Bureau of Standards study published three months ago, focusing on 426 defendants in the District of Columbia, revealed that 17 percent of those charged with "violent crime" and 25 percent of those charged with "dangerous crime" were rearrested while on bail.
>
> Other cities have had similar experiences. Records in Philadelphia for 1969 show that 37 percent of persons arrested on burglary charges, 34 percent of those arrested in robbery cases, and 29 percent of those taken on homicide charges were on bail at the time of the crime.

The Richmond News Leader expressed the important point that—

> Those who oppose preventive detention somehow view judges as ogres who would welcome an opportunity to put every criminal suspect behind bars. The record suggests otherwise. Judges who deal daily with violent criminals soon learn to recognize a hardened criminal when he appears in their courtrooms. These judges also recognize their responsibility to uphold the law, acting as instruments of that law. Arguments against preventive detention suggest that most judges are corrupt and that they have no ability to distinguish a hardened criminal from a first offender, an unjustified insult to the Federal judiciary.

I am confident that judges in the District of Columbia will employ pretrial detention with discretion and restraint. No one seeks unnecessary pretrial detention. The objective is to protect the community when that protection is essential.

Mr. President, I ask unanimous consent to have printed in the RECORD several editorials.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian, July 21, 1970]

LIMITS ON DETENTION

Two of the Administration's crime control bills currently in Congress have a common controversial provision—pretrial detention of a defendant in a criminal prosecution for a dangerous or violent crime.

Pretrial detention is one of the chief points of debate over S2600 amending the Bail Reform Act of 1966. A similar provision is contained in the District of Columbia Crime

Control Bill which also includes other controverted provisions such as that permitting law enforcement officers to enter a building or room without knocking under certain circumstances.

Pretrial detention and "no-knock" entry have become dirty phrases to some opponents of the legislation. Their implication is that there would be no protection against the abuse of such authority. By no means. Both procedures would be surrounded by limitations.

For example, to effect a pretrial detention in any case, the government would have to proceed against a defendant in a hearing of record. It would bear the burden of producing evidence leading to a judge's finding that "no condition or combination of conditions of release will reasonably assure the safety of the community." A judge's ruling in favor of pre-trial detention would be subject to appeal. Detention would be limited to 60 days.

The potential of danger inherent in the pretrial release of some defendants is real. A National Bureau of Standards study published three months ago, focusing on 426 defendants in the District of Columbia, revealed that 17 per cent of those charged with "violent crime" and 25 per cent of those charged with "dangerous crime" were rearrested while on bail.

Other cities have had similar experiences. Records in Philadelphia for 1969 show that 37 per cent of persons arrested on burglary charges, 34 per cent of those arrested in robbery cases, and 29 per cent of those taken on homicide charges were on bail at the time of the crime.

In 1966, more than two years before the Nixon Administration took office, the President's Commission on Crime in the District of Columbia recommended adoption of legislation to authorize the pretrial detention of those defendants who present "a truly high risk to the safety of the community." The report said, "After considering the opposing arguments, the majority concludes that the courts are presently capable of identifying those defendants who pose so great a threat to the community that they should not be released, and that a constitutionally sound statute authorizing detention in certain cases can be drawn."

The proponents of the current legislation contend that it meets these standards. It should be noted also that as early as 1927 the American Law Institute included a provision for pretrial detention in its Model Code of Criminal Procedure.

Of course, the legal profession is well aware that pretrial detention is already widely practiced by the courts by setting extravagant bail figures, despite the injunction of the Eighth Amendment to the U.S. Constitution that "excessive bail shall not be required." Such practice obviously discriminates against most defendants and in favor of the wealthy, including those supported by a crime syndicate.

The prospect is that both society and many defendants would be better served by a pretrial detention system operating strictly under court supervision and the limitations of an adversary hearing.

Moreover, it should not be ignored that S2600 contains important, non-controversial bail reforms that would make the criminal courts more responsive to the interests of both the accused and the public.

[From the Delaware State News, July 16, 1970]

BALANCING THE PENDULUM SWING

(By Jack Smith)

Strip away all its fancy fixings, government exists to protect people.

Wise public policies preserve our freedoms, keep us from bodily harm, guarantee property rights and preserve justice. These are all forms of protection.

For many complicated reasons the forces of anarchy prevail in this nation. If allowed to continue unchecked, our previous rights and freedoms will disappear.

The American people must not allow a few old men in Congress to block the Organized Crime Control Act of 1969. The lead story Tuesday in this newspaper, by the Associated Press, told the sad tale of how Rep. Emanuel Celler, age 82, is serving the well-meaning but dangerous opposition of the assorted liberals opposing this package.

The criminals in this nation are delighted with this confusion. They look at Congress as a bunch of stupid individuals. They steal, rape and kill. If they happen to get caught, they're released. The present system makes it easy, actually encourages them.

Don't go for this stuff about the danger of repression. It exists, of course, but there's little chance of it now in this permissive society. Those who raise this cry these days are just suckers for those who are destroying the finest nation this world has ever known.

Important in this package of bills that will be passed if the American people put on the pressure is the one (S. 2600) authorizing limited pretrial detention of dangerous defendants.

Don't let the liberal con you on this one. Of course the ultimate answer is speedier trials. But this is not practically attainable. Despite all the money we're spending on our courts, it's a bottomless pit.

As a fellow who once prepared watches and clocks—the trouble is obvious to me. The pendulum in the clock of criminal justice has swung over way to far. There it will stay until the clock is properly balanced. Passage of these crime control laws will help make the adjustment.

Call and wire our Congressman or any you know—today. Balancing the pendulum swing will allow the government to get to its basic job—protecting people.

[From the New York Daily News, July 21, 1970]

BIG LAW AGAINST BIG CRIME

The House last week passed, by a 332–64 vote, the Nixon-backed crime bill for the District of Columbia—a big package of tough measures which it is hoped will become a model for crime-harried cities the nation over.

A Senate vote is expected this week; and we hope the bill may win an impressive majority in Congress' upper house. Or doesn't the Senate want prosecutors and police adequately equipped to defend decent people against criminals and crooks?

[From the Charleston (S.C.) News and Courier, July 15, 1970]

PRETRIAL DETENTION

After voluminous and often heated testimony before a Senate subcommittee on constitutional rights, the issue of pretrial detention is coming before the U.S. Senate for decision.

The proposal for detention in jail before trial of someone charged with a crime takes the form of an amendment to the Bail Reform Act of 1966. That act was designed to minimize the use of money bond as a means of detention and a barrier to a person's freedom.

In practice, as Richard G. Kleindienst, Dept. of Justice deputy attorney general, has told the Senate subcommittee, the Bail Reform Act "absolutely precludes a trial judge from considering danger to the community in setting conditions of pretrial release in a non-capital case."

Under the act, every defendant charged with forcible rape, arson, kidnaping, armed robbery, burglary, bank robbery and a number of other crimes has an unequivocal statutory right to release before trial, unless substantial evidence exists that he will attempt to escape jurisdiction of the court.

Those opposed to reforming the act contend that if a person charged wtih a crime can be detained prior to trial his freedom is being denied without due cause. Those favoring reform offer compelling evidence that defendants released under the Bail Reform Act are free, until their trial, to continue to prey on the community.

"Eliminating money bond," Mr. Kleindienst has said, "does not eliminate the social need to detain those persons who pose a serious threat to the public safety."

This threat has increased since the Bail Reform Act was passed. A survey made by the U.S. Attorney's Office discloses that of 557 robbery defendants indicted during 1968, some 70 per cent of the 345 defendants released before trial were rearrested for a new crime. Pretrial detention could have protected the public against these criminals.

Under proposed legislation, no one would be detained unless (1) he came within one of a group of carefully chosen categories who may pose a danger to society, (2) the judge finds that the defendant cannot be released on any condition that would reasonably assure the safety of the community, and (3) there is a "substantial probability" of the defendant's ultimate conviction.

Sen. Robert C. Byrd, D-W. Va., has said that the Bail Reform Act, passed with the best of intentions, "is proving a windfall to the chronic violent criminal." Society deserves protection against such persons. Until the judicial system can be geared up to speed trials of those charged with crimes against society, pretrial detention seems to provide the only means by which chonic offenders can be kept off the streets.

[From the Indianapolis (Ind.) Star, July 17, 1970]

MAKING CRIME EASIER

One afternoon a man posing as a janitor gained entry to the apartment of a young woman in Washington, D.C., threatened her with a knife, raped her, tied her with a scarf and fled.

He was identified from fingerprints and a photograph as John C. Swann. Swann was arrested and released on personal recognizance four days after the assault.

A month later, Swann, still at large, accosted the rape victim as she left a suburban shop where she worked. He fired four gunshots, one of which wounded her in the left shoulder. Then he escaped.

It was not until nine months later, after he was located and rearrested, that Swann was tried by a jury and found guilty of rape. Subsequently he also was convicted of intimidating a witness.

Washington police files bulge with cases of serious crimes committed by suspects released pending trial on felony charges. Such cases have risen scandalously since a liberal Congress enacted the so-called Bail-Bond Reform Act of 1966. Under this act, defendants charged with forcible rape, arson, kidnapping, armed robbery, burglary, bank robbery, mayhem, manslaughter and assault with intent to kill have unequivocal rights to release before trial, if a judge so decides, without putting up one cent of bail bond money.

As Senator Hugh Scott (R-Pa.) remarked recently, John Dillinger, who robbed at least 13 banks, three supermarkets, a mill, a drugstore and a tavern before he was first captured in 1933, would be guaranteed pretrial release today in the District of Columbia. So would a defendant caught red-handed setting fire to a children's hospital after planting bombs in every public building in Washington.

It is no wonder that this absurd "reform" has been followed by the worst crime surge in the district's history.

Consequently, lawmakers upon recom-

mendations of the Department of Justice have drafted legislation that would provide for preventive detention, after a judicial hearing, of defendants whose release would be dangerous to "the safety of any other person or the community."

House and Senate conferees have agreed to include preventive detention in the D.C. Omnibus Crime Bill, which has at last emerged from conference after months of negotiation, and has been approved by the House. It is now before the Senate, where there is stiff opposition.

A coalition of Senate liberals opposes this move, planning instead to introduce separate legislation for court reorganization. Under the guise of improving court procedures, their measure would have the effect of bypassing the Senate-House Conference Committee working on the Omnibus Crime Bill.

The liberal package would omit the preventive detention provision which means, of course, that dangerous repeat offenders can continue, pending trial, the unrestrained criminality that has converted the nation's capital into a city virtually under siege. Sponsors of the move include Senator Birch E. Bayh Jr. (D-Ind.) and other senators who have consistently fought administration crime-control efforts.

Bayh, at a hearing where he urged rejection of preventive detention, talked evasively of prison conditions, education, housing and employment but he assiduously sidestepped the problem of keeping dangerous repeater criminals off the streets prior to trial. Maintaining his evasion, he expressed the opinion that the problem did not represent a matter for serious concern.

Perhaps to Bayh and his fellow liberals it does not. But it does to those who must suffer the consequences.

In their rush to pose as champions of the underdog, Bayh and his associates display heart-wringing concern for the rights of repeater criminals charged with serious crimes.

They do not seem to feel anything like the same concern for the rights, safety and lives of innocent, law-abiding citizens—the criminals' victims and potential victims.

[From the St. Louis (Mo.) Globe-Democrat July 6, 1970]

PRETRIAL DETENTION FOR REPEATERS

Opponents of the Nixon Administration's proposed amendment of the Bail Reform Act of 1966, which would authorize pre-trial detention of "hard-core" crime repeaters, are resorting to scare tactics in their attempt to block this urgently needed change in the law.

They claim it "smacks of the police state," that it convicts individuals of "probable guilt" and so on.

As a matter of fact pre-trial detention is the only sensible answer to the extremely serious problem of dangerous defendants who have a history of repeating crimes or who are considered dangerous to be at large for other valid reasons.

Some critics of the pre-trial detention proposals say that the complete answer to crime recidivism is to make speedy trials mandatory.

But speedy trials are not the whole answer.

As Deputy Attorney General Richard K. Kleindienst pointed out in testimony before a Senate Judiciary subcommittee, "Professional armed criminals whose sole occupation is to break into homes or stage holdups on the street will still commit crimes while awaiting trial."

"Narcotics addicts who must commit crime to support their habits will commit those crimes while awaiting trial. Incorrigible troublemakers with a manifest streak of viciousness and violence will strike again while awaiting trial.

"Compulsive sex offenders may lose control and commit new crimes while awaiting trial."

Is it really a "police state" tactic to impose limited pre-trial detention on a sex offender who has repeated this crime and in the view of the judge represents a danger to the community?

Locally, it will be recalled that Milton Brookins Jr., accused of being the "phantom rapist" and identified by seven women in St. Louis as the man who raped them, was released on a $12,000 bond after two of the women signed warrants against him and caused his arrest.

While he was out on bond he was accused of forcing his way into an apartment of a young woman to brutally beat and shoot her as he attempted to rape her, and also of attempting to ravish her companion.

In two subsequent trials on charges resulting from this episode, Brookins was sentenced to 60 years in prison for armed robbery and 99 years for assault with intent to ravish.

Again, the question can be asked. Should Brookins have been released on bond after so many women identified him as a rapist?

Pre-trial detention in such cases should be made mandatory to protect society from criminals who have demonstrated by their actions that they are too dangerous to be at large. The time limit of 60 days on such detention seems reasonable.

The District of Columbia Crime Bill reportedly has been stalled in a conference committee by objections of several senators to the preventive detention provision. It is hoped that the conference committee will keep this important section in the final version. This bill could well serve as a model for other cities throughout the nation.

[From the Milwaukee (Wis.) Sentinel, July 16, 1970]

PROTECT SOCIETY

House and Senate conferees have agreed on a District of Columbia anticrime bill that includes a provision for preventive detention—limited pretrial jailing without bond of criminal suspects found to be dangerous.

Under the bail reform act of 1966, a trial judge is absolutely precluded from considering danger to the community in setting conditions of pretrial release in noncapital cases.

Historically, danger to the community has been considered by trial judges who could set money so high as to effect detention—a hypocritical, unreliable and discriminatory procedure.

Now, every defendant charged with forcible rape, arson, kidnaping, armed robbery, burglary, bank robbery, mayhem, manslaughter, and assault with intent to kill has an absolute, unequivocal statutory right to release before trial, unless there is substantial evidence that he will attempt to escape.

This turns loose on society pending trial professional armed criminals whose sole occupation is to break into homes or stage holdups on the street, narcotics addicts who must commit crimes to support their habits, incorrigible troublemakers with a manifest streak of viciousness and violence, and compulsive sex offenders.

Also turned loose are other defendants with special motives to engage in crime while awaiting trial, such as those who may desire to "bankroll" their families for the time they are in prison, or to pay off a bondsman or a loan shark or a gambler, or to simply have a "last fling."

As Deputy Atty. Gen. Richard G. Kleindienst pointed out at a Senate hearing, "Society has the inherent right to protect its members, for limited periods through due process procedures, from persons who pose a serious threat to life and safety . . .

"Today, federal judges are faced with an agonizing decision when a dangerous defendant stands before them. They must either disregard the mandate of the Bail Reform Act by setting bail beyond the defendant's means, or they must shut their eyes to community danger. One course perpetuates hypocrisy; the other course is hazardous to society.

"Open pretrial detention would eliminate hypocrisy from the bail system . . . defendants would be afforded a due process hearing in which they would gain a significant measure of protection against arbitrary determinations."

It is to be hoped that Congress not only will adopt the pretrial detention system for the District of Columbia but that it will pass legislation applying the system to all federal courts throughout the land.

[From the Norman Brewer Report, WMC–TV, Memphis, Oct. 16, 1969]

A proposal by President Nixon to legalize pretrial detention of certain Federal criminal defendants on grounds that they are dangerous is up for consideration in Congress. The plan is controversial. Legal authorities differ on whether it is constitutional—a question the Supreme Court may some day be asked to settle. They also disagree on whether pretrial detention would achieve its purpose—to protect society from violent crimes committed by some defendants while they are free, pending trial on earlier offenses. A House Judiciary Subcommittee is scheduled to hold hearings on the Administration proposal to authorize Federal judges to order pretrial detention of certain defendants after a hearing and compliance with specified conditions. The problem has become acute in the District of Columbia—the only place in which Federal jurisdiction includes street crimes. The D.C. police have reported that 35 percent of defendants indicted on armed robbery—who were released pending trial, were re-arrested and re-indicted on subsequent felonies—mostly armed robberies—before they came to trial in their first cases. D.C. police authorities declared recently that crime in the Capital City could almost be "cured" if 300 hardcore criminals and narcotics users could be put in jail. The records show that not only in Washington, but nationwide, increasing numbers of crimes are being committed by persons already indicted but free on pretrial release. Many are being arrested up to seven times for new offenses while awaiting trial. Libertarians will be screaming about how pre-trial detention of hardcore criminals will violate the American system of justice. But that system is in deep trouble. Isn't it time that some changes were made in it? Changes that balance protection of the innocent with protection of the guilty?

[From the Richmond (Va.) News Ledger, June 30, 1970]

LET THE JUDGES DECIDE

A few days ago in Washington, a traffic patrolman shot and killed a robbery suspect fleeing from a liquor store holdup, after the suspect had shot the patrolman through the chest and neck. Details of the shooting repeat a pattern that has prevailed in the nation's capital since passage of the Bail Reform Act of 1966, under which all suspects charged with other than capital crimes in Federal courts must be released on bond if the judge considers them likely to show up for trial.

Had Federal District judges in Washington been permitted to consider a suspect's record or the likelihood that he would commit other crimes while free on bond, the recent shootout might not have occurred. The suspect in the case, Franklin E. Moyler, had the record of a hardened criminal. He had served two years in jail on charges of assaulting an officer. He subsequently chalked up a number of assault charges: In January, he was charged on four counts, including assault with a deadly weapon, but was released when he posted one-tenth of a $1,500 bond. On June 1, he was charged again with robbery and released on a $2,000 bond. So he was free on June 19 to shoot and to wound a policeman critically.

The latest incident adds yet more imperative reasons for approval of a preventive detention provision included in the D.C. Crime Bill, under which Federal District judges would be permitted more discretion in setting bail. The Tydings Advisory Panel Against Armed Violence recently endorsed preventive detention as "an immediate response to armed violence." The panel found, in its investigation, that one out of every 11 suspects released on bond is charged with subsequent offenses before reaching trial on the first charges. The panel also reported that offenders charged with certain crimes, such as burglary, robbery, and narcotics offenses, are much more likely to be charged with subsequent offenses while free on bond.

The preventive detention proposal has sincere opposition from those who believe that it infringes on the constitutional rights of criminal suspects. After all, they say, the suspect has not yet faced trial on his charges, and therefore he must be presumed innocent and set free until proved guilty. Opponents further contend that only a small percentage of those released actually commit new crimes before their trials, and preventive detention would punish both the innocent and the guilty.

These arguments fail to persuade. In recent testimony before a Senate subcommittee, U.S. District Judge George Hart recounted 14 cases in Washington in which preventive detention would have prevented commission of new crimes by the suspects, all of whom had been charged with crimes of violence. The subsequent crimes included rape, attempted murder, and armed robbery. In Judge Hart's view, the right of society to be protected from crimes of violence justifies approval of preventive detention.

Those who oppose preventive detention somehow view judges as ogres who would welcome an opportunity to put every criminal suspect behind bars. The record suggests otherwise. Judges who deal daily with violent criminals soon learn to recognize a hardened criminal when he appears in their courtrooms. These judges also recognize their responsibility to uphold the law acting as instruments of that law. Arguments against preventive detention suggests that most judges are corrupt and that they have no ability to distinguish a hardened criminal from a first offender, an unjustified insult to the Federal judiciary.

The arguments continue, pro and con, and a great deal of misinformation results. Meanwhile, the crime rate in Washington rose 21 per cent during the first three months of this year over the same period in 1969; the national crime rate rose by 13 per cent. Even the liberal *Washington Post* has recognized that the lack of preventive detention has contributed to Washington's crime problems. With support from both conservative and liberal elements, preventive detention in conjunction with a speedier trial system, may yet prove a highly effective weapon against those who repeatedly threaten the lives and safety of citizens in the nation's capital.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 a.m. tomorrow.

The motion was agreed to; and (at 5 o'clock and 24 minutes p.m.) the Senate adjourned until tomorrow, Thursday, July 23, 1970, at 11 a.m.

EXTENSIONS OF REMARKS

ONE MAN'S PERSEVERANCE

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WYMAN. Mr. Speaker, an article appeared in Sunday's Boston Globe that describes the splendid work of Mr. Hugh Tuttle, former mayor of Dover, N.H., in keeping his family's three-century-old farm a prosperous and going concern in the fact of growing urbanization.

Hugh Tuttle's energy, industry, and dedication to his home and his fellow citizens are well known in Dover, N.H., and throughout New Hampshire's First Congressional District. In these rapidly changing, and often confusing times, Hugh's accomplishment serves as an inspiration to us all.

The article follows:

IN AGE OF DISAPPEARING FARMS: HUGH TUTTLE LOVES THE LAND TOO MUCH TO GIVE UP

(By Nathan Cobb)

DOVER, N.H.—It is this simple: Hugh Tuttle loves the land.

For 325 years, the Tuttles have been farming the rich soil of Dover Point, three miles southeast of the center of this milltown of 20,000. The developments that chewed up the other farms along the Point and spit out the box-like houses that replaced them now squat at the borders of Hugh Tuttle's land, and he realizes they will someday invade his own fields.

But he also knows it has been his own ingenuity and foresight that has sustained the Tuttle farm for at least one more generation, thus assuring him he will always be a farmer. And that's all he ever wanted, really.

The success of Hugh Tuttle is ironic. His property has been worked by 10 generations of Tuttles and is the oldest farm in America that has continually passed from father to son. But Hugh's refusal to cling to the past has been its salvation.

Educated in botany at both Harvard and the University of New Hampshire, Tuttle has an advantage over most of his fellow farmers. He not only knows how something grows, he knows why.

As he drives you through his 40-plus acres of salad crops, he is likely to tell you about one of his latest experiments, perhaps the black sheets of polyethylene he is using to warm the topsoil. He has been active in the Soil Conservation Service for nearly 25 years, and he is constantly talking about "a better way."

But the main reason the Tuttle land has not yet gone for housing sits conspicuously beside Dover Point Road at the northwest corner of the farm. It is formally designated "Tuttle's Red Barn," but people hereabouts—who know Hugh as a former city councilor, mayor, acting city manager and state legislator—call it simply "Tuttles." It is the store where Tuttle sells the vegetables they grow, as fast as they can grow them.

"My father always sold to the independent stores," recalls Tuttle, who is 50 but whose bone-thin features, mahogany-colored skin and closely-cropped hair skim a decade off his age. "But then the chain supermarkets came in. They weren't interested in quality, just in buying cheap and selling high. We struggled along for several years and just weren't making enough income. I could see we had to do something."

Tired of paying 40 cents or more on the dollar to a middleman, the Tuttles warily opened their 125-year-old barn as a roadside store in 1956. They were immediately inundated by a quality-starved market that has been growing ever since. The daily appearance of 800–1000 customers who spend around $1200 is not uncommon, a volume of business that is a far cry from the two truckfuls of preordered groceries Tuttle was laboriously delivering to local stores every day 15 years ago.

The unchallenged manager of the store is Hugh's wife, Joan. She defies the stereotype image of a farmer's wife as she rushes about in fashionable bellbottoms and sandals, anxiously checking the loading platform in back for more vegetables or happily discussing four types of strawberries with a customer out front.

All three Tuttle children passed their growing-up summers in the store. But Rebecca, a long-legged blonde who is 17 and will start college in the Fall, may well be spending her last season on Dover Point. And Lucy, 25, lives in Paris, while 23-year-old William Penn Tuttle 3d is working in Boston.

The barn opens for the season with the green lettuce and spinach of late May, runs through the yellow corn of hot summer, and closes with the orange pumpkins of Halloween. Cars fill the parking lot long before the 10 a.m. opening, and many daily pickings are gone by noon. There is no such thing as "day-old," and smart shoppers telephone ahead to reserve certain vegetables.

The atmosphere around the store is chaotic crackerbarrel. The hectic filling of orders is likely to be salted with numerous questions about children, introductions of grandchildren and exchanges of news.

Not only are customers called by name. So are their dogs.

While all this controlled mayhem is taking place at the barn, Hugh Tuttle usually can be found quietly managing his fields. "It's better that way," he smiles. "Sometimes if a customer complains, I take it personally."

The farm now produces some 60 vegetables, everything from Swiss chard to Chinese peas. "We decided we were going to make these meat and potato Yankees like salads, and we've done it," Hugh laughs, His land covers 245 acres (the average U.S. farm being 250), but some 200 of this pasture, hayland, wasteland and the woodland that produces the fireplace logs he sells during Fall and Winter.

He keeps precise records of when, where and what he grows, as well as shortage and excess records. These details will make up his "bible" for subsequent years.

Complicated? "It's either do it this way or mechanize and grow only two or three crops, ship them to Boston, pay off the top, and let everyone make more money than you do," he says flatly.

Hugh Tuttle's day begins at 5:30 a.m., and by 7:30 he is joined by his pickers. Unlike many New England farmers, he has a built-in labor market. Dover is filled with low-income families who are anxious to have their teenagers work in the fields, and the University of New Hampshire is only four miles away. The farm receives some 200–300 work applications every year.

Picking goes on all day, with Tuttle acting as a liaison between the store and fields. When his wife tells him customers are waiting for peas, he hurriedly moves pickers to that area of the farm. Or beans. Or corn. And on it goes.

It was one John Tuttle—"Immigrant John", the family calls him—who first made his way to Dover Point from Bristol, England, in 1632, having been shipwrecked off the coast of Maine along the way. The land

was used only to keep the family alive for seven generations, but the industrial revolution eventually brought cotton mills to Dover and in 1909 Hugh's father began growing vegeables and taking them around to local grocery stores.

"It used to be that the dumbest kid in the family took over the farm," Hugh explains. "But times have changed. There's a revolution in agriculture now. I'll try anything new at least once, and if it doesn't work, well . . ."

A little later he calls out to his 22 black angus beef cattle, the ones he keeps mostly because the local kids like them and because he loves "the look of black cows against the green grass." They come slowly across the pasture, bellowing.

"I'm the only one left along here," he says, squinting up Dover Point rd. "The taxes have tripled during the past 10 years, and I'm paying houselot taxes on much of my land.

"But, of course, all types of American farms are going out of existence at a rapid rate," he goes on, "particularly around the population centers of the East and Far West. And with no population control and no preservation of land for agricultural purposes, I can foresee the day when this country won't be able to grow its own food."

Is time running out on the Tuttle farm? Certainly the family knows that half of America's farm population has disappeared since 1950 and that creeping urbanization has helped swallow up over one-third of the country's farms during the past two decades.

"There's a possibility it may go on another generation," Hugh theorizes, stooping to cut a row of lettuce. "My son has allergies which make living here almost impossible, but I have two daughters, and who knows? They might marry farmers.

"But the only way to survive another generation is via the retail route. The farm just couldn't go on if we were still wholesaling. You see, land values are so high they've made farming almost impossible this close to megalopolis. Frankly, I'm not encouraging anybody to carry on here another generation.

"But this land!" Hugh Tuttle says, setting a box of fresh lettuce in the back of his pickup truck. "This land has a dependability you don't find in people, and that's what I love. I wouldn't have lived my life in the city for anything."

TREATMENT OF PRISONERS ACCORDING TO THE GENEVA CONVENTION

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1970

Mr. SCHWEIKER. Mr. President, today over 1,400 American servicemen are held as prisoners of war by the North Vietnamese. We have used every available diplomatic channel to persuade that government to provide a list of such prisoners, to indicate their condition, and to permit regular communication between them and their families in accordance with the rules of the Geneva convention.

Whether the requests have come from the United States, from neutral countries, or from international organizations, they have been ignored or rejected by the North Vietnamese Government.

Yet that government is a signatory to the Geneva prisoner of war convention which requires that captor nations, as a minimum, must treat prisoners in the manner we have requested of North Vietnam.

Once again, I urge we renew our efforts to press for minimum justice for American prisoners of war held by the North Vietnamese.

BITTER HARVEST

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. SCHMITZ. Mr. Speaker, I would like to include an article by Father Daniel Lyons, S.J., which appeared in the July 12th issue of Twin Circle magazine. Father Lyons points out the fallacies and bitter harvest of the so-called grape strike.

The article follows:

CHAVEZ REAPS BITTER HARVEST

(By Father Daniel Lyons, S.J.)

I went to the Coachella Valley with Father Cletus Healy late in June to find out the latest developments regarding the table-grape situation. The valley is in the vicinity of Palm Springs, 100 miles east of Los Angeles. We also went to the Bakersfield and Delano area to talk with workers, growers, pastors and other knowledgeable persons to find out all we could. Father Healy will be writing a more detailed account of our latest investigations for our readers, but I am anxious to tell you my conclusions.

First of all, do not think of grape-pickers as an oppressed people. They are the highest paid agricultural workers in the nation. A long-time pastor in Delano told us he had often said to concerned outsiders: "Go out and find a family that is underfed and come back and tell me, so I can feed them." They have apparently never found any. Secondly, do not think the workers are clamoring to join the union. As a union organizer, Cesar Chavez has failed miserably to get workers behind him. Thirdly, do not labor under the illusion there has been a workers' strike against the growers.

Chavez called for a strike against the growers, but he could never get more than a handful of workers to go out on strike. So he hired pickets who were non-workers, and induced hippies, members of the SDS and other characters from the Berkeley campus and elsewhere to picket various ranches. Newspapers and TV crews then interviewed the picket as though they were workers out on strike.

"POISONED" GRAPES

Since a strike is supposed to be a withholding of labor by workers on the job, the effort failed miserably. Chavez then launched a nationwide boycott, but this too failed until recently. Having failed to get the workers behind him, having failed with his strike tactics, having failed with his boycott, he launched a fourth weapon: pesticides. He claimed the growers were using poisonous pesticides, so no one should eat grapes. Then he cynically agreed to waive the poison issue if the majority of growers would sign contracts with him. But he was beaten on the pesticide issue when the State of California Department of Agriculture proved that his charges were untrue.

But Chavez is not a failure. He has succeded in getting hundreds of thousands of dollars from the AFL–CIO. He has gotten millions of dollars worth of publicity. He has successfully formed committees in nearly 100 cities to pressure the chain stores into boycotting table grapes. In Chicago alone he has 40 full-time representatives working on the boycott. He has gotten mayors in such big cities as New York, Boston and Detroit to support his boycott. He has organized pickets all over the country to man the entrances to chain stores with their placards.

Whether Chavez is behind it or not, he has also profited from fires that have been set in scores of sheds, owned by growers in strategic areas, and from hundreds of tires that have been slashed on the cars of grape pickers who have not succumbed to his tactics. He has gotten hundreds of clergymen, and particularly priests, to picket stores and call on store managers to persuade them to boycott grapes. He has also managed to get all the Catholic bishops in the United States behind him officially. Only a few Catholic bishops are actively behind him, but the good name of them all is being used because a bishops' committee was set up and is acting in their name.

COMMITTEE USURPED POWER

As the spokesmen for the bishops' committee, Auxiliary Bishop Joseph Donnelly of Hartford and Monsignor George Higgins of Washington, D.C., said they would do everything they could to organize the table-grape industry. And that is only the beginning, they pointed out. The committee intends to dedicate its efforts to organizing all of the farm workers in America. There is no indication the rest of the bishops had this in mind when they supported the committee on table grapes. As far as we can determine, it is a power the committee simply usurped.

That the name of the U.S. bishops is being used in the campaign to organize the table-grape industry is unprecedented. We have also found it bitterly resented. In the Coachella Valley, for example, 70 percent of the growers are not Catholic. Among them is the head of their association, who is facing bankruptcy because he will not force his workers to join Chavez's union. He met twice with the bishops' committee, but said it refuses to meet with him any further because a bishop on the panel thought he had not been sufficiently respectful. Of course, in the eyes of the grower the bishop was just another pleader for Chavez.

Shortly before he died in Illinois this past May, Father John Coogan, S.J., wrote to Twin Circle that Monsignor George Higgins, who is the dynamo behind the bishops' committee, has spent his life crusading for compulsory unionism. "As far as grapes are concerned, Higgins can take them or leave them," he said. Father Coogan, who taught social science at the University of Detroit for many years, and who preceded this writer as current affairs columnist for Our Sunday Visitor, knew whereof he spoke.

By right, Cesar Chavez should have had to convince the workers they should join his union. He never did. He is about as popular with most of the workers as the seven-day itch. If they oppose his union he sometimes threatens to have the Internal Revenue Service harass them. The union contracts he has signed have forced the workers to pay so many fees, dues and assessments they are all receiving less take-home pay than they were before. And they are forced to pay these sums by having the money taken out of their checks by the employer, under pressure from the union. Furthermore, Chavez is bringing in thousands of workers from Mexico to take the jobs of residents, since so many refuse to join his union even under pain of losing their job. He is constantly advertising for workers on the radio in Mexico, and the workers in California know it. Only ten percent of grape pickers were migrant workers before Chavez came in, and he condemned the importation of workers from Mexico in the past.

MANY WORKERS FIRED

Just as Chavez has never succeeded in getting the worker behind him, so he never

succeeded in getting enough people to stop buying grapes. Where he did succeed is in getting so much pressure on chain store managers that they were afraid to handle his grapes. He succeeded so well with this that he has finally forced many employers to sign a union contract with him. In doing this he never consults with the workers. He merely forces the employer to discharge all those who will not sign up with his union.

From all we could find out by talking with workers and employers, the so-called union elections are a farce. Employers who have signed a union contract have usually done so because the boycott has made it impossible for them to sell their product, so they face financial ruin. The union promises to sell their grapes for them, and it does so by forcing stores to buy grapes with the union label on the box. It then acts as the broker.

The union makes no attempt to contact the workers before it forces an employer to sign a contract. Numerous employers quote Monsignor Higgins as saying: "Either you sign a union contract or we have no recourse but to have the bishops across the country enforce the boycott and make you sign." When employers ask him why the workers are not consulted by the union, the Monsignor declares: "That is not necessary. They can ratify the contract later."

What is so shocking is to have the workers and employers tell you what "ratification" means. It means telling the workers they will be fired that day, or at least within three days, if they do not sign a union card. Those workers unwilling to join the union then leave. That is why you hear that "the workers voted to join the union 70–0." Sometimes the figure is given as "70 to 2," as in a Russian election.

As Father Coogan pointed out, compulsory unionism is what Monsignor Higgins is totally committed to pushing. That is why he and his committee of one or two active bishops talk with the union as though it represents the workers, instead of trying to understand the thinking of the workers themselves. They have determined that compulsory unionism is what should be imposed on the workers, whether the workers like it or not, and whether the workers want this particular union or not. When the bishops' committee talks about "negotiations" they mean compulsory unionism and nothing else.

WORKING CONDITIONS UNCHANGED

No working conditions are changed by the union contract. All they get is $1.75 per hour, plus commission, instead of $1.65 per hour, plus the same commission. If the workers were being underpaid, how has the union helped them? They are getting considerably less money now, after they pay their initiation fees, union dues and assessments. And what is the justice of forcing workers to join a union unless they want it?

The bishops' committee is not listening to the pastors involved or to their parishioners. Large numbers of Catholics have already been alienated from the Church, and thousands of non-Catholics have been embittered by the arbitrary, high-handed actions of the bishops' committee.

A "FIGHT TO THE DEATH"

Chavez describes his movement as a "fight to the death. They destroy our union or we conquer them." He is now moving his hired pickets against the $11 million melon crop in the Imperial Valley. Melons are vulnerable because they begin rotting within three days after ripening. A spokesman for the union said pickets will move from field to field, picketing crops as they ripen. Reports the Los Angeles Herald-Examiner: "Chavez' tactics of intimidation and threats have closed three fields comprising 300 acres of one grower's total of 1,200. The cost to the grower is estimated at $30,000 a day." As usual, none of the workers belong to his union, but he hopes to force the employer to compel them to join.

We expect that of Chavez, but we cannot believe that most of America's bishops would approve of what is being done in their name if they were fully aware of the facts. Coercion of both the workers and employers ill becomes the Church Christ founded.

PROPER NEWS REPORTING AND USE OF MASS MEDIA BY EXECUTIVE BRANCH

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1970

Mr. MOSS. Mr. President, on July 10, the distinguished Senator from California (Mr. CRANSTON) addressed the National Broadcast Editorial Conference in Park City, Utah. His speech dealt with the important question of proper news reporting and the use of the mass media by the executive branch. Because of the importance of this matter and the excellent manner in which Senator CRANSTON addressed the problem, I ask unanimous consent that his speech be printed in the Extensions of Remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR ALAN CRANSTON

Last month, the Senate repealed the Gulf of Tonkin Resolution. In the six years the Resolution existed, more than 50,000 Americans died in Southeast Asia. In those six years, our involvement grew from a few advisors in one country to thousands of troops in three. In those six years, the cost of the war kept us from meeting our urgent domestic needs, and controversy over the war kept our people divided.

The Gulf of Tonkin Resolution was adopted in August, 1964, after President Johnson had appeared on national television requesting what amounted to a blank check to wage war in Vietnam. The request stirred little debate in the press, among the public or in the Senate. CBS News, for example, devoted only two minutes of air time for commentary after the President had completed his remarks. Fred Friendly, who was then president of CBS, later wrote: "I shall always believe that, if journalism had done its job properly that night and in the days following, America might have been spared some of the agony that followed the Tonkin Resolution."

But the press didn't do the job.

The Congress didn't either, and we've gone through six years of agony.

The war drags on.

And a new President goes on television to seek public support as he sinks deeper and deeper into the morass in Indochina.

We dare not repeat the mistakes of 1964. Our nation can't survive another six years like the ones we've just gone through.

Congress must never again turn over its power to the President—it must never again allow the United States to become locked in an undeclared war in a distant corner of the globe.

And the press must never again fail to give the American public the vital information and interpretation it so desperately needs in these complex and troubled times. The press—especially television—must never again let major Presidential announcements go unexplained.

The primary burden of explanation falls on television for two reasons:

First, television is the medium the President uses to take his messages to the people, and it should be, therefore, the chief medium of interpretation of that message.

And, second, television is the largest—and in many cases the only—source of news for the American people.

The importance of television as the country's news source can't be over emphasized. On an average evening, 20.6 million American households—one of every three households in the United States—watch TV network news. The news programs reach more than 40 million viewers a night and there is good reason to believe that many of these men and women only occasionally read a newspaper or news magazine, and never read a journal of opinion.

A study recently published at Harvard revealed that half of this country's adults apparently lack the literacy required to read a newspaper. And a survey by Roper Research Associates a year and a half ago indicated that 59 per cent of our citizens rely on television as their main source of news; 29 per cent said television was their only source of news.

These are sad and disturbing observations. Not because they indicate that television has a large audience, but because they reveal that many Americans are getting all or almost all of their news from a medium that isn't structured to give important events the necessary depth of coverage on a day to day basis.

As Walter Cronkite noted recently, there isn't time in a single news show to develop even basic arguments on all sides of an important issue. The viewer needs a fair background going into the broadcast to get an accurate impression of the day's news. And, unfortunately, most viewers don't have that background.

Because of this situation, television newsmen have struggled for longer news programs, fewer commercials, more investigative reporting, more analysis and interpretation. To a small degree they have been successful. But, in many important ways, they haven't been. And television news has a long way to go before it meets the needs of a public that reads very little.

You and the other journalists in the industry will be partially responsible for how well television develops in the next few years. But, as you well know, not all of the decisions are yours; your best efforts can be thwarted; your best plans reversed.

Television—especially television news—has incredible potential. It could make possible the sort of extended dialogue—that is so extremely necessary today. It could, with a few alterations, provide many sides to many issues. It could allow complete discussion of complex matters. It could be an expanded and essential ingredient in the continued success of the largest and most complicated democracy the world has ever known.

Television *could*.

I'm not sure that it *will*.

I'm not sure because I believe there are men in government and in television itself who want less dialogue, not more. Men who want cleverly packaged Presidential announcements with no interpretation. Men who want to hear simple solutions to complicated problems. Men who fear controversy, don't trust debate, and want the open forum open only as long as it is the platform for ideas they feel comfortable with. If these men prevail, I fear that dialogue—at least dialogue on television—will die in our times.

Our job—mine in Congress, yours in the industry—is to see that they do not prevail.

Our job is to work for more dialogue, more discussion, a greater exchange of ideas and

a broader airing of divergent views on television. It won't be easy. The forces on the other side are powerful. And, I fear, public opinion is with them, not us.

The evidence at hand convinces me and, I know, many others that the Administration has launched a coordinated attack on the press—especially on television. One ultimate goal of the attack is to eliminate dialogue—complete discussion of Presidential announcements—and one tactic it has used is to play on the public's distrust of the media.

The Vice President had led the attack. He has spoken, obviously, for the entire Administration. And he has been aided by a number of Administration officials—from the White House aide who wrote the Vice President's speech attacking television news, to the Nixon-appointed chairman of the FCC who announced he agreed with what the Vice President had said.

In addition, the law and order zealots in the Nixon Administration have—either by design or accident—damaged the news media's ability to gather information. The Justice Department has issued subpoenas to newsmen, and sources have started to clam up. The officials in government who would play fast and loose with some rather basic freedoms—including freedom of the press—have been given new license by the Nixon Administration. And the result, as far as the media's ability to gather information is concerned, has been unfortunate indeed.

One of the main reasons for the Administration's attack on the media is, I think, the Administration's overwhelming desire to circumvent the press—to take its already-prepared message directly to the people.

We shouldn't be too surprised.

This is, after all, how the President was elected. He didn't debate. He didn't subject himself to hard, live, on the air questioning by newsmen. He didn't take any chances. Instead, he was "sold" to the American people. His television appearances were carefully conceived—worked out well in advance to give the impression of dialogue while permitting none of the dangers that are presented by a real, unrehearsed exchange of ideas. Even his election eve telethon was written in advance.

Once in office, Mr. Nixon continued to make good use of television. He allowed ten televised press conferences, and, last week, even conducted a question and answer session with three network newsmen.

Televised press conferences are a well-established aspect of the presidency, and I think Mr. Nixon has had little choice but to conduct them. The press conferences have been infrequent and I believe it is clear they are only a secondary and unavoidable factor in the President's approach to television. The backbone of Mr. Nixon's television operation is the speeches—the safe, sure presentations the President has used 12 times in his first 18 months in office.

He has gone directly to the people—unencumbered by questioners—with slick, carefully prepared reports complete, in recent months, with charts, maps and film footage.

The President has had free television time to make his case in the most effective way he and his advisors could devise. But that, apparently, wasn't good enough. Not only did Mr. Nixon seek to have large chunks of prime television time to give his views, his way, with no questions. He apparently wanted television to carry his speeches with no follow-up, no balance, no interpretation, no analysis of his remarks. Because, when television executives exercised proper journalistic judgment and provided some analysis after the November 3 speech on Vietnam, the Vice President began his rampage.

I think the Vice President's outbursts have been disturbing—particularly since they came from an Administration that pledged to lower its voice and bring us together. But even more disturbing is that the intimidation in the Administration's attacks on the press has been successful in some instances. An editorial in the January 3 *TV Guide* pointed up the situation very well:

Vice President Spiro T. Agnew's scolding of the networks apparently has had the desired result: After President Nixon's Dec. 8 press conference, there was no criticism whatever from commentators who followed him.

I haven't watched every commentary following every Presidential appearance on television. I've seen some criticism in the broadcasts since December. But I've also seen too many instances when post-speech coverage was very brief, and really presented only a skimpy rehash of what the President had said.

The success of the Administration anti-press campaign can be attributed to careful study of where the press is vulnerable. The Vice President found a place when he suggested, in the Des Moines speech, that "perhaps it is time the networks were made more responsive to the views of the nation and more responsible to the people they serve." This hit a sensitive spot, for there is fear among a good many of the people television serves that the network news programs aren't telling it like it is. Indeed, we'd be fooling ourselves if we didn't believe that the Vice President reflects the concern of many, many men and women in this country.

A New York Times sampling last fall showed people who called or wrote to television stations supported the Vice President's views by a two to one margin. A Gallup poll conducted early this year revealed that only 40 per cent of the American public believes television fairly reports social and political issues.

Certainly the press—especially television—can present more sides to controversial issues. It can present more discussion and a greater exchange of ideas—and this will do much to restore the public's confidence. But I doubt that these steps would satisfy the Vice President. He's not concerned with a free press. He's concerned with an acquiescent one.

In his attack on television news, the Vice President quoted this passage from the Supreme Court's landmark Red Lion decision: "It is the right of the viewers and listeners, not the right of the broadcasters, which is paramount."

He left out what I believe is a much more meaningful passage from the same decision: "It is the purpose of the First Amendment to preserve an uninhibited market place in which truth will ultimately prevail, rather than to countenance monopolization of that market, whether it be by the government itself or a private licensee."

We've seen how committed the Nixon Administration is to creating an uninhibited market of ideas.

We've seen an Administration that wants a monopoly on the market place.

We've seen an Administration that wants its ideas accepted without discussion or interpretation.

We've seen an Administration that views television as a tool to be used only to advance Administration policy.

I believe we've seen an Administration that has no intention of helping to preserve an uninhibited market place of ideas.

But television's record in this area is not all that it might be. In the last year, television networks have been unduly active with the censoring scissors. Joan Baez mentioned why her husabnd was in jail. The statement was censored. Carol Burnett appealed for letters of peace to be sent to Mrs. Martin Luther King. The appeal was censored. Judy Collins criticized Judge Julius Hoffman. The criticism was censored.

This is an uninhibited market place of ideas? I think not.

I think the censors have been working too hard. I think they have trimmed—too much and too often. I think ideas—especially unpopular ideas—deserve to be heard. And it is a serious matter when controversy is snipped out of network television.

It is also serious when network television avoids controversial subjects or waters down their presentation on the air. Early this year, *Variety* reported a long list of television documentaries had been severely trimmed or discarded altogether. The documentaries covered touchy subjects—homosexuals, corruption in Saigon, the military-industrial complex—subjects television news should be looking into. It is sad indeed that network executives decided these controversial subjects could not be presented, or presented fully, on the air.

As I'm sure you know, television policy is a delicate matter in the Senate right now. And, in fairness, I should tell you I am one of a group of Senators who, this week, filed a complaint with the FCC seeking a ruling that network television will provide time for us to respond to the President's television speeches on the war.

The group, consisting of Senators of both parties, is seeking to improve the balance between the executive and legislative branches of government. As you well know, the branches are supposed to be co-equal—but that is obviously not possible when one branch has unlimited access to the Nation's most powerful communication medium, and the other branch has practically no access at all. We were willing to purchase television time to provide a Congressional balance to the President's presentations, but—since NBC initially did sell us a half hour for one show—the three networks have told us they will sell us none. And so, as a last resort, we have turned to the FCC. Without arguing the case, let me only say that I believe a response by us, or by some other informed group, would add substantially to the exchange of ideas about the war. And that sort of exchange is what we should be striving for—on many issues.

I realize the networks face serious financial and programming difficulties in cases like these. Your realization of that fact must be greater than mine. But I also realize that there is a need for more than one voice to be heard on the question of the war in Indochina. I think your voices—the voices of the industry's editorialists—should be heard. And I think the voices of those opposed to the President's policies who are not in the press should be heard also. We need to work harder to establish that uninhibited market place of ideas in which the truth will ultimately prevail.

Here are some things that can be done:

Every instance of interference with the press by the Administration should be well publicized. The first few subpoenas to newsmen when unnoticed for several weeks last year because each publication and television network thought that it was alone and said nothing. This shouldn't happen again.

There should be a national privilege law for newsmen. Subpoenas damage a newsman's ability to gather news and should be issued only under carefully predetermined circumstances.

The proceedings of the House and the Senate should be open, within reasonable limits, to radio and television. And the House should follow the Senate's lead and open committee sessions. It is absurd to argue that the electronic media should cover government and then make it impossible for the media to use its primary tools.

There should be more commentary on television—especially commentary at the local level. It's one thing for a network commentator to appear on national television and discuss how an event affects the Nation. It is something quite separate, and equally important, for a local commentator to appear on local television and discuss the local effects of the same event.

News programs should be enlarged and there should be more time for explanation and background during the show. Several educational television stations are experimenting with an hour-long format that resembles a news meeting between an editor and a group of reporters. The results of the experiments have been very encouraging. I should think that a similiar format might well be adapted to commercial television.

All newsmen should stay skeptical of politicians and government. Thousands of public relations men in Washington are cranking out press releases, manufacturing "news" and creating snazzy images for their bosses and agencies. As a result, the need for a skeptical, objective and thorough press corps is greater than ever.

In all of these—and like changes that have been suggested elsewhere—there is one common thread. It is this: We need more controversy on television—not less. We need more commentary on television—not less. More Americans should have access to the airways. More ideas should be expressed. More opinions given. More sides presented. And more feathers ruffled.

We desperately need to expand our market place of ideas.

Because if we don't expand it, I fear our children may one day come to the market place—and find it closed.

KNBR LOOKS AT THE PERIPHERAL CANAL

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WALDIE. Mr. Speaker, a recent report by the U.S. Geological Survey and linking the water quality of San Francisco Bay with the amount of fresh water outflows from the Sacramento River has caused an enormous amount of concern to be focused on the California State water project.

As proposed, Mr. Speaker, this project would divert up to 80 percent of the normal fresh water outflows that enter the bay to points to the south.

If the contentions of the U.S. Geological Survey report are correct, and there is no real reason to doubt them, then the perils posed to the San Francisco Bay area are quite clear—it will face tremendous problems because of the massive diminution of fresh water outflows.

A recent editorial on San Francisco radio station KNBR contained some insightful and highly pertinent conclusions and, I think, should be of interest to the Members.

The editorial follows:

PERIPHERAL CANAL

The giant California water plan to deliver northern California water to the south has been a multi-billion dollar fiasco from the beginning. The long delays in construction may, however, prove a blessing in disguise. The U.S. Geological Survey has just issued a report on the effect of building the peripheral canal to divert Sacramento River water away from San Francisco Bay. Their findings indicate that without the flushing action of the Sacramento River waters, the Bay would quickly become a stagnant dead sea, similar to Lake Erie. We at KNBR would have to wonder why the original planners did not discover this same information. It would seem that they overlooked or merely closed their eyes to anything that did not further their purpose. In any event, it is clear that the proponents of the water plan must either, one, prove the U.S. Geological Survey wrong, or two, abandon the idea of building the peripheral canal. We realize that this plan is of great importance to southern California, but the destruction of San Francisco Bay is a price which the people of northern California *can* not and *will* not pay.

SCOTT TESTIMONY ON CAMPUS UNREST

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1970

Mr. SCHWEIKER. Mr. President, last week, the distinguished minority leader (Mr. SCOTT), appeared before the President's Commission on Campus Unrest, headed by another distinguished Pennsylvanian, former Gov. William W. Scranton.

Senator SCOTT spoke eloquently on the need for reasonableness and moderation in an area where too often rhetoric and emotion dominate our attention. Senator SCOTT has shown an understanding of many of the legitimate concerns of young people and has made some excellent suggestions for conduct by young and old alike.

I commend Senator SCOTT's remarks and ask unanimous consent that they be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE HONORABLE HUGH SCOTT, A U.S. SENATOR FROM THE STATE OF PENNSYLVANIA

Senator SCOTT. Mr. Chairman, I am very honored and pleased to have a chance to testify here before this distinguished Commission, and of course with special reference to the Chairman, whose services to his Commonwealth and the Nation are so well known and so greatly appreciated.

I am glad to make a brief opening statement on an issue which is of primary concern, as you have stated, to this very distinguished Commission. A Commission which is marked by its credentials, its background of civic and academic aplomb, and the very high level of the membership, would guarantee I should think, that it would well and truly satisfy its mandate and provide most useful information and recommendiations.

The distinguished Majority Leader, Mr. Mansfield, and I last May after the Kent State tragedy urged the President to establish a high level commission fully to investigate and report on that incident, and on the general situation of unrest and turmoil which exists on some campuses today.

We said at that time that "We believe sincerely that the Nation would welcome recommendations as to how the present unfortunate situation can be alleviated."

Mr. Chairman, my purpose this morning is simply to express a view as to what is happening, not only on campuses, but to all our people. There has been an intolerable level of intemperance and misunderstanding on all sides which has created an atmosphere of distrust among Americans who find themselves in dissent with each other.

And this rhetoric has built up a heavy turbulence of highly emotional disagreement.

And so we need to retreat from demagoguery with all of its aspects of oratorical fulmination. And I think that it is time that we learn to show each other our humanity and our basic human goodness. And we are going through a time when the diatribes of the left and the polemics of the right are obscuring the broad swath of the middle wave. And the dissenters are to be heard above the tumult.

And yet it is moderation that produces action, wise and reasoned, forward-moving action. The time has come strongly to reassert our broad generosity and spirit of accommodation, and to reassert the strength of that moderate spirit, then, which has been our heritage.

Last November prior to the coming of hundreds of thousands of students from hundreds of campuses to Washington, I suggested then that the solution could include better listening, more compassion, and a willingness to respond and show a sensitivity and an awareness to the problems of the other side, and that the Government should inject some youthful idealism, and that we should not resign Government to the apathetic or the cynical or the coldly mathematical, that we should listen to the young voices of idealism, of hopes for better ways. And I would say now that we ought to have a synergetic system to harness this great potential.

The concern of the student activists is expressed in the search for means to influence the decisions which most directly affect their lives—the war, the draft, the rights of people, the conditions of living.

And student awareness does this generation credit, as does their idealism. Their anger at the system, the Establishment, and often for society, is evidence of this awareness.

At the same time one feels that students generally are more aroused than informed, and often more frustrated than constructively involved. And this Commission will serve to increase the body of information available to us as to where there may be some better ways to establish more acceptable communication between students and the rest of the community.

And perhaps too the Commission may come up with some helpful suggestions as to areas where the Establishment and the alienated students may reach some common ground once certain essential premises are established.

Let us hope that the Commission's efforts will lead to more accommodation, and less confrontation, to more open minds and fewer closed schools. And all of us will wish the Commission well, and I do thank the Commission for its kindness in inviting me to appear before you.

Chairman SCRANTON. We appreciate very much your comments, and also your wishes of good health and wealth to us in what we are attempting to do.

As you know, one of the most difficult things at the moment is the first item that the President enunciated when he established the Commission, which was to identify the causes themselves of the campus unrest.

What is your thinking about what these causes may be, Senator?

Senator SCOTT. I have a feeling that each generation comes into the universities under different conditions of life from any preceding generation. And unbulwarked as yet by experience, desirous, quite naturally, through idealism, for sudden and in fact at times almost instant gratification, they naturally react against the conditions in which they find themselves.

This particular generation, born in a time of what seems to be never-ending war, continuous social conflict, an era where a government of laws appears to have failed to provide a good condition for men, and in the concatenation of the Cambodian expedition, which came undoubtedly with enormously heavy impact, the very sad events at Kent State and Jackson State—I think all of these

things combine to create a mood in the universities unlike anything that has happened before in its intensity.

I have lived and seen all kinds of student unrest. I remember in 1967 at Temple University the excitement developed over the increase in the price of coffee in the cafeteria from 10 cents to 12 cents. There was a brown bag revolt, as it was called, and the students raised their voices in economic consumer protest.

When I attended the University of Virginia the high cost of clothing created a spontaneous reaction across the United States. Most of this Commission is old enough to remember it. But in every campus in America there was a run on overall factories, and students appeared by the scores of thousands in blue denim overalls—and promptly brought the price of clothing down by a good 20 or 25 per cent.

It would be natural, then, for students to feel at this time that their impact can immediately affect the operations of government. And of course their frustration increases when they find that government, the system, representative government in America does not operate with celerity which they demand.

And I think that they threaten to lose confidence in the system because it does not immediately respond to what to them is so crystal clear, the need for change. And they are not yet sufficiently experienced to realize that the previous generations have already recognized that need for change, have done something about it, have made their slow and painful progress forward, have done what they honestly believed was their best, which this generation feels was very poor indeed.

So I think all those things are involved.

If I may name-drop for a minute, concluding the answer, I had a recent talk, just before the general elections in Great Britain, with the Queen. And she asked about student unrest in America. And I discussed it with her in much this vein. And I spoke of instant gratification.

And her comment was, "How odd, and how very much like the emerging nations, to want it all at once."

Chairman SCRANTON. I hope you do not mind if we ask you a series of questions, sir.

Senator SCOTT. Not a bit.

Chairman SCRANTON. But all the members of the Commission wish to do so.

One more question on this line.

Do you see this unrest as stemming—being primarily caused by, characterized as political or economic or cultural, or how do you see it in terms of trying to pinpoint it into a field of endeavor or field of philosophy or field of interest?

Senator SCOTT. I simply do not think it is economic. To distinguish it from other occasions, it arises in many cases among the affluent. It does not seem to have goals of economic alteration. It seems to me to be more of a cultural malaise. As they begin to realize what is going on, they also begin to dislike intensely the way it is happening. And when they say, tell it like it is, they do not like the way it is.

And so obviously it is the best educated generation, and healthiest and strongest generation. They have an advantage over their elders even in height. And they certainly do in education and training. And therefore they see themselves as equipped to handle the world's problems, which is in the nature of youth, before they have grown memories, and of course thereby grown experience.

To characterize it oversimply, I would say cultural.

Chairman SCRANTON. Mr. Ortigue has a question.

Mr. ORTIGUE. Senator, we have heard a great deal from the students indicating that they wish to have the means to be heard, but that frequently they are not heard. Do you have any suggestions to the Commission in terms of the mechanism by which young people who, as you have indicated, have not had the experience, can be heard?

I am specifically concerned that after the tragedies this spring many of the Senators and many of the members of Congress were available to the students. And it is fashionable now to be available. I would like to know, what are your reactions in terms of suggestions for young people to make certain that their concerns are heard?

Senator SCOTT. I think there was some release of tension, when students were heard by members of Congress and by their staffs. And in my case they were heard by myself and my staff literally by the thousands during this period. They demand—and it would be well if we could find means to accord it to them—better ways of being heard within the college system, a greater participation in the planning phase without the semidictatorial powers that at times they demand.

And I am coming to why I think they do it that way.

I have said to groups that we have for years been saying, get involved. And now we have said, do it. And sometimes we then are appalled when they do it to us collectively. And of course that is an ideal way for them to become involved in the political system, to pursue their choice of candidates, their choice of issues.

In the educational system they do need more participation. The sad fact is that if you create a new form of student senate or student faculty cooperation, after they get it there is less tendency to use some of these means of cooperation.

A student at Temple, speaking of that university again, said recently that students do not like to work within the committee system, because when they go to the committees, unless they are angry and arrogant and contentious, they are going to be out-talked. This is a fear that their elders are not going to listen to them.

It also appears that they are not yet quite competent enough to engage in the reasoning process with their elders. They fear that they will be overcome by sophisticated subtleties of logic.

Of course, we need more logic and philosophy in the colleges, perhaps. But I do think all the doors should be open to them where they can participate before they are really ready to control.

Chairman SCRANTON. Commissioner?

Mr. RHODES. I have two questions, Senator.

First, if in fact what we have been seen happening on the campuses in the last year, the gradual growth of a massive student revolt, indicates that a radical outspoken majority of the students are opposed to the administration's policy, do you think, given the Cambodian invasion and the President's war policies, that any activities in Indo-China are worth the disillusion of our society, as indicated by the events of the spring, which all of our knowledge indicates will continue to the fall?

Senator SCOTT. Mr. Rhodes, I would have to respectfully challenge the premises there. Because I do not believe that the values in our society are vitally damaged or inherently defeated by the war in Indo-China.

I do think the war in Indo-China is immoral, but in the same sense that virtually all wars are immoral, that it is unpopular, that it should be terminated as fast as possible. But I think it is more fashionable than reasonable to argue that the cause of this summer of our discontent is directed solely to the war.

I think it was one of the springs that set it up. One wonders why it was not set off sooner at a time when the war was growing rather than at a time when the war was lessening. And it might have been good for this country had this happened about two to four years ago. But obviously it disorders the priorities. Obviously it deters and detains the things that need to be done in this country. But I do not believe that we can ascribe all of our ills to this particular unfortunate situation.

Mr. RHODES. My second question is, we often hear descriptions of the political dissent coming from students. And this Commission is charged with investigating the process of campus unrest, which to some extent begs the question already, I would suggest, and in fact we are almost really more concerned about political dissent, which has more of its sources on the campuses. But why do you think—or do you think dissent in this country against the Administration's policies goes beyond the campuses; and in fact is something which is suggested by simply focusing on the campuses in terms of unrest?

Senator SCOTT. Well, dissent is the history of America. And it is not confined to the young. And when it is not violent, it should be honored. And there is a Jeffersonian precept to go on there. I do not believe that—the dissent today, I will put it this way, is more outspoken, or evident, more voluble. But we have had many periods of dissent in this country where the whole Nation reacted quite suddenly, with dissent against policies, economic or political. This is simply one of those periods in my life.

Mr. RHODES. Thank you, sir.

Chairman SCRANTON. Mr. Ahern?

Mr. AHERN. Senator, what contribution do you think the national Administration can make toward alleviating some of the concerns that students have today?

Senator SCOTT. The contribution of our concern, attention, listening, and invitation for wider participation. As you may know, this is not universally popularly said, but at the White House today there are probably more members of the Ripon Society than of any other organization.

And while I am concerned myself, I refer them to the intolerable excesses of the far right, for example. The White House, in other words, if you go down there, is really peppered with attractive thinking young men and women. We could have more of that in all the government. And those who are their elders would do well to listen to them.

I think the President's action in naming this Commission and recognizing people of different background and different ages is indicative of their concern. You can never really listen enough. But certainly there ought to be more of it.

And then like all administrations, there is the lack of follow-through. Every President has commented at one time or another, I give an order, and then nothing happens. So this Administration is nothing unusual, it gives orders too, and very frequently nothing happens.

Sometimes that is true of their leaders, they give orders to us in Congress, and nothing happens. It is the difficulty of the system.

Mr. CANHAM. Senator, could we get a little specific about the relationship of legislation to this problem. Would you tell us your views about pending legislation and other legislative proposals, what you think the Congress could do to help relieve the situation?

Senator SCOTT. Well, obviously, no repressive legislation—obviously no legislation designed to control people's behavior should be considered. Beyond that I think we in this country expect too much of our laws, and sometimes too little of the people who are responsible for administering it at all levels.

I would not have specific legislative suggestions to make. I would think that we ought to leave the solution of these problems as far as we can to the colleges, referring now to the students, to the colleges, to the faculties, to intercommunity relations.

I think that the Administration can help by supporting continued research into im-

balances in education, to discrimination in education, to the support of the educative process as we are doing in the education bill, where both House and Senate have added funds above and beyond the Administration's request.

But I believe we may be in a period where I would doubt that legislation per se touching on student unrest would be of very much use. The Commission may come forward with a suggestion, but nothing occurs to me.

Mr. CANHAM. As you well know, we have had for some time a system by which a considerable number of student interns come to Washington to work in the summertime and sometimes other times. How would you feel about a really massive enlargement of this participation of students in government, both in the legislative branch and in the executive branch, by which a contact, a first-hand personal relationship could be set up on a really substantial scale between students and the governmental process nationally, and of course State and local as well?

Senator SCOTT. Well, I would welcome it. I have had quite a bit of personal experience with this. I think it would be an excellent thing to do if college credits were to be allowed for this kind of internship, if it were a regular part of the curriculum where those who wished to do it could. I have a dozen interns in my office this year.

Normally we have six to seven. We have had some requests. And we try to divide them among small colleges and large.

We are aware of the women's liberation movement. And we have usually about the same number of ladies and gentlemen. They are fascinated by the entire process. It does the public officials good, because it convinces them as observers that we really work very much harder than the general public would understand or accept. They themselves ultimately become involved in the political process. I have never known a college intern who worked for me who did not later maintain some interest in political life and affairs. And some of them became candidates for public office.

I will give you a very amusing incident. Janet Bond discovered that the old common law position of coroner in the county of Mercer, New Jersey, was elective. So she set up a write-in petition, and got herself elected as coroner of Princeton University. And she found that the only duties she had were the care of shipwrecked sailors. And you would be amazed at the naval change in Princeton after Janet became coroner.

Mr. CANHAM. Could you explore a little further your views about the relationship of students to this fall campaign. Do you think the colleges and universities should suspend for a while so the students can take an active part in the campaign in October? Or what do you think should be the attitude as to this 1970 campaign?

Senator SCOTT. Well, one wonders whether it will become a regular process or not, whether it will continue for all Novembers. I would see no special objection to it. I would prefer that instead of the universities closing down—which I think is a mistake, I think it is a mistake to close the universities for an election, it makes more of an elite of students. They are already elitists. It gives them special privileges not available to the worker in a plant, or to the professional man, to the woman in secretarial work. So that they give a certain advantage which will be resented in other parts of the community.

But if the individual student, if the colleges could arrange for the individual student to take a couple of weeks off to engage in political activity on condition that he makes up the time, that seems to me to be a desirable objective. It has been done to some degree in other countries. It is not unusual in England to go to the dean and explain that you want to be away for a week or so, and you have time to make it up. If the colleges can be sufficiently flexible to accommodate that I would see no objection.

But I do not think you ought to close the whole university because allegedly a majority of the students want to engage in the political process. I know students pretty well. I have taught twice in my lifetime. Five to 10 per cent of them will engage in the political processes, and rest will go off on a lark somewhere.

Chairman SCRANTON. Dr. Derthick?

Dr. DERTHICK. Would you guess that giving the vote to persons of eighteen will in any significant way alleviate the discontent among young people?

Senator SCOTT. Yes. If I can come at this sideways, I think the reform in the draft has already taken some of the pressure off the valve. And students become aware that the draft is a one-year thing, and ultimately it will be succeeded by a voluntary army. It is a release of pressure. The right to vote is a release of pressure.

I have supported the 18-year-old vote reluctantly, because I think 19 is a better age. We have not been given our choice in Congress here, it is either 18 or 21. I think 19 is better.

In a rather extensive survey, I think, in the State of Washington a few years ago, all of the 18-year-olds voted for the 18-year-old vote. But when they reached 19, and 19 to 21, they were overwhelmingly of the opinion that 19 was a better age.

That says something to me. In England in the last generation there were 2.8 million men between the ages of 18 and 21 who might have voted, and only 1 per cent voted.

And therefore two things emerge, I believe, one, that the young people do not exercise the franchise in the proportion their elders do when given it, and, two, they divide about as diversely in this disparate fashion as their elders did.

Mr. ORTIGUE. I want to follow through with reference to the matter of students being heard, because the question of the draft is so important to them and their concerns. Do you foresee relief for students in the immediate future, future relief in terms of the draft?

Senator SCOTT. Yes, in several directions. First, I think the number of draft calls will steadily decrease, for example, for the rest of this year. And this Administration would be very wise not to have heavy draft calls in September and October, both for their purposes and that of the students.

We have a voluntary army pending which may yet be adopted, perhaps not in its present form, but with a provision for ultimately putting the draft on a standby and moving into a volunteer army. And that has a really good chance of being accepted in the Congress.

Moreover, the combat troops will or should be out of Vietnam by next spring or summer. And that would perhaps permit sending only volunteers to combat areas. So that I think all of these will ease the student concern.

And I have noticed among adults that the greatest and most violent rhetoric usually comes from parents of 15-, 16-, and 17-year-olds, those who are about to be eligible for the draft.

Mr. RHODES. Senator, you have said that you are opposed to the legislation to repress the acts of students. Some students have charged that the Industrial Security Act which is now in the Judiciary Committee, and the D.C. Crime Bill which would permit no knock, and legislation with respect to drugs would be used oppressively against them. Students at the University of South Carolina have petitioned me to that extent. How do you feel about those acts?

Senator SCOTT. IST, the Internal Security Act in the Internal Security Subcommittee?

Mr. RHODES. No, there is one about the industrial security in the Judiciary.

Senator SCOTT. I do not know of a bill that touches on industrial security. But if it is the broad overall of the internal security, which is a low number, S. 1, or S. 8, which has been considered off and on this year and last, I have very serious reservations on it, and probably could not support it. I am on that subcommittee. And I have already indicated that I do not like what is going on in that bill.

I think it does have within it the seeds of oppression.

Now, on no-knock, which the House of Representatives considers today and the Senate tomorrow, and the D.C. Crime Bill, both no-knock and preventive detention have become liberal code words. They are knee-jerk words nowadays. And they will not stand up to the assault upon them in my opinion. And I will tell you why.

In the first place, a no-knock is already the law in approximately three-fourths of the States. It is the common law of England. And it certainly means that if you are—if the arresting officer is of the conviction that his life is endangered, or that the evidence is about to be destroyed instantly and on the spot, he may enter without a warrant.

Now, what this bill does, wrought by lawyers and wrought by men who are extremely concerned about the rights of individuals is interpose the judgment of a judge or a magistrate, whichever way it will come out of the Congress, in lieu of the judgment of the policeman.

As it is now, the common law, and in most states the policeman, can knock on the door. Now, if behind that door there is a dealer in heroin, and he has in a little box anywhere from $10,000 to $100,000 worth of this white powder, if there is a knock, the powder goes down the drain in about five seconds. And therefore it is essential to preserve the evidence.

But this new bill, Federal bill, will go much further than most of the States. It would require the policeman not to use his own judgment, but to go to the judge and give the fact as to the reasonableness of the existence of the evidence, and the right to protect society, which in my view overwhelms the rights of the individual.

Under those circumstances, therefore, you have someone responsible above and beyond the policeman, who does not necessarily have the same legal training, the judge.

Now, as to preventive detention, I am not quite as positive on that. It is again an effort to determine whether the rights of society rank higher collectively than the rights of the individual. There a judge could detain a person accused of a crime, and would not normally under the law as written detain a first offender. If there is evidence that that person's previous record of conduct, or conviction of crime, is such that it would be dangerous to the entire community to have him released, and there is a special provision in this bill providing for a special calendar so that these people shall be detained properly and may not be detained beyond this period in jail—there is a constitutional question.

Most of the lawyers in the Congress seem to think it is constitutional, that it does not violate the prohibition against excessive bill.

I have a reservation on it until I have heard all the evidence. But it may be that this is another case where we decide for society rather than for the individual. And when you stop to think of it, that is the case in almost every criminal statute.

Chairman SCRANTON. Have the members of the staff any questions?

Mr. BYRNE. No.

Chairman SCRANTON. Senator, you referred

in your statement to a synergistic system to harness some of this violence that is going on. And yet you do not think that we should involve ourselves in any way in repression. How are we going to get such a synergistic system of harnessing, and why do you think we ought to have it?

And secondly, if we do have it, how can we avoid repression?

Senator SCOTT. Well, your system has in the process of formulation, as I see it, through public opinion already, if one can rely on the survey, some 80-odd per cent of the people have reacted quite violently against violence. I would think that one of the functions of this Commission is to help to establish public opinion and to advance it.

And there are some guidelines—I hate to use this cliché—but some guidelines. And rules of behavior and conduct will emerge and be accepted by society generally, and be recommended to faculty administrators and college presidents. I have in mind, when you speak of the control of violence, that these colleges who resorted to civil relief were often more successful that those who called on the police force, the writ of injunction.

The University of Virginia has adopted, for example, in the midst of violent controversy between the alumni, the student body and the faculty, certain rules of behavior. In other words, if you want to protest, you give a notice in advance, and you do it on certain days and in certain areas of the university, and you are protected, the university is on your side.

If you violate the rules which you have agreed upon in advance—all students are asked to agree in advance—to fail to agree has already outlawed a dozen or two dozen people, perhaps, I do not know what you do with them except to keep an eye on them. But at this university the student body agreed. And they also agreed that they would accept the penalties which came from violating the rules which they were jointly making.

And I think this is one area that you are aware of, that you already know about.

Chairman SCRANTON. If we do come up with some formulas or guidelines, have we got some instances of universities where this has worked? Perfectly frankly, we are looking forward to any instances or cases anywhere in the country where protests and dissents have been handled, and handled well, and at the same time people given an opportunity to vent their spleen on whatever they care to do.

Senator SCOTT. I have only experience with two schools, both of which I once attended. And there they were handled well, and were handled reasonably, and again within the Jeffersonian area of the principle, the University of Virginia and Randolph Macon.

Chairman SCRANTON. Isn't it impossible to make a formula and say, use this over all the country? Aren't there differences?

Senator SCOTT. Oh, yes. There is the widest kind of differences, obviously. And one which would go in an urban environment, a community college, might not go in a sectarian small-town institution. So that I doubt if we could establish with too much specificity a guideline that would apply to everybody. And I think there are some broad rules of behavior which society has long recognized.

And I think the key to it is asking people to abide by it in the first place. Because that is where you identify the outlaws, who certainly regard themselves as Robin Hoods, but you identify them.

Chairman SCRANTON. Secondly, one other question. You say that you do not think that there is basic legislation that could be passed that would be helpful in this field, because if we got into too much of that it would really end up in repression. And yet at the same time it is generally conceded, as we referred to it, that students, at least a lot of them, seemed to be very frustrated by our present political action or lack of political action.

And the political system does not seem to move as rapidly forward in the way they think it ought. Are there any reforms, political reforms that you would advocate, or any suggestions that you would make to us to advocate that would help in this political system to answer some of their questions, if they should be answered?

Senator SCOTT. Well, they have indicated when they come down here that they dislike the unwillingness of Congress to reform itself. They feel that there should be a much better system for avoidance of conflict of interest, for disclosure of holdings, for some change in the seniority system. The problem in Congress is, the longer you stay here the more you tend to like the system.

But it has been recommended in both the House and the Senate that the choice of the committee chairman ought to be made perhaps by the committee itself from among the three or five more senior members, which avoids the brashness of the total newcomer, creating a revolution the first week he is in the Congress, but at the same time gives a width of choice and breadth to selection of committee chairmen, and probably would make them less cocksure of themselves.

A committee chairman in Congress has enormous powers, much more than the chairman of an average committee elsewhere. So they would like to see this system reformed.

They would like to see reforms in the State Legislature, where to the student they seem to be doing little more than voting an increase in salaries or expense accounts.

They would like to see, I am sure, more democracy, as they put it, in the university itself, and in the way in which the university runs.

They would like to have more say about the curriculum. And now I think you are in a highly controversial area in which I am not competent to speak. As I say, I would like to see more logic and more philosophy taught. I would like to see some of the old basically virtuous subjects renovated and restored.

I believe that there is a likelihood that students will better understand the system if we can engage their attention as to what it is we are trying to do with a little more plausibility.

You are not going to engage it by calling them rough names. You are not going to engage it by refusing to talk to them. You may ultimately cause them to listen if you sound more reasonable than their elders have been sounding to them. And then of course the on-rush of time will take care of this college generation, which will become quite logical in about eight to ten years.

Chairman SCRANTON. Mr. Ortigue has one last question, which he says you can answer with a yes or no.

Mr. ORTIGUE. Senator, do you have any indication that there are forces outside of this country that are pushing students within this country, or assisting them in carrying on campus unrest?

Senator SCOTT. I have no evidence whatever. The Communist Party would be missing a big bet if it were not frantically running around the fringe trying to penetrate. But I see no evidence of it.

Mr. ORTIGUE. Thank you.

Chairman SCRANTON. We thank you very much, Senator. We appreciate the time you have given us, and particularly your courtesy in allowing us to have this room. And we welcome anything that you would like to send us at any time, sir, during the course of the deliberations of the Commission.

Senator SCOTT. Thank you, Mr. Chairman.

Chairman SCRANTON. Is Senator Kennedy here?

We are very grateful to have Senator Kennedy before us. I do not think anybody in America is more interested in the problems of youth in America than Senator Kennedy. I do not think I need to introduce him to any of you, or to the City of Washington.

You may proceed as you wish, sir. You may read your statement or comment on it or do anything you wish to and then we would like to ask you some questions.

Senator KENNEDY. Thank you very much, Chairman Scranton.

THE BLOODBATH IS NOW

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. LEGGETT. Mr. Speaker, now that it has become apparent that our Vietnam adventure has helped rather than hindered the fall of the dominoes, and that it has wrecked our economy and destroyed our domestic tranquility, the arguments that the war serves our national interest have gone out of style. The principal argument against accelerated withdrawal has become the danger of the bloodbath might ensue among those adherents of the Thieu-Ky regime who are unable to escape to the Riviera.

The possibility of a bloodbath concerns me deeply. I do not like it all. But as a reason for staying in Vietnam it leaves me absolutely unmoved.

To begin with, there is no evidence that an American withdrawal would produce a greater bloodbath than would a Thieu-Ky victory. Bloodbaths are not a peculiarly Communist phenomenon; the greatest slaughter of recent times was that which followed an anti-Communist victory in Indonesia.

Thieu and Ky, and Lon Nol for that matter, have shown themselves as capable of atrocity as has the other side. And our own effectiveness at ameliorating their savagery has not been impressive.

But more importantly, the bloodbath that is going on right now is far greater than that which could reasonably be expected to be committed by either side after the end of the war. For Vietnam as well as for the United States, the greatest evil is the war itself.

Using figures supplied by the Agency for International Development, columnists Frank Mankiewicz and Tom Braden have put together an interesting analysis in their Washington Post column of July 21, 1970, which I insert in the RECORD at this point:

THE NONCOMBATANT TOLL ALREADY EXCEEDS PREDICTIONS OF VIETNAM "BLOODBATH"

(By Frank Mankiewicz and Tom Braden)

We have the capability to count every last bullet we capture, every grain of rice scooped from the Cambodian sanctuaries, and every week we solemnly list the "body count" of enemy dead, but we publish no figures on the number of noncombatant civilians we kill. There is a good reason—conservative estimates from the field are that we kill more civilians in a year in Vietnam than the Vietcong have since the war began.

For those who like to talk about the "bloodbath" that will ensue if we leave Vietnam, the figures are instructive. Most official spokesmen put at 29,000 the number of innocent civilians killed by the Vietcong since the war began. President Nixon—presumably with better information—put

that figure at 40,000 in his conversation on network TV last week.

But U.S. and South Vietnamese government figures show that there were at least 200,000 civilian casualties in South Vietnam in the past twelve months, including between 50,000 and 60,000 dead. Those figures do not include any civilian deaths in Laos, where our saturation bombing is at a higher level than it ever was against Japan, or in Cambodia, whose civilian population we have only this year begun to expose to our bombing and artillery.

One starts this gloomy study of civilian casualties with official figures of the Agency for International Development (AID). AID finances 43 civilian hospitals in Vietnam, and keeps records of their admissions, as well as those to the military hospitals of civilian casualties. It is only since late 1967 that we have begun to treat Vietnamese civilian casualties at all, although we have been causing them, on a major scale, ever since our bombing and "search and destroy" missions began in 1965.

In the base year of 1967, there were nearly 50,000 civilian casualties admitted for treatment in these AID-supported and U.S. hospitals. On-the-spot investigation by the Senate Subcommittee on Refugees yielded the conservative conclusion that the admission figures were understated by from 10 to 20 per cent.

Testimony by senior AID health officials from Vietnam revealed further that for each casualty admitted to a provincial hospital, there was at least another civilian wounded but not admitted. That is to say, roughly the same number were treated in village or hamlet clinics, at home, or not at all. In addition, there was a conservative estimate that approximately 50,000 Vietnamese civilians died of war injuries before they ever reached a hospital.

All of that adds up to between 150,000 and 200,000 civilian casualties in 1967, of whom between 50,000 and 60,000 died. Those are the figures for 1967, and the comparable figures are higher for each subsequent year, including the current one. In 1967, by the official Pentagon count, there were 3,706 civilians killed by the Vietcong. Since the enemy has no air force at all with which to bomb villages, since it has no navy to shell from off-shore, and since enemy rocket attacks on the cities are infrequent and cause relatively few casualties, the conclusions to be drawn are inescapable and melancholy.

Finally, it must be added in all candor that even this doesn't tell the whole story. Our "body count" of enemy dead in the past twelve months (pre-Cambodia) stands at 138,982. Concealed in that figure, we know at least since My Lai, is a large number of innocent civilians, including women and children.

In support of the argument that a bloodbath would ensue if we left Vietnam precipitously, the Pentagon has now produced a study estimating that some 100,000 South Vietnamese would be killed by the enemy. But even that number is carefully hedged, and assumes the unthinkable possibility that we would make no effort to protect them. But the casualty figures tell another story; the South Vietnamese have had that kind of a bloodbath every year since we made them a part of the Free World.

ON LEGISLATION FOR VETERANS

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 22, 1970

Mr. SCHWEIKER. Mr. President, as the junior Senator from Pennsylvania and as ranking Republican on the Subcommittee on Veterans' Affairs, I have long admired the outstanding record of my colleague from Pennsylvania (Mr. SCOTT) in the field of veterans' legislation.

Senator SCOTT, himself a war veteran, is currently backing a number of important bills to assist veterans with their education and medical needs and to provide additional benefits and recognition to the families of deceased veterans.

I ask unanimous consent that a summary of Senator SCOTT's accomplishments in veterans' legislation be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SENATOR HUGH SCOTT'S RECORD ON VETERANS' LEGISLATION

One debt this Nation owes that can never be fully repaid is the debt to our veterans. Senator Hugh Scott, a veteran himself, having seen active service in the North Atlantic and the South Pacific, knows that veterans deserve to receive additional benefits.

Senator Scott has always worked for legislation to aid veterans. He has introduced bills calling for additional national cemetery space in Pennsylvania and has called for a rehabilitation allowance for paralyzed veterans. During the 1968 Republican National Convention, Senator Scott was Chairman of the Platform Subcommittee on Human Needs, which dealt with veterans affairs. He wrote the plank which promised aid to returning Vietnam veterans, further assistance to cold war veterans and increased benefits to veterans of previous wars.

The following summary outlines how Senator Scott has worked to assist veterans:

91ST CONGRESS

Legislation

S. 338—To increase the rates of educational assistance allowance paid to veterans.

S. 1205—To provide for a Supreme Sacrifice Medal for widow or kin of deceased.

S. 2800—To provide paraplegia rehabilitation allowance of $100 a month for veterans of World War I, World War II and Korea.

S. 2813—To increase amount payable on burial and funeral expenses for veterans from $250 to $400.

S. 2890—To define "active duty" so as to allow reservist or member of National Guard or Air National Guard of any state to enjoy education benefits.

Votes

Voted to provide additional veterans' education and training assistance.

89TH CONGRESS

Votes

Voted for the Veterans' Pension and Readjustment Assistance Act of 1967.

89TH CONGRESS

Legislation

S. 969—To provide for at least one veterans' service center in each state.

S. 3580—To provide additional readjustment assistance to veterans who served during the Vietnam era.

Votes

Voted to provide education and readjustment benefits to those who served in the southeast Asia theater of operations as determined by the President.

Voted to provide that benefits of the Cold War Veterans' Readjustment Assistance Act be through grants rather than loans.

Voted for the Cold War Veterans' Readjustment Assistance Act.

88TH CONGRESS

Legislation

S. Res. 48—Creating a standing Committee on Veterans' Affairs in the United States Senate.

87TH CONGRESS

Legislation

S. 3289—To grant national service life insurance to veterans heretofore ineligible.

Votes

Voted against reducing by $10 million funds for medical administration and miscellaneous operating expenses of the Veterans' Administration.

86TH CONGRESS

Legislation

S. 688—To provide for establishment of national cemeteries in Pennsylvania.

S. 269—To equalize pay of retired members of uniformed services.

Votes

Voted for the Veterans' Pension Act of 1959.

Voted to offer to veterans of World War II and to veterans of the Korean War an opportunity for one year to take out national service life insurance at their attained age.

Pennsylvania's veterans are receiving greater benefits and more assistance than ever before because of Senate Republican Leader Hugh Scott's efforts over the years. Senator Scott has pledged his continued efforts for the future.

MEET THE CHALLENGE

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ZWACH. Mr. Speaker, we are constantly hearing complaints about our system of Government, our universities, our churches, and our environment.

But while we are hearing all that is wrong, the complaintants rarely offer solutions to correct the shortcomings.

This was pointed out in a well-written editorial by Ellis Bloomfield in the Hector Mirror in our Minnesota Sixth Congressional District.

Mr. Speaker, with your permission, and for the edification of my colleagues, I insert Mr. Bloomfield's editorial in the CONGRESSIONAL RECORD:

MEET THE CHALLENGE

We spend an awfully lot of time complaining about our system, our government, our universities, our churches and about how loused up our whole world is. Of course many things really do need changing. We have made and will continue to make many mistakes as long as we are doing things.

It is easy to view our mistake in getting involved in the Viet Nam War, our failure to keep our envionment clean, our raising too large families, our not curbing inflation, our spoiled children and a host of other problems. Most of these problems have been protested by mass demonstrations and other means.

There is a real challenge, now that we are so aware of the problems, and perhaps it can be met in part by some of those graduating this week. That challenge is in finding the solutions.

Demonstrations and protests in the past have certainly brought the problems to our attention, but now we need something more. It takes no guts or brains to join a mass movement and make a protest demonstration. It takes a lot more to work out and propose solutions. We recently heard a speaker who said that we should follow each protest with a proposal.

We do not like pollution but we cannot destroy all automobiles and shut down all of our factories, instead we have to come up with pollution eliminating devices. We must come up with a new powerplant for our cars or clean up the old one. We must devise ways to produce our manufacturing materials without cluttering up the air. There is more of a challenge in this than marching down the street and making demands that factories be closed, which is obviously no solution.

Almost everyone in the country would like to get out of Viet Nam, but not too many workable solutions have been proposed. The logistics of the situation alone prohibit us from simply raising our hands and immediately pulling out. We do not want to commit to slaughter the last 50 or 60 thousand boys over there, especially if we know a few of them personally. Yet there has to be a workable solution for a fast pullout. It would be a challenge for some group to come up with a well worked out plan better than that now being followed. It would probably be adopted and welcomed.

You can go right down the list of things being complained about and ask yourself if you have any solutions. If you do, make them known, if you do not, then think about them. Your voice will be heard far louder than if you "give up" and join the masses who can only take the negative approach and knock the system, without trying to better it.

The world is desperately in need of deep thinking young people who can set their sights on improving their world and do something about it.

KIDNEY FOUNDATION OF CALIFORNIA

HON. ALPHONZO BELL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BELL of California. Mr. Speaker, I would like to bring to the attention of my colleagues an outstanding example of volunteer public welfare effort that is taking place in southern California.

The Kidney Foundation of Southern California, headquartered in Los Angeles, an affiliate of the National Kidney Foundation, has just completed a most successful fiscal year—1969–70—in its continuing battle against the Nation's No. 4 killer—kidney disease.

The foundation is a nonprofit, nonsectarian organization supported by public contributions, with volunteers devoting their time and money in a three-prong attack against this often insidious threat to our health. The group sponsors service to aid kidney disease patients with "Project Life Preserver" a program of securing home artificial kidney machines. It supports research to discover causes and seek means of control of kidney disease. Through an educational program the foundation keeps the public informed of ways of early diagnosis of kidney disease and keeps physicians continually alerted to new discoveries by means of literature and an annual medical symposium.

In the last fiscal year the organization funded nine new home artificial kidney machines, making a total of 12 that have now been made available at no cost to needy patients by the foundation. It also earmarked $25,000 for research fellowship grants and established three new volunteer chapters in the western Los Angeles area, the Los Angeles-Long Beach Harbor area, and in San Diego County. Also launched were an at-cost drug bank, transplant donor program, and a pilot kidney disease detection project.

I would like to publicly express appreciation for a job well done by the hundreds of dedicated members, contributors, physicians, and to the 1969–70 board of directors led by Mr. Orville John Hoag, Jr., its president, Dr. Harvey C. Conick, M.D., chairman of the foundation's voluntary scientific advisory council, and to Mr. Leonard Gottlieb, the Kidney Foundation of Southern California's executive director.

MEDICAL CARE AND POCKETBOOKS

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ANDERSON of California. Mr. Speaker, in this year of recession every American has been hard hit by the dual tragedies of inflation and unemployment. Perhaps hardest hit of all are those who have had the misfortune of being hospitalized.

Hospitalization has always been a hardship; illness is never easy, but it is especially trying at the present time. Today, with the usual hardships of illness, comes the added problem of paying the astronomical costs of medical care.

Recently, an editorial appeared in the Los Angeles Times commenting on this problem. The editorial states:

There is a growing consensus that something must be done—because for millions of Americans, going to the hospital means going broke or close to it. For many more, good medical care is next to nonexistent.

It goes on to offer some succinct comments on the options before Congress and on the difficult choices which Congress will have to make in order to balance the public's demand for more health protection and the public's predictable reluctance to pay the bill.

Mr. Speaker, I feel that this editorial presents a view which the entire Congress should take into consideration. I insert it in the RECORD:

[From the Los Angeles Times, July 13, 1970]

MEDICAL CARE AND POCKETBOOKS

ISSUE: With medical costs soaring, what role should the federal government play in providing adequate health insurance?

Although Americans spend over $60 billion a year for health care, far more than any other nation in the world, it is almost literally true that a lot of people would as soon die as get seriously ill.

For millions of Americans, going to the hospital means going broke or close to it. For many more, good medical care is next to non-existent.

There is a growing consensus that something must be done—even if that something has to be a national health insurance system going far beyond the existing Medicare and Medicaid programs for the elderly and indigent.

Several bills already have been introduced, ranging from a modest "medicredit" approach backed by the American Medical Assn., to a sweeping proposal that cradle-to-the-grave medical services, financed through the federal government, be made available to every man, woman and child in the United States.

The Nixon Administration is expected to come up with some specific proposals of its own for the next session of Congress.

Despite the growing pressure for action, however, the question is so enormously complex that it may take several years to work out an approach which will alleviate rather than exacerbate the problem.

As anyone knows who has been to a hospital lately, medical costs have been soaring out of sight—partly because the 1966 enactment of Medicare and Medicaid created massively greater demands for health services, and partly because of the pressures for higher pay by nurses and medical technicians.

Even people who have relatively generous medical insurance coverage can be wiped out by a catastrophic illness in the family. The situation is even more tragic for the 24 million Americans under 65 who have no health insurance at all.

It is widely recognized, however, that a comprehensive national health system will produce nothing but still higher medical costs unless it is accompanied by measures to increase the supply and quality of medical services.

This involves the training of more doctors, of course.

In view of many experts, it also involves the large-scale use of so-called paraprofessionals—medical technicians who can take over some of the less complicated functions now performed by physicians.

Finally, it is expected to involve steps to encourage a more effective utilization of equipment by hospitals, and an acceleration of the trend toward group medical practice.

Just how to go about achieving these fundamental reforms is going to require some very close congressional study. The lawmakers need to do considerable head-scratching, too, over the extent to which an expanded federal health insurance plan will supplant private industry's own medical insurance programs.

Last but not least, there is the politically important question of balancing off the public's demand for more health protection and the public's predictable reluctance to pay the bill—a bill which, under the more ambitious schemes, could run up to $40 billion a year.

Since the money can come only out of our own pockets, either in the form of higher income taxes or social security deductions from our paychecks, that is a very large question indeed.

KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. LONG of Maryland. Mr. Speaker, Pfc. Franklin J. Krantz, Jr., a courageous young man from Maryland, was killed

recently in Vietnam. I should like to honor his memory by including the following article in the RECORD.

PFC. FRANKLIN KRANTZ, JR., KILLED AT 19 IN VIETNAM

Pfc. Franklin J. Krantz, Jr., of Route 3, Frederick, died in Vietnam June 13 after being wounded in an enemy ambush a week before, the Department of Defense announced yesterday.

Private Krantz, 19, died at the 12th Evacuation Hospital in Cu Chi, Tay Ninh province. He was wounded by enemy small-arms fire while on patrol somewhere in South Vietnam on June 4, the Defense Department said.

A member of Company A, 1st Battalion, 5th Infantry Regiment, 25th Infantry Division, he had been on duty in Cambodia prior to his being shot, his father said.

Private Krantz had enlisted for three years in the Army in July, 1969, after his graduation from Governor Thomas Johnson High School in Frederick.

He completed his basic training at Fort Bragg, N.C. and had advanced training at Fort Polk, La. He was sent to Vietnam in December, 1969.

In high school, he was a member of the glee club. "His only ambition was to be a radio announcer," his father said.

Private Krantz, who was born in Frederick, is survived by his father, Franklin J. Krantz, Sr., of Frederick; his mother, Mrs. Ronald Garling, of Bel Air; three sisters, Mrs. Susan Shafer and Mrs. Sandra Leigh, both of Frederick; and Candace C. Krantz, of Bel Air; and both grandmothers, Mrs. Henry Krantz, of Frederick, and Mrs. Carl Brinkman, of Orlando, Fla.

VA HOSPITALS SHORT OF FUNDS AND PERSONNEL FOR 1971

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. TEAGUE of Texas. Mr. Speaker, as a result of a recent survey made last week of the 166 VA hospitals by the Veterans' Affairs Committee, it appears that the budget requests made to the Congress for the Veterans' Administration for 1971 fall over $180 million short of what is needed to meet the medical needs for America's sick and disabled veterans. H.R. 17548, which is the Appropriations bill to fund this program, is presently awaiting action by the House and Senate conferees. As the bill stands in conference, the Congress has added a total of $125 million to the requests made by the administration. One hundred million dollars was added by the Senate and I have written to each of my colleagues endorsing the action taken by the Senate.

Mr. Speaker, the wisdom of the House and Senate action is borne out by the survey which the Veterans' Affairs Committee has just completed. I have communicated these results to each one of the House conferees so that they will have the most up-to-date information available as they contemplate accepting the additional $100 million voted by the Senate. It is abundantly clear to me that the House conferees should accept the additional funding voted by the Senate as it appears that dental care for returning Vietnam veterans has been underfunded by over $20 million; hospital equipment budgets have been shortchanged by over $26 million; and VA hospital directors throughout the Nation say they are over $83 million short of funds to hire needed recruitable medical personnel.

Mr. Speaker, the following is a breakdown of the 1971 nationwide deficiencies just compiled by the Veterans' Affairs Committee:

Dental Care for returning Vietnam Veterans	$20,409,707
Community Nursing Care program	7,524,798
Purchase of New Equipment	11,644,159
Purchase of Replacement Equipment	14,667,774
Non-recurring Maintenance & Repair	35,526,747
Recurring Maintenance & Repair	1,982,412
Recruitable Medical Personnel	83,495,450
Other categories (i.e. fees for medical consultants, contract hospitalization, outpatient fee medical, state home program grants, etc.)	5,259,253
Total 1971 VA hospital deficiencies	180,510,300

Mr. Speaker, the following is a State by State breakdown of these figures:

States reporting	Dental care for returning Vietnam veterans	Community nursing care program	Purchase of new equipment	Purchase of replacement equipment	Nonrecurring maintenance and repair	Recurring maintenance and repair	Recruitable medical personnel	Other	Total
Alabama	$728,877	$275,094	$160,116	$404,436	$253,330	0	$1,819,609	$46,016	$3,687,478

A METHOD OF DECISIONMAKING AMONG ALTERNATIVES

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BURTON of Utah. Mr. Speaker, I have become increasingly concerned over the way decisions are being made with regard to the use of our resources. Often these decisions are made without a systematic evaluation of any kind. I submit that decisions affecting the allocation of our resources are generally very complex, and require a systematic reconciliation of conflicting goals to arrive at an optimum selection. The weakness of the prevelant decisionmaking approaches is that they have failed to recognize two basic principles of decisionmaking, reported Dr. A. Bruce Bishop in his study on "Socio-Economic and Community Factors in Planning Urban Freeways." These are:

(1) That decisions must be based on the differences among alternatives; (2) That money consequences must be separated from the consequences that are not reducible to money terms; then these irreducibles must be weighed against the money consequences as a part of the decisionmaking process.

Dr. Bishop's study deals with the choices in planning urban freeways; however, his method for comparing and evaluating user and community consequences for decisionmaking among alternatives is useful in all areas of public program decisions. I commend to the attention of my colleagues chapter VI of his study outlining his method as the second in a series of articles dealing with the critical matter of making choices in the allocation of our resources.

The study follows:

A METHOD FOR DECISIONS AMONG FREEWAY LOCATION ALTERNATIVES BASED ON USER AND COMMUNITY CONSEQUENCES

(By Bruce Bishop)

INTRODUCTION

Consequences to users and impacts on affected communities are both recognized as important parts of decisions about urban freeway locations. Often, of course, these decisions are made primarily in response to political pressures without a systematic evaluation of any kind. At the same time, highway planners and analysts have proposed various methods for evaluating these factors in order to provide a basis for improving and expediting the decision-making process. To date, these techniques have generally fallen into one of two groups. The first of these is to apply economic measures such as the benefit-cost ratio. It is primarily based on agency costs and motor vehicle operating and (possibly) time costs. The other technique is some form of point weighting scheme similar to the sufficiency rating. Seldom does either of these methods include more than a few of the many variables relevant to the decision.

A general criticism of either of these approaches is that they have failed to recognize two basic principles of decision making. These are [3]:

1. That decisions must be based on the differences among alternatives.

2. That money consequences must be separated from the consequences that are not reducible to money terms; then these irreducibles must be weighed against the money consequences as a part of the decisionmaking process.

One of several statements which applies these principles to highways and freeways is:

"In many cases, some consequences of decisions among highway alternatives cannot be expressed in terms of money. Furthermore, these 'irreducibles,' 'to whomsoever they may accrue,' are relevant to the decision. In these situations, the 'dollar' answers from the economy study do not dictate the final choice; on the other hand they provide a money figure against which the irreducibles can be weighed and thereby narrow the area of uncertainty with which the decision maker is faced." [4]

This paper proposes and discusses a procedure that is intended to fit these rather simple statements of principle to the complex problem of decision making among proposed freeway locations in urban areas. It offers a structure and analytical tools by which valid comparisons among alternatives, based on these principles of decision making, can be made.

It must be recognized at the outset that decisions about urban freeway locations usually involve a variety of effects that these are viewed and weighted differently by the affected interest groups. At the same time the human mind can at one time encompass and analyze the effects of only a limited number of such relationships. Thus a primary aim of any decisionmaking scheme must be to eliminate as many irrelevant factors as possible, and to provide a means for clearly focusing on and thinking straight about the remaining areas of agreement as well as on the points of disagreement.

REVIEW AND CRITIQUE OF PRESENT METHODS OF ANALYSIS

The present methods for making decisions among alternative freeway locations generally fall into two groups. These are benefit-cost or other economy studies and point weighting schemes. A brief review and critique of each of these approaches follows.

Benefit-cost studies

Engineering economy provides the basis for comparing the direct economic consequences of alternate route locations with each other or with the "do nothing" alternative, which, in this instance, is to continue to use existing facilities. Engineering economic analysis has taken the following forms:

1. Benefit-cost ratios—including incremental benefit-cost ratios.

2. Present worth of benefits minus present worth of costs.

3. Equivalent uniform annual cost.

4. Rate of return—including incremental rates of return.

These methods are presented and discussed by various writers [4] and [14] and others. All of the methods, when correctly applied, will give equivalent answers. To date these techniques have been little used, except on the Interstate System, where they were required by the Bureau of Public Roads. Even these studies often left much to be desired.[5]

The principal difficulties in benefit-cost studies for alternative highway locations in rural areas relate to such factors as estimating future traffic volumes, choosing a proper time period for the analysis, determining appropriate unit values for such items as time, and for methods 1, 2, and 3 (above) specifying the minimum attractive rate of return. Each of these problems has received attention in the literature (see Reference 14 for a summary). In the urban environment, freeways have additional consequences referred to in the literature as community impacts or effects. These often involve values which cannot be quantified in money terms. To date, neither suitable techniques nor adequate data have been developed for appraising the economic effects of these factors; furthermore, it may be inappropriate to quantify some of them. It follows that, in the urban context, economic analysis may give only a partial appraisal of the problem.

Factor weighting methods

Systems of point weightings and numerical ratings also have been proposed as a method of evaluating community impacts. The approach of Jessiman and Brand, et al.[6] is to itemize the objectives to be considered in the selection of the location and, where possible, to define a measure for the objective. Each objective is given a weight which reflects its importance relative to the other objectives. A total of 100 percent is assigned to all the objectives. Points under each objective are given to each proposal according to how well it satisfies the objective; the one best satisfying each objective receives the maximum points allowed; the worst receives none, and the remainder are assigned values between zero and the maximum. Points allotted to each objective are totaled for each proposal; and the one achieving the most points is considered the best alternative.

Hill [7] proposes a similar method of evaluating which he calls a goal achievement matrix. This provides for separate weightings by individual segments of the community; in turn, these opinions are weighted to reflect the relative importance of each group. Other methods of analysis have been suggested by Roberts [9], Shimpeler and Grecco [11] and Schlager [10].

All of these weightings methods violate in some basic ways the two principles of decision making stated earlier. Some of the reasons for this deficiency and some of the difficulties encountered in attempting to consolidate community effects into a single number are as follows:

1. *Finding Common Units of Measure.* The first difficulty is in finding a common unit for constructing a utility scale which can measure all the diverse impacts of a freeway in such a way that they can be combined into a single number.

2. *Assigning the Values.* Any procedure which requires the assigning of subjective numerical values leads to the question of who is to assign them. Clearly, where conflicting interests are involved, the viewpoint taken will affect the values assigned. It is also evident from careful observation of planning studies that values change during the planning process. This is to be expected as the natural result of information developed by the study itself and by the planners' reactions to this information. It follows that the rating scheme itself becomes another variable in the planning process.

3. *Weighting the Interest Groups.* Even if adequate evaluations by various groups can be obtained, the problem of comparing the evaluations or utilities assigned by one individual or group with those of others and deciding how much weight should be given to each still exists. Different members of society have different interests. Inevitably they will value the various objectives at widely varying rates. While the theoretical concept of utility is important, it is severely limited by the fact that to date no way has been demonstrated to measure the utilities of all individuals on some absolute scale. Until such interpersonal comparisons of utility are possible, the aggregation of the preferences of all individuals and groups in society into a single measure cannot be taken to be an objective measuring device.

4. *Complex Decisions Need More, Not less, Information.* In any situation where large amounts of information must be encompassed in a decision, the tendency of decision makers is to aggregate all information relevant to the decision into a single number. While too much information is confusing, too little information or an over-aggregation of information can also lead to incorrect decisions. Too much aggregation sub-

Footnotes at end of article.

merges pertinent information. It masks and covers the true differences among alternatives and leaves no way to identify and contract these differences in decisionmaking. A middle ground is needed where the number of factors in the decision is manageable, and yet all the differences among the alternatives which are pertinent to the decision are shown.

USER AND COMMUNITY FACTORS IN EVALUATING ROUTE LOCATION ALTERNATIVES

To carry out an engineering, economic, social analysis of the effects of freeway location, a basis must be established for evaluating both user and community consequences in making comprehensive comparisons of the differences among alternatives. To accomplish this, three important aspects of the problem must be considered. These are (1) quantification and separation of user and community factors, (2) viewpoint of decision makers, and (3) time period of analysis. Decision makers should include all of these in their analyses if optimal decisions are to be made.

Quantification

Comparisons of the differences among alternatives depends on defining the factors which measure the relative merits of the alternatives. Identification and quantification of these factors are difficult problems. Tables 1 and 2 represent the effort of the authors to develop a list of factors that describe the cost of the freeway and its impact on users and the community. These tables separate the consequences into direct and indirect effects in a manner which, in the authors' opinions, is in best keeping with the second principle of decision making, and with the best current practice in highway economy studies. Table 1 contains the direct effects which are specifically associated with highway construction and use, and Table 2 the indirect effects which fall upon the non-user and the community. The "measures or suggested measures" indicate whether these consequences are presently quantifiable in money terms, or, in other instances, those factors for which there seems to be a good possibility to measure them in some other units. Factors which are seemingly non-quantifiable also are noted. The word "non-quantifiable" is used advisedly since the effects described by the item are real. In time they might be quantified, though not necessarily in dollar values.

User and direct effects. Table 1 lists the items of direct cost of the highway and costs or benefits to the highway user. Items (1) and (2) under the heading "quantifiable market values" are those typically used in the calculation of benefits and costs in the economic analysis of highway projects. The variables listed under (1) the cost of the highway and (2a) vehicle operating costs are readily definable and, given reasonably accurate inputs, are quantifiable in money terms. The same is not true, however, for item (3) travel time savings to non-commercial vehicles and item (4), the non-quantifiable non-market items. These are important in the ledger of costs and benefits to the * * *. Considerable research effort has been devoted to arriving at monetary values for some of these factors. There remains, nevertheless, substantial controversy and disagreement as to the methods for imputing values to these factors, the values to be assigned, and whether or not certain portions of them should be considered at all.[1 2 6 12 13]

In order to avoid confusion, and also to place the analysis on a solid economic basis, the authors recommend that only the "quantifiable market values" (measurable in the market place) be stated in money terms to be included in the economic analysis. This means that travel time savings must be divided into commercial and non-commercial (as indicated by Table 1) segments, using a monetary value only for commercial travel time. Likewise only the identifiable economic costs of accidents are considered on the monetary side of the ledger, avoiding any attempt to place dollar values on loss of life, pain, or suffering caused by accidents. By the same line of reasoning, the authors recommend that discomfort, inconvenience, strain and aesthetic considerations not be stated in money terms.

Factors in Community Impact. Table 2 contains a list of 18 factors which describe the community or non-user effects of freeway route location. They are grouped into four areas: (1) Local Transportation Effects, (2) Community Planning and Environment, (3) Neighborhood and Social Structure, and (4) Community Economic and Fiscal Structure. As indicated earlier, techniques are not available and may not be appropriate for expressing the community effects of freeways in money terms. Quantification of others may not be possible even in non-monetary terms. Table 2 suggests some possible measures for items that appear to be quantifiable. Some of these have been taken from the highway research literature; others are suggestions of the authors. All are tentative at this point.

Footnotes at end of article.

TABLE 1.—DIRECT EFFECTS OF FREEWAY CONSTRUCTION AND USE

Factor	Description	Units	Time period (years)
QUANTIFIABLE MARKET VALUES			
1. Cost of highway:			
(a) Planning	Capital cost and annual cost of planning, constructing, maintaining, and operating the freeway.	Dollar	Not available.
(b) Right-of-way		do	20 to 40.
(c) Construction		do	20.
(d) Maintenance		do	Annual.
(e) Operation		do	Do.
2. Costs (benefits) to highway user:			
(a) Vehicle operating cost (including congestion costs).	Net increase (decrease) in costs of vehicle operation per year.	do	Do.
(b) Travel time savings (commercial)	Net increase (decrease) in travel time, times dollar value of commercial travel time.	do	Do.
(c) Motorist safety (economic cost of accidents).	Net change in expected number of accidents times average cost per accident.	do	Do.
QUANTIFIABLE NONMARKET VALUES			
3. Costs (benefits) to highway user:			
Travel time savings (noncommercial)	Minutes saved per vehicle trip	Minutes or hours.	Do.
NONQUANTIFIABLE NONMARKET VALUES			
4. Costs (benefits) to highway user:			
Motorist safety	Accident-costs of pain, suffering and deprivation	Unknown	Do.
Comfort and convenience	Discomfort, inconvenience, and strain of driving	do	Do.
Aesthetics from driver viewpoint	Benefit of pleasing views and scenery from the road.	do	Do.

TABLE 2.—COMMUNITY EFFECTS OF FREEWAY LOCATION AND USE

Factor	Measures and suggested measures (description)	Units	Time period: Long run	Time period: Short run
Local transportation effects:				
Traffic service to community by freeway—Highway capacity, O-D of trips, major traffic generators.	1. Percent reduction of through traffic on city streets. (Vehicles before, vehicles after)/vehicles before.	Percent	X	
	2. Distance of freeway access from major traffic generators (E. G. academic, business, cultural, administrative centers) or as measured by road user or transportation costs.	Miles	X	
	3. Corridor miles compatible with present or future public transportation development.	do	X	
Effect on local transportation—city street circulation mass and/or rapid transit.	1. Costs (savings) for improvement to city streets to provide for projected traffic volumes if freeway is not built.	Dollars	X	
	2. Net change in parking space available as result of freeway	Number of spaces	X	
	3. Number of interchanges with the community less streets closed	Number	X	
Access to regional facilities—recreation, education, culture, business, and employment.	1. Travel time savings to regional activitiy centers (minutes/vehicles)×(vehicles/day) for each facility.	Minutes per day	X	
	2. Number of trips to community generated from outside	Vehicles per day	X	X
Highway design standards—grades, alinement, and interchange location.	1. Miles less than X% grade	Miles	X	
	2. Miles of curvature less than Y radius	do	X	
	3. Average distance between interchanges	do	X	
Community planning and environment:				
Land use—Land development, changes in use, multiple use, separation of uses.	1. Land for potential development to which access is created	Acres	X	
	2. Miles of freeway separating incompatible land use minus miles dividing compatible uses.	Miles	X	
	3. Miles adjacent to or through land undergoing change in use	Miles/acre	X	
Esthetic impact of freeway on community—depressed or elevated, landscaping, structures.	1. Miles depressed in residential areas plus miles elevated in commercial areas less miles at grade.	Miles	X	
	2. Additional costs of aesthetic improvement in structures and landscaping.	Amount	X	
Noise	1. Increase in DB level weighted by miles residential, and numbers schools, churches, etc., adjacent to freeway.	DB (weighted)	X	
	2. Additional cost of noise barriers in "noise problem areas"	Dollars	X	
Air pollution	1. Net change in noxious exhaust emissions for projected traffic with and without the freeway.	Percent	X	

Factor	Measures and suggested measures (description)	Units	Time period: Long run	Time period: Short run
Neighborhood and social structure:				
Property values—Changes in resale values	1. Increase or decrease (net) over normal trend in property value classified by type of use and distance from freeway.	Dollars	X	
Neighborhood impacts—Displacement and relocation of people, environmental qualities, neighborhood cohesiveness and stability.	1. Number of housing units displaced (or) number displaced as percent of community's total stock.	Number		X
		Dollars		X
	2. Number of people displaced (or) number displaced as percent of community's population.	Number		X
		Dollars		X
	3. Net loss of housing—Units taken (less) vacant replacement housing in same price range with comparable financing (less) new construction planned on vacant land with financing.	Number of units	X	
	4. Cohesive neighborhoods severed by freeway (as determined by mapping neighborhood boundaries and social characteristics).	Number of people	X	X
	5. Neighborhood stability (mobility index, Hill, S.L., and Frankland, B., HRB record 187, 1967, pp. 33-42).	Index No.	X	X
Parks and recreational facilities	1. Acres of parks lost (gained) as percent of total available acres	Percent	X	
	2. Cost of park replacement less compensation	Dollars	X	
	3. Number of parks affected	Number	X	X
Cultural and religious institutions	1. Number of churches taken (or) total attendance affected	Number of churches		X
		Number of people		X
	2. Additional cost of relocation, excess over taking price	Dollars	X	
	3. Improved access or location for new church facilities	Minutes	X	
Historical sites and unique areas	1. Number of historical areas lost (total affected less those relocated)	Number	X	
	2. Value of monument measured by annual visits per year	Visits per year	X	
School system—Attendance boundaries, school environment	1. Net loss (gain) in tax base for school system	Dollars	X	X
	2. Number of schools totally or partially taken (or affected)	Numbers		X
	3. Number of school attendance areas with access to school seriously impaired where boundaries cannot be adjusted.	Number of pupils	X	X
	4. Increase (decrease) in cost of providing school services due to changes in bussing, etc.	Dollars	X	X
	5. Net additional cost to the community of relocating schools affected by freeway (plus) cost of noise reduction in schools adjacent to freeway.	do	X	
Community economic and fiscal structure:				
Effect on tax base—Net change in assessed value of property on tax rolls.	1. Loss of assessed valuation in right-of-way as percent of community total.	Percent		X
	2. Loss of assessed valuation in right-of-way less increase of land values (assessed) due to freeway impact.	Dollars	X	X
	3. Net loss (gain) in tax revenue due to freeway impact	do	X	X
Community services—Police and fire protection, utility services—water, garbage.	1. Net increase (decrease) in costs of providing fire and police protection and water, sewerage, and garbage service.	do	X	
Commercial activity—Wholesale, retail	1. Net increase (decrease) over normal trend in gross wholesale and retail sales.	do	X	
	2. Net number of businesses located (dislocated) by freeway	Number		X
Employment—Creation of jobs, displacement of jobs	1. Net number of jobs located (dislocated) as a result of freeway	do		X
	2. Net gain (loss) in gross earnings from jobs located or dislocated by the freeway.	Dollars	X	X
	3. Net increase (decrease) in job opportunities due to expanded commuting area less jobs available to outside commuting.	Number	X	X

The factors and suggested measures given in Table 2 can be used as a basis for evaluating differences in community impact of various alternatives. It must be recognized that those measures which are given in dollar values are not compatible with the market cost items in Table 1 and therefore cannot be incorporated into the economic analysis. While the list of factors and measures given in Table 2 provides a reasonable means for identifying and measuring community effects, it is also meant to stimulate thought, research, and improvement in the means of describing and measuring community impact. Only by collecting data during route location studies and on the effects of existing freeways will it be possible to properly evaluate the community effects of proposed freeway route alternatives.

Viewpoint as a factor in evaluating community effects

Different alternatives affect the various levels of government, communities, and groups in different ways. Much of today's controversy over freeways results from the failure of one group to appreciate another's values and concerns.

To provide some insight into the principal concerns of the major decision making groups, a research survey was used to evaluate the attitudes of highway planners, community officials, and a sample of citizens in one community, toward the route location factors presented in Tables 1 and 2. A few of the results of the survey are given in Table 3. They show the degree of importance placed on route location factors by these three groups.

TABLE 3.—IMPORTANCE OF FACTORS IN ROUTE LOCATION TO HIGHWAY PLANNERS, LOCAL OFFICIALS, AND CITIZENS

[In percent]

Factor	Division of Highways: Major	Minor	No	Community officials: Major	Minor	No	Citizens: Major	Minor	No
Direct costs and benefits of freeway:									
Cost of highway	95	4	1	86	12	1	81	16	1
Motorists safety/comfort	85	13	2	84	12	2	87	8	1
Travel time savings	52	43	5	55	40	2	61	31	7
Vehicle operating cost	41	54	5	29	48	21	19	50	29
Local transportation effects:									
Traffic service to city	96	4	0	89	8	1	77	20	1
Local transportation	74	20	6	91	7	2	63	31	4
Regional access	50	45	5	65	31	2	55	37	7
Highway design standards	93	5	2	87	11	2	81	15	1
Community planning and environment:									
Land use plans	65	32	3	79	17	2	52	37	8
Esthetics of freeway	69	26	5	76	21	1	42	51	2
Noise	24	67	9	67	28	3	51	42	4
Air pollution	13	52	35	58	33	6	72	22	2
Neighborhood and social structure:									
Property values	65	28	7	72	22	2	59	33	6
Neighborhood impact	54	41	5	59	33	5	40	41	17
Parks and recreation	82	18	0	58	34	6	37	51	8
Cultural/religious center	54	43	3	36	57	4	17	61	18
Historical/unique areas	69	30	1	64	32	2	37	48	11
School system	56	37	7	51	43	5	43	42	13
Community economic and fiscal structure:									
Effect on tax base	30	61	9	49	42	7	48	41	7
Community services	32	65	3	71	25	2	61	34	3
Commercial activity	37	50	13	56	39	3	47	43	6
Employment	41	45	14	56	32	8	60	35	2
Number in sample	54			160			123		

Several of the responses of the three groups, as shown in Table 3, deserve comment. First is the attitude toward vehicle operating costs. They are considered to be of importance by the highway planners; on the other hand, community officials or citizens place practically no importance on them. Second, as expected, the highway planners show less concern for local traffic circulation than do city officials. Third, regarding the factors in community environment such as noise and air pollution, there is much more concern by community officials and citizens than by the highway planners. Finally, the factors reflecting neighborhood and social structure were of much less importance to this particular sample of citizens than to either the highway planners or community officials.

These few examples point out the need for considering the various viewpoints in planning studies. Based on the survey, it might be concluded that, from the local viewpoint, highway planners may be putting much more emphasis on parks, the effects on the school system, and cultural and religious institutions than is necessary. On the other hand, they clearly indicate that, at least in this instance, some factors ranked as important by planners are not valued as highly by local officials and citizens. The factors which are most important will, of course, vary with each individual project. Some means, such as Table 3, should be used to evaluate every project at the conceptual stage with each affected group expressing its principal concerns. Besides the groups included in Table 3, other groups such as school districts and commercial and industrial interests should also be considered. By identifying the factors of greatest concern to each community group, the costs and benefits and the points of agreement and disagreement might be identified. It should be emphasized that the purpose of such evaluation is to eliminate confusion and many of the pointless arguments, and not to assign "weights" to the factors for evaluation of alternatives.

Time period

The time period over which the consequences of the various factors are evaluated is also important. Otherwise short run consequences might be given more weight in the decision as compared to the long run effects, or vice versa. An example might be the community concern that elderly people would be displaced from their homes in a given area. At the same time, the community master plan may indicate that the area is suitable for high density apartments and a survey show that the transition is already underway. In this instance, an appreciation of the time factor is extremely important to a rational appraisal of the possible alternatives.

The right hand columns of Tables 1 and 2 provide space in which the time period can be expressed (in some manner) in order to bring each factor into focus. A decision maker may on this basis be able to "discount" the significance of a factor's impact, conceivably in ways similar to the application of compound interest formulas in the economy study.

COMMUNITY FACTOR PROFILES: A DECISION MAKING TOOL

The approach to decision making among alternatives suggested earlier in this paper pointed out that correct decisions among freeway location alternatives must have two parts: (1) an economy study which includes all items that can be reduced to money terms, and (2) an analysis of all items which cannot be stated in terms of money but which must be weighed in the decision. The approach proposed for analyzing the indirect or community effects of (2) has been called a "community factor profile." In the opinion of the authors, this approach is at least a step toward more rational decision making.

The community factor profile is a graphical description, based on the factors and measures suggested in Table 2, of the effects of each proposed freeway location alternative. Figure 1 is a highly simplified and consolidated version of such a profile for four alternative locations numbered 1, 2, 3 and 4. [Figure 1 not printed in RECORD.] On this figure, each profile scale is on a percentage base, ranging from a negative to a positive 100 percent. One hundred either negative or positive is the maximum absolute value of the measure that is adopted for each factor. Reduction to the percentage base simplifies scaling and plotting the profiles. The maximum positive or negative value of the measure, the units, and the time span are indicated on the right hand side of the profile for reference. For each alternative, the positive or negative value for any factor is calculated as a percent of the maximum absolute value over all alternatives and is plotted on the appropriate abscissa. A broken line connecting the plotted points for each alternative gives its factor profile. For the profiles, factors and measures should be selected which will adequately describe all important elements of community impact. Care should be used in defining factor measures to assure that they are not measuring the same consequences. Otherwise in effect there would be "double counting" and disproportionate weight would be given to those factors. This may result in incorrect decisions.

In order to reduce the complexity of the diagram and, in turn, of the decision making process, the full set of community factors should be reduced whenever it is possible to do so. Two guidelines are suggested for accomplishing this: (1) eliminating all those factors that are not relevant or important to the particular decision, and (2) eliminating all factors where the values are substantially the same for all alternatives. These tests must be acceptable to all parties involved in the study.

It is expected that the profiles will be prepared for each alternative from the viewpoint of each community interest group and will incorporate the factors that are important to that particular group's viewpoint. A composite profile would also be prepared showing the total community effect for each factor. Separate profiles for each alternative could be made on transparent overlays to facilitate the method of comparison proposed in the following section of this paper. In passing it should be noted that research is well under way to provide such displays on a cathode-ray tube activated by a computer. This would permit almost instant recall of any comparisons that seemed appropriate.

METHOD FOR PLAN EVALUATION

Because of the complexity that "real life" factor profiles would often have, a systematic procedure for evaluating and comparing the relative merits of the several alternatives is essential. The method proposed here is that a series of paired comparisons be made using engineering economic analysis and factor profiles as the decision making tools.

First, alternatives 1 and 2 would be compared; then the better of these is compared with 3, and so on. In comparing two alternatives the incremental cost or benefit from the economic analysis is weighed against the differences in community impact between the alternatives as shown by the factor profiles. The decision maker representing each group would appraise the economic and community factors and determine his preference between the two alternatives. After all the paired comparisons among the various alternatives have been completed, there would result preference rankings for each viewpoint in the community. These would be used for comparisons among competing viewpoints in reaching a final decision.

A highly simplified example to illustrate the paired comparison approach is given by the question: "Is it preferable to save $50,000 per year in vehicle operating costs accruing to local residents by adopting a shorter route or to retain a commercial enterprise employing ten people and paying $20,000 per year in property taxes? It is estimated that a substitute enterprise will develop in five years." It is admitted that this example is far simpler than those of the real world where the factor profile would include several elements. Even so, such such comparisons make clear the actual points at issue and may greatly reduce the number of irrational arguments that accompany most controversial decision.

Technique for comparisons among alternatives

The flow chart of Figure 2 depicts the procedure to be followed in making the paired comparison described above. [Figure 2 not printed in RECORD.] Failure to follow some such procedure may result in selecting the less than optimum alternative.

Step 1: Perform Engineering Economic Analysis. Rank the alternatives in order of preference as determined by the economic analysis. This may be done on the basis of maximum net benefits over cost or total and incremental benefit cost ratios or rates of return. Tabulate the net benefits over costs for each alternative.

Step 2: Prepare Factor Profiles. Factor profiles are prepared from the viewpoint of each interest group showing the freeway's impact on each relevant factor for that group. A factor profile is also prepared which shows the total or aggregate effect of each alternative over all communities and groups.

Step 3: Economic and Factor Profile Analysis. Compare alternatives on the basis of the economic analysis and the factor profiles. Eliminate from the set of feasible alternatives any alternative which is dominated by another from the standpoint of both the economic analysis and the factor profile. One alternative is strictly dominant over another if all percentage values of the factor profile of the dominant alternative are greater than that of alternative. This implies that there are no crossovers in the lines of the factor profiles for the two.

Step 4: Paired Comparison of Alternatives. Paired comparisons are made for each viewpoint on the basis of the incremental differences in community effects from the factor profiles, and comparing these with the incremental differences in costs from the economic analysis. Any two alternatives can be paired, but a reasonable beginning would be to pair one of the alternatives having a good factor profile with the preferred alternative from the economic analysis.

(a) Determine the differences between the alternatives for the community factors, and compare the increments of values gained with the increments of values lost.

(b) State a preference between the two alternatives based on the importance to the decision makers of the tradeoffs among the factors.

(c) Check the preference statement against the ranking from the economic analysis. This resolves the question, "Is the alternative preferred in (a) also superior from the standpoint of the economic analysis?" If the answer is "yes" then the preferred alternative is paired with the next alternative selected for analysis. If "no," then the analysis proceeds to (d).

(d) Test the differences in community factors against the excess of costs over benefits. The decision-maker is asking the question, "Are the gains in community factors

worth the additional incremental costs of this alternative?" If the answer is "yes" the alternative of higher cost is preferred because of its higher community benefits. Otherwise, the alternative preferred from the economic analysis is selected and paired against the next alternative for analysis.

Step 5: Continue Paired Comparison Procedure. The procedure (a) through (d) is continued until all feasible alternatives have been included in comparisons. The paired comparisons among the feasible alternatives produce a preferred alternative, and also a preference ranking among all alternatives for each viewpoint if this is desired.

The only constraint imposed on the decision makers in the paired comparisons is that preferences among alternatives must be transitive, i.e. if A is preferred to B, and B is preferred to C, then A is preferred to C. This insures that preferences and decisions are consistent with previous ones, and that the final ranking of alternatives reflects the decision makers' true preferenecs.

In sum, the purpose of the factor profiles and the procedure for analysis is to help the decision maker apply the two basic principles of decision-making: (1) to separate economic effects measurable in dollar values from other consequences, and (2) to compare the differences in alternatives in making decisions. The factor profiles and the method of analysis offer both a visual aid and a systematic procedure for implementing these principles. The construction of the factor profiles does not imply that the area under the curves can be integrated, or the percentage values of factors can be added in order to make a decision. To do so would be to revert to the factor-weighting methods discussed earlier in this paper.

An example application

Consider a freeway route location with four proposed alternatives, with the relevant community impact factors and corresponding factor profiles depicted in Figure 1. The economic analysis in Table 4 provides the following information:

TABLE 4.—ECONOMIC ANALYSIS OF LOCATION ALTERNATIVES

Item	Alternative (in thousands)			
	1	2	3	4
Annual cost	$650	$750	$850	$700
Annual road user savings	1,000	1,200	1,150	1,000
Net benefits	350	450	300	300
Benefit-cost ratio	1.54	1.60	1.35	1.43

Incremental analysis	Incremental		Benefit-cost ratio	Incremental net benefit (cost)
	Cost	Benefit		
4 over 1	50	0	0	(50)
2 over 1	100	200	+2.0	100
3 over 1	200	150	+.75	(50)
2 over 4	50	200	+4.0	150
3 over 4	150	150	+1.0	0
3 over 2	100	(50)	−.5	(150)

The economic analysis indicates that alternative 2 is preferred, since it shows a benefit-cost ratio greater than 1 on the total investment and on all increments of investment. Alternative 1 ranks next, then 4 and 3 have equal desirability from an economic standpoint.

It must be recognized that the rankings given by this analysis can be changed substantially by changing the interest rate, with lower rates tending to favor higher capital investments. This example is based on an interest rate that reflects the minimum attractive rate of return for a particular highway agency.

In examing the factor profiles, we find that the profile of alternate 4 dominates both 1 and 3. Since 4 is equally attractive as 3 in the economic analysis, alternative 3 can be dropped on the basis of the dominance tests. For the first paired comparison, alternative 2, preferred from the economic analysis, is paired with 4, a dominant alternative from the factor profiles. In comparing the differences between these two alternatives, we find that alternative 2 provides 200 acres of developable land and saves 290 housing units and $.58 million in assessed valuation. On the other hand, alternative 4 decreases the average daily traffic on major local streets by 5000 vehicles and saves 25 parcels of industrial property and 2 community facilities. Let it then be assumed that the decision makers agree that alternative 4 is the more attractive of the two, based on the factor analysis tradeoffs.

However, in the economic analysis alternative 2 is preferred to 4 by $150,000 per year, so that additional comparison to the net benefits foregone must also be made. Here it should be noted that alternative 2 costs the agency that will build the freeway $50,000 more per year; on the other hand, vehicle operating costs are $200,000 per year less. It could be that the various groups would therefore weigh the economic consequences quite differently. Assuming that, even with the cost differences, alternative 4 is selected over 2, a similar comparison would be made between 4 and 1.

ADVANTAGES OF THE PROPOSED APPROACH

When a composite analysis of the over-all effects of route location alternatives does not produce a final decision among alternatives because of conflicts of interest among decision groups, then an analysis of factor profiles from the viewpoint of each decision making group can be performed. By separating out those factors that are relevant to each decision making group, and following the procedure for analysis from the flow diagram of Figure 2, a preference ranking of alternatives can be derived for each viewpoint. The rankings and profiles can then be used for resolving conflicts among competing interest groups. In addition, where there are areas of disagreement, the factors responsible for such conflicts, and the reasons for them, can be pinpointed explicitly.

The proposed approach can also serve as a basis for negotiation and compensation. In a political setting, arriving at decisions which are as equitable as possible may involve negotiation and compensation of losers by the gainers. One of two approaches can be taken by decision makers in arriving at final decisions:

1. Selecting the alternative that will distribute the impact as equally as possible among the conflicting interest groups,

2. Selecting the alternative which maximizes the net benefits of both economic and community factors along the entire route.

With either approach the factor profiles can be used as a basis for negotiation and bargaining, and for determining and providing for compensations to communities, groups and individuals to achieve equitable solutions. This becomes especially important in the light of new and proposed legislation respecting public hearings, decisions, and compensation for losses. Recently, the courts have altered the concept of compensating property to one of compensating people when freeway rights of way are acquired. It is not a great step to the concept of compensating communities and groups for losses resulting from freeways. At the same time, provisions might be made to allow communities and groups to make certain concessions and side payments, and adjust community and service district boundaries in order to equalize gains and losses. Such steps as these could do much to smooth the present rocky road to agreements on freeway locations.

SUMMARY

To summarize, the advantages of the proposed factor analysis method of evaluation of freeway locations are as follows:

1. It separates the direct money consequences from the community consequences so that they do not become confused in the analysis;

2. In complex decision making where it is important to have more rather than less information on which to base the decisions, it provides a means by which to display the different factors relevant to making choices;

3. It provides a means for comparing the incremental differences in community factors among alternatives, and contrasting them with the differences in economic costs or benefits;

4. The analysis also provides for separation of viewpoints as well as an analysis of the over-all impact. It shows the incidence of community effects upon community groups, brings out the points or agreement or disagreement among those groups, and serves as a mechanism in resolving those conflicts;

5. Finally, factor identification and factor profiles can be a useful tool during the planning process a) in defining the factors which are important to the community and community groups, b) in establishing goals and objectives, c) as a basis for discussion during the development of alternatives, and d) as a means of evaluating and making decisions among alternatives.

REFERENCES

*The survey used to evaluate the attitudes of planning and decision-making groups toward the factors in freeway route locations was conducted in three parts during September, October, and November of 1968, and April, May, and July of 1969. The first sample included 54 highway engineers and planners in the Los Angeles, San Francisco, and Sacramento offices of the California Division of Highways. The second was a sample of 160 community officials and professional staff including mayors, city councilmen, city managers, city engineers and city planners. This sample was drawn from all the communities of the two major urban areas of California, San Francisco-Oakland and Los Angeles-Orange County, where freeway studies were currently being or had been conducted in the three years 1965–1968. The third was a sample of 123 citizens from four communities in an area of Southern California where a freeway study was recently completed and a route selected. The communities were primarily suburban and residential in nature.

TUNNEY LAUDS KAPPA ALPHA PSI LEADERSHIP DEVELOPMENT PROGRAM

HON. JOHN V. TUNNEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. TUNNEY. Mr. Speaker, Kappa Alpha Psi Fraternity has undertaken a most laudable task in its guide right service program.

Conceived in 1922, guide right is a year-round program for the educational and occupational guidance of youth in high school and college. It is inspirational in character, as well as a source of information for young men.

Through guide right, Kappa Alpha Psi attempts to place the training experience and friendly interest of successful men at the disposal of young men who need inspiration and counsel regarding their choice of a life's career. And to arouse the interest of the entire community in the problems of youth as they seek to lead useful lives.

To be more specific, the objectives of guide right are:

Helping youth, especially those of high school age, in the selection of courses leading to vocations compatible with their attitudes and personalities.

Assisting students to get employment and progress successfully in their chosen vocations.

Assisting parents in counseling their children by giving the youth an opportunity to talk with people who are successful in their chosen vocations.

Sponsoring entertainment and cultural enrichment activities to give young people respite from the drudgery of the streets.

Informing young people of the values of higher education, assistance available for educational pursuits, scholarships, loans, professional counseling and fellowships. They also discuss the various opportunities in vocations and professions, current labor demands and trends, and the personal, scholastic, and economic requirements for employment.

The Los Angeles alumni chapter of Kappa Alpha Psi has implemented the guide right program through a social action project, the instructional leadership league, referred to as the Kappa League.

The Kappa League embodies the goals of the guide right program, with specific emphasis on leadership development and self-motivation for career achievement.

Since the fundamental purpose of the fraternity is achievement, Kappa Alpha Psi seeks to help the young men of its league achieve worthy goals for themselves and make constructive contributions to their community when leadership roles become their responsibility.

In an article appearing in the Los Angeles Times, on January 30, 1970, staff writer Jack Jones described the Kappa League and its programs:

YOUTHS IN LEADERSHIP LEAGUE TO BE HONORED BY BLACK FRATERNITY

Kappa Alpha Psi Helps Students from Ghetto Prepare for College and Then Gives Them Advice in Choosing Career.

"For a long time, we in the black middle class have been accused of going down our own road and not worrying about our young brothers in the so-called ghetto," said Mel Davis, a Hollywood film studio accountant.

Davis (as social action committee chairman for the Los Angeles alumni chapter of Kappa Alpha Psi Fraternity, directs a one-and-a-half-year-old program to build leadership talent and open the doors to higher education and careers for black male students from several local high schools.

"We feel we are making a contribution to assist our youngsters," said Davis.

"There is self-satisfaction in seeing these young guys come up and head for medical school or business. It's nice to think that in some cases it wouldn't happen if it weren't for us."

SECOND ANNUAL CEREMONY

More than 30 of the young men piled up enough achievement points in a variety of projects presented for honor March 7 in the Biltmore Bowl during the second annual ceremony staged by the black-fraternity-sponsored Instructional Leadership League.

The Kappa League, as it is more commonly called, began with 13 Locke High School students in June, 1968, as part of the national fraternity's Guide Right program.

By the end of the following school year, it had grown to 51 and by now has expanded to include 76 students in the 10th, 11th and 12th grades in seven high schools.

The Kappa League is a strictly run, demanding program which requires its enrollees to plan, execute and report on such projects as discussion groups, educational events and social gatherings.

League members meet every two weeks at the Kappa "Kastle," 1846 South Crenshaw Boulevard and are carefully graded by supervising alumni on their conduct, project performance and abilities to organize their own affairs.

A major thrust of the program is to prepare the young men for college, which involves bringing in undergraduate fraternity members from local universities and colleges to tutor. Alumni aldvisers work closely with high school counselors.

ARRESTED WITH APPLICATIONS

High school seniors in the group are apprised of available scholarships and are guided in writing admittance applications to universities offering the best educational ladders to desired careers.

"If a youngster wants to be an architect, we'll run interference for him and steer him to a successful man in that field," Davis said. "But he has to make his own contact. That's part of his leadership development."

Kappa alumni include men who have made the grade in many fields. "You name it and we have it," Davis said.

Some prominent Kappa alums, he notes, are Superior Judge Bernard Jefferson, Federal Judge David Williams, State Sen. Mervyn Dymally (D-Los Angeles), City Councilmen Thomas Bradley and Billy G. Mills, insurance executives Norman B. Houston and Norman O. Houston, and such sports figures as high jumper John Rambo and basketball stars Walt Hazzard and Wilt Chamberlain.

While the effect of the program on the high school students and their parents have been sharply positive, the impact on the fraternity's undergraduates on several local college campuses has also been noticeable Davis said.

FIVE PHASES

"This has been a lifesaver in rapport between the undergrads and the alums," he said, "They didn't feel we are doing anything relevant to the community. Now they are throwing themselves into this thing."

All activities and projects—such as a January weekend retreat centering on discussion of black equality, sex and drug abuse—are geared to five rigidly outlined phases of the Kappa League program.

These are self-identity (discipline, awareness, appearance . . .); training (academic, career preparation . . .); competition (politics, sports . . .); social (religion, communication, manners . . .) and health education (physical fitness, sex education, drugs . . .)

It was the Kappa League students themselves who ruled out smoking at the meetings and who confiscated drugs from a guest at one of their dances.

The social action committee members of the Kappa Alpha Psi alumni chapter in Los Angeles, who direct the Kappa League, are Mel L. Davis, chairman; Solomon Henderson and Burnell Hayes, secretaries; Earle Carrington, scholarship coordinator; Lloyd Goddard, testing and counseling coordinator; Burnell Hayes, training coordinator; John Merrill, Bernard Johnson Jr., and Lafayette Height, tutorial services coordinators; Edgar Bishop, ways and means coordinator, and Cagney France, identity phase coordinator. Committeemen are Oliver Barnett, Prosper Bullen, Ralph Butler, Gaston Boyd, Tom Bradley, Charlie Jackson, Mel Longmire, Jerrell Stephens and Dave Wilkerson.

They and Kappa Alpha Psi Fraternity are to be commended for efforts to help young men make the most of the opportunities available to them in our society.

THE WATER POLLUTION PROBLEM IN WASHINGTON, D.C.

HON. J. GLENN BEALL, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BEALL of Maryland. Mr. Speaker, those of us who live and work in the Washington, D.C., area realize the extent of the water pollution problem. One of our Nation's greatest rivers, the Potomac, flows just south of the Capitol, a vivid example of the seriousness of the situation.

My colleague, and close friend, from the Eighth Congressional District of Maryland, GILBERT GUDE, has demonstrated continually his concern about the conditions which lead to the pollution of the Potomac River. Just recently he examined an interceptor which carries waste from Virginia, Maryland, and the District to the Blue Plains treatment plant. His inspection tour disclosed raw sewage overflowing into the river at Key Bridge.

I understand that subsequent information has been supplied to my colleague that indicates that from 20,000 to 100,000 gallons of sewage empties into the river at this location each day—depending on the weather.

Below are an article and an editorial from the Washington Star about this situation. I hope each of my colleagues will take the opportunity to read about these deplorable conditions:

[From the Evening Star, July 7, 1970]

SEWER AT KEY BRIDGE HAS DAILY OVERFLOW

(By Robert Pear)

The D.C. Department of Sanitary Engineering has nicknamed the sewer "Old Faithful," so regularly does it gush raw sewage into the Potomac River at Key Bridge for two or three hours daily.

Rep. Gilbert Gude, R-Md., and Montgomery County Councilman Richmond M. Keeney were dismayed at the sight yesterday as they walked along an inadequate, 3,000-foot stretch of the Potomac interceptor in George-

town, which carries waste from Virginia, Maryland and the District to the Blue Plains treatment plant.

The two Marylanders pledged their support for a new relief sewer, but it is unlikely the proposed 84-inch pipe will be laid unless the District gets a supplemental appropriation of $2.5 million from Congress.

Jean B. Levesque, water services chief of the Department of Sanitary Engineering, said the sewer, on Water Street NW between Key Bridge and 31st Street, has been overflowing for two years.

In dry weather, the sewage spews through a temporary weir and into the Potomac around 2 p.m. almost every day. After rainstorm, the combined sewer often discharges water and sewage all day, Levesque said.

North of Key Bridge the Potomac and Dulles interceptors run parallel. With completion of the Potomac pumping station and the Lincoln Memorial tunnel in 18 months, the two interlopers will extend without interruption from 31st Street south to Blue Plains.

The $2.5 million required to fill in the gap tentatively has been approved by the City Council but Mayor Walter E. Washington says it must wait until location of the Potomac Freeway is finally determined.

The single 48-inch pipe that now links the two dual sections cannot handle the 50 million gallons of sewage that pass through daily, including most of the waste from the Cabin John watershed in Montgomery County.

At peak periods, the sewage flows exposed over the ground for about 25 feet, between a manhole and the interceptor, and then through an underground pipe straight into the Potomac.

A sanitation official estimated the overflow in the river on a dry day at between 20,000 and 100,000 gallons.

Montgomery County will help finance the interceptor through payment of user charges, and Keeney suggested yesterday that construction of the line could be hastened if the county paid a portion of its share in advance.

Gude said the Georgetown pollution hazard indicated again the need for suburban areas to construct small sewage treatment plants of their own.

About half of the 232 million gallons of sewage processed daily at Blue Plains comes from suburban Maryland. The Interior Department has proposed a 67-million-gallon limit on Maryland's input, noting that the treatment facility operates at 10 percent above designed capacity.

GUDE'S WALK

Over a period of years, Justice William O. Douglas' organized walks along the C & O Canal have served the useful purpose of publicizing the great natural assets of that area, and reminding us of the steps still required to conserve them.

For a similar purpose, Maryland's Representative Gude joined a few newsmen and sanitary engineers in a shorter walk the other day to publicize a glaring instance of public neglect in that same area: The overflow of raw sewage into the Potomac River near the canal at Key Bridge.

It is well known that this overflow pours millions of gallons of sewage directly into the river in times of rain. A fact less well known, discovered by the Gude party, is that the overflow actually occurs on nearly a daily basis, even without rain. In response, the congressman is pressuring the District government to expedite its work on a 3,000-foot gap in the giant Potomac interceptor sewer which would correct the fault—transmitting this sewage directly to the regional treatment plant at Blue Plains.

Last month, the District City Council conditionally approved a budget request to Congress for this purpose—the condition being that the sewer job must be delayed until final agreement is reached on the Potomac Expressway, so that the two construction projects can proceed together. If the economics of the situation actually require such a delay, that conclusion, as we have noted before, certainly adds another compelling reason for speeding decisions on the District's deadlocked freeways.

But Gude is right to ask whether, in fact, some means could not be found to allow the sewer work to proceed immediately. We think the point might well be raised when the region's local sanitation officials get together this Friday to try to co-ordinate their sewage programs. Most of the immediate local concern properly involves the expansion of the Blue Plains plant. Even with that expansion assured, however, the sewer gap in Georgetown will continue to pour raw, stinking sewage into the Potomac on a regular schedule, every day.

WHY IS THE SENATE DRAGGING ITS FEET?

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BYRNES of Wisconsin. Mr. Speaker, the Columbia, S.C., State on July 12 asks the necessary question, "Why is the Senate dragging its feet on the family assistance plan?"

This is an editorial that I believe all my colleagues should read. I am inserting it in the RECORD at this point:

WHERE ARE THE REFORMERS WHEN REFORM COMES ALONG?

Daniel P. Moynihan, the White House counselor, warned the other day that failure to get the Administration's Family Assistance Plan approved this year probably would doom welfare reform for a decade. It is a grim thought, considering the horrible botch that passes for "welfare" in our welfare state.

What needs to be asked, though, is why Congress persists in dragging its feet. The House passed the Nixon bill April 16. Here it is July and the Senate Finance Committee, to which the House bill was assigned, has yet to set a hearing date, let alone begin the tortuous process of enactment.

Mr. Moynihan may have put his finger on the problem when he observed that those who like to talk about the need for welfare reform are nowhere to be found when reform is proposed.

"They do not want us to fail," Mr. Moynihan was charitable enough to suggest. "That part of their spirit and goodness survives. But they somehow do not want us to succeed," he went on. "They do not, I sometimes think, want anything to succeed."

Though Mr. Moynihan declined to name names, it is not hard to spot those he had in mind. Conspicuous among them are the various "welfare rights" lobbyists who are forever squawking about the insensitivity of the Establishment and demanding more and more for less and less—but not for fewer and fewer. Mr. Moynihan is too charitable. Their purpose is not welfare reform. It is welfare growth.

Then there are those who, while in favor of reform as an abstract proposition are never heard to suggest any specific improvements. Sen. Russell Long of Lousiana may fall into this category. The senator wants reform in the worst way, but he objects to the Nixon proposal on grounds that, while it includes effective work incentives for the first time in history, it doesn't include enough of them.

The senator may be right. No one is insisting that the Nixon plan is perfect; it might even be a mistake. The President himself concedes that it is no more than the first step in a difficult journey out of the existing quagmire in which countless unfortunates are stuck. If improvements are what Senator Long is after, however, his methods are certainly curious. As chairman of the Senate Finance Committee, he could have scheduled hearings on the welfare bill. Instead he has elected to sit on it for nearly three months.

Maybe the Administration has failed to push the reform measure as far as it might have. But that is not the principal difficulty. If Mr. Moynihan is correct in predicting another decade of welfare degradation and despair, the blame will belong to our listless Senate.

MORE EVIDENCE SUPPORTING THE OIL IMPORT QUOTA SYSTEM

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WOLD. Mr. Speaker, at the time the Task Force on Oil Imports made its report the point was made that many of its recommendations would not hold up under the harsh light of reality. I was among the many who felt the task force relied too heavily upon academic experts who lacked the firsthand knowledge of the petroleum industry to really do a first-rate report or to conclude with any validity that the oil import quota system should be abolished.

The events of the past few months have already shown the weakness of the report.

The July 15, 1970, issue of the Wall Street Journal has an article entitled "Soaring Tanker Rates Damp Oil Imports and May Force U.S. Gasoline Prices Up."

The article presents first hand evidence that so-called cheap foreign oil may not contribute to lower prices for the consumer. In fact, the cost of foreign oil may end up higher than U.S. produced oil because of increased transportation charges and any number of other variables which cannot be controlled by the United States.

Adequate supplies of petroleum are vital to the security and well-being of our Nation. The only certain means to insure adequate supplies is by developing domestic self-sufficiency.

I include the July 15 article in the RECORD with my remarks:

COSTLIER FOREIGN CRUDE: SOARING TANKER RATES DAMP OIL IMPORTS AND MAY FORCE U.S. GASOLINE PRICES UP

Motorists in the U.S. and Western Europe may soon be paying more for gasoline because a pipeline closedown in Syria and forced production cutbacks in Libya have sent oil tanker charter rates zooming to near records.

The tanker charges, which have doubled since April and quadrupled since this time last year, have bloated the delivered cost of Middle Eastern and African crude oil at U.S. East Coast refineries to 75 cents a barrel higher than the cost of delivered U.S. oil.

Normally the price edge is on the other side. The imported crude usually costs $1.45 a barrel less than U.S. oil.

As might be expected, the price distortion has sharply reduced U.S. imports of foreign oil. And it has narrowed the profit outlook for some inland refiners who customarily obtain a windfall by trading off their oil import "tickets."

But it has sharply raised the profit outlook for such independent ship owners as Aristotle Onassis and Stavros Niarchos of Greece and Daniel K. Ludwig of the U.S., operators of the world's largest private tanker fleets.

The impact is mirrored in domestic production plans. The Texas Railroad Commission, that state's oil regulatory agency, is expected today to raise sharply the amount of oil that Texas wells will be allowed to produce next month.

Louisiana's oil regulatory body, the Conservation Department, has already acted to open up the August flow. Last Friday it announced that the August per-well oil production rate will be the highest since the Suez Canal crisis snuffed off the flow of foreign oil in 1956.

Canada, too, is rushing in more crude. U.S. imports from Canada in the first week of July ran at nearly double the year-earlier rate.

PIPELINE RUPTURE

This latest oil crisis had its beginnings May 3, when a bulldozer under mysterious circumstances rammed into the Trans Arabian Pipe Line in Syria, knocking out the line, which normally carries about 475,000 barrels of oil a day from Saudi Arabian fields to the Mediterranean port of Sidon, Lebanon.

The line carried only about one-sixth of the oil output of Arabian American Oil Co., which is owned 30% each by Standard Oil Co. of California, Texaco Inc. and Standard Oil Co. (New Jersey) and 10% by Mobil Oil Corp. But this was oil that was close to Europe, only a short tanker's run away from Continental refiners.

Fixing the line would be simple enough, company officials asserted in New York. A spokesman said the job could be done "in about 24 hours." But so far, he stated, the Syrian government has adamantly refused to allow company technicians to do any repair work, and the line still sits idle.

Though Arabian American Oil officials are loathe to speculate about Syria's refusal, other Middle East specialists view the government stand as another ploy in the Arab-Israeli war. The line had often been attacked in the past by Arab guerrillas; one section of it goes through the Israeli-occupied Golan Heights. Evidently, by the analysis of some Middle East sources, Syria hopes to pressure the U.S., through the oil companies, to cut off Israeli aid.

Syria, though, was only the starting point for the current oil crisis. Libya has compounded the woes in the past month by ordering seven producers in that country to slash their output some 550,000 barrels a day, or about 15% of Libya's total output. Companies hit there are Occidental Petroleum Corp., Continental Oil Co., Marathon Oil Co., Amerada Hess Corp., the Royal Dutch-Shell Group, Texaco and California Standard.

The issue, by Libyan government account, is conservation. But some oil experts, see this, too, as a ploy, not in the war with Israel but in the war with the oil companies over tax payments.

Europe, as the Middle East's most immediate customer, has made up some of the almost one million barrels a day lost in Syria and Libya by shortstopping oil from Libya and Nigeria that normally would have gone to the U.S.

But Europe has had to do most of its emergency shopping in the Persian Gulf, and therein lies the cause of the tanker rate surge. Because the Suez Canal remains closed by the Arab-Israeli war, all Persian Gulf oil destined for Europe, a six-times-longer journey than the voyage across the Mediterranean from Lebanon to Europe.

The resulting sudden jump in tanker demand has quickly eliminated what had been a traditional summer surplus. And it has sent spot charter rates for a single voyage soaring close to levels prevalent during the Suez crisis of 1956. They are more than half again higher than during the six-day Arab-Israeli war of 1967.

The cost of moving a barrel of oil from the Persian Gulf to the U.S. East Coast has skyrocketed to about $3.25 a barrel; the oil itself in the Persian Gulf area costs only $1.25 a barrel, producing a total cost in the U.S. of about $4.50 a barrel. A barrel of crude oil from Louisiana, by contrast, costs only $3.75 delivered to an East Coast refiner, or 75 cents less.

On the West Coast, too, "Persian Gulf Crude is quite a bit more costly than California crude," a California Standard spokesman says.

PEDDLING IMPORT "TICKETS"

The effect of the high tanker rates has been to render temporarily worthless a "ticket" to import foreign oil. In normal times, inland refineries, which are too far from ports to economically utilize foreign oil, work out exchange agreements with East Coast refiners. They deliver low-cost foreign oil to the East Coast refinery in exchange for receiving an equal amount of high-cost domestic oil at the inland refinery. The value of this swap can be a windfall as high as $1.45 a barrel to the inland refiner.

This gain "often means the difference between a profit and loss" for an inland refiner, said one oil executive. And the smaller the refinery, the greater the impact, under a so-called "sliding scale" that provides quotas of up to 40% of a small refinery's total crude oil processing rate, compared with a big-refinery average of only about 7%.

J. Avery Rush, president of Diamond Shamrock Corp.'s oil and gas unit, said in Amarillo, Texas, his company was having increased difficulty arranging trades for about half its second half oil import quota of about 4,000 barrels a day. "The amount of our quota which we haven't placed yet is large enough for us to be concerned" about its potential effect on second half earnings, he said.

Clark Oil & Refining Co., Milwaukee, said "everything is still up in the air" in its efforts to work out exchange agreements for its second half quotas.

SEEKING TO EXTEND QUOTAS

"A number of companies holding unused tickets are likely to be hot-footing it to Washington in the next few weeks to seek an extension of their quotas," one oil executive said. The quotas are due to expire Dec. 31. During the 1967 world oil supply crisis, however, the Government permitted unused quotas to be used during the following two years.

Some inland companies also have protected themselves against the present situation with long-term exchange agreements. American Petrofina Inc., controlled by Petrofina S.A. of Brussels, said in Dallas it made "most of our deals on a full-year basis" good until next Jan. 1, so it doesn't expect to be hit too hard by the current difficulties.

As the foreign crude costs mounts ever higher, meantime, the big international oil companies continue to cut back on their use of foreign oil at U.S. refineries. "East Coast crude oil imports could fall to as little as 300,000 barrels a day from a normal level about 700,000 barrels daily," one major company predicted. Total U.S. imports of foreign oil other than that from Canada fell to 520,000 barrels a day in the week ended July 3 from 850,000 barrels daily a year earlier, the American Petroleum Institute said.

In the same period, imports of Canadian oil jumped to 609,000 barrels daily from 316,000 barrels a day a year earlier. This was despite the fact that Canadian oil was placed under an official U.S. quota for the first time July 1, limiting imports to an average of 395,000 barrels a day for the last six months of the year. "Companies are borrowing from future quotas to boost Canadian imports now at the expense of November or December," one oilman declared.

Some oilmen were hopeful the U.S. Government could be persuaded to ease restrictions on Canadian oil. Ashland Oil Inc. said in Ashland, Ky., it hopes the Government will foresee the possibility of a U.S. crude oil shortage and allow freer access to Canadian crude.

SPACE AND TOMORROW'S SOCIETY

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. MILLER of California. Mr. Speaker, it is a pleasure to offer for the RECORD a speech delivered in Sacramento, Calif., on Monday, July 20, by Karl G. Harr, Jr., president of the Aerospace Industries Association of America. The subject of Mr. Harr's speech is, "Space and Tomorrow's Society." I commend its reading to all those concerned about our national future:

SPACE AND TOMORROW'S SOCIETY

(Address by Karl G. Harr, Jr.)

President Stone, members of the Comstock Club, ladies and gentlemen.

Most thoughtful men and women everywhere must still retain some of the feeling of awe they experienced just a year ago today when Apollo 11 Commander Neil Armstrong cautiously placed a foot upon the moon's surface in that "one small step for a man—one giant leap for mankind."

Nothing that has happened since or will occur in space in the future is likely to have quite the same impact throughout the world as that historic achievement.

At the same time, of course, thoughtful people today have a lot of other things to think about—some of them quite awesome in their potential for good or evil; issues and problems which have intensified in recent years to a point of urgency.

In view of this, I have chosen as a title for this brief address "Space and Tomorrow's Society," and I welcome the opportunity to speak on the interinvolvement between our space activities and our society as a whole. Perhaps some aspects of the relationship may be new to you.

First let us review what has happened in the U.S. space exploration during the year since the first Apollo touchdown. Apollo 11 was completed with great success, and was followed by a near-perfect lunar-landing Apollo 12 mission of longer duration in November. Now four men had walked on the moon, bringing back rock and soil samples and a wealth of other data, and leaving behind a number of functioning scientific experiments.

The Apollo 13 mission in April, although its moon landing was aborted, also made a most important contribution to spaceflight progress by demonstrating to us and an anxious world that our space team could cope with such an emergency. A magnificent performance by the astronauts themselves and by Government and industry personnel on the ground—plus the fact that effective contingency plans for such an emergency had been made far in advance—brought the

Apollo 13 crew back from beyond the moon to a safe splashdown and recovery in the Pacific. Perhaps even more importantly, the danger in which Apollo 13's crew found itself demonstrated as nothing else had the universal identification with space exploration. Many millions of people throughout the world united in a common bond of prayer for their safe return.

The year since Apollo 11 also saw many successes in unmanned exploration, among them the flight past separate regions of Mars by two Mariner spacecraft. Launched a month apart early in 1969, the two craft completed their missions within a week of one another in mid-summer, they too returning a wealth of new information.

Dramatizing how far we have come in space, a less noticed event of the year was the re-entry on March 31 of Explorer I, launched 12 years and two months earlier on January 31, 1958. This spacecraft, America's first satellite as you may recall, weighed slightly over 30 pounds. Nevertheless, it not only discovered the Van Allen radiation belts but it got us going in space competition.

It is neither feasible nor appropriate to go into great detail here about how our space capability has grown in the twelve and one-half years since Explorer I. Just a few indicators tell that story. Our orbital payload weights, for example, have increased 10,000 times, our speed record 13 times, and NASA has successfully launched more than 150 unmanned spacecraft, apart from the manned Mercury, Gemini and Apollo capsules. An even larger number of unmanned satellites have been launched by the military to enhance the national security.

More important to our discussion here, however, is the record of contributions made by the space program to our general economy, to the advancement of our overall technology, and to the improvement of the quality of all our lives. Much has already been accomplished, and much we may look forward to in the 1970s and 80s and beyond—for the benefits we have reaped so far are merely the tip of the iceberg of that potential.

The great bulk of the money and effort that has been invested in space thus far has been applied to the manned flight program, to meet the national goal for the first space decade of landing men on the moon and returning them safely. A quick look at the budget shows that manned flight is continuing to draw the lion's share of the funding, although the ratio is declining.

Apart from the obvious lift to the national morale and the nation's international prestige afforded by the Apollo successes, there are deeper rewards to be found in extending our exploration—manned and unmanned—of outer space. These are for the moment largely intangible. They are very long-range, and involve the acquisition of knowledge of the nature of our solar system and its relationships with other parts of our galaxy, the composition of the moon and the planets and what use can be made of such new knowledge to improve life on earth.

Simultaneously some very tangible and direct benefits to mankind have been and are being accomplished through our unmanned satellites in orbit around the earth. Meteorological satellites have greatly enhanced our ability to forecast the weather around the globe. Communications satellites have not only vastly increased our available channels for private and business communication, but have made it possible to transmit television pictures instantaneously around the world with, among other things, enormous implications for education. Other satellite systems are aiding navigation, geodesy and mapmaking.

Within three years, first launches will be made of earth resources survey satellites. It is expected that these spacecraft alone will produce benefits that within a few decades will cover the cost of the entire space program. They will locate sources of water, oil and minerals that were previously undetected. They will spot forest fires and crop blights, track the movement of concentrations of fish, and aid in control of pollution. It is estimated that savings in agriculture and forestry will amount to more than $2 billion annually in the United States alone.

Another rich area of economic benefits is familiarly known as spin-offs—new products, materials and processes that have come into existence as a result of space research and development and have quickly found application in non-space activities. Whole new families of alloys and plastics, microminiaturized electronics, revolutionary fabrication techniques, previously unattainable standards, tolerances and degrees of quality control—all of these have grown out of space-related work and found their way into other areas of manufacturing. And this story has barely begun.

New products range from homely items like lightweight, indestructible frying pans to new medical equipment adapted from Apollo systems enabling doctors and hospitals to give better treatment to patients.

Thus, although in its beginnings, some 13 years ago, the space program was of no special importance to the national economy, this situation changed rapidly as our national interests dictated that we embark on a truly major effort, with the principal goal of manned lunar landing but with a wide range of supplementary programs.

By the mid-60s the accelerating space effort had created several hundred thousands of jobs, and the aerospace industry—including aviation as well as space and missiles—had become the nation's largest manufacturing employer. It is still number one, incidentially, in spite of the recent fall-off.

Early in the program it became clear that to meet the stern challenge of space flight we would have to achieve new standards of precision, reliability and durability. Breakthroughs in a variety of areas of science and technology were required if the program was to succeed. Government, industry, independent research laboratories and hundreds of colleges and universities were brought into this drive for excellence, and scientists and engineers in a myriad of disciplines found themselves working in close cooperation for the first time.

Far from the least of the important economic outgrowths of the developing space effort was the creation, by necessity, of an entirely new order of systems management capability. Bringing together such highly skilled but widely diversified teams and ensuring that they worked together effectively to overcome otherwise insuperable problems was a new experience that has now supplied us with a priceless national asset. If we will, we can utilize this unprecedented capability to help deal with our compelling domestic needs.

The pressing problems of urban decay, rising crime rates, congested transportation systems, and deterioration of our air, water and soil, require the attention of the best possible technological and managerial skills. No national effort has developed and honed such skills as has the space effort.

So much for a thumbnail review of what we have done and what it has meant to us.

Now let me turn to the ongoing dialogue about the dimensions of our future space effort.

I can remember, because I played a small role in it, the time when the United States had to decide whether or not it would invest in a space effort, and if so, to what degree.

At the time when this fundamental decision had to be made each of its components could be argued, pro and con, only on the basis of speculation.

Limited to such speculation either side could be plausibly argued on such propositions as: a major national space effort will greatly bolster and advance our overall economy; a major space effort is directly related to our international, political and psychological status; it is directly related to our national survival in many ways, and so on.

Because all was speculation in the early days of space, that is, the late 1950s, no one could be faulted too severely for a lack of total comprehension of the significance of such a program.

We do not have any such excuse today. In the 13 years of our national space program much that was then mere speculation has been established beyond peradventure.

Today nobody can responsibly refute the fact that:

1. There is a direct and beneficial relationship between our space effort and the strength and growth of our overall economy.

2. There is a direct and beneficial relationship between our space effort and our standing among the peoples and the nations of the world.

3. There is a direct and beneficial relationship between our national space effort and our national survival.

4. There is a direct and beneficial relationship between that effort and our capacity to address ourselves effectively to all national needs.

In fact, no one really tries to refute these points directly. They cannot. They may snipe at them, poor mouth them and attempt to distort them, but they cannot refute them. Thirteen years has been long enough to firmly establish each of these conclusions, as well as the single overall conclusion that no other challenge to our nation presents anything remotely comparable to space as an opportunity to benefit our whole society by increasing our overall capability to deal with all of our problems. Why then do some people so violently oppose this program?

The fact is, I suppose, they do not really oppose the exploration of space per se. They oppose it simply because they mistakenly view it as a competitor for national resources with programs to which they ascribe a high priority.

This attitude, it seems to me, drives from a most fundamental misconception as to the true nature and effect of the space effort. Far from being a competitor with other programs, our national space effort is the best ally such programs could have. It is essential to them—particularly over the long run. Without the vigorous pursuit of the prudent and practicable programs available to us in our national space effort, I challenge anyone to show how these other objectives could be either sustained or even attained. Probably, in all candor, even this basic fact is appreciated by most of those who favor drastic reduction of our effort. What energizes them really, is that our space effort has at times had so much appeal on so many fronts to so many segments of society, both at home and abroad, that it has loomed at the prime competitor for resources to those who see it as such. Because it is so formidable, assault upon it can be very frustrating. There is no place to get a valid hold, really. This leads to a certain amount of frenzy and some pretty ironic intellectual and logical distortions.

For instance, among the principal detractors are numbered many of those who are most disturbed by what they regard as this nation's warlike and materialistic image both at home and abroad. Yet time and again we have seen how the whole world responds to the astronauts and their achievements. Even those people and governments around the world who are prone to be negative about much in America today are among the first to turn out their hearts and spirits to our space program. We would have to go far back indeed to find goodwill emissaries comparable to the astronauts. Yet this over-

whelming and unique benefit to our national image is hardly credited by those who profess the greatest concern about that image.

This ironic ambivalence goes way back. Let me refresh your recollection, by way of example, about the attitude of many of those principal current detractors during the 1960 election campaign. That election took place a little more than three years after Sputnik, at a time when the U.S. had not very much to point to in terms of dramatic achievement in space. One of the principal points being made by those who are today foremost among our space effort's critics was that U.S. prestige abroad had suffered dramatically and that the principal reason therefor was superior Soviet space achievements and all that allegedly implied.

The kind of frustration that produces such ambivalence also can produce dangerous oversimplification. One so oriented looks at a ghetto and sees a space capsule with a multimillion dollar price tag. Unfortunately such oversimplified emotion-charged disregard for the true nature of what our space effort has meant to us—has had its effect in terms of public support.

But the significance of pointing out the impact of our space effort on our national economy pales by comparison with the real reasons for sustaining a vigorous space effort. This has to do not with Congressmen who vote against the space effort nor editors who write against it. It has to do rather with our space effort's relationship to the fundamental aspirations of our youth.

Here is where today's most dangerous anomaly lies.

As the citizens of tomorrow's society, it is upon our youth that the impact of current national decisions will fall most heavily.

They must be brought to an understanding of the identification between our continued acceptance of this challenge and their ability to fulfill their own aspirations.

We know, because history has so often taught and retaught us, the cost of heeding those who would sell the day to profit the hour. We know that the story of nations, of people, and of whole societies has always been one of struggle between those with faith in the future and those unwilling or unable to face it because of immersion in immediate problems. As Senator Bible recently stated, "Every important advance in the history of mankind would never have occurred if it had been put off until other more immediate needs were handled."

We in America also know that where major technological advance beckons, a nation such as ours, which depends heavily on such advances for its survival, its well-being, its standard of living and even the viability of its free institutions, has but one area of choice. It can opt to accept or reject the challenge; it cannot opt to accept or reject the effects of its decision. We also have learned that technological advance is essentially indivisible. You either opt for it or you don't. If you advance technology in one area you advance across the board; and it is from such overall advance that the power and capability to make choices is preserved to a people.

Senator Monroney once stated particularly well the effects of a contrary decision in the following terms: "Starving technology mortgages the future of our society. Twenty years ago Britain picked immediate social goals over technical progress. Today it is paying the price, lacking the production base to support either social or technical progress."

Our youth must fully understand these facts and do so in terms of their own aspirations. They must appreciate the relationship, again on their own intellectual, economic and social terms, between America's continued acceptance of the greatest challenge earthmen have been privileged to assume and the range of options that will be theirs.

For when all is said and done what is at the root of their statement? What, in their eyes, is the single most important attribute of the society in which they will live as adults? It seems to me there emerges clearly from all their various modes of expression and assertion that they most want a society unfettered by the past. They want to be free to make their own choices, free to determine not only their own life-style but also the scope of their horizons, the range of their options. They fervently seek such freedom. Explicitly and implicitly they demand it.

How can they have any chance for such a society if today's America turns its back on the greatest challenge with which it is presented? If we were to falter now, to let ourselves fall back into a stagnant, static posture based on weakness, confusion and abdication of our responsibilities to the future, we would surely doom any and all of their efforts to achieve such freedom. They must be brought to understand this fact.

America, as other nations, through choice or necessity, have done in the past, would for the first time in its history be closing the lid on the future. Not only would we thereby forfeit the most fundamental attribute we stand for, to our own youth as well as to others. Not only would hope, advance, opportunity, serendipity, faith, curiosity and determination no longer be, as they have always been, distinctive hallmarks of American life. Not only would we be the first generation in our nation's history to condemn our citizens of tomorrow to horizons prescribed by an absence of will, wit and vision. But history has shown us that once one generation makes such a denial of the future, a nation more often than not starts sinking inexorably, like a confused and frightened dinosaur, into the mud of the ages.

Our youth must come to understand that our space effort is no more "competing" with other priorities than the engine of a car "competes" with the seat cushions for design and funding priorities. In a practical sense some accommodations are always necessary, but if they are made at the essential expense of the engine, the seat cushions, no matter how comfortable and attractive they may be, will soon just sit and rot by the roadside.

Now we don't owe our youth prescriptions for their life-style or the scope of their horizons. They wouldn't pay any attention to us anyway. But we do owe them our best efforts to make them appreciate what is involved, and our best efforts to preserve for them the widest possible range of choice.

If when they become adults, when the world is theirs, they decide to sell the day to profit the hour, to remove their society from the mainstream of history, they will have to answer for it to future generations. If they decide to opt out, it doesn't make too much difference what we do now. But if they choose to sustain their growth, their strength and their independence of choice—and every indication is that is just what they will do—who among us will want to justify having deprived them of the chance?

ONE HUNDRED YEAR CELEBRATION—HAMBLEN COUNTY, TENN.

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. DUNCAN. Mr. Speaker, this weekend will be a great occasion for the people of Hamblen County, Tenn. The county is celebrating its 100th birthday.

Today I want to pay tribute to this enthusiastic and hard-working group of people who have contributed so much to the progress and growth of the area. Some of the finest schools and churches can be found in the towns of Morristown, Russellville, Lowland, and Whitesburg. A variety of industry abounds in Hamblen County, and it is a good farming area. Excellent newspapers, banks, and businesses serve the county.

Hamblen County was created on May 31, 1870, and was named for Hezekiah Hamblen. The first settlers had come to the county around 1783 and found a good location to live and farm at the bend of the Nollichucky River.

Morristown, the county seat, is actually older than Hamblen County itself, and the first county court was organized in an old storehouse in Morristown on October 3, 1770.

This weekend Hamblen County will relive some of its early days and will display the progress it has made in the past 100 years. On Saturday Hamblen countians will turn out for a gala centennial parade and the festivities will continue with a special program in the evening. Happy 100th birthday, Hamblen County.

HAROLD H. KAHN LEADS URBAN REFORM

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. FEIGHAN. Mr. Speaker, with the problems of today's cities becoming increasingly acute, the need for effective and dedicated leadership for our metropolitan areas becomes ever more apparent. Citizens' groups and urban leagues can play a significant role in providing and encouraging the kind of leadership which produces solutions to the transportation, environmental and developmental problems which accompany the growth of metropolitan communities.

One example of that leadership and dedication in Metropolitan Cleveland is the work of Harold H. Kahn, one of Cleveland's most outstanding civil leaders and newly elected president of the Citizens League of Greater Cleveland. The accompanying article, from the Plain Dealer of June 3, describes his efforts to achieve a government system for Cuyahoga County, which comprises the Cleveland metropolitan area, which would be more effective in furthering efforts to solve urban problems in that area.

The article follows:

COUNTY REFORM TOP OBJECTIVE OF LEAGUE

The major objective of the Citizens League of Greater Cleveland this year will be adoption by Cuyahoga County voters of the alternative form of county government, Harold H. Kahn, the League's new president, said yesterday.

Kahn, 64, senior partner in the law firm of Kahn, Kleinman, Yanowitz & Arnson, was elected yesterday succeeding F. J. Blake, senior vice president of Central National Bank, who had served the maximum two years. Kahn has been on the league board six years and was vice president last year.

"The solution of such problems as water and air pollution, transportation, storm drainage, sewage and waste disposal are stymied by the lack of a viable county or-

ganization," Kahn said. "Every effort must be made to communicate to the voters of Cleveland and the suburbs the vital importance of reform of their county government as the most basic and fundamental step to progress."

The alternative proposal was defeated by county voters last November. Officials of the Citizens League, and other groups, hope to get enough signatures to put the issue on the ballot, possibly this fall.

The proposal would create an elected administrative head of the county and expand the board of county commissioners from three to seven persons, who woud serve as legislators.

Kahn is a graduate of Glenville High School. He received bachelor's and law degrees from Case Western Reserve University.

He is president of the board of the Jewish Convalescent and Rehabilitation Center of Cleveland and a trustee of the Council of Human Relations, Suburban Community Hospital, Fairmount Temple and the Jewish Community Federation.

He and his wife, Jean, live at 2985 West Belvoir Oval, Shaker Heights. They have two children, Mrs. Evelyn Safran and William H. Kahn.

CULEBRA

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mrs. CHISHOLM. Mr. Speaker, I rise today in order to express an overwhelming feeling of personal outrage and to focus attention upon a situation which is intolerable to those who must live through it and avoidable by those who perpetuate it. The island of Culebra is an inhabited part of Puerto Rico which is currently used by the Navy for extensive bombing and shelling practice. Recent testimony before the House Armed Services Subcommitte on real estate as well as a study by the Puerto Rican Civil Rights Commission, have chronicled the history of U.S. involvement, pointing consistently toward blatant naval insensitivity to the welfare and safety of the Culebran people.

HISTORY

Culebra is a 7,000-acre island, approximately 7 miles long and 3 miles wide lying slightly east of the Puerto Rican mainland. It is one of 76 municipalities of the Commonwealth of Puerto Rico. Culebra's 726 inhabitants, all of whom are U.S. citizens, rely for subsistence almost exclusively on farming and fishing.

The initial involvement of the United States with Culebra began in 1901. At that time, and again in 1902, Executive orders were signed by President Theodore Roosevelt which provided that all public lands on Culebra were to be for the use of the U.S. Government under the jurisdiction of the Navy. Both of these Executive orders were reaffirmed in 1903. Six years later Roosevelt dedicated the cays and islets surrounding Culebra as national wildlife refuges, thus acknowledging the rare ecosystem of the island. By 1911 the residents of San Illdefonso had been evicted by the Navy and had formed the new town of Dewey on the southern part of Culebra. Up until 1936, the U.S. Government had only intermittent contact with Culebra and few complaints from its citizenry. However, it was in that year that the Navy commenced aerial bombings and offshore attacks. On February 14, 1941, President Franklin Roosevelt signed Executive Order 8684 reaffirming the U.S. naval presence and expanding its jurisdiction to include the air space over the island and 3 miles of territorial waters surrounding Culebra. Accessibility to the area was declared to be at the exclusive discretion of the Navy. Severe penalties were established for those who violated naval restrictions.

Throughout the midfifties and into the early sixties, the Navy attempted to gain control of the entire island. They apparently were willing to resettle the Culebrans on neighboring islands in order to facilitate more freedom in their weaponry practice. However, these plans were abandoned when it was pointed out that Puerto Rico's Constitution provides that no municipality can be dissolved unless its citizens vote for dissolution by referendum—The Armed Services Journal, June 27, 1970, page 23.

In 1960, there was a noticeable change in the bombings and shellings—they became both more frequent and more intense. By 1969 weaponry practice averaged 9½ hours per day for 6 days of the week, as well as 3½ hours on Sundays—testimony of Thomas C. Jones, Jr., attorney for the Municipality of Culebra, before the House Armed Services Subcommittee on Real Estate, June 10, 1970. Culebrans were forced to undergo 228 days of aerial rocket fire, 123 days of naval gunfire, and 114 days of strafing by jets—Wall Street Journal, June 10, 1970, page 1. Living in Culebra in 1970 is much like living in London during the German blitzkrieg. Furthermore, accelerated bombings have been planned for 1970. The Navy presently is ahead of its 1969 pace, having already made 17,860 runs to the target this year—Wall Street Journal, June 10, 1970, page 1.

As an added affront to the Culebran people, the Navy has, in recent years, given permission to Venezuela, Great Britain, Brazil, West Germany, the Netherlands, and Trinidad-Tobago to join with the United States in bombing Culebra.

At the present time, there is an acquisition request before the House Armed Services Subcommittee on Real Estate. It seeks approval of a Navy intention to purchase 2,350 additional acres on Culebra for the purpose of expanded bombings and missile testings. It is this request which initially brought Culebra public attention.

The history of U.S. involvement in Culebra is consistently interspersed with a succession of accidents and near misses—notwithstanding contrary assertions and denials by the Navy. In 1935, for example, Alberto Pena Garcia, a 15-year-old schoolboy, was killed when he smashed a USMC grenade with a hammer—The Armed Forces Journal, May 23/26, 1970, page 30. Similar, albeit nonfatal, accidents occurred in 1914 and 1964. In 1946, nine Navymen were killed in an accidental bombing because their office was painted the same color as the bombing target—The Armed Forces Journal, May 23/26, 1970, page 30.

More recently, there has been an increase in the number of near misses. Several 1,000-pound bombs reportedly landed within a few feet of Culebra's shore and remained there unexploded for several days while children played nearby—the Armed Forces Journal, June 6, 1970, page 19. On May 22 of this year, the Governor of Puerto Rico, the Honorable Louis A. Ferre, was fired upon without warning. Ironically, he was visiting Culebra to investigate complaints that naval bombings were dangerous. Richard D. Copaken, counsel for the municipality of Culebra, collected signed statements from lower level Navy personnel concerning this incident. In their statement, they conceded that the red warning flag had not been displayed and that bathers had been seen in the firing area earlier and may still have been there. In fact, three children were in the line of fire and testified to that effect at the June 10 hearings before the House Armed Services Subcommittee on Real Estate. They further attested that during the firing they had seen a boat in the distance—Governor Ferre's.

On this past July 4, a day on which no military activity was scheduled, a Navy Phantom jet made three low passes 10 feet above the water on a fishing boat, dropping a bomb or firing a rocket on two of those passes. Mr. Jose Higuera, the owner of the boat, reported the incident to the Honorable Ramon Feliciano, mayor of Culebra. It is Mr. Higuera's opinion that the incident was done viciously by the Navy.

EFFECTS

As might be expected, the Navy's presence on Culebra has had tremendously detrimental effects—on the lives of the people, the economy of the island, and the ecology of the area.

The influence upon the human environment has been perhaps the most pernicious consequence of naval target practice. Through statements to their attorneys and in testimony before a House subcommittee, the people of Culebra have constantly emphasized the fear and apprehension which has resulted from the continual bombings of their homeland. They are subjected to the noise of supersonic booms, gunfire, rocket fire, and heavy air traffic. As a result, many Culebrans worry about the safety of their families. Thus Mercedez Morales Lopez told Culebra's lawyers:

> There is much insecurity and danger for the children . . . I have certainly been afraid here, and so have the children, including the two-year old.

The naval attacks further manifest their inimical effects on the human environment in the operation of Culebran schools. Learning has been greatly hindered. Carmelo Feliciano, who has been a schoolteacher in Culebra for 13 years, testified at the recent Culebra hearings:

> Teaching in Culebra is an extremely difficult job. The continuous flow of air traffic at low altitudes over the school, helicopters, jets and propeller planes, make an infernal

noise, creating a state of tension and anxiety and rendering virtually impossible to hold the attention of the students. . . . When bombs and shells are exploding, the school buildings tremble with every explosion. You can see fear in the children's eyes. They sit in school as if ready to run at a moment's notice. During the periods of heavy night bombing, students fall asleep in class. They look sleepless and the teachers there know why this is so. Bombing is carried out far past midnight every day and these kids are kept awake by the noise and the tremor caused by the bombs until early morning hours . . .

Due to all this noise caused by Navy aircraft and boats bombing and shelling, and also because they live in constant fear of losing their lives, the students' work at school is very poor. There has not been an honors graduate in Culebra in more than three years. Intelligence tests show a far below normal IQ for Culebran students. I have observed that many of these students have moved out and attend school in the main island of Puerto Rico and their grades are considerably higher at these other schools. The ones that return to Culebra fall back way below in their school work.

Furthermore, there are numerous reports of bomb-related property damage as well as complaints stemming from the inaccessibility of Culebra during its frequent attacks. However, the point need not be belabored. The consequences which result from naval bombardments are clearly deleterious in terms of Culebra's human environment.

A less apparent, yet perhaps equally destructive result of the bombings has been the erosion of a stable Culebran economy. The farmlands upon which the people depend for food have been pillaged by ship-to-shore bombings and aerial attacks. The fishing industry, long a principal support of Culebra, has been significantly harmed. Navy regulations prohibit fishing during bombings and thousands of fish have been found dead in the aftermath of weaponry practice. These harmful effects on the farmlands and fishing industry were recently observed firsthand by my district representative, Victor Robles.

The Commonwealth government has long been aware of Navy plans for expansion in Culebra. Cognizant of this, it has been reluctant to invest in the welfare of the Culebran people and has further damaged the economy of the island. Thus, Culebra's educational, health, and employment facilities are shamefully inadequate. Culebra's per capita income is only $400—notably less than neighboring islands.—San Juan Star, June 6, 1970, page 3.

The ecosystem of Culebra and its adjoining cays and islets is in many ways unique. It provides important nesting grounds for various migratory oceanic birds, including the sootytern, the nobby tern, and the laughing gull. In addition, the Bahama pintail, a rare and endangered species, can be—or used to be—found in the eastern part of Culebra. Navy shelling and bombing have greatly harmed these rare species. Several years ago, for instance, a bomb-related fire in an impact area destroyed 30 acres of nesting grounds—observed by Ricardo Cotte, the Department of the Interior's agent in Puerto Rico.

Moreover, the previously mentioned dead fish are contributing to a gradual pollution of Culebra waters. Its once beautiful cays have become sewers of dead fish. Thus, one of the most noxious, although less conspicuous, consequences of naval bombings is the snail-like, yet inevitable, transformation of the Culebran ecosystem. This ecological transformation will, in all probability, further adversely affect the lives of the people.

ALTERNATIVES

It seems evident that acceptable alternative sites to Culebra do exist but have not been adequately explored by the Navy. Representative JORGE CÓRDOVA, the resident Commissioner of Puerto Rico, has suggested several possibilities—among them, Mona, Monita, and Desecheo. Furthermore, should these sites prove unacceptable, it seemingly is possible to construct artificial islands or platforms exactly to Navy specifications—Armed Forces Journal, June 27, 1970.

The Navy has consistently denied that satisfactory alternative sites exist. However, they have not proffered any suggestions of their own. They are the logistical experts who best understand their own training needs and hence, should be actively involved in seeking and securing a more acceptable training site. Instead they have been content to merely refute those offered by nonexperts. The crucial question revolves around contingency plans. What would the Navy do if they were told by Congress that they could no longer use Culebra? One seriously doubts that the Roosevelt Roads complex would completely shut down. Somehow, it seems, acceptable alternative sites would suddenly appear.

DISCONTENT AND SUPPORT

In the last several months, the Culebran people have vehemently voiced their fundamental dissatisfaction with the current situation. They not only adamantly oppose the Navy's efforts to acquire additional land, but seek to end all bombing activities on their island. These firm convictions can be seen in a recent survey reported in the Armed Forces Journal—May 23/26, 1970, page 29. It found that of the 313 families that were interviewed, 304 wanted the Navy to cease its bombardments. The validity of this survey was recently tested by Thomas C. Jones, Jr., attorney for Covington and Burling. He purposely slanted his study in the Navy's favor, yet still found that 95 percent of those interviewed opposed the Navy's acquisition of additional land and that 75 percent opposed any weaponry testing on Culebra. Demonstrations supporting "Culebra for the Culebrans" have been held both on the Island and on the Puerto Rican mainland—most recently on July 18.

Outside of Culebra, support has been steadily gaining momentum. Puerto Ricans in the Commonwealth itself, as well as their elected representatives both in Puerto Rico and Washington, have been acting in conjunction with Puerto Rican organizations and leaders in New York City to return Culebra to its people. Thus it can be seen that discontent among the Culebran people is both widespread and intense, and that support for their cause is pervasive. So far, however, this support has been ineffective. The bombings go on. That they do, seemingly is an indication of the position of Puerto Ricans within American society. It is ludicrous to think that such a situation could continue anywhere else in this country. The realities of power politics dictate that it could not. Thus Culebra continues to suffer, partly because its citizens are Puerto Ricans and hence, at a distinct political disadvantage.

I unequivocally support the Culebran people in their efforts to regain control of their island and I am fully committed to assisting them by any legitimate means possible. I offer my support and assistance, independent of any political benefits or liabilities the issue may have for me personally, and fully cognizant of Culebra's political implications within Puerto Rico. I support Culebra simply because the Culebrans are right and the Navy is wrong—because I believe, and have always believed, in the fundamental right of people to decide for themselves issues which greatly affect their own welfare.

In keeping with my support of the Culebran people, I have met, and will continue to meet, with representatives from the Puerto Rican community both in Washington and New York, as well as with other U.S. Senators and Representatives who have expressed an interest in Culebra. Our purpose has been to plan effective collective efforts aimed at saving Culebra. Further. I have written to Senator HENRY M. JACKSON in his capacity as chairman both of the Interior and Insular Affairs Committee and the Armed Services Subcommittee on Military Construction. I have urged him to hold hearings to investigate whether or not the Navy should be permitted any future use of Culebra as a weaponry training site.

On July 18, 1970, I sent a representative from my New York office, one who is fluent in Spanish, to personally deliver a statement to the Honorable Luis Ferre, Governor of Puerto Rico. My letter to Governor Ferre reaffirmed my support for the Culebran people and pledged my continuing efforts on their behalf.

I strongly urge you, as colleagues in the House of Representatives and as people interested in fair play, to join with me in supporting the Culebran people. Theirs is a fight for human rights. Reason urges your support; justice requires it.

AROUND THE WORLD FACTFINDING TOUR

HON. WILLIAM O. COWGER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. COWGER. Mr. Speaker, I recently returned from an around-the-world factfinding tour which included Southeast Asia and the Middle East. I have just completed a report of this tour for my constituents in the Third Congressional District of Kentucky. I would also like

to share my experiences with my colleagues in the Congress.

The following is a description of my visits in Southeast Asia and the Middle East:

AROUND THE WORLD FACTFINDING TOUR

On June 8, I left Louisville for an around-the-world fact-finding tour of Southeast Asia and the Middle East. In November of 1967, I toured several countries of Asia and upon my return made a report to the Congress. President Richard Nixon read our recommendations and asked Congressman Fred Schwengel, of Iowa, and I to return again and to report to him our "observations and recommendations". As before, the tour was made at no expense to the Federal government, but was paid for from private and personal funds.

VIETNAM

I arrived in Saigon after a long 12,000 mile flight, with stops in San Francisco, Hawaii, Guam, and Manila. There was immediately visible improvement in Vietnam since my visit there two and a half years ago. For all practical purposes Saigon is secure and no longer do your hotel windows rattle every night from bombing and gunfire on the outskirts of the city. The de-Americanization of the war is immediately evident with the obvious reduction of American troops in the area. Vietnamization has brought about full mobilization with over one million men under arms in the regular and provincial forces of South Vietnam.

I toured the jump-off bases along the Vietnam-Cambodia border from which President Nixon ordered U.S. ground troops' intervention on May 1. By gunship helicopter I was able to visit almost all of our bases in the Fishhook and Parrot's Beak area. I talked with our troops on Special Forces duty in isolated camps along the border that have been under constant fire from North Vietnamese regulars who crossed the border from Cambodia. The enemy has been using their sanctuaries to inflict rather substantial losses on these outposts.

By helicopter I was able to fly into Cambodia within sight of the Mekong River and touch down at our most forward fire bases. At one encampment I inspected two enemy bunkers where caches of weapons and ammunition had not yet been removed. Our intervention into Cambodia caught the North Vietnamese completely by surprise, not only to the extent that they did not have time to evacuate their supplies and munitions, but their booby traps and deadly land mines were almost non-existent.

I stopped at a fire base west of the Angel's Wing area which was occupied by a combined force of U.S. and South Vietnamese artillery. Their big guns were firing on enemy positions within a twenty-mile radius. Amid all of this thunderous noise, I had a "C" ration lunch with some of our troops in Cambodia.

I was very much impressed with the success of this operation and by the effectiveness of the South Vietnamese troops. Since my visit two and a half years ago, they have been well trained and supplied with our latest equipment. They are tough little fighters who cannot be expected to win all of the battles, but are dedicated to self-help and self-determination.

I also had an opportunity to tour the northern battleground near DaNang, Hue and the DMZ. I inspected our Marine fire bases that protect the giant air base at DaNang. The enemy has changed their strategy from frontal assault to terrorist attacks. I flew to within sight of the Au Shaw Valley where our patrols have almost daily fire fights with smaller elements of North Vietnamese regulars. Again I was impressed by the ARVN forces, under General Lam, who are fighting alongside the remaining Marines and the 101st Airborne Division. Formerly the Marines had this whole sector under their command but most of them have returned to the States under President Nixon's withdrawal program.

Back in Saigon, I had the opportunity to meet with members of the Vietnam National Congress. I visited with the Speaker of the House and attended one of their morning sessions. I had a particularly interesting discussion with the former Mayor of Hanoi, the capital city of North Vietnam, who is now an elected member of the South Vietnamese Senate. I was surprised to learn that almost half of the Senate are from North Vietnam and moved south when the Communists took over control of their country.

Democracy is working in Saigon and surprisingly a free society exists in a war time atmosphere. This is the first time in all history that a developing nation has simultaneously tried to fight a war, attain economic self-sufficiency, install constitutional democracy and move into the twentieth century. I have great respect for the people of South Vietnam.

CAMBODIA

I flew into Phnom Penh, capital of Cambodia, at a time of great crisis. While I was meeting with officials of the American Embassy, and the Ambassadors of India, Singapore and Australia, we could hear gunfire outside the city. The beautiful city of Phnom Penh is completely mobilized with a civilian army with very few rifles. I met with a group of students and faculty leaders who represented 15,000 college and university colleagues who had volunteered for defense of their country. I was deeply moved by their intense patriotism and noted their hatred of Prince Sihanouk.

Unfortunately, much of the truth about Cambodia has not been properly reported by the news media. On March 18 the National Assembly voted unanimously to remove Prince Sihanouk as Chief of State. However, the Lon Nol government is not a new one for he has been Prime Minister for almost a year. From Peking, Sihanouk called upon Red China, North Vietnam, communist elements from Laos, and the Viet Cong to invade his country in his behalf. Contrary to news reports, Prinec Sihanouk has almost no support in Cambodia.

I met with the President of the National Assembly and some of the leaders of the Cambodian Congress. As the only U.S. Congressman or Senator to visit Phnom Penh during this period of crisis, they wanted me to tell the true story in America. They are not asking for U.S. troop intervention, but they are badly equipped to fight a war. We have made available $8 million in arms and ammunition and have supported South Vietnamese troops who came to the defense of Phnom Penh. I was very much relieved to leave Cambodia because the Phnom Penh airport was closed two days after my departure.

THAILAND

I next visited Bangkok, the capital of Thailand. The Thais have had a volunteer army division fighting with us in South Vietnam for several years. There was talk that the famous Black Panther Division from Thailand would be deployed into battle in Cambodia.

Eleven nations from Southeast Asia recently met in Djakarta and called for the territory integrity of Cambodia. The war in Indo-China cannot be properly termed a civil war for it is more correctly an invasion by North Vietnam into its neighboring countries. I was quite aware of a change in attitude since my visit two and a half years ago. There is now a much closer feeling among the free countries of South Vietnam, Cambodia and Thailand.

THE MIDDLE EAST

After a long flight from Bangkok to Bombay and then to Tel Aviv, I landed in Israel. I visited the Israel Ministry of Defense where I received a most unusual briefing on all four borders of conflict. There is almost daily action on all fronts, but by far the most sensitive is the battle area adjacent to the Suez Canal. The interdiction of Russian pilots and sophisticated SA–3 missiles in this zone brings new dangers.

I also visited the biblical City of Jerusalem, which is the capital of Israel. I went to City Hall where I met with their famous Mayor, Teddy Kollek. As always, we found the problems of a big city to be about the same anywhere, except Teddy has the additional crisis of dealing with a war torn country with Jews, Arabs, Moslems and Christians trying to live together in one community.

I next had a meeting with the Israel Foreign Affairs Ministry and then toured the old walled city of Jerusalem, including a visit to the wailing wall at the Temple.

CYPRUS

In order to enter the Arab world from Israel, it was necessary for me to fly to Cyprus. Actually, I had to use two passports and two sets of plane tickets. I landed at Nicosia, the capital of Cyprus, which is an independent island in the eastern Mediterranean and another hot spot in the world. Eighty percent of the population is Greek and twenty percent is Turkish and their nationalism for their home countries erupts into occasional fighting. Twice in 1964 and again in 1967 open warfare existed. Now there is an uneasy peace patrolled by 3,500 United Nations troops from Canada, England and the Scandinavian countries. I drove through no-man's land between the Greek and Turkish armies. Four convoys a day are allowed by agreement to cross through this area, escorted by U.N. forces. The United States plays an important role in Cyprus because both Turkey and Greece are good allies of ours.

ARAB WORLD

First I visited Beirut, Lebanon, where they have the same explosive situation that existed in Jordan a short time ago when the Fedayeen ("freedom fighters") prompted a three-day battle in Amman. There are many Palistinian refugee camps in and around Beirut which are controlled by the Fedayeen. They have been causing most of the border incidents from Jordan, Syria and Lebanon.

After flying over the Suez Canal, the pyramids and the Nile River, I landed in Cairo. In Egypt they have the longest recorded history in the world—five thousand years. President Nasser has tried hard to promote Arab nationalism and unity. He recently escalated the Mideast conflict by shelling the Israeli positions on the east bank of the Suez. There are almost daily air strikes from both sides.

I visited the United States Embassy where there exists the most unusual situation in American diplomatic history. Egypt and the United States severed relations after the 1967 six-day war. Both countries now have Embassy staffs in the other's capital, but under a foreign flag. Our sixteen-man staff occupies the same buildings as before, but each morning we run up the Spanish flag. We are officially recognized as a section of the Spanish Embassy. In Washington, the Egyptians operate under the Indian flag.

From Cairo I flew to Albania, Paris and Washington, D.C. On June 25, I completed the last leg of my around-the-world tour by returning to Louisville.

THE UNITED STATES HAS THREE CHOICES

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. SCHERLE. Mr. Speaker, it is a very easy thing to appropriate more money than is in the budget for any pet social

scheme that comes along and then say, "If you wish to balance the budget, cut defense spending."

It is very easy and very irresponsible.

Those who seek to cut our defense spending down to virtually zero for the sake of building a bigger welfare state are taking us to the brink of war and maybe into war itself, a war we will not be able to win because of their foolish notion that we do not need to be strong to be free.

Mr. Speaker, the United States has three choices. It can continue to spend beyond its income and collapse from within under the weight of a galloping inflation.

It can steal from defense funds in order to finance welfare state spending and fall prey to ruthless forces from without.

Or it can live within its income and strike a reasonable balance between domestic spending and defense spending.

Mr. Speaker, that last course is the course President Nixon has chosen. That is the responsible course.

A SALUTE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. STEIGER of Wisconsin. Mr. Speaker, the Sheboygan School District has been most fortunate these past 16 years in having as its superintendent, Leslie W. Johnson.

Mr. Johnson has proven himself an excellent educator and has demonstrated his concern for students throughout his years in Sheboygan.

The following editorial from the July 1 edition of the Sheboygan Press both congratulates Mr. Johnson on his retirement and thanks him, on behalf of all of us who know and respect him, for his years of leadership in the field of education:

A SALUTE

Sheboygan is a bit different today—or hadn't you noticed? The end of June has come. July is here and there is a new hand at the helm of the Sheboygan public school district. It is appropriate that we salute Leslie W. Johnson, who has retired as superintendent of schools.

Sixteen years is a long time for a local school administrator. And those 16 years have been difficult years for Wisconsin public school administrators. The state has gone through the throes of school district reorganization. The joining together of school districts has not always been a happy time everywhere in Wisconsin. Under Superintendent Johnson's leadership, there has been a minimum of bickering in the ever-enlarging Sheboygan district and a maximum of striving for better educational opportunities for all. The past 16 years have been years of increasing financial stress. Superintendent Johnson has not sought much plush or finery but he has carefully and quietly stressed the need for quality education and he has never sidestepped the costs of education—be it good education or bad. These past 16 years have been years of urgent need for new buildings, for more buildings, for different buildings, for bond issues, for educational planning and selling. Superintendent Johnson has done well and the evidence is at every hand.

These past 16 years have been years of increasing demands for more and better accomplishments by the schools. Many school administrators have yielded to the pressures and have become budget operators, building planners, or labor negotiators. Superintendent Johnson has given leadership to all of these leadership roles but he has insisted that first and foremost he is an eductator. He has been concerned about boys and girls, about the teaching and learning processes and about genuine accomplishments in the classrooms.

Mr. and Mrs. Johnson have played large and important roles in our community. We are glad that Mr. Johnson is not leaving education completely—education needs the Leslie Johnsons. We are glad that they will continue to live in Sheboygan.

We salute them both and wish them many more happy years among us. We do appreciate what has been accomplished and how it has been accomplished during these last 16 years, the Johnson years.

CONGRESSMAN ESHLEMAN'S LATEST NEWSLETTER

HON. EDWIN D. ESHLEMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ESHLEMAN. Mr. Speaker, I am today sending to my constituents my latest newsletter. I am including the contents of that newsletter in the RECORD at this point:

REPORT FROM YOUR CONGRESSMAN
ED ESHLEMAN

CAMBODIAN WRAP-UP

The President made good on his promises. His primary purpose for crossing the border into Cambodia was to hurt the enemy and thus secure—probably hasten—United States withdrawal from Vietnam. He accomplished his goal and got us back out of Cambodia. All the gloomy talk that the war was being expanded and that the United States had plunged into another quagmire proved exaggerated. What was originally a courageous decision by the President became an apparently successful military operation. As more and more American troops come home even the critics may begin to realize the extent of our success in Cambodia.

WHO IS ON SECOND

First there was the McGovern-Hatfield amendment which was stronger than the Cooper-Church amendment which got tangled up with the Byrd amendment which was supposedly hawkish, but which lost, but then was reworded and won about the time that the repeal of the Gulf of Tonkin resolution was being tied to the Cooper-Church amendment which finally was passed in the Senate and was considered a victory for the doves even though the hawkish wording was in it, but when it got to the House, it was rejected—so who's on second?

BIRD'S EYE OBSERVATION

Several months ago I was receiving waves of correspondence from irate constituents who had received some unwanted pornographic mail in their homes. Today I am hearing from almost no one on this subject. Perhaps this is an indication that the anti-pornography laws passed by Congress and the tough anti-pornography drive launched by the Nixon Administration are beginning to take effect.

STUDENT VISITORS

I met with a group of honor students from Lancaster County junior high schools on the Capitol steps several weeks ago. Some picture taking after I talked to them produced the photo on the left.

GOOD NIGHT CHET!

And the babbling brook called the ocean shallow.

PRESERVE AND PROTECT

There is a precious document in Washington which we go to great trouble to protect. So treasured is this single sheet of aged parchment that the bronze and glass case in which it rests is filled with helium gas, protecting it from possible damage from free oxygen. Special filters have been blended into the glass, shielding the document from the ultraviolet rays of sunlight. There is a steel and concrete vault beneath the floor to protect the parchment from fire, bombing, or invasion, with a special mechanism that can quickly lower it into this fireproof-bomb-proof chamber should danger threaten. An armed guard is present at the site 24 hours a day. All of this care is taken to preserve and protect the original copy of the Bill of Rights. These days there are incidents which make one believe that perhaps we should be just as concerned about the preservation and protection of the liberties set forth in this document.

RESPONSIBLE SPENDING

When House and Senate majorities decide that larger expenditures for health and education are justified—and a strong case can be made that they are—the House and Senate should take the responsibility for deciding what other programs are less essential. This kind of responsibility is being shirked. The Johnson Administration demonstrated, at the enormous cost of a serious national inflation which has not yet been controlled, that huge wartime costs cannot be met along with greater domestic spending without weakening the whole economic system. The Nixon Administration has undertaken to trim back budgetary overgrowth by setting a series of priorities. Congress has not followed suit. It would be fine to see health and education funds increased by Congress, if only Congress would show comparable zeal in cutting back other programs. The House and Senate should not be bound by Administration priorities, but should make certain we live within our national budget.

AT THE ROOT

A nationally known news commentator spoke recently on Capitol Hill. He set forth in his talk the things which he believed to be at the root of many of our present national problems. Vietnam, racism, and the generation gap were not on his list because these, he said, were manifestations of more basic factors. Three of these basic factors were listed and deserve, I think, some wider attention. They are: (1) the continued loss of individualism in our mass society, (2) the sharply spiraling and largely untempered flow of technological advance, and (3) the unresponsiveness of government to the legitimate needs of the American people. They are not problems which will be easily programed toward solution or cured with large doses of federal money, but they are the kind of underlying considerations which should influence our judgment as we seek solutions to more visible national dilemmas.

DO NOT SPOIL THE FUN

It is obvious that all of the great problems of our time are not getting solved quickly enough, but it is also a fact that much progress is being made. Yet, even as the steps forward are taken, voices of discouragement are heard, sometimes screaming more loudly than ever. Why? Perhaps a story making the rounds in Washington reveals an answer. It is

a story about an Englishman who met a nationalist revolutionary just before Britain withdrew from India in 1947. "Why do you look so glum?" asked the Englishman. "We are giving you your independence." The Indian replied, "You don't understand. We don't want you to give us our independence. We want to wrestle it away from you."

FORMER COLLEAGUE

The picture at the right was taken in Secretary of Defense Mel Laird's office at the Pentagon. This month I had occasion to talk with him about some matters affecting the New Cumberland Army Depot. However, as might be expected, the conversation also turned to some remembering of Mel's prior service with us on Capitol Hill as a Congressman from Wisconsin.

TO COME HOME

An emerging debate which is likely to become quite bitter in the post-Vietnam era is what to do about the thousands of American young people who have fled into exile to avoid the draft, and the smaller number of servicemen who have deserted rather than face combat duty. To forgive and forget is a charitable pattern deeply rooted in Christian beliefs and yet—aside from the legal issues involved—there are some moral questions which need to be answered. Those who fled to avoid conscription or Vietnam duty set themselves above both statutory and ethical law. For each of them who was not drafted, some other American boy was. For each of them who declined to go to Vietnam, someone else made the trip. It would be intolerably unjust to grant full and unconditional amnesty to those who refused to serve their country when it, rightly or wrongly, called upon them. To do so would be to cheapen the personal sacrifice made by other young Americans who did what was required of them, some at the cost of their lives. I don't think it is necessary to be punitive or harsh in our judgment of those who fled. But their mistake should not go unrecognized. For some—in particular those who because of deeply felt convictions left the country to avoid the draft—our approach should be benevolent but firm. We should require from them two years of alternative service. For those who knowingly, willfully and brazenly deserted their country, we can only hope they will make better Canadians or Swedes than they did Americans.

BUMPER STICKER

Seen in Washington on Honor America Day: "If you don't like policemen, the next time you're in trouble call a hippie."

SLASHING SUBSIDIES

Farm subsidy payments are a basic feature of our national agricultural policy which seems to stress farming by government handout. Our Pennsylvania farmers have condemned this policy on many occasions as disastrous for the man who wants only to market a superior product. There is another factor worth consideration too. Last year the Commonwealth received less than one-tenth of one percent of all subsidy money. In the House of Representatives the unfairness and the failures of the handout approach to agriculture have been acknowledged in recent years. On several occasions the House has voted to limit the amount any one farmer could receive in subsidy payments to $20,000. However, the Senate has always failed to go along with this initiative; that is, until this year. Recently the Senate also voted for a $20,000 subsidy limitation which gives some hope that a more reasonable approach to agriculture may be on its way.

CAMPUS CONCERN

What can the new Presidential commission on college problems tell us? We already know that when political dissent turns criminal the law must be enforced. We know that when the law is enforced it must be enforced legally and with restraint. We know that the independence and integrity of the schools must be protected and that education must reform. We know that an end to the war would help, so would further reforms of the draft, but that these things in themselves are not at the root of campus turmoil. We know that in times of public passion reason becomes more difficult but more necessary to apply. What we know we don't have to be told again. But by looking closely at our schools, perhaps the commission can refine and articulate some of the problems. In so doing it can help the country, the Administration and the Congress to think more constructively about the issues to be faced.

THE SWITCH IS ON

The Nation is gradually being geared from a wartime into a peacetime economy. There are some figures compiled this month in Washington which show the shift. The budget for the Department of Defense has dropped $17.3 billion since 1968. Since June, 1969 Defense Department employment, civilian and military, has been trimmed by 840,000. Defense takes 35% of the total Federal Budget as compared to 43% three years ago. Meanwhile, the spending for other Federal programs has risen $18.4 billion in that three year period.

HEALING DIVISION

That division is a fact of life in our country today cannot be denied. When President Nixon, campaigning in 1968, applauded a young girl's placard which read "Bring Us Together," he hardly foresaw, nor did anyone else, the polarizations now visible in America. The efforts to affix blame for these divisions cannot be helpful in finding solutions. Some meaningful effort toward healing divisions could be helpful. That effort should not be based entirely in Washington. Americans' all of them have always been ingenious problem-solvers. They have often shown that they can see and work toward the larger good; that compassion in communities can be practiced; and that, above all, respect for the individual is the essence of the American dream. The strength and reason available from such insights can enable the United States to deal with division, but even more importantly can enable us to heal division.

LET US LOOK AT THE RECORD, PLACE THE BLAME WHERE IT BELONGS

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. FOREMAN. Mr. Speaker, recently one of New Mexico's leading newspapers properly received and summarized the partisan attacks by those who attempt to place responsibility for today's inflationary problems on the Nixon administration. Many of these same partisans continue to bemoan inflation while at the same time they continue voting for more and more deficit Government spending. Let us look at the record closely, some folks speak and vote against inflation, others only speak, and speak, and speak.

The article follows:

[From the Albuquerque Journal, June 20, 1970]

BLAME WHERE IT BELONGS

Democrats including New Mexico's Sen. Joseph M. Montoya have said they will make inflation and the cost of living key issues in this year's congressional campaigns.

Republicans should welcome that since they can accurately pin the blame on the Democrats who controlled the federal government through most of the 1960s and spawned inflation through spendthrift policies.

Dr. Arthur A. Smith, economist and senior vice president of the First National Bank in Dallas, has some pertinent comments in the June 15 issue of Bank Letter. He notes that Congress has been asked to raise the ceiling on the federal debt by $18 billion to a record high of $395 billion and adds:

"After at least nine of the most prosperous years in our history . . . you might wonder why the federal government was not able to reduce its indebtedness . . . Basically the answer is that there has been no real intention to control the debt—no serious thought of ever paying it off, or even reducing it very much.

"On the contrary, the kind of fiscal policy deliberately followed since 1961 utilized deficit financing as a major stimulant to advance the economy—a policy not even suspended, let alone abandoned, when the Vietnam war accelerated . . . Instead we have stubbornly held to the contention, so strongly emphasized by President Johnson, that we 'can have guns and butter both.'

"The above prodigal fiscal policy . . . has been almost entirely responsible for inflation . . ."

Dr. Smith also states that "inflation has cost (low-and middle-income taxpayers) much more than their share of the taxes that would have been required under balanced budgets . . ."

Even though the Democrat-controlled Congress should be aware of the financial havoc it already has wrought it persists in undermining President Nixon's efforts to balance the budget.

Inflation should be a campaign issue but let's put the blame where it properly belongs.

THE EMERGENCY HEALTH AMENDMENT

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. WILLIAM D. FORD. Mr. Speaker, the misery and tragedy of disease has no geographic, economic, or racial boundaries. Cancer, heart disease, diabetes, and other ailments strike equally at rich and poor, black and white, farmer and city dweller, old and young.

This Nation's resources, financial and intellectual, have been and are being used to explore space, to fly faster than the speed of sound, to assist underdeveloped nations throughout the world.

Can we not apply these same resources to make certain that our own people have the necessary facilities and medical personnel available when illness or accidents strike and make hospital or medical care necessary?

The emergency health amendment to the labor, health, education, and welfare appropriations bill for fiscal year 1971 can help us to begin to rationally apply our resources to the very real health crisis faced by all Americans. This amendment would add $360,454,000 for health needs to a bill that totals $18.8 billion. This would add only one-tenth of

1 percent of the total cost of the $18.8 billion bill we are voting on here.

Is it so much to ask that we make this beginning effort toward meeting our Nation's serious health care crisis?

Health care problems continue to worsen, for as health costs continue their upward spiral, health services deteriorate. Today health expenditures per person average $294 a year. For a family of four the average cost is $1,176, or more than 13 percent of the median family income in this country, and about 20 percent of the average annual family take-home pay. But even with these high costs, Americans find it difficult to get critically ill family members into overcrowded hospitals. A shortage of doctors results in long waits in crowded reception rooms or no care at all for the poor. Any mother who has waited an hour or more in a doctor's waiting room with a child that has a high fever knows the anguish that these problems cause.

Our national health statistics are bleak. We rank below most Western nations in general health care. In 1950 our country ranked sixth in infant mortality; today we have fallen to 21st among nations. In 1959 we ranked 13th in male life expectancy; now we rank 18th.

But by far the most immediate problem is the drastic shortage of health personnel. The U.S. Public Health Service has indicated that as of today we need, to meet existing health needs: 48,000 more doctors, 17,800 more dentists, 150,000 more nurses, 266,000 more allied health workers. About 3,000 Americans are attending foreign medical colleges as the United States turns to the schools of other countries, importing every year almost as many foreign doctors as American medical schools graduate. Without the 7,000 physicians coming into the United States every year from abroad, many of our city hospitals would have to close down.

In this amendment we are asking for $138,954,000 in additional funds for medical manpower institutional support and student loans. This is less than the price of a major missile launch but I believe that it is certainly far more important to the welfare of the American public. Is $15 million for the National Heart and Lung Institute too much to add to this appropriations bill? I think not—and for those who do, I would suggest what will be a very sobering visit to the respiratory disease ward of their local hospital. Is $80 million in additional funds for the Hill-Burton direct grant program excessive? The vote on June 25th by the House of 279–98 to override the President's veto of Hill-Burton should indicate not.

President Nixon himself has indicated his awareness of the Nation's health problems. He said: "We face a massive crisis in this area (health care), and unless action is taken administratively and legislatively to meet the crisis within the next 2 or 3 years, we will have a breakdown of our medical care system which could have consequences affecting millions of people."

I will take the President at his word and sincerely urge that we support this emergency health amendment on a bipartisan basis.

ATTORNEY GENERAL MITCHELL SPEAKS ON DRUG ABUSE CONTROL LEGISLATION

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BOGGS. Mr. Speaker, as you know, the Ways and Means Committee has begun hearings on the subject of drug abuse control legislation. On Monday, our committee heard an excellent presentation by the distinguished Attorney General of the United States, John N. Mitchell. Because there is a great need for new legislation in the field of drug abuse control and because this is a matter of such importance it should receive broad, bipartisan support. I am inserting the Attorney General's testimony in the RECORD and calling it to the attention of my colleagues on both sides of the aisle:

DEPARTMENT OF JUSTICE: STATEMENT BY JOHN N. MITCHELL, ATTORNEY GENERAL OF THE UNITED STATES BEFORE THE HOUSE WAYS AND MEANS COMMITTEE ON H.R. 17463 JULY 20, 1970

Mr. Chairman and members of the Committee: I deeply appreciate your invitation to appear before you today to discuss legislation dealing with control of dangerous drugs. I assure you that the need for more effective control is a matter of the deepest concern to the President and to the Department of Justice and to me, just as I know it is to the Congress and the members of this Committee.

In a few weeks the young people of our nation will be returning to school—an event which American parents once looked upon with a smile and a sigh of relief. Today, it is a sad fact that parents view the opening of school with trepidation and concern because the drug traffic—narcotics and pills—has penetrated the school rooms and school yards of America at virtually every level.

It is no exaggeration to say that the drug danger threatens the moral and physical health of an entire generation.

I am accompanied today by Mr. John E. Ingersoll, Director of the Bureau of Narcotics and Dangerous Drugs, and by Mr. Michael R. Sonnenreich, Deputy Chief Counsel of the Bureau. I would like to address my testimony to the major features of the legislation recommended by the Administration and I have asked Mr. Ingersoll to discuss the more technical aspects of the bill.

On July 14, 1969, the President sent a message to the Congress relating exclusively to the narcotics and dangerous drug problem in the United States. At that time, he expressed the Administration's concern with the serious problem caused by drug abuse and misuse in the United States and outlined ten specific steps the Administration would take as initial counter-moves against this growing national problem.

Mr. Chairman, the President's ten-point program is directed at the many facets of the drug abuse problem. The program calls for new Federal and State laws, new cooperation with foreign governments and increased effort at our borders to halt the flow of drugs into the United States from outside sources; it calls for improved and increased training and resources for law enforcement; and finally, it recognizes that new laws and increased enforcement alone will not solve the drug abuse problem—rather we must also have effective programs of research, public education, and addict rehabilitation. For the convenience of the Committee, I have attached a copy of the President's message to my statement and would like to request that it be included in the record following my statement.

All of these areas discussed in the President's message are vital in our Federal effort to deal with the problem. Today, however, I shall focus my comments principally on the law enforcement aspects of the problem, since this is the area of major concern to the Department of Justice.

Education, research, and rehabilitation are the long-term answers to the drug abuse problem in the United States. But while we plan, prepare, and explore in detail each of these areas, it is important that we regulate the manufacture, importation and distribution of narcotics and dangerous drugs through a logical and enforceable control scheme.

On July 15, 1969, the Administration sent to Congress the proposed "Controlled Dangerous Substances Act." This is the proposal the President promised in his message. This legislation, amended during consideration in the Senate, passed that body as S. 3246 on January 28, 1970 by a unanimous vote—82–0.

In the House of Representatives, there has been a jurisdictional problem of which you are well aware, and the original bill was divided between this Committee and the Interstate and Foreign Commerce Committee. The Subcommittee on Public Health and Welfare of the Interstate and Foreign Commerce Committee commenced hearings on February 3, 1970, and is about to conclude its work on the legislation. This Committee has several drug proposals before it, however, H.R. 17463, introduced by Chairman Mills and Mr. Byrnes, embodies the provisions recommended by the Administration. H.R. 17463 is very similar to S. 3246, which the Administration also endorsed.

Since the introduction of H.R. 17463, representatives of the Administration have had extensive and extended discussions with the Public Health and Welfare Subcommittee. As a result of these discussions, the Administration has endorsed several changes in the provisions of our proposed bill which we believe improve the legislation and resolve the problems that many witnesses raised during the hearings before the Public Health and Welfare Subcommittee. Accordingly, we would like to submit to the Committee later this week a number of recommended changes for H.R. 17463. I have asked Mr. Ingersoll in his testimony to highlight the major areas where we have sought to resolve apparent problems in the Administration's legislation.

Mr. Chairman, if we are to have truly effective drug enforcement, we must have a new Federal law. It is very important that both your Committee and the Interstate and Foreign Commerce Committee reach agreement with regard to the proposed revisions in the drug laws. Without such agreement, we are likely to have divergent Acts emerge from the House of Representatives when our purpose is to unify and clarify the laws into a new code. We stand ready to assist this Committee in any way we can to facilitate your consideration of this legislation and coordination of the work of your Committee and the Interstate and Foreign Commerce Committee. I would now like to briefly mention some of the problems that exist under our present system of narcotics and dangerous drug laws and the design of our proposed legislation to deal with these problems.

First, we presently have a hodgepodge of laws with differing regulatory features for controlling drugs. The disunity of the existing law is the result of piecemeal, ad hoc attempts over the last 50 years, to deal with the problem of controlling dangerous drugs. Beginning with the Harrison Narcotic Act of 1914, nine major pieces of legislation have been enacted in the narcotic and dangerous drug field. An examination of these measures, from the Harrison Act through the Marihuana Tax Act of 1937, through the

Narcotic Control Act of 1956, through the Drug Abuse Control Amendments of 1965, provides both a chronology of our sporadic efforts to deal with a growing problem and an insight into our failure to do so effectively.

In passing these laws, use was made of the power to tax and, more recently, the power to regulate interstate commerce. They represent limited responses to what was deemed to be the given needs of the times. There was no conception of the problem growing to the dimensions it has reached today. Drug abuse has outstripped the growth of our technology and population, while our laws have remained static.

Today we have one Federal agency responsible for the enforcement of these laws, and it must approach its enforcement and regulatory responsibilities with divergent schemes of authority. For example, we have subpoena power as to the narcotic drugs but not as to the other dangerous drugs. We have order forms and quota requirements as to the narcotic drugs and marihuana but not as to LSD and the other hallucinogens. We have registration requirements for the narcotics and marihuana that are different from those of the other dangerous drugs.

We have forfeiture powers as to the narcotics and marihuana but a completely different type of forfeiture for the dangerous drugs such as the hallucinogens and amphetamines. Efficient law enforcement requires both an effective organizational structure and a sound, coherent legal basis. The Administration's proposed legislation—as embodied in H.R. 17463—would create such a structure and basis by providing a single, integrated body of law and derivative regulations based solely on the power to regulate interstate commerce. Controls and other enforcement tools would be interrelated and consistent.

Second, as the result of a series of cases that have arisen recently, namely, the *Leary, Covington, Buie,* and *Turner* cases—we no longer have an effective possession law for the narcotic drugs—except heroin—and marihuana. As I am sure you are all aware, the presumption of illegal importation as to marihuana, cocaine, and the other narcotics no longer exists. While possession offenses are not the major thrust of Federal law enforcement, they are a necessary concomitant to drug conspiracy cases against large-scale traffickers. We need a law that clearly defines possession as possession, and H.R. 17463 does this.

Third, there is ample evidence both in the news media and in scholarly journals that there is a real credibility gap among the population—both young and old—as to the existing penalties for marihuana, the dangerous drugs, and the narcotics. It is often pointed out that existing penalties are out of phase internally among themselves and externally with the rest of the Federal criminal code. This lack of credibility has not only a serious effect on the prosecution and sentencing of defendants, but undoubtedly has also had the more insidious effect of undermining respect for the entire criminal justice system. There is a need for more careful delineation of the entire narcotic and dangerous drug area, both as to substantive offenses and penalties. We believe that the penalties of H.R. 17463 are realistic and an effective deterrent.

The bill makes simple possession of any drug as a first offense punishable as a misdemeanor. In addition, the first offender may receive the benefit of a special provision whereby he may fulfill probationary terms set by the court and earn dismissal of his case and elimination of a conviction record. H.R. 17463 also eliminates most mandatory minimums, to which Federal judges are almost unanimously opposed. Individuals established as professional criminals, however, do face mandatory minimums, and a maximum of life imprisonment and substantial forfeitures. Mr. Ingersoll will go into more detail on the penalty structure, but I can assure you of my satisfaction that these new penalties are both realistic and flexible enough to fit the offense and offender.

Fourth, the diversion of legitimately produced drugs from their normal channels of distribution into illicit sources must be halted. There has been a tremendous upsurge in this kind of diversion in the last five years, and we must tighten the regulatory controls now so that we are not faced with utter chaos in the future. We need a better system of identification of those persons engaged in dealing with dangerous drugs, as well as better methods for inspection and the keeping of records. These are fundamentally law enforcement functions. There are many who say that the dimensions of the drug abuse problem in America today indicate that we are ten years too late in effectively meeting it. Be that as it may, I feel that we must move more effectively into this area of regulation of the legitimate industry *now,* so that the same is not said of us in 1980. I should like to point out that H.R. 17463, as did S. 3246, borrows heavily from the existing narcotic regulatory controls that were shaped by this very Committee. We feel they are necessary and will not hinder the legitimate manufacturers, distributors, and dispensers of these drugs.

Fifth, key inventory requirements under the Drug Abuse Control Amendments of 1965 have expired for most of those drugs, which means that these inventory requirements no longer must be maintained in accordance with law. This glaring loophole must be plugged to facilitate accountability audits to be conducted by Federal Agents. H.R. 17463 closes this loophole by requiring inventories which must be conducted every two years.

Sixth, there is a need for a more flexible import-export control system to trace all legitimately produced controlled dangerous drugs; the Department of Justice must be able to follow the flow of drugs, not just within the United States, but also those drugs leaving the country and coming into it. This new system, which again borrows heavily from the existing narcotic laws, comports with the needs of protecting the public as well as the consumer. It will allow for a system of authorization by and notification of the Department of Justice on all shipments of drugs in and out of the United States, depending on their schedule classification.

Seventh, H.R. 17463 provides new and important law enforcement tools for the investigation of narcotic and dangerous drug cases. It provides for "no-knock". Some 31 States already have this authority.

Mr. Chairman, I would like to take a minute of the Committee's time, while I am on this subject of "no knock," to try to give a better perspective to this type of legislation.

The impression seemingly held by a wide audience is that if "no knock" is enacted into law, which I strongly hope will be the case, a policeman may, on his own decision, enter any private home at any time of the day or night.

Nothing could be further from the truth. Under the "no knock" rule an agent may enter a person's premises without announcing his authority and purpose *only* if he has obtained a search warrant from a judge *and* the judge has been persuaded there is probable cause that evidence will be quickly and easily destroyed or that there is a danger to life and limb of the agent.

I would remind you that we are dealing with cleaver and ruthless drug peddlers, who have no hesitation about taking the life of an agent. And the moment of entry is the moment of greatest peril.

Without "no knock" an agent not only risks his life, but gives the drug peddler the opportunity to destroy the evidence at the same time.

The American people—and the news media which inform them—are fond of catch-words or phrases that neatly sum up what is often a complicated or intricate solution to a pressing problem.

Unfortunately, these shortcuts may often lead to erroneous conclusions or opinions on behalf of our citizens—and, I might add, by many newsmen. Such is the case, I think, with the term "no knock" and its application in our uphill battle against drug traffickers.

If I were to try to supply a phrase to describe this type of operation, I would call it "quick entry," because that is what we seek to do.

I might point out that during the most successful Operation Eagle, conducted by the Bureau of Narcotics and Dangerous Drugs last month, "quick entry" would have proven a valuable tool in four instances, three of which involved the destruction of evidence and one of which involved the safety of two agents.

H.R. 17463 also provides for an administrative inspection warrant procedure that comports with the Supreme Court rulings in the *Camera, See,* and *Colonnade Catering* cases, Since administrative inspections are a prime means of uncovering drug diversion from legitimate channels, such an administrative inspection warrant procedure is vital to effective law enforcement.

The administrative procedures set out in H.R. 17463 have been streamlined, somewhat along the lines of the existing narcotics laws, to insure due process but not cause undue delay in bringing drugs under control. Where a drug has a potential for abuse, there must be a quick procedure for bringing that drug under control, while allowing for an administrative hearing and judicial review.

Lastly, H.R. 17463 allows the Attorney General to deny, revoke, and suspend registrations to insure the integrity of the registration system, and to deny those persons who should not be allowed to deal in these drugs the ability to do so. I might point out that under present narcotic and dangerous drug laws, such authority does not exist, and it is sorely needed.

CONCLUSION

As you know, Mr. Chairman, drug abuse has reached the epidemic stage among our young people. It is a critical national problem that needs all the attention we can focus on it.

Virtually no area of the country has escaped this menace. It has invaded the country estates of our most wealthy families with the same ease that it has involved the most desperately poor. The pusher is just as comfortable and as readily available in the halls of our suburban high schools as he is in the halls of our ghetto apartment buildings.

As I said earlier, schools all across the country are about to reopen for the fall semester. Millions of young people will begin leaving for classes early in the morning, not to return until many hours later. Concerned parents will ask themselves: Is this the day that our son or daughter will swallow a pill or smoke a marijuana cigarette?

Mr. Chairman, this Committee and the Congress can offer an exciting "back-to-school present" to the families of America by moving swiftly on this legislation and letting them know that more effective tools for drug control are on the way. And when these tools become available, I give you my personal assurance that the Department of Justice will use them to the full extent of the law.

COMBATING DRUG ABUSE

(Message from the President of the United States)

To the Congress of the United States:

Within the last decade, the abuse of drugs has grown from essentially a local police problem into a serious national threat to the personal health and safety of millions of Americans.

A national awareness of the gravity of the situation is needed; a new urgency and concerted national policy are needed at the Federal level to begin to cope with this growing menace to the general welfare of the United States.

Between the years 1960 and 1967, juvenile arrests involving the use of drugs rose by almost 800 percent; half of those now being arrested for the illicit use of narcotics are under 21 years of age. New York City alone has records of some 40,000 heroin addicts, and the number rises between 7000 and 9000 a year. These official statistics are only the tip of an iceberg whose dimensions we can only surmise.

The number of narcotics addicts across the tional origin. This union, as well as others United States is now estimated to be in the hundreds of thousands. Another estimate is that several million American college students have at least experimented with marihuana, hashish, LSD, amphetamines, or barbiturates. It is doubtful that an American parent can send a son or daughter to college today without exposing the young man or woman to drug abuse. Parents must also be concerned about the availability and use of such drugs in our high schools and junior high schools.

The habit of the narcotics addict is not only a danger to himself, but a threat to the community where he lives. Narcotics have been cited as a primary cause of the enormous increase in street crimes over the last decade.

As the addict's tolerance for drugs increases, his demand for drugs rises, and the cost of his habit grows. It can easily reach hundreds of dollars a day. Since an underworld "fence" will give him only a fraction of the value of goods he steals, an addict can be forced to commit two or three burglaries a day to maintain his habit. Street robberies, prostitution, even the enticing of others into addiction to drugs—an addict will reduce himself to any offense, any degradation in order to acquire the drugs he craves.

However far the addict himself may fall, his offenses against himself and society to not compare with the inhumanity of those who make a living exploiting the weakness and desperation of their fellow men. Society has few judgments too severe, few penalties too harsh for the men who make their livelihood in the narcotics traffic.

It has been a common oversimplification to consider narcotics addiction, or drug abuse, to be a law enforcement problem alone. Effective control of illicit drugs requires the cooperation of many agencies of the Federal and local and State governments; it is beyond the province of any one of them alone. At the Federal level, the burden of the national effort must be carried by the Departments of Justice, Health, Education, and Welfare, and the Treasury. I am proposing ten specific steps as this Administration's initial counter-moves against this growing national problem.

I. FEDERAL LEGISLATION

To more effectively meet the narcotic and dangerous drug problems at the Federal level, the Attorney General is forwarding to the Congress a comprehensive legislative proposal to control these drugs. This measure will place in a single statute, a revised and modern plan for control. Current laws in this field are inadequate and outdated.

I consider the legislative proposal a fair, rational and necessary approach to the total drug problem. It will tighten the regulatory controls and protect the public against illicit diversion of many of these drugs from legitimate channels. It will insure greater accountability and better recordkeeping. It will give law enforcement stronger and better tools that are sorely needed so that those charged with enforcing these laws can do so more effectively. Further, this proposal creates a more flexible mechanism which will allow quicker control of new dangerous drugs before their misuse and abuse reach epidemic proportions. I urge the Congress to take favorable action on this bill.

In mid-May the Supreme Court struck down segments of the marihuana laws and called into question some of the basic foundations for the other existing drug statutes. I have also asked the Attorney General to submit an interim measure to correct the constitutional deficiencies of the Marihuana Tax Act as pointed out in the Supreme Court's recent decision. I urge Coongress to act swiftly and favorably on the proposal to close the gap now existing in the Federal law and thereby give the Congress time to carefully examine the comprehensive drug control proposal.

II. STATE LEGISLATION

The Department of Justice is developing a model State Narcotics and Dangerous Drugs Act. This model law will be made available to the fifty State governments. This legislation is designed to improve State laws in dealing with this serious problem and to complement the comprehensive drug legislation being proposed to Congress at the national level. Together these proposals will provide an interlocking trellis of laws which will enable government at all levels to more effectively control the problem.

III. INTERNATIONAL COOPERATION

Most of the illicit narcotics and high-potency marihuana consumed in the United States is produced abroad and clandestinely imported. I have directed the Secretary of State and the Attorney General to explore new avenues of cooperation with foreign governments to stop the projection of this contraband at its source. The United States will cooperate with foreign governments working to eradicate the production of illicit drugs within their own frontiers. I have further authorized these Cabinet officers to formulate plans that will lead to meetings at the law enforcement level between the United States and foreign countries now involved in the drug traffic either as originators or avenues of transit.

IV. SUPPRESSION OF ILLEGAL IMPORTATION

Our efforts to eliminate these drugs at their point of origin will be coupled with new efforts to intercept them at their point of illegal entry into the United States. The Department of the Treasury, through the Bureau of Customs, is charged with enforcing the nation's smuggling laws. I have directed the Secretary of the Treasury to initiate a major new effort to guard the nation's borders and ports against the growing volume of narcotics from abroad. There is a recognized need for more men and facilities in the Bureau of Customs to carry out this directive. At my request, the Secretary of the Treasury has submitted a substantial program for increased manpower and facilities in the Bureau of Customs for this purpose which is under intensive review.

In the early days of this Administration, I requested that the Attorney General form an inter-departmental Task Force to conduct a comprehensive study of the problem of unlawful trafficking in narcotics and dangerous drugs. One purpose of the Task Force has been to examine the existing programs of law enforcement agencies concerned with the problem in an effort to improve their coordination and efficiency. I now want to report that this Task Force has completed its study and has a recommended plan of action, for immediate and long-term implementation, designed to substantially reduce the illicit trafficking in narcotics, marihuana and dangerous drugs across United States borders. To implement the recommended plan, I have directed the Attorney General to organize and place into immediate operation an "action task force" to undertake a frontal attack on the problem.

There are high profits in the illicit market for those who smuggle narcotics and drugs into the United States; we intend to raise the risks and cost of engaging in this wretched traffic.

V. SUPPRESSION OF NATIONAL TRAFFICKING

Successful prosecution of an increased national effort against illicit drug trafficking will require not only new resources and men, but also a redeployment of existing personnel within the Department of Justice.

I have directed the Attorney General to create, within the Bureau of Narcotics and Dangerous Drugs, a number of special investigative units. These special forces will have the capacity to move quickly into any area in which intelligence indicates major criminal enterprises are engaged in the narcotics traffic. To carry out this directive, there will be a need for additional manpower within the Bureau of Narcotics and Dangerous Drugs. The budgetary request for FY 1970 now pending before the Congress will initiate this program. Additional funds will be requested in FY 1971 to fully deploy the necessary special investigative units.

VI. EDUCATION

Proper evaluation and solution of the drug problem in this country has been severely handicapped by a dearth of scientific information on the subject—and the prevalance of ignorance and misinformation. Different "experts" deliver solemn judgments which are poles apart. As a result of these conflicting judgments, Americans seem to have divided themselves on the issue, along generational lines.

There are reasons for this lack of knowledge. First, widespread drug use is a comparatively recent phenomenon in the United States. Second, it frequently involves chemical formulations which are novel, or age-old drugs little used in this country until very recently. The volume of definitive medical data remains small—and what exists has not been broadly disseminated. This vacuum of knowledge—as was predictable—has been filled by rumors and rash judgments, often formed with a minimal experience with a particular drug, sometimes formed with no experience or knowledge at all.

The possible danger to the health or well-being of even a casual user of drugs is too serious to allow ignorance to prevail or for this information gap to remain open. The American people need to know what dangers and what risks are inherent in the use of the various kinds of drugs readily available in illegal markets today. I have therefore directed the Secretary of Health, Education, and Welfare, assisted by the Attorney General through the Bureau of Narcotics and Dangerous Drugs, to gather all authoritative information on the subject and to compile a balanced and objective educational program to bring the facts to every American—especially our young people.

With this information in hand, the overwhelming majority of students and young people can be trusted to make a prudent judgment as to their personal course of conduct.

VII. RESEARCH

In addition to gathering existing data, it is essential that we acquire new knowledge in the field. We must know more about both the short and long-range effects of the use of drugs being taken in such quantities by so many of our people. We need more study as well to find the key to releasing men from the bonds of dependncy forged by any continued drug abuse.

The National Institute of Mental Health has primary responsibility in this area, and I am further directing the Secretary of Health, Education, and Welfare to expand existing efforts to acquire new knowledge and a broader understanding in this entire area.

VIII. REHABILITATION

Considering the risks involved, including those of arrest and prosecution, the casual

experimenter with drugs of any kind, must be considered at the very least, rash and foolish. But the psychologically dependent regular users and the physically addicted are genuinely sick people. While this sickness cannot excuse the crimes they commit, it does help to explain them. Society has an obligation both to itself and to these people to help them break the chains of their dependency.

Currently, a number of federal, state and private programs of rehabilitation are being operated. These programs utilize separately and together, psychiatry, psychology and "substitute drug" therapy. At this time, however, we are without adequate data to evaluate their full benefit. We need more experience with them and more knowledge. Therefore, I am directing the Secretary of Health, Education, and Welfare to provide every assistance to those pioneering in the field, and to sponsor and conduct research on the Federal level. This Department will act as a clearinghouse for the collection and dissemination of drug abuse data and experience in the area of rehabilitation.

I have further instructed the Attorney General to insure that all Federal prisoners, who have ben identified as dependent upon drugs, be afforded the most up-to-date treatment available.

IX. TRAINING PROGRAM

The enforcement of narcotics laws require considerable expertise, and hence considerable training. The Bureau of Narcotics and Dangerous Drugs provides the bulk of this training in the Federal government. Its programs are extended to include not only its own personnel, but State and local police officers, forensic chemists, foreign nationals, college deans, campus security officers, and members of industry engaged in the legal distribution of drugs.

Last year special training in the field of narcotics and dangerous drug enforcement was provided for 2700 State and local law enforcement officials. In fiscal year 1969 we expanded the program an estimated 300 percent in order to train some 11,000 persons. During the current fiscal year we plan to redouble again that effort—to provide training to 22,000 State and local officers. The training of these experts must keep pace with the rise in the abuse of drugs, if we are ever to control it.

X. LOCAL LAW ENFORCEMENT CONFERENCES

The Attorney General intends to begin a series of conferences with law enforcement executives from the various States and concerned Federal officials. The purposes of these conferences will be several first, to obtain firsthand information, more accurate data, on the scope of the drug problem at that level; second, to discuss the specific areas where Federal assistance and aid can best be most useful; third, to exchange ideas and evaluate mutual policies. The end result we hope will be a more coordinated effort that will bring us visible progress for the first time in an alarming decade.

These then are the first ten steps in the national effort against narcotic marihuana and other dangerous drug abuse. Many steps are already underway. Many will depend upon the support of the Congress. I am asking, with this message, that you act swiftly and favorably on the legislative proposals that will soon be forthcoming, along with the budgetary requests required if our efforts are to be successful. I am confident that Congress shares with me the grave concern over this critical problem, and that Congress will do all that is necessary to mount and continue a new and effective Federal program aimed at eradicating this rising sickness in our land.

RICHARD NIXON.

THE WHITE HOUSE, *July 14, 1969.*

A TRIBUTE TO THE FLAG

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BURKE of Massachusetts. Mr. Speaker, in Memorial Day services on Sunday, May 31, in Safford Park, Wollaston, Mass., I had the privilege of presenting an American flag which flew over the U.S. Capitol Building in honor of the men and women of Wollaston who served their country.

A monument was erected with subscriptions contributed by Wollaston residents, business and professional men, and members of Wollaston American Legion Post, which headed the effort to establish the monument.

I include my remarks for the RECORD:

A TRIBUTE TO THE FLAG

There are too many today who do not know what our flag stands for, and it is the American Flag to which countries of the World look and hope. This flag, which we honor and under which we serve, is the emblem of our unity, our power, our thought and purpose as a nation. It has no other character than that which we give it from generation to generation. The Choices are ours. It floats in majestic silence above the hosts that execute those choices, whether in peace or in war. And yet, though silent, it speaks to us—speaks to us of the past, of the men and women who went before us, and of the records they wrote upon it. Traditionally a symbol of Liberty, the American flag has carried the message of freedom to many parts of the World.

I know that the citizens of Wollaston will enjoy having and displaying this most meaningful symbol of our Country's great heritage and will be reminded often of the noble principles it represents.

Mayor James R. McIntyre accompanied me to the ceremony and the following remarks are his:

REMARKS BY JAMES R. MCINTYRE

I am proud to be here as Mayor of a concerned community at this dedication of this memorial at Safford park to the memory of the Wollaston servicemen and women who served their country in time of need.

Little did I realize when as a young boy attending Wollaston School and daily walking by this park, that at some future date I would be here as Mayor of Quincy, addressing a group of my fellow citizens at this dedication of this memorial to those who sacrificed their lives in the cause of freedom.

We owe a great debt of gratitude to them. Those who are not able to be here physically, are here in spirit. We can thank them for the freedom that we possess in this country today, for they have purchased it with their lives. May we long have in this country men and women who are willing to serve their country in time of need. When the day comes that we have young men and women in America who are not willing to answer the call to their country in time of need, then there will be no more America.

I am pleased as Mayor of the City of Quincy, to officially accept this monument which was made possible by the donations of so many members of the Wollaston community; in particular, the Wollaston Legion Post 295; the Wollaston Business and Professional Men's Association; and also the United Commercial Travelers.

PROBLEMS FOR THE AGED

HON. DAVID PRYOR

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. PRYOR of Arkansas. Mr. Speaker, the Senate Committee on Aging has called institutional care for the elderly an "imperfect substitute" for independence, stating that "institutionalization" can mean that one way of life is wrenched away while another, far less satisfactory mode of life, is substituted.

In this Nation's 24,000 nursing homes and homes for the aged, institutionalized health care has become a way of life for over a million Americans. Until the past decade, this concept of care was relatively unused. The aged remained at home, with families and friends.

Recent Federal programs, notably medicare and medicaid, have furnished the aged with readily available medical care. But to obtain this care, independence must be sacrificed. Medicare and medicaid payments—which are made to institutions, not people—have become a "bounty," trapping the aged in nursing homes. Other, perhaps more rehabilitative, forms of care are not possible.

In Britain, the situation is somewhat different. There are few nursing homes. Government funds have been channeled instead into other forms of long-term care. One British official summed up feelings in that country:

Our philosophy is that old people want to remain at home, in their own houses, surrounded by their own possessions, their own memories. We don't mind whether it is a good home, a bad home, a tiny home. That's where we believe they should be—where they feel secure, where they've got confidence. It's tempting to think that it's a matter of institutions and that sort of thing. I think it is rather like condemning old cars to the scrap heap.

Human scrap heaps have become profitable business in the United States. And, since making patients well does not tend to make nursing homes rich, rehabilitation within these institutions is minimal.

I believe that Prof. Jules Henry in "Culture Against Man" has summed up rather well the role of the nursing home in our society:

In many primitive societies the soul is imagined to leave the body at death or just prior to it; here, on the other hand, society drives out the remnants of the soul of the institutionalized old person while it struggles to keep his body alive. Routinization, inattention, carelessness, and the deprivation of communication—the chance to talk, to respond, to read, to see pictures on the wall, to be called by one's name rather than "you" or no name at all—are ways in which millions of once useful but now obsolete human beings are detached from theirselves long before they are lowered into the grave.

U.S. Federal dollars were poured into long-term care institutions with little foresight. There was little contemplation of what kind of care would be best, little contemplation of economic, social or medical aspects of the problem.

Those confined to nursing homes have time for such contemplation. A few glimpses:

". . . Although I do not think that the patients suffer for lack of cleanliness or medical care, they suffer so by just being there, waiting for death."

"No matter who they were before—their accomplishments, their stations in life, or whatsoever—most of them quietly wait the end now . . ."

"But the smell, the atmosphere, is what stands out in my mind the most. No disinfectant smell prevailing here. It was mostly covered by urine, and the smell of despair, of loneliness of waiting for the big event of death to end the monotony of the T.V. in the lobby; the wandering without hope; of staring out windows for hours at a time."

"The air was thick with disinfectant and urine and the cries of lonely and sick patients pierced the quiet. It was supposedly a good home yet there seemed to be nothing for the yet-ambulatory patients to do except wander aimlessly, or clutch dolls . . ."

In such an atmosphere, rehabilitation in any form becomes, as Saturday Review recently put it, simply "not a profitable field of investment."

THE THOMAS BATEMAN STORY

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. JONES of Tennessee. Mr. Speaker, contrary to popular opinion, people still care for each other. An outpouring of the human spirit can accomplish wonders, and has, in Jackson, Tenn., and surrounding area. The touching story of how real folks rallied to the assistance of an unfortunate fellow human being is proof that people are the best things we have going for us, after all.

Radio station WDXI in Jackson, Tenn., learned that a 24-year-old resident of Humboldt has been suffering from chronic nephritis. Unable to work, the patient, his wife, and 5-year-old son receive their total income from social security. Doctors advised that the patient's kidney function rate was only 10 percent and would cease to function completely in a very short time. The prognosis was obvious unless an artificial kidney machine and, hopefully, a kidney transplant could be arranged. Since a kidney transplant is not an easy thing to come by—use of an artificial kidney machine costs about $12,000, not to mention the expense and time required to train someone in the use of the equipment. What is a man to do—unable to fend for himself—seriously ill, with a wife and young son?

The family's plight was brought to the attention of WDXI by Mrs. Danny Waynick, president of the Spring Creek, Tenn., Jaycettes.

The organization had undertaken a project to help raise money for the Thomas Bateman family. WDXI, believing citizenship to be a subject best expressed in positive action, set to work.

On Tuesday, June 23, WDXI program director Curtis White and announcer Leonard Fielding read an announcement supplied by Mrs. Waynick. Time: 5:30 a.m. A discussion between the two men followed on their early morning broadcast as to how best try to help a fellow in such difficulty. One offered to give $10 if the other would match it. It was immediately done. They next challenged the audience—5:30 a.m.—to call WDXI and pledge assistance in cash.

Now, WDXI is quite used to excellent audience participation but this time the reaction was instantaneous and overwhelming. The phones started ringing and continued the whole day. People brought money in cash, checks, silver, and varying denominations. By 5 p.m., the amount had reached $3,400 with more coming in. Staff members quickly consulted and decided to keep the opportunity open the next day for the Thomas Bateman project.

On Wednesday, June 24, Jackson and surrounding area kept the human spirit busy. At 5 p.m. the total was $5,700 and counting. The usual jobs of writing, scheduling, news broadcasting, and the countless other tasks performed in a radio station had to be done, but they became secondary in importance. The entire staff devoted itself to the Bateman project sensing that, perhaps for the first time in a long 5 years of sickness and despair, Tom Bateman was seeing a glimmer of hope, $7,500 and counting.

Fund raising in Humboldt, Bateman's hometown, as well as other projects by the Spring Creek Jaycettes continued and the response was gratifying. In fact, the human response in the interest of a young man, seriously ill and discouraged, was simply overwhelming. Over $13,000 has been received and the project is assured of success.

In these days when bad news seems to be the only thing around, a positive response by human beings for one of their own is as cleansing as a breath of fresh, clean air. Several things come to mind.

Thomas Bateman has a new lease on life.

The expensive kidney machine is assured.

A kidney transplant is not as impossible as once seemed.

Mrs. Bateman and 5-year-old Jeff have had their dreams come true.

And, people power is still with us after all.

There may be some who think that all a radio station does is play music, read news and commercials, but you will not find many of those people in Jackson. Of course, WDXI has told its audience for years that citizenship is broadcasting in action. And they believe it. Thomas Bateman is living proof.

A UNIQUE GARDENING PROGRAM

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. GUDE. Mr. Speaker, the task of improving conditions in our country's urban areas is one with which we are vitally concerned. Projects to aid inner-city youngsters have been increasing over the years as concerned citizens realize that the best way to keep children off the streets and free from trouble is to channel their energies into constructive programs. The wealthy must not be thought of as the only ones able to appreciate beauty . . . in particular, young people from all walks of life can learn a deep and desired respect for beauty. It has been proven time and time again in many areas of this country, that places which are cleaned up and beautifully landscaped create respect. And most important, where the people themselves have created this beauty through their own work that beauty will be maintained and perpetuated.

In Washington, a short time ago, a group of concerned citizens joined together to form the Washington Youth Garden Council. Today it is a very successful program serving nearly 1,000 children throughout the city encouraging and supervising them to plant and maintain their own gardens in the District. The program develops a sense of responsibility and maturity for these youngsters in order that they do not feel the need or desire to turn to less productive activities.

The June 21, 1970, issue of the New York Times, carried an article, "Radishes, Lettuce—'All in a Row'" explaining and praising this unique gardening program. Because of the importance of this program the need for it to continue to flourish, I feel this article would be worth reading.

I insert the article at this point in the RECORD:

[From the New York Times, June 21, 1970]

RADISHES, LETTUCE—"ALL IN A ROW"

(By Barbara Dubivsky)

When you are only nine years old and not yet fully won over to the disciplines of gardening, keeping your vegetables "all in a row" can seem an uneven struggle. Weeds spring up where stringbeans should. Beetles and squash borers threaten. And the hot, summer sun beats down relentlessly.

Yet, only a handful of the 800 city children participating in Washington's youth gardens program "quit out." The children derive a strong sense of responsibility toward their tender sprouts.

Under the joint sponsorship and direction of the District of Columbia's Department of Recreation and the Washington Youth Gardens Council (an all volunteer community governing board), the eight-year old program, which is designed to involve city youngsters in all aspects of gardening, operates the year round at 45 locations throughout Washington. Children from all income groups are welcome, but there is a special commitment to those from the inner city.

In many disadvantaged neighborhoods, however, lack of adequate open space limits individualized gardening, the core of the program. Activities in such areas center around horticulturally related projects such as weed and insect collections, garden scrapbooks, potted plants and window boxes. Many of the neighborhood recreation centers, through which the program operates, maintain a club plot, communally cared for, as a green reminder of greater efforts elsewhere.

More and more inner city children are being assigned plots of their own at the National Arboretum. Volunteers provide the necessary transportation. When additional supervisory staff is available, land already donated in the Kenilworth and Anacostia sections of the city will be parcelled out.

The largest concentration of individual gardens, 100 in all, is now located at Twin Oaks, the youth gardens demonstration center at 14th and Taylor Streets in northwest Washington. In this lower middle-class

neighborhood, recruiting is no problem. Children from nearby elementary schools respond gratifyingly when William Hash, program director, visits their classes. In poorer sections of the city, parents not long removed from rural southern backgrounds are often reluctant to let their children do what they still think of as "fieldhand work."

Though the program begins as an after-school activity, it will continue all summer. Youngsters between the ages of 8 and 19 are eligible to join, but 9-to-13-year-olds are most responsive. Mr. Hash finds children under 9 often lack the necessary physical strength to handle garden tools and have not enough experience to follow directions, and the mobility of early adolescence tempts teenagers farther afield.

A graduate agronomist with horticultural experience, young Hash introduces his recruits to the soil by having them finger various samples to differentiate between sandy soil, clay, etc. Lectures and indoctrination movies are kept to a minimum. Hash's theory is that, "children this age learn best by doing."

In the new greenhouse, recently christened by having tulip petals tossed at its windows, children planted seeds last spring, at the proper time, the seedlings were moved outdoors.

While waiting for outdoor planting time, the youngsters draw up their own garden plans. After consulting posted lists of vegetables that grow well, and checking with their parents to make sure these would be acceptable fare at the family table, the young gardeners marked in their favorites on specially prepared plotting paper. Collards, mustard greens, onions, kale, stringbeans and leaf lettuce were popular choices. Almost everyone chose radishes because they grow fast.

Using rulers the children themselves made out of garden labels, they made careful notation how vegetables should be spaced out, onions, 2-inches apart; spinach, ½-inch and how deep they should be planted, kale, ½-inch deep; collard seeds, "sprinkle along."

Before putting seed to ground, the children are trained in careful soil preparation and told that watering, fertilization and cultivation are important steps in producing an onion or a carrot but can as easily aid the growth of weeds. Though they may look pretty, the children are taught that weeds only crowd and weaken productive crops.

Followup instruction is provided by student junior leaders, whose white pith helmets are their symbols of authority. Barbara Cook, wears hers rakishly as she explains to a confused beginner, "if you don't see another plant like that in the row, you know it's a weed." She chastizes another for not pulling weeds out vigorously enough. "I'm ashamed of you. Pull out the root and all or you're going to have the weed right back." At an even more overgrown plot, she can only shake her head in exasperation as a young lad responsible for its condition, tells her, "I guess the devil came to visit it."

Most children are eager and hardworking, and if allowed, would work their plots more than twice a week. When told, "the plants need time to rest," one girl translated this to mean, "you need time for the weeds to come back."

At council rings during the summer morning hours, instruction is given in conservation as it affects one's immediate environment. There is also some nature study, when children learn about insects, which are friends (lady bugs, garden spiders, toads) and insects which are foes (Mexican beetles, squash borers).

Organized with the personal and financial assistance of Mrs. Martin Voege and the estate of Irene Lewishohn Washington's youth gardens has over the years received support from the Sears Roebuck Foundation, a sustaining group of the Junior League of Washington, the American Association of Nurserymen and the Sevin and Rudolph B. Behrend Foundation. Its annual funding comes primarily from the Federal government through the District of Columbia budget's allocation to the Department of Recreation. Private subscriptions are also solicited.

The current Gardens Council chairman, Mrs. Orville Freeman, wife of the former Secretary of Agriculture, would like to raise additional funds to provide for more trained staff. "In an operation like this, you can use volunteers just so far," she observes. Some long range thinking has also gone into offering vocational landscaping scholarships.

Spreading the idea of youth gardens, particularly those supported and encouraged by a council of concerned citizens, also concerns Mrs. Freeman. In this she is supported by the A.A.N., which has produced a brochure which sets out step by step how interested people can start similar projects in their own communities. Free copies are available for the asking from the American Association of Nurseryman, 835 Southern Building, Washington, D.C. 20005.

A PERSPECTIVE VIEW OF THE MIDDLE EAST CRISIS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ROSENTHAL. Mr. Speaker, the situation in the Middle East continues to remain explosive. Soviet military activity is threatening to upset the balance of power and jeopardize the very existence of Israel, the region's only bona fide democracy.

This is obviously not the time when the United States' support of Israel should vacillate. The Soviets and Arabs must be made to understand that the United States will not abandon Israel to those who seek to destroy it as a sovereign state.

For an excellent perspective of the dangerous predicament in the Middle East and what possibly might be done about it, I recommend the reading of the following testimony delivered before the House Foreign Affairs Near East Subcommittee by I. L. Kenen on July 22. Mr. Kenen is a veteran analyst of Middle East affairs and presents a cogent case for continued firm American support of the beleaguered state of Israel:

STATEMENT BY I. L. KENEN, EXECUTIVE VICE CHAIRMAN, AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE, BEFORE THE SUBCOMMITTEE ON NEAR EAST OF THE HOUSE FOREIGN AFFAIRS COMMITTEE

In the Near East today we are witnessing a grim spectacle.

Twenty-five years have passed since World War II revealed the destruction of some six million Jews, the degradation of the survivors of that holocaust and the desolation of the Jewish people around the world. At that time, the civilized international community reacted vigorously and, like the League of Nations after World War I, the United Nations reaffirmed the right of the Jewish people to establish its homeland in Palestine, with which it has been linked for thousands of years of recorded history.

But today that homeland is in danger and there is an incredible indifference to its fate.

Today the tiny nation of Israel, with her three million people, is defending herself from the attacks of the Arab states and the Arab terrorists who have waged war against her since her establishment in 1948.

Israel is caught up in the crossfire of three wars: the war between the Arab states and herself; the Arab-Arab conflict between the radical Soviet-supported states and the conservative Western-oriented states; the cold war between East and West, where she finds herself defending the interests of the Free World but without its active support.

The crucial Arab-Israel issue is the Arab refusal to recognize Israel's right to exist. From the beginning, Arab states, in violation of the UN Charter and their UN obligations, have persisted in a state of war against a neighbor. In contrast, Israel has steadfastly offered to negotiate peace treaties.

The United Nations has been powerless to cope with violations and to establish peace.

There is a major reason. The Soviet Union, on the diplomatic and military fronts, backs the Arab states as part of her strategy to dominate the Near East. Whatever may be her intention—whether it is to destroy Israel or merely to exploit tensions to further her own imperialism—is a matter for speculation. What is alarming is that the Soviet Union can pursue this evil policy without effective challenge from any source.

But while the Soviet Union must bear primary responsibility for the long struggle—so costly in life and resources to both Arabs and Jews—our own Government has some share in the blame. Over the years, American policy in the Near East has been equivocal, erratic and inconsistent. We have often reversed ourselves. We have been reluctant to take a strong position. We have been immobilized by doubts and fears. As a result, the Arab states still like to believe that the United States will ultimately abandon Israel.

What explains the U.S. attitude?

First, there is fear that the Arab states may retaliate against America's economic and strategic interests. Second, there is danger that the Soviet Union may gain prestige and power in a polarized Near East. And, third, there are the pressures of special interests concerned with short-term advantage, trying to buy some space and time for themselves by offering up bits and pieces of Israel to appease the Arabs. They like to identify their own interests with those of the United States; they wrap the flag around oil derricks.

These special interests always claim that the United States favored Israel over the Arab states because of pressures exerted by Israel's friends and that we need a more "even-handed" policy.

The record refutes the myth.

The fact is that we have been less than even-handed.

In the beginning, in 1947, the United States reluctantly endorsed the UN proposal for the partition of Palestine. But we did nothing to implement that decision. We failed to help Israel to defend her right to the promised state. Instead, we imposed an arms embargo depriving Israel of military assistance from this country. Then, responding to pro-Arab lobbying in and outside the Government, we reversed ourselves; we tried to set partition aside and to substitute an unrealistic UN trusteeship plan.

Subsequently, the United States recurrently pressured Israel to abandon territories she had won in the struggle with the Arabs. While we gave generous economic assistance to both Israel and the Arab states—and Congress was primarily responsible for initiating that program—we repeatedly refused Israel's requests for arms, even after the Soviet Union began arming the Arab states. We detoured her to other countries. In lieu of arms, we offered guarantees, but these faded into scraps of paper when the time came to carry them out.

We declined to support Israel's pleas for direct Arab-Israel peace negotiations. We failed to challenge the Arab boycott. We imprudently perpetuated the Arab refugee

problem by urging unrealistic repatriation proposals and by failing to insist on resettlement. And often, over the years, we seemed to be in competition with the Soviet Union for the favor of the Arab states, and certain charismatic Arab leaders, like President Nasser of Egypt.

THE ATTITUDE OF CONGRESS

Throughout this period Congress has displayed greater realism on these issues.

The restoration of the Jewish national homeland was supported by Congress in 1922 and again in 1945—and in the post-war debate, a large majority of the Senate and House vigorously favored the same objective; they were reflecting the views of most Americans.

The State of Israel came into being with the help of Congress, which also assisted her remarkable development. It was Congress which initiated the economic aid program for Israel, which called for direct Arab-Israel talks, which advocated resettlement of the Arab refugees, which urged arms for Israel, which sought ot combat the Arab boycott, which questioned our unrequited affection for Nasser.

Regrettably, its views have not always been accepted by the Executive Branch.

Congressional support for Israel is denigrated and disparaged by pro-Arab forces, which insinuate that Congressmen yield to pressures. The implication is that a minority are prejudicing America's interests and that American Congressmen sacrifice judgment and patriotism for selfish political ambitions.

Those who circulate this mischievous slander reflect on the loyalty of Israel's supporters and impugn the integrity of America's political leaders.

The best answer to this smear is that history shows that Congress actually has been right on these issues.

Support for Israel has been consistent with the highest interests of the United States from every standpoint.

ISRAEL'S ROLE

Israel has proved to be a situation of strength in the Near East, resisting the attempts of radical Arab states and the Soviet Union to dominate the region.

The destruction of Israel would permit anti-democratic forces to gain control over every government, every economic resource and strategic outpost.

The first countries which might face a Soviet takeover are the so-called moderate Arab states where the United States has substantial economic interests.

There are many governments in the Near East—Arab as well as non-Arab—which regard Israel as a balancing factor checking the spread of the radical Arab states which are led by President Nasser and supported by the Kremlin. Whatever may be their public posture, they would not grieve if we strengthened our support for Israel.

But further, and of prime importance, Israel is an eloquent advocate of democracy and freedom, informing many people by its example, by its instruction and by its cooperation that independence for the state is not enough—that the individual must also be free and that men can advance to higher standards in a democratic and open society.

Men will defend their institutions from aggression and subversion if they have a stake in their society as free, equal and secure citizens.

We read in the press about the daily exchanges of fire across Israel's frontiers. What we do not read—and what may some day prove of great significance in man's struggle for freedom—is about the daily exchange of learning.

Israel's program of international cooperation today involves some 80 countries all over the world.

Each year more than 1,000 trainees arrive in Israel for courses in agriculture, labor, economics, science and technology—some 12,000 in the last 11 years.

At the same time, Israel annually sends out some 450 experts to help other peoples; 3,000 in 64 countries in the last 11 years.

The program continues despite the war, at a higher rate in 1969 than in 1968.

THE COMMITMENT

In the last few years many Americans have become more isolationist because of reaction to Viet Nam. Some American diplomats have tried to give the impression that we have no commitments to Israel. This trend toward disengagement is predicated on the claim that what happens to Israel is not of vital interest to the United States.

That view has now been challenged by President Nixon's welcome observations on July 1.

Mr. Nixon and his aides have spoken vigorously on the dangers that now confront the Near East. They warned that the situation there is more dangerous than in Viet Nam, that we need to take action to induce the Russians to pull out their forces.

They made it clear that the United States would not permit the arms balance to be tipped against Israel. They differentiated between the aggressive intentions of the Arabs and Israel's desire for peace.

The White House pointed out that the Soviet combat base in Egypt may transform the Mediterranean into a Soviet sea, obstructing the U.S. Sixth Fleet, putting land bases and oil supplies at the disposal of the Soviet Union and endangering moderate Arab regimes, NATO countries and Iran.

WHAT WE CAN DO

The President's views justify full support for Israel at this time.

1. At the very least we should quickly end our inexplicable tactic of withholding military aid at this critical moment. Such aid should be open so that there is no misunderstanding in either the Kremlin or Cairo. If we are diffident and weak the Arab states and the Soviet Union will be emboldened to push their war further. Symbols and tokens are inadequate to block the Soviet advance.

2. The Administration and Congress should consider what can be done to help ease Israel's economic crisis. We have never given any arms to Israel, and grant economic aid to Israel ended almost a decade ago. Israel has had to pay high prices in life and resources to maintain her security and survival. If the Israel citizen is defending the interests of the United States and the Free World, we should not ask him to carry the entire burden alone.

Israel's defense expenditures have tripled since the six-day war. They will approximate $1.2 billion in the current year—about 22 percent of Israel's gross national product, which is three times the proportionate burden borne by the United States. The foreign exchange debt will increase in 1970 by $570 million, reaching a total of $2.7 billion.

Israelis have heavily mortgaged their future. Israel's per capita foreign debt is the highest in the world; the Israelis are assessed extremely high taxes and forced loans.

Foreign currency reserves dropped to about $400 million by the end of 1969—the lowest figure since 1962—and since the trade deficit has risen because of huge defense expenditures, Israel's reserves are descending to a bare working minimum.

It is obvious that Israel urgently needs large-scale economic assistance from friendly foreign governments to maintain economic stability.

I do not need to recall to this Committee that we have given $239 million in grant military assistance to seven Arab states, and that our economic aid and military aid to Greece, Turkey and Iran has been in the billions.

In addition, we have provided billions in aid to strengthen countries which are on the Sino-Soviet periphery. Now for the first time, Soviet military personnel have moved into the Near East, along with huge quantities of sophisticated armaments.

Today Israel faces a much graver threat than ever confronted most of the countries which have enjoyed massive economic and military support from the United States. In the light of our record everywhere else, it is difficult to understand hesitation to provide Israel with assistance.

3. The direct Soviet military involvement in the Near East should be condemned by world opinion. We should mobilize other nations to join in the demand that Russian military personnel withdraw from Egypt. How can the Soviet Union pretend to be a peacemaker in the Big Four talks in the light of her brazen military operations?

4. We should not condone Arab terrorism nor should we reward and encourage it by diplomatic gestures; we should act vigorously to condemn and to combat it. We should withhold assistance from countries which are involved in harboring or subsidizing El Fatah and other guerrilla groups. There is no glamor or heroism in a movement which "resists" Israel by shooting down passenger planes, by murdering civilians in cafeterias and supermarkets, school busses and bus stations. The international community should impose sanctions against countries which provide sanctuary for terrorists who are involved in hijacking or attacks on planes. We should not permit their planes to land at our airports, nor should our planes land at theirs.

5. Above all, we should insist on a real peace. Arabs and Israelis must negotiate treaties. We cannot be satisfied with half-way measures which fall short of a real peace. We should reconsider our involvement in procedures like the big Four talks which enable the Soviet Union to try to dictate the terms of a settlement and to entrench itself as the dominant power in the region.

THE RECORD SINCE 1967

When the six-day war ended back in 1967, there was a real chance for an Arab-Israel peace. Many of us believed that two measures were essential:

1. To promote peace, urge the parties to talk over their differences in direct negotiations;

2. To prevent war, keep the Israelis strong enough to deter the Arabs and the Russians from military action.

To its credit, our Government rejected Soviet pressures that we repeat our 1957 blunder. The United States refused to go along with the Soviet-Arab demand that we pressure Israel to withdraw to the 1967 lines. Instead, our Government endorsed the view that the parties themselves must reach agreement on frontiers, as part of a comprehensive peace agreement.

And it is pertinent to note that more recently, in his television interview on July 1, President Nixon rightly emphasized the need for what he called "defensible frontiers."

The resolution unanimously adopted by the United Nations in November 1967 provided for a UN envoy "to proceed to the Middle East to establish and maintain contacts with the States concerned in order to promote agreement and assist efforts to achieve a peaceful and accepted settlement in accordance with the provisions and principles in this resolution."

The resolution meant different things to the differing parties.

1. The Arab states and the Soviet Union have insisted that the resolution obligated Israel to withdraw completely and unconditionally to the 1967 armistice lines.

2. To the United States and to Israel the language and the legislative history showed that the frontiers had to be agreed upon, by the parties.

Both the Arab states and Israel insist that they have accepted the resolution. But while

some Arab governments give lip service to the resolution, Syria, Iraq, Algeria and the terrorist organizations have summarily rejected the document and will have nothing to do with it. Their declared objective is the liquidation of the state of Israel as a Jewish state. Arab leaders have emphasized that they do not commit the Arab terrorists and that these organizations have the right to reject the resolution because it does not satisfy their objectives.

Thus, President Nasser told the Palestine National Council on Feb. 1, 1969:

"The UAR appreciates the resistance organizations' stand in rejecting the Nov. 22, 1967 Security Council resolution, which the UAR has accepted. It is the Palestinian organizations' right to reject this resolution. This resolution may be adequate to eliminate the consequences of the June 1967 aggression but it is inadequate to fulfill the Palestinian destiny."

Can this double interpretation be considered as a sincere acceptance?

The United Nations' attempt to bring the parties together to implement the resolution failed.

The Arabs blamed the Israelis. They insisted that the resolution was self-executing.

If the parties accepted its principles, it would then be up to Israel to withdraw completely. But the Israelis insisted that the resolution was not self-executing and that it was up to the UN envoy to bring the parties together to reach agreement.

The Russians supported the Arab position.

Our Government has supported Israel's stand. This was made clear by former Under Secretary of State Eugene Rostow, who has said on a number of occasions that it was the Russians and the Arabs, not the Israelis, who were obstructing implementation.

On March 1, 1969, at San Francisco, Mr. Rostow said:

The basic obstacle to peace has been the continuance and intensification of terrorist activities supported or condoned by some Arab governments, and the policy embodied in the Khartoum formula—'no negotiations, no recognition, no peace'.

And he went on to say that the UAR—

bears primary responsibility at this time for the stalemate in the Jarring mission. . . . It says that it is ready to implement the Security Council resolution as a package deal. . . . But thus far, at least, it has not made clear its willingness to implement the provision of the resolution requiring it to make an agreement establishing peace, nor its acceptance of any practical procedure for reaching such an agreement with Israel.

THE BIG FOUR TALKS

The Arabs and the Russians had another objective. Because of the stalemate over interpretation, they insisted that the Great Powers draw up guidelines for the Jarring mission. In actuality, the Arabs and Russians want the Great Powers to impose a settlement. They regard the Big Four as an admirable instrument to formulate such guidelines because the United States is outnumbered and outpressured in that forum.

Long ago, in 1964, Sir Bernard Lewis wrote that the Arabs want an imposed settlement "in which, perhaps, Soviet arms would wield the knife, while Western diplomacy administered the anaesthetic."

The Israelis kept appealing for direct negotiations but Arab sympathizers in this country mocked this demand as an insincere tactic to avoid settlement. They oppose direct negotiations for they consider that it would be a humiliation and beneath Arab dignity to sit with the Israelis.

DIRECT NEGOTIATIONS

The call for direct negotiations is not merely a bargaining tactic. Israel learned in 1949, after the successful Rhodes armistice talks, that agreements could be reached when she met directly with the Arab states.

But in 1949 and 1950 the UN Palestine Conciliation Commission yielded to the Arabs at the Lausanne talks and, as a result, the Israelis were in one hotel, the Arabs in another, the UN commission in a third. The parties never met; the negotiations were stalemated for a year and a half. Israel learned its lesson at that time.

A principle is involved. The Israelis believe that if the Arab states are not ready to meet and to negotiate the issues directly with them, they are not really ready to live in understanding and peace. What the Israelis are looking for is more than uneasy coexistence. What they want is a full peace of sincere reconciliation which will end incitement to hate and which will open frontiers to an exchange of goods and goodwill—a cooperative effort toward security and a higher standard of living for all the peoples of the area.

Years ago I heard the leader of the American Friends of the Middle East tell an audience that our duty was to keep Arab and Jew apart—not to bring them together. This curious line drew some support from the Department of State.

In 1961 the Democratic platform called for direct Arab-Israel talks and Candidate John Kennedy announced that he would try to bring the parties to the peace table.

But in the fall of 1961 the U.S. delegation voted at the United Nations against the so-called Brazzaville resolution, which was initiated by Afro-Asian countries and which called upon the Arab states and Israel to negotiate. That negative vote was a blunder which was criticized by many Members of Congress.

We hoped that this strange opposition to direct negotiations had ended in 1967, but there was no sign of it in the diplomacy of this period.

In the summer of 1967, King Hussein could have reached an agreement with Israel if he had entered negotiations with her. But there is no evidence that the United States encouraged the Jordanians to meet with Israelis at that time.

If Hussein had moved, he might have anticipated and averted the growth of a terrorist movement which now shares control over his country, blocks a peace and incites a never-ending war against Israel. Instead of going to Jerusalem, as he might have done, the Jordanian king elected to go to Khartoum in Sudan, where he and Nasser obtained their subsidies from the oil-rich Arab states to sustain their economies and strengthen their war machines.

Early in 1969, the Administration accepted the French proposal for Four Power talks. This meant that the Arab states would no longer be under any need to negotiate directly with Israel. It also meant that the United States would be under strong pressure from the Russians to accept their interpretation of the resolution.

The United States did in fact retreat on a number of major issues. This became evident in the proposals offered by Secretary of State William P. Rogers in December 1969 for Egypt and Jordan. These proposals critically undermined Israel's position in any future negotiations.

I would like to put into the record the policy statement adopted by the American Israel Public Affairs Committee which comments on these proposals:

After the Big Four talks began in 1969, 70 Members of the Senate and 282 Members of the House joined in a declaration which insisted that there could be no half-way measures and that there was no effective substitute for direct talks.

It is no coincidence that just about the time the Big Four began to meet, Nasser was emboldened to denounce the UN cease-fire, which all the parties had accepted, and to open his war of attrition against Israel.

ISRAEL'S ARMS REQUEST

On the Suez front, the Egyptians outgun and outnumber Israel and they inflicted heavy casualties. The Israelis used their highly efficient air arm to silence the Egyptian guns and to reduce the heavy casualty toll.

At the same time, the Israelis renewed their appeal to the United States for additional planes. The French were refusing to deliver Mirage planes which Israel had already paid for. After a long delay, the United States announced in March that it believed that Israel still had a qualitative advantage over the Arab states—even though the Arabs had a four-to-one advantage—and that it would therefore defer action on Israel's request.

This decision was taken despite the news that the Russians had already agreed to install the sophisticated SAM–3s inside Egypt. The State Department said that it had taken this into account, characterizing that new Russian initiative as merely "defensive."

Our country had several reasons:

1. It feared Arab retaliation against U.S. economic interests, specifically the flow of oil and the profits from oil.

2. It hoped that the Arabs might be more receptive to a peace settlement.

3. It hoped that the Russians might similarly curtail the flow of arms.

I do not propose to debate an issue as sacred as oil. But I do recall that both in 1956 and again in 1967, the Arab states realized they were courting economic disaster when they tried to withhold their oil from the West. Moreover, we should bear in mind that Nasser and Hussein would collapse if the oil-rich Arab states had to cut off their subsidies.

Now it is quite possible that the West might suffer short-term losses if it helped Israel, but this short-range prospect ignores the implications of a Soviet diplomatic and military victory. If the Soviet Union is permitted to weaken or destroy Israel, then every state in the Near East will be vulnerable to Egyptian-Soviet subversion and pressures for nationalization.

Israel's existence is *a priori* protection for American oil interests in the Persian Gulf—in Saudi Arabia, in Kuwait and Bahrein, in the Trucial States, and in Southern Arabia and Iran.

The plain fact is that Israel is the only stabilizing factor in the entire Near East—the only factor that keeps the area from flying apart, from becoming a scene of chaos—with the Arab states, goaded on by the Soviet Union, at each other's throats.

Without an Israel, Jordan would long ago have disappeared, swallowed up by either Syria or Egypt, probably the spoils of a war between them. And Lebanon would have gone the way of Jordan. Without an Israel, Nasser and the Soviet Union would be well on their way, through Yemen, to Saudi Arabia and the rich oil fields there and in the Persian Gulf.

Without Nasser's defeat by Israel, he and the Russians would have rushed in to fill the vacuum left by the British at Aden, exposing the oil-rich areas of the southern tip of the Arabian peninsula, such as Muscat and Oman, to their ambitions.

Our negative answer to Israel's request for planes did not produce a more receptive Arab attitude toward the U.S. peace initiative. On the contrary. When Mr. Sisco visited the Arab states, feeling was so high against the United States in Jordan that our Ambassador thought it unwise for Mr. Sisco to enter that country.

On the major issue—the arms race—the Russians soon showed that they had no intention of reducing their involvement. Twenty-five days after the Rogers press con-

ference it was learned that the Soviet Union was sending pilots into Egypt. Obviously, the Russian action was not defensive. The new Russian technicians help in the installation and use of the new missiles which provide an air cover for offensive action along the Canal, while the pilots undertake missions against the Israel air force.

Meanwhile, in Washington, there were reports that the Administration was hesitating to say yes to Israel because there were some doubts about the attitude of Congress. There was a swift answer on Capitol Hill. In a remarkable demonstration of support for Israel, a letter was signed or endorsed by 79 Senators—and there were similar communications to the President endorsed by 239 Members of the House. These letters all urged the Administration to provide planes to Israel.

This was not the first such demonstration. Earlier this year, a declaration calling for direct negotiations and military support for Israel was endorsed by 70 Senators and 281 Representatives.

THE NEW PEACE INITIATIVE

Yet the Administration was still reluctant to grant Israel's request. And on June 25, Mr. Rogers announced a new peace initiative—the reactivation of the Jarring mission and a 90-day truce period during which neither side would attempt to gain a new military advantage. In order to win acquiescence of both sides, the United States will delay action on Israel's request for planes.

It has been widely reported that the United States is using Israel's application for planes as leverage. It is a carrot to be fed the Israelis if they cooperate with our peace proposals; it is a stick to fly the Arabs if they are not. Accordingly we may expect the Russians and the Arabs to stall for time. They will claim to be receptive to the Rogers peace initiative while they continue to prepare to force Israel to withdraw from the Suez Canal.

Both the Egyptians and the Russians want to reopen the Suez Canal—the Russians particularly because they want to send their fleet and shipping from Odessa in the Black Sea to the Indian Ocean, Africa, India and Viet Nam; the Egyptians because the Canal is a money maker. They can do it if they can wrest control of the air from Israel. They can do it if Israel begins to run out of planes.

Nasser said in Libya on June 25:

"The Egyptian army has completed its canal-crossing training, and once the army has acquired a balance in the air, no power in the world can stop it from crossing.

"We will be able very soon to make up for Israel's air superiority by obtaining a balance in the air because we are training hundreds of pilots and obtaining hundreds of planes."

Why must Israel hold the Suez until there is a peace settlement? Because Israel's frontiers are now much shorter and more defensible than they were in 1967. Israel now, for the first time, has defense in depth. Its front lines are far removed from its populated cities.

Today there are more Arab soldiers on Israel's frontiers than in 1967, but the Israelis do not have to mobilize as they did in 1967, paralyzing their economy, for they not only have distance from the Suez Canal front but they also have the depth of the Canal to bar the advance of Egyptian forces.

Meanwhile, there are inspired dispatches which assure us that Nasser is for a peaceful solution—that he does not really wish to drive Israel into the sea.

But on the very day that Mr. Rogers announced his peace initiative, Nasser said in Libya:

"The Arab masses know that their strength lies in their unity . . . and unity means the end of imperialism and its collaborators and the liquidation of Israeli aggression and the Zionist entity."

All Arab calculations are predicated on their hope to intimidate the United States into standing aside.

The involvement of Soviet pilots has diminished—if not eliminated—Israel's qualitative superiority. The Israelis have begun to lose planes in their battle to defend the Suez sky—and prevent an Egyptian crossing. And their older French planes are wearing out.

There have been reports that Israeli is getting some replacements for planes she has lost. I hope this is true. However, we are told that the United States will not announce the extent of any new military supplies to Israel.

But many are asking, why not? Can we deter the Arabs and the Russians from pressing their war to the finish if we do not put them on public notice that we are standing firmly with Israel? Our past experience with the Russians has shown that they will push aggressively into every corner where they encounter no resistance, that they increase arms shipments precisely when we hold back. If we want to stop Russian penetration in the area, we must move to strengthen Israel at once. That is the most practical and most effective deterrent. If the Russians are determined on reckless military adventure, it must be made expensive for them. They must be made to realize that they will have to pay a very high price.

THE OPPOSITION PRESSURE

Unfortunately, there is a school of thought in Washington which argues the other way. They do not want to make it harder for the Russians. They seem to think that we must placate the Arabs and that we will gain popularity among them if we exercise "restraint" in our support of Israel. This, of course, would make it easier for Nasser and his Russian friends.

I know Arabists in Washington who believe that Israel's victory in 1967 was a disaster for the West, for, they argue, it enabled the Soviet Union to pick up the pieces and reinstate Nasser. Some even suggest that the Soviet Union tricked Nasser into war in 1967 in order that he might lose so that the Soviet Union might come in as his savior.

And today there are some who think that we would be better off if we stood aside and permitted the Russians a free hand in the area. They are paralyzed by an obsession with polarization.

I am not debating here with imaginary straw men. Recently, one of our ex-cryptodiplomats, an ex-CIA agent in Cairo, Miles Copeland, published a book which reveals how he and other CIA agents tried to court Nasser in Egypt.

That book is damaging to the United States because it confirms for many Arabs—as well as for Israelis—that the United States had a major objective in the Near East—to build up Nasser as its protege and agent. It is interesting to note Mr. Copeland's views on Phantoms:

In a letter to the Paris *Herald Tribune*, on June 13, 1970, Mr. Copeland reveals that in a recent visit to Washington he was assured that "the principal fear of the Executive Branch . . . unlike those Senators who are up for reelection—is not what the Soviets are doing in Egypt but of what our own Government may be forced by domestic policies to do for Israel."

Mr. Copeland believes that the Soviet Union wants us to supply Phantoms to Israel because that will enable them to win all the Arabs over to their side, to the prejudice of American interests. The implication of Mr. Copeland's thesis is that any military aid we give Israel really helps the Russians. He attributes this view to American diplomats in Washington. Would he turn this around to argue that the way to stop the Russians is to withdraw all aid from Israel and join the Russians in prayers over Israel's memory?

I believe that such arguments impede progress toward peace in the Near East, and are inimical to American interests. For they feed the flames of Arab intransigence. They encourage the Arabs to believe that ultimately a frightened United States will abandon Israel to Cairo.

THE HOPE FOR PEACE

We should not be pessimistic about the prospects of peace in the Near East. It will take a long time before the Arab states become reconciled to Israel's existence and perhaps new Arab leadership will be needed. But I like to think that eventually the people of the Arab world will come to understand that they can live at peace with Israel and that they stand to gain more by reconciliation and peace than by hatred and war.

We need to have positive goals in the Near East. We need to reaffirm principles which offer new opportunity and hope to the peoples there.

Our current policy appears to be based on negative considerations: the avoidance of dangers, the avoidance of a nuclear confrontation between the Soviet Union and the United States, the avoidance of an interruption in communication lines, the avoidance of nationalization, the the avoidance of polarization. But what are we for? We seem to be on the defensive and we seem to be reacting to dangers rather than creating a new climate and environment for the acceptance of ideas and ideals cherished by America and the Free World.

There is a vast difference between Israel and the Arab states. All of them struggled and won independence from foreign domination. But the people in Israel have gained something more than independence for the state. In Israel the people achieved freedom and equality for the individual, democratic institutions to enable them to find self-expression, social security to ensure them a stake in their country. This has not been the case in the Arab world where any experimentation with democracy has been short-lived and where people are ruled by military dictatorship or by feudal and dynastic regimes.

I am not suggesting that the way to peace is for us to promote new coups to overthrow the military dictators and thus to establish democratic societies.

But I do submit that it is our task to stand firmly with those who resist totalitarian aggression and who cherish freedom for the individual and democracy for his community. When the ballot box replaces rule by rifle in the Arab Near East, we may hope for a change in the Arab attitude.

If the Arab states and the Soviet Union continue to defy the UN cease-fire and to prosecute their war of attrition against Israel, it is because they believe that they can weaken both Israel and the United States to the point where our country will feel that it must surrender to what the Soviet Union is pleased to call a political solution.

If we can make it clear that we are enlisted with Israel in the struggle for a genuine peace—and that we are enlisted for the duration and will not waver—the time may come when wiser men will come to power in the Arab lands to lead their people away from destruction and war to genuine cooperation and peace with all their neighbors.

FREEDOM AND DREAMS

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. HOWARD. Mr. Speaker, I should like to insert at this time a very poignant editorial from the Asbury Park, N.J., Evening Press.

The editorial discusses essays written by the children of Harlem's Public School

186, on the subject of what freedom means to him. Their comments, their hopes should bring to us all a new dedication to provide the kind of world these children have in mind—a world where, as one child said, a white person who sees a black person would not "make fun of the black person." A world "without rats and mouses."

The Congress has, in past years, made long steps in providing freedom for these children, but there is yet a long way to go—in housing, in education, in equal opportunity. We have the opportunity, the responsibility, to take these next steps.

The editorial follows:

[From the Asbury Park Evening Press, July 15, 1970]

FREEDOM AND DREAMS

If they will listen adults can learn from children, such as the youngsters in the lower grades of Public School 186 in Harlem who were asked to write essays on what freedom means.

To one freedom is a world with unlocked doors. To another it's a city whose parks are safe at night and "a place without rats and mouses."

One boy saw it this way: "Freedom means to me that nobody who is white and sees a black person would make fun of the black person. That you can live in a pretty house. And when a black child is walking and asks a white child to play with her, she won't say no."

Some of the children are in a choral group that has made 11 recordings dealing with their heart-warming concepts of freedom. They sing of their high hopes. Some would like to be president. Others would rather be astronauts.

Adults often reckon wisdom by years. Children express it in dreams that only genuine freedom can fulfill.

EQUAL OPPORTUNITY

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. GIAIMO. Mr. Speaker, we in this Nation sometimes lose sight of the real meaning of the word "equal opportunity" in the heat of public debate and frustration over lingering racial injustices. There are still those who scream "never" in defiance of the law and morality. There continues to be a racist counterreaction from some of those who are rebuffed.

Mr. Speaker, what is at issue here is the matter of whether or not America may fully utilize the talents and capabilities of all her citizens. To the extent equality of opportunity is denied to members of our society, we stand self-crippled and partially immobilized in a strongly competitive, rapidly changing world. I believe most Americans understand this—the rhetoric and venom of the polarizers notwithstanding.

We are just beginning to see our first concerted efforts in behalf of equal opportunity come to fruition. The news is heartening, both North and South.

In the city of Atlanta, a black businesswoman is proving that franchised restaurants are not the exclusive domain of white America.

Geraldine White, a Negro American, owns and operates a nationally franchised restaurant in Atlanta's Westside area near the Atlanta University complex. Mrs. White, this restaurant chain's first black franchise holder in the South, does not see herself as a pioneer. She believes that the black business community's future lies in full participation in the American dream.

I should like to point out that Mrs. White's view is far different from that of the black entrepreneur of the past. His business was based upon service to the black community. His efforts and investments were confined there. He had a guaranteed market there.

Mrs. White believes that it is time for blacks to develop and participate in the economy on the same basis as whites. The key to this is equal opportunity.

The beginning was not easy. Mrs. White grew up in Atlanta's Vine City area, a poverty area remote from the much-talked-about affluent Negro community of Atlanta.

Mrs. White and her husband, Gary, worked up to the proprietorship of a small community grocery store. That beginning success generated their mutual desire for something better. When the Bonanza Sirloin Pit restaurant chain announced plans to develop minority franchising, the Whites decided to try for one.

Mrs. White sold the company on her plan. It granted her the franchise—the impossible dream in the improbable place was off and running. Geraldine White, a charming woman with an easy manner and friendly smile was that rare thing, a natural restaurateur. Taught the management-operations approach in Bonanza's Dallas-based restaurant school, she drew in her entire family and set what bids to be a pattern for minority groups to move into the mainstream of the American economy. Her husband, her children, her sister, her niece, are all employees and a solid sales team in this particular restaurant.

The restaurant opened October 6, 1969, and that beginning, featuring a black businesswoman with a dream—and a restaurant with a popular concept—is now firmly established in the Atlanta scene. Customers, white and black, from the Atlanta University complex and from the business community around the unit are ample testimony that Mrs. White and her restaurant are a solid community asset when it comes to eating time.

The ease with which Mrs. White worked into the pattern of a highly competitive and specialized business deceptively hides the very sound and practical approach she uses to manage and build her business. Bonanza, hard-nosed in its operational aspects to keep its hard-won image, makes no exception for either her race or sex. Mrs. White has her own pattern and rates class A. The company regularly inspects and evaluates her unit, measuring it against the 190-plus other units around the country.

Perhaps the most distinctive feature to her efforts is the simple fact that the unit she operates look like and produces the same quality meal served in the top units all over the United States of America.

Mr. Speaker, the case of Mrs. White carries a lesson that cuts two ways. It provides eloquent testimony to the hard work and perseverence of a black American who was afforded opportunity. Mrs. White was given nothing but the chance to participate as an equal.

It serves notice to those who would resegregate themselves into a black fortress within America that the future lies in full and open participation in a nonracial society. Black racism is as much a dead end as white racism.

Mrs. White is gently but firmly established on a course which is taking her family into the mainstream of the economy and the society.

SOME OBSERVATIONS ABOUT THE OFFICE OF ECONOMIC OPPORTUNITY

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WHALEN. Mr. Speaker, it has become fashionable in some circles to disparage the efforts being made by the Federal Government to combat poverty.

There are those who contend that the administration is insensitive to poor people and minority groups. Some of these critics appear disinclined to look at what is being done to solve the problem of poverty in this country by the Office of Economic Opportunity under the leadership of our former colleague, the Honorable Donald Rumsfeld.

It is at Mr. Rumsfeld's desk that the rhetoric ends and the reality begins. If concrete results are to be achieved in antipoverty programs, idealism must be mixed with pragmatism. I believe that Don Rumsfeld and OEO are making a meaningful attempt to cure this ailment in our society. It is not an easy job and it never has been for OEO from its very inception.

Mr. Nick Thimmesch, the noted columnist, recently discussed what Don Rumsfeld and the OEO are doing in a political environment no less hostile than in the past. For the information of my colleagues, who might not have had an opportunity to read the piece, perhaps the best yet on the subject, I herewith insert in the RECORD:

SOME TRUTH ABOUT THE GOP POVERTY PROGRAM

(By Nick Thimmesch)

WASHINGTON.—The Office of Economic Opportunity, a pale horse limping in limbo in 1968, is now running in directions which please Director Donald Rumsfeld, and this makes some people unhappy.

Critics squawk that Rumsfeld, 37, is gutting programs, ignoring idealistic militants and changing the anti-poverty agency's role from that of advocate to enforcer. Rumsfeld doesn't agree.

"Teddy Kennedy and Fred Harris (the Oklahoma Senator) go around saying that President Nixon doesn't like blacks and wants to end the war on poverty," Rumsfeld said in his second floor office in the White House.

"Part of their future seems to be based on saying that everything is rotten in the country. If people would quit wringing their hands and get to work, maybe we'd make even more progress. How can Congressmen say the President is against the poor, when they cut his anti-poverty budget request by $100 million last year?

"Sure, there's unrest, but black people became cynical about promises long before we took office. We've cut the promises. Sometimes I meet with people (in poverty programs) who are hostile because they've heard the criticism of those who over-promised. Those people usually go away saying they have been fed a bunch of baloney about what we're doing."

After a year in office, Rumsfeld has a young staff which he calls "compassionate and tough-minded." The rhetoric is diminished and poverty is looked at with a colder eye. Instead of confrontation with traditional social agencies, Community Action Agencies funded by O.E.O. are encouraged to cooperate with them. Some lawyers in the Legal Services division are dismayed that Rumsfeld wants them to be more conciliatory and less contentious. Community Action agencies, often riddled with waste and controversy, have been told to shape up.

"I told a meeting of CAP agencies in Tennessee," says assistant O.E.O. Director Frank Carlucci, "that I'd shut them down if they didn't manage themselves right. They responded with a standing ovation. We've changed the attitude. O.E.O. is maturing."

O.E.O. is also involved in a "performance contract" experiment by which an educational firm will be paid on the basis on gains made in math and reading skills by backward students most of whom are poor. This is an idea the late Sen. Robert F. Kennedy unsuccessfully pushed several years ago—the government telling educators, "If you don't produce, no more federal money."

There's also a push for economic development by the poor. O.E.O. funded: a catfish farm in Hancock County, Ga.; a supermarket and modular housing in Durham, N.C.; furniture and rug manufacture by Mexican-Americans and Indians in New Mexico, along with cattle feeding; and the Bedford-Stuyvesant neighborhood project in Brooklyn.

Other innovations are recruiting VISTA volunteers for specific duties rather than for some vague, idealistic impulse; funding a Kentucky program for midwifes; and making a $2 million grant for health manpower development by John W. Gardner's celebrated Urban Coalition, an outfit which so far has operated mostly on the luncheon circuit.

Despite all the noise about cutbacks in anti-poverty spending, the current budget is the same as 1969, and the administration is asking for an increase of $132 million next year. The current $1.948 billion budget shows big increases in health and nutrition; economic development; and research and evaluation. Administration opponents still sharply criticize the $108 million cut from the Job Corps and the $64 million trimmed from the program to get jobs for youth. Vice-President Agnew recently announced an administration request for an extra $50 million for summer youth employment.

What's happening at O.E.O. is that a Republican administration is seeking to employ a low-key, keep-your-voices lowered, practical approach to solving the problems of the poor. Naturally, Democrats who authored and pushed the anti-poverty program are going to squawk. They just don't like the thought of Republicans running such a big program for the poor. Rumsfeld is determined to show them that Democrats have no monopoly on humanitarism. This kind of competition between Democrats and Republicans is good for the nation.

THERE ARE 180 MEMBERS SPONSORING O'NEILL-GUBSER AMENDMENT

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. O'NEILL of Massachusetts. Mr. Speaker, we will shortly be considering the amendment of the gentleman from California (Mr. GUBSER) and I have proposed to provide for recording of teller votes on amendments in Committee of the Whole. Earlier this week, the gentleman from California (Mr. GUBSER) and I sent Members of the House a letter regarding various aspects of the amendment and noting that it is receiving exceptionally widespread support, including that of the distinguished majority and minority leaders. At that time a total of 141 Members had sponsored the amendment. Since then, the number of sponsors has continued to grow and at this time a total of 180 Members are sponsoring the O'Neill-Gubser amendment. As we noted in our letter, many Members have given this proposal long and careful consideration so as to accommodate all valid concerns and possible problems and the strong showing of support the proposal has received is evidence of its soundness and workability. Mr. Speaker, while Members may continue to sign up as sponsors by calling either my office or Mr. GUBSER'S office, I would like to take this opportunity to list those Members who are sponsoring the amendment to date. I also insert a copy of the amendment and our letter of July 20 which answers questions various Members have raised about our proposal.

The material follows:

SPONSORS OF THE O'NEILL-GUBSER AMENDMENT TO PERMIT RECORDING OF TELLER VOTES

Mr. Adams, Mr. Addabbo, Mr. Anderson of California, Mr. Anderson of Illinois, Mr. Anderson of Tennessee, Mr. Andrews of North Dakoa, Mr. Ashley, Mr. Beall, Mr. Bell, Mr. Bennett.

Mr. Biester, Mr. Bingham, Mr. Blatnik, Mr. Boggs, Mr. Boland, Mr. Brademas, Mr. Brasco, Mr. Broomfield, Mr. Brotzman.

Mr. Brown of California, Mr. Burke of Florida, Mr. Burke of Massachusetts, Mr. Burton of California, Mr. Button, Mr. Chappell, Mrs. Chisholm, Mr. Clay, Mr. Cleveland, Mr. Don Clausen, Mr. Cohelan, Mr. Conable, Mr. Conte.

Mr. Conyers, Mr. Corman, Mr. Coughlin, Mr. Cramer, Mr. Crane, Mr. Culver, Mr. Daddario, Mr. Daniels, Mr. Dellenback, Mr. Denney, Mr. Dennis, Mr. Diggs, Mr. Donohue, Mr. Dwyer, Mr. Eckhardt.

Mr. Edwards of California, Mr. Edwards of Louisiana, Mr. Eilberg, Mr. Erlenborn, Mr. Esch, Mr. Evans of Colorado, Mr. Evins of Tennessee, Mr. Farbstein, Mr. Fascell, Mr. Findley, Mr. Flowers, Mr. Foley, Mr. William Ford, Mr. Fraser, Mr. Friedel, Mr. Fulton of Tennessee, Mr. Fulton of Pennsylvania.

Mr. Gibbons, Mr. Green of Pennsylvania, Mr. Gubser, Mr. Gude, Mr. Halpern, Mr. Hamilton, Mr. Hanley, Mr. Hansen of Idaho, Mr. Harrington, Mr. Hathaway.

Mr. Hawkins, Mr. Hechler, Mr. Helstoski, Mr. Hicks, Mr. Hogan, Mr. Howard, Mr. Jacobs, Mr. Johnson of California, Mr. Jones of Tennessee, Mr. Karth, Mr. Kastenmeier, Mr. Keith, Mr. Koch, Mr. Kuykendall.

Mr. Leggett, Mr. Long of Maryland, Mr. Lowenstein, Mr. Lujan, Mr. McCarthy, Mr. McCloskey, Mr. McClure, Mr. McDade, Mr. MacGregor, Mr. Madden, Mr. Mailliard, Mr. Matsunaga, Mr. May, Mr. Mayne, Mr. Meeds, Mr. Melcher, Mr. Meskill, Mr. Mikva, Mr. Miller of Ohio, Mr. Minish, Mr. Mize, Mr. Mollohan, Mr. Moorhead, Mr. Morse, Mr. Mosher, Mr. Moss, Mr. Nedzi, Mr. Obey, Mr. O'Hara, Mr. O'Konski, Mr. O'Neill, Mr. Olsen, Mr. Ottinger.

Mr. Patten, Mr. Pepper, Mr. Pettis, Mr. Philbin, Mr. Pike, Mr. Pirnie, Mr. Podell, Mr. Preyer, Mr. Pryor, Mr. Quie, Mr. Railsback, Mr. Rees, Mr. Reid of New York, Mr. Reuss, Mr. Riegle, Mr. Robison, Mr. Rodino, Mr. Rogers of Florida, Mr. Roe.

Mr. Rooney of Pennsylvania, Mr. Rosenthal, Mr. Roth, Mr. Roybal, Mr. Ryan, Mr. Saylor, Mr. Schadeberg, Mr. Schneebeli, Mr. Scheuer, Mr. Schmitz, Mr. Schwengel, Mr. Shriver, Mr. Stafford, Mr. Steiger of Arizona.

Mr. Steiger of Wisconsin, Mr. St. Germain, Mr. Stokes, Mr. Symington, Mr. Talcott, Mr. Teague of California, Mr. Thompson of New Jersey, Mr. Tiernan, Mr. Tunney, Mr. Udall, Mr. Van Deerlin.

Mr. Vander Jagt, Mr. Vanik, Mr. Waggonner, Mr. Waldie, Mr. Weicker, Mr. Whalen, Mr. White, Mr. Widnall, Mr. Winn, Mr. Charles Wilson, Mr. Bob Wilson, Mr. Wold, Mr. Wolff, Mr. Wydler, Mr. Zwach.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 20, 1970.

DEAR COLLEAGUE: This week we will offer our amendment to H.R. 17654 to permit recording of teller votes in Committee of the Whole. For your guidance, we are enclosing a copy of our amendment plus a list of its sponsors to date.

As of last Friday, 141 Members had sponsored this proposal. In addition, it has received the support of leading members of both parties, including the personal endorsement of Reps. Carl Albert and Gerald Ford.

We believe this strong showing of support is evident of the soundness and workability of this proposal.

As we have noted, our amendment would permit recording teller votes on major amendments while retaining the present non-record teller procedure for less important amendments. It would also guarantee Members at least 12 minutes to reach the floor to vote.

The amendment is designed to make the least change in present procedures and it has been kept as uncomplicated and simple as possible. For example, while there are several effective and foolproof procedures for recording teller votes, we have purposely avoided specifying any particular method so as to give party leaders and House officials maximum flexibility to develop and implement the *best possible* system.

The "best" system might involve running two teller lines simultaneously, having Members call out their names as they pass the tellers and having the clerks repeat each Member's name as it is checked off on the roster.

Teller votes could also be recorded electronically should the House authorize installation of such equipment.

It is our feeling, however, that the tech-

nical question of *how* to record names should be considered separately from the policy question of *whether* to record them. House rules do not specify any particular method for taking non-record teller votes and we see no reason for doing so with record teller votes.

Another key consideration in formulating our amendment involved the number of Members required to obtain a recorded teller vote. After long deliberation, we decided on 20—the same number as is now required to obtain a non-record teller vote. We believe this will adequately protect against frivolous amendments and that setting a higher requirement would prevent record votes on many important issues and thereby make a sham of this long-overdue reform.

We are aware of the argument that a larger number of Members should be required to obtain recorded tellers in order to protect against politically-motivated amendments. A higher requirement, however, would not prevent a determined effort to obtain a record vote, it would simply delay proceedings by forcing those desiring such a vote to seek quorum calls to get additional supporters on the floor.

We are aware also that a substitute amendment may be offered which, like the original Gubser proposal, would provide for roll call votes in the House on amendments defeated in Committee of the Whole. Such a procedure has several serious drawbacks in our view. It would be extremely time-consuming, it would involve a major change in House procedure, and it could result in complicated parliamentary problems requiring the House to return to Committee of the Whole to reconsider legislation.

Thus we urge that you examine closely any alternatives which may be offered and we solicit your support for our amendment. We and many other Members have given this proposal long and careful consideration in an effort to accommodate all valid concerns and possible problems. We believe we have succeeded and we hope you will agree.

Sincerely,

CHARLES S. GUBSER.
THOMAS P. O'NEILL.

P.S.—If you wish to add your name to those listed in the RECORD as sponsors when this amendment is offered, please call either of our offices.

RECORD TELLER VOTES—O'NEILL-GUBSER AMENDMENT TO H.R. 17654

On page 39 immediately below line 4, insert the following:

"RECORDING TELLER VOTES

"SEC. — Clause 5 of Rule I of the Rules of the House of Representatives is amended to read as follows:

" 'He shall rise to put a question, but may state it sitting; and shall put questions in this form, to wit: "As many as are in favor (as the question may be), say Aye;" and after the affirmative voice is expressed, "As many as are opposed, say No;" if he doubts, or a division is called for, the House shall divide; those in the affirmative of the question shall first rise from their seats, and then those in the negative; if he still doubts, or a count is requested by at least one-fifth of a quorum, he shall name one *or more* from each side of the question to tell the Members in the affirmative and negative; which being reported, he shall rise and state the decision. *If before tellers are named any Member requests tellers with clerks and that request is supported by at least one-fifth of a quorum, the names of those voting on each side of the question shall be entered in the Journal. Members shall have not less than twelve minutes from the naming of tellers with clerks to be counted.*' "

And make the appropriate technical changes in section numbers and references.

WAR PRISONERS NEED PUBLIC'S SUPPORT

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BOB WILSON. Mr. Speaker, in the June 25, 1970, edition of the Daily Californian an article appeared concerning prisoners of war in North Vietnam. The story tells of a San Diego-based organization that is attempting to arouse public interest in this subject. The organization, the National League of Families of American Prisoners in Southeast Asia, hopes that a public letterwriting campaign will pressure Hanoi into abiding by the terms of the Geneva Convention governing the treatment of war prisoners. With the permission of my House colleagues, I should like to insert this article into the RECORD with the hope of carrying its message to a greater number of concerned citizens:

WAR PRISONERS NEED PUBLIC'S SUPPORT

San Diego County reportedly has the largest concentration of wives and relatives of U.S. servicemen held captive by North Vietnam.

Many of these individuals do not know if their husbands, sons and fathers are alive or dead. Some of them have waited in agony for years for a tiny shred of information about the men taken prisoners by the enemy.

But North Vietnam, despite the most persistent pleas, has been slow to respond with anything more than an occasional gesture toward fulfilling its obligations as a signatory to the Geneva Convention governing the treatment of war prisoners.

The Communist regime has refused even to honor its basic obligation to release the names of the prisoners it has taken. Likewise, it has declined to give the International Red Cross permission to inspect prisoner-of-war camps and has violated the article forbidding prisoners to be paraded or photographed for propaganda purposes. Mail sent to known prisoners of war has been returned.

After years of impatient and fruitless waiting, the relatives of men believed to be prisoners in North Vietnam have launched a campaign to enlist public support for their efforts to get the Communists to abide by the terms of the agreement which they signed.

A San Diego-based organization, the National League of Families of American Prisoners in Southeast Asia, hopes an aroused public will have more influence on Hanoi than it alone has so far been able to muster.

The organization's leaders have reason to believe that public pressure will produce results. They have discovered that the North Vietnamese government usually makes some slight concession when an event, such as the trip to Paris by wives of prisoners, focuses public attention upon its dereliction in honoring the Geneva Convention.

What can the public do?

The league suggests that letters be sent to the Office of the President, Democratic Republic of Vietnam, Hanoi, North Vietnam, via Hong Kong, and to Minister Xuan Thuy, Paris Peace Talks, Paris, France.

Airmail postage, it should be noted, will be 25 cents for the letter sent to Vietnam; 20 cents for the one sent to Paris.

"Write again and again to the leaders of North Vietnam, to news editors both here and abroad, to members of Congress and the United Nations and to ambassadors of foreign nations," the league suggests.

"Americans and the rest of the free world must insist on humane treatment of these 1,500 American servicemen who are in desperate need of YOUR public support. Your voice, your letter, could be the one that makes the difference for them."

Letters should be brief and to the point. They should not be abusive. All that the wives and other relatives ask is that North Vietnam honor the terms of the Geneva Convention which it signed in 1957.

That agreement requires (1) release of names of prisoners held; (2) immediate release of prisoners who are sick or wounded; (3) impartial inspections of facilities used for prisoner detention; (4) assurance that all prisoners receive proper medical care and adequate food; (5) prisoners shall not be paraded or photographed for purposes of political propaganda; (6) belligerents must not use false information about prisoners which would be harmful to the mental health of the prisoners or their families at home; (7) provisions for frequent exchange of mail between prisoners and their families.

So far, Hanoi has spurned pleas by the International Red Cross, U.N. Secretary-General U Thant, dovish U.S. Senators, the late socialist leader Norman Thomas and such anti-Vietnam War groups as SANE (National Committee for a Sane Nuclear Policy).

Whether a public letter-writing campaign will be any more successful remains to be seen. We owe it to the American prisoners to try it and see.

WHY WE SHOULD BE LOYAL TO OUR FLAG

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. DON H. CLAUSEN. Mr. Speaker, Pamela Crumb, a young sixth grader from Cloverdale, Calif., has written a very thought-provoking essay on "Why We Should Be Loyal to Our Flag."

Her essay was judged the best in districtwide competition and second in the State of California in the Veterans of Foreign Wars essay competition.

Pamela is the daughter of Mr. and Mrs. Manuel Crumb.

In my judgment, this young lady has come forward with a very simple and honest statement of her feeling for the flag of her country, and I sincerely commend her for having done so. The essay follows:

WHY WE SHOULD BE LOYAL TO OUR FLAG

(By Pamela Crumb)

There are many Americans today that do not show loyalty to their Flag.

I think we should be loyal to our Flag because it is the symbol of our country.

We should respect our Flag because it reminds us of long ago when early Americans gave their time and lives to make our country free.

We should be loyal to our Flag because of

the many things and freedom it gives us, such as the right to get an education, the right to choose our church, and the right to publish things.

We should be proud of our Flag because it has flown over our nation from the time that our country was a savage wilderness to the present day with our modern skyscrapers.

Americans should be loyal to the Flag because it gives them the right to dream for the future. We can dream for good homes, good schools, for food, shelter and clothing.

Our dream of continued freedom is the most important dream of all. Its the most wonderful thing, to be free, to think, speak, write and worship as we please.

I want to be loyal to my Flag. It represents the greatest nation on earth.

ANOTHER VIEW OF ALLEGED AMERICAN ATROCITIES IN VIETNAM

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BROYHILL of Virginia. Mr. Speaker, the other day Mr. Thomas C. Piddington, 3606 Colony Road, Fairfax, Va., requested me to bring to the attention of the Congress another and a much often neglected view of the recent wave of charges against American service personnel for alleged atrocities against civilians in Vietnam. In this case it is the view of the serviceman himself. A1c. William K. Piddington, now serving in Vietnam, recently sent his father the following poem, penned by T. Sgt. William O. Hasting, Jr., 377 Transportation Squadron, TSN AB RVN, which Airman Piddington feels should also be included when anyone considers the conduct of American troops in the Vietnamese war:

UNNECESSARILY DEAD

The young man comes from far away
To a land where death is near
He walks in jungles throughout the day
At night he rests in fear.

He was trained by America's best
But his skills are yet untried
In this land he will meet the test
With hopes to pass in stride.

He is told "you will not fire your gun
Till the enemy is defined
For if you kill an innocent one
You'll be court-martialed in no time."

The chopper hovers above the ground
The air is charged with fear
They said this was a V.C. town
Our young man's test is near.

The noise of battle in his ears
His buddies left and right
He tries to conceal his fear
As a figure comes in sight.

His weapon is raised and ready
His heart beat is wild
He forced his aim to be steady
Then he realized it was a child.

He remembered other incidents
And G.I.s now on trial
They claimed it was an accident
But are convicted all the while.

His moments lost in thought
Was his first mistake
But the way this war is fought
One is all it takes.

The grenade landed at his feet
The explosion he did not feel
His god he has come to meet
For a child he did not kill.

Who killed this young man
Was it the ones who trained him
Was it the one who placed a grenade in a child's hand
Or the ones who say "don't shoot first, let them?"

WHITE HOUSE REPORT ON THE PROBLEMS OF THE BLUE COLLAR WORKER

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. PUCINSKI. Mr. Speaker, there have been several articles recently in the press based on the "White House Report on the Problems of the Blue Collar Worker."

These articles were based on the report which apparently has been leaked to certain newspapers but not generally distributed to the public.

I am pleased that I have been able to obtain the report through my own sources.

I am placing it in the RECORD today because I believe it is of paramount importance that this Nation finally awakens to the fact that America's blue collar and white collar workers can no longer be expected to carry the major burden of the cost of Government and get very little in return.

I have said here on the floor of the House, time and again, that many of those in Government have become so obsessed with the plight of the poor and of minority groups, that they fail to realize the problems of America's blue collar and middle-income white collar workers.

It is this middle-income American who carries the greatest burden of taxation, who suffers most intensely the ravages of inflation, and who is consistently excluded from assistance programs because he supposedly earns enough money to take care of his own needs.

Nothing can be more misleading than to believe that the middle-income American worker is without problems or burdens.

I recently made an analysis and showed how a blue collar worker in America, earning $7,000 a year, has only $200 more of spendable income to take care of his wife and three children than a similar family with a husband, wife, and three children who derive their income entirely from public aid.

Is it any wonder that the middle-income American worker of this Nation is in revolt? When you consider that he goes out and works very hard to earn $7,000 a year, and then, in the final analysis, has only $200 more to spend on his family than those who rely entirely on public aid.

I hope all administrators of public agencies and Members of Congress will carefully read the "White House Report on the Problems of the Blue Collar Worker," and I hope the President himself will diligently address himself to the problems of these forgotten, and forsaken, Americans.

"The White House Report on the Problems of the Blue Collar Worker" follows:

THE PROBLEM OF THE BLUE-COLLAR WORKER

The social and economic status of blue-collar workers has become a subject of increasing concern in the last few years. Recent reports have identified the economic insecurity and alienation which whites in this group have felt. What such reports have failed to note is that there are some two million minority-group males who are skilled or semi-skilled blue-collar workers who are full-time members of the work force and who share many of the same problems as whites in their income class. This non-white group also shares the same concern as white workers for law and order and other middle-class values. Many have moved from subemployment to low-income entry-level jobs, but they now feel blocked from further opportunity.

In 1968, 34 percent of all minority-group families were in the $5,000 to $10,000 income category. Of course, on the average, most black families are still not anywhere as well off as white families: The median income of all Negro families was $5,590, that of all white families $8,937. But the point is that both these groups have essentially "working-class" economic and social problems related to wage, tax and government benefit structure for the nonpoor—a fact not given adequate recognition by the media, which, to the extent it emphasizes only the black ghetto, perpetuates a stereotype.

We should recognize:

(1) the common *economic* problem which many blue-collar workers have, of both races (mostly white, of course, in numbers); and

(2) the common *social* problems concerned with housing, education, jobs and personal safety which are related to income class but also are a function of the close proximity of the blue-collar workers to the disadvantaged people.

These two points are worth further consideration.

I. THE ECONOMIC SQUEEZE

Forty percent of American families—including 70 million family members—have incomes between $5,000 and $10,000 a year and might be termed "lower-middle-income." The head of the household is usually a vigorous, fully employed blue-collar worker with heavy family responsibilities although many of this group are also in white-collar or service jobs. It is precisely when his children reach their teens and family budget costs are at their peak that two things happen to the bulk of such male breadwinners:

They reach a plateau in their capacity to earn by promotion or advancement;

Their expenses continue to rise, as the last family members are born, as they become homeowners, as car and home equipment pressures mount, as the children may become ready for college, or support is needed for aging parents.

The American wage and salary structure does not respond directly to this situation, since it is based on the ethic of "equal pay for equal work." It does not provide additions for either growing family size or age (except as it may reflect job seniority); payment is exclusively for work done—the same pay is given to everyone in the same job; and, unlike the situation in many other countries, the wage structure is not supplemented by public payments based on family size, although income tax exemptions give some recognition:

Income needs for a growing family rise faster than are normally provided by advance-

ment. Family budget costs for a two-child family are three times the needs of a single individual, according to BLS, while a typcial semi-skilled steelworker's increase in job level results only in a wage rise of somewhat less than one and a half times.

The result is illustrated by the accompanying table, which portrays the case of a typical steelworker. The worker has some margin beyond his budget needs when he is young, but only if he saves and does not acquire a living standard commensurate with his pay. If he does not anticipate later family needs by adequate early savings—and usually he does not—he begins to be squeezed in his later thirties, and finds himself in deeper straits as his children reach their teens.

Many other industries have fewer promotion opportunities than steel. A study of 11 major industries estimated that one-third of all non-supervisory jobs were "dead-end." The lack of an adequate adult education system geared to workers hinders movement out of these jobs. Relatively few firms have work-site education and few community colleges direct courses for upgrading purposes to blue-collar workers.

Upward job mobility is also hindered by age discrimination against older workers; by lack of detailed, free information about other jobs; and by the high costs of private employment agencies (which often have job openings which the Employment Service does not have).

The result for semi-skilled blue-collar workers as a whole is that, when general wage rate increases are added to increased individual earnings due to promotion, real income has somewhat less than doubled in the past two decades, which is still not enough to meet the cost of the same standard of living throughout the period. Males aged 45 to 54 years in 1968 who had one to three years of high school—the educational level typical of blue-collar workers in that age group—had increased their incomes by only 84 percent between 1949 and 1968.

COMPARISON OF FAMILY BUDGET COSTS AND STEELWORKERS' EARNINGS (1967 BUDGET COSTS AND WAGE RATES)

Age and family status	Family budget costs		Pay grade	Estimated annual earnings	
	Amount	Index		Amount	Index
22—Single	$3,358	100	2	$5,747	100
23—Married, no children	4,538	135	2	5,747	100
28—1 child, under 6	5,627	168	7	6,629	115
38—2 children, older 6 to 15	9,076	270	12	7,510	131
41—2 children, older 9 to 18	10,347	308	15	8,039	140

NOTES

Budget costs and wage rates as of 1967.

Annual earnings are based on hourly rates, with no further adjustments for effect of seniority on immunity from layoffs and opportunities for more overtime and no allowance for the value of fringes.

Grade 15 in the chart is approximately the midpoint of the U.S. steel job evaluation wage structure and is at beginning point of skilled craftsman wage scales.

Family budget costs are based on BLS moderate living standard for a 4-person family, spring 1967, and include occupational expenses, gifts and contributions, life insurance, social security payments, and Federal, State, and local income taxes, in addition to the goods and services for family consumption. For equivalence scale appropriate for total budget—see table A-1, p. 14, BLS Bulletin 1570-2.

The worker who established his standard of living when he was single or first married thus finds that he can maintain it only by:

1. Having saved when he was younger (which he didn't do); or
2. moonlighting on a second part-time job; or
3. having his wife work even in spite of the obstacles to doing so; or
4. continued pressure for wage increases.

If a younger worker has no opportunity for advancement, the entire annual productivity-related rise in wages, about three percent, is needed just to *keep up* with his increasing family needs. If such a worker wants to improve his standard of living he must be able to move up the ladder. The pressure on wages promises to increase as those born in the post World War II baby boom move into their late twenties and early thirties, and thus assume family responsibilities in the next five years. Workers in the 25–34 age group will represent 25 percent of the labor force in this decade.

This problem is intensified by inflation. Since 1965 money wages have advanced *20 percent, but* real earnings measured in true purchasing power remained almost static. These men are on a treadmill, chasing the illusion of higher living standards. Thus their only hope seems to be continued pressure for higher wages. Their only spokesmen seem to be union leaders spearheading the demand for more money wages. They are overripe for a political response to the pressing needs they feel so keenly.

The *tax* structure offers little relief to this worker since it gives only small recognition to family size considerations. Even the Tax Reform Act of 1969 does not provide adequate relief to these families:

A married couple with an $8000 income who has two children will pay $263 less under the new law—which doesn't fully take effect until 1973—than the old one. This fails to bridge the budget gap described above;

Deductions for family members are token in character, even under the new tax law, and provide more at higher income levels than at lower or moderate levels (the $750 deduction is a tax savings of $125 for the person in the 16 to 17 percent bracket and $300 for the person in the 40 percent bracket). Moreover, the size of the tax deductions has no relation to the age of the children, even though budget costs for older children are more than for younger.

There is no provision for tax relief as family education costs rise, either in terms of the $100 a year that it costs to send a child to school or the additional cost of going to college.

Regressive State and local taxes also hit heavily at this group. Average State and local taxes are almost $700, and have increased rapidly in recent years. Moreover, in at least some states income is redistributed from lower-income to higher-income groups to subsidize higher education for the children of the latter.

Government policies on child care designed to enable the wife to work also give little relief. At present, families with income of $6900 or above cannot deduct child care expenses. This figure was set in the Internal Revenue Act of 1964 and is now unrealistically low. Adjusted to current prices the ceiling would be about $8200. Government child care centers under Headstart and Win are for the "poor," and so do not help this group. Their costs for child care (when not provided by other family members) may run from $25 to $40 a week. The Family Assistance Act of 1970 will aggravate this problem. Welfare mothers will receive subsidized child care to facilitate their move from welfare to work. Lower income mothers who seek work and are outside the welfare system will incur the full cost or be unable to add to family income.

Finally, high transportation costs, wage discrimination and lack of education and training also discourage many blue-collar wives from working or minimize their contribution to family income. Yet it is precisely working wives who make very meaningful contributions to the family income, and who have the potential to make even more: In the 40 percent of husband-wife families where wives do work, median income in 1968 was $10,700, compared to $8,200 where they didn't. Part-time employment has almost doubled since 1956 and provides a new opportunity for more women to combine work with family responsibility.

The problem of restricted economic opportunity for the blue-collar worker also spreads into the next generation. The children of this group in our society are not "making it" to the same degree as are children in the middle and upper-middle classes.

Despite the broadening base of college enrollments, we still find marked evidence that the lower-income groups have a much smaller proportion of their children continuing beyond high school. Only one-fourth of the youth in college are from the half of the families with a below-median income. Worse yet, the great majority of high school dropouts are not from the disadvantaged ghetto population. Many white and black school dropouts are from this lower-middle-income group; in some of the urban areas the dropout rate for this group runs about 30 percent. Here we sense the stirrings of a new type of unfortunate cycle, as some of the children of these blue-collar workers are unable to achieve a reasonable entry into productive society. Twenty percent are unemployed in the fall following the year they drop out of school. Present efforts to reduce youth unemployment (e.g., Neighborhood Youth Corps) are geared to disadvantaged youth—not these people.

Other government aids—minimum wage, training, welfare payments—are not for this group because they have presumably "made it," and whatever the government may have done to keep employment and jobs up generally has faded or is overwhelmed.

Economic insecurity is compounded by the fact that blue-collar workers are often the first to feel the effects of an increase in unemployment, feel most threatened by automation, and are also more dependent on sheer physical health for their livelihood than white-collar workers. Yet there is inadequate protection for temporary or permanent disability under State workmen's compensation laws.

There are other dimensions to the problem too: the shortage and high cost of housing; the high cost of medical and legal services, the lack of inexpensive entertainment and recreation facilities (e.g., few summer camps for the worker's children).

All these factors add up to an economic squeeze and insecurity for the working man. We have no package of solutions to deal with this problem. However, in fashioning any attack, certain things should be recognized: (1) that government aid being given to the disadvantaged is sorely needed, and (2) that it would be impossible and undesirable to try to modify the American wage structure; and (3) that almost anything which could be done by the government would cost money.

II. THE SOCIAL SQUEEZE

People working and living close to the margin of economic needs are under constant pressures. These pressures have an economic base but find other outlets, other frustrations of a social nature.

People in the blue-collar class are less mobile, less organized, and less capable of using legitimate means to either protect the status quo or secure changes in their favor. To a considerable extent, they feel like "forgotten people"—those for whom the government and the society have limited, if any, direct concern and little visible action.

Some of the problems which "bug" the blue-collar class include:

Fear of violent crimes. This is a growing

fear of crime in the inner cities and this fear is spilling over to the outer ring of the metropolis—primarily areas where they live. Economic immobility blocks a flight from these conditions.

Class status. Many of these workers are immigrants or sons of immigrants, they feel unsure about their place in the "mainstream" of American society. Some live in mixed neighborhoods—feeling the pressure of constant succession by lower status groups, especially minorities. As the minorities move up a bit, they squeeze these people. Minority inroads in housing, schools, and jobs create fears. They worry over merging of seniority lists, changing entrance requirements for jobs, and lower admissions standards for public schools.

Feeling of being forgotten. These people are most exposed to the poor and the welfare recipients. Often their wages are only a notch or so above the liberal states' welfare payments. Yet they are excluded from social programs targeted at the disadvantaged—medical aid, housing, job training, headstart programs, legal aid, and the like. As taxpayers, they support these programs with no visible relief—no visible share.

Educational level. Since most blue-collar workers have barely completed formal high school education, they have limited leverage to change occupations, and they have limited mobility to use their education as a lever to escape from their economic and social problems. Overt hostility between ethnic and racial groups is probably greater between less educated groups than between more educated groups. Thus, the blue-collar worker is more prone to transfer his economic and social frustrations to racial and ethnic prejudices, and of late to overt hostilities.

Low status of blue-collar work. The American working man has lost relative class status with the growth of higher education. Changes in the nature of the labor force have dramatized the professional and technical experts to the relative detriment of the skilled worker. Skilled workers also have hostility toward those below them at semiskilled and unskilled levels and the feeling is mutual. But all blue-collar workers, skilled or not, have been denigrated so badly—so harshly—that their jobs have become a last resort, instead of decent, respected careers. Manual and skilled occupations have become almost invisible in terms of the propaganda of today. Fathers hesitate—and even apologize—for their occupations instead of holding it up as an aspiration for their sons. This attack has been so strong, so emotional and so unfounded that the workers have suffered a loss of self respect and the nation is suffering a loss of future manpower.

Low status also derives from the working conditions and nature of much unskilled and semiskilled work. Much of it is oppressively tedious, noisy, and mind numbing, with little room for human contact. Research has found a significant relation between poor mental health and such types of work.

Let us examine the problem of the low status of blue-collar work further:

According to union leaders, the blue-collar worker increasingly feels that his work has no "status" in the eyes of society, the media, or even his own children. While the nation has, in recent years, sold the importance of science and technology to our younger people, it has neglected to communicate the importance of some ten million skilled blue-collar workers who are responsible for transforming the ideas of scientists and the plans of engineers into tangible goods and services. These workers make and maintain the models, tools and machines without which industrial processes could not be carried out. They exercise considerable independent judgment and are responsible for extremely valuable equipment and products.

A good auto mechanic, for example, must know hydraulics, pneumatics, electricity, and some chemistry and other skills. Yet many youth learn that status accrues to the white-collar job (and so "prefer" it) even though a job in coveralls, such as mechanic, may pay better. The average mechanic working for a metropolitan auto dealer earns nearly $10,000, yet there is a short supply of them due to lack of interested youth. A recent survey showed that only one out of four male high school seniors wished to work as blue-collar workers, even though almost half of all jobs in the economy are blue-collar jobs.

Schools tend to reinforce this tendency, since most teachers know little about blue-collar work. So do the media; the only publicity given to workers is when they are out on strike and there they are often shown in a bad light.

Adding to the problem is that fact that the long-term narrowing of manual skill wage differentials (temporarily halted) has relatively worsened the position of semi- and skilled blue-collar workers compared to the unskilled. At the same time, high-skilled white-collar workers have been making substantial and publicized improvements in their economic position, with salary increases often far higher than wage increases. Furthermore, the educated workers with college and advanced degrees have been getting the biggest pay gains.

The result is chronic and inflationary shortages in many skilled blue-collar fields; a feeling of "failure" for the many youth who won't get white-collar jobs; exacerbation of racial friction when black youth refuse to take "dirty" blue-collar jobs offered them "by a white society," even when they may be good-paying; and a general resentment by blue-collar workers which is translated into wage demands.

Resentment is likely to worsen with any increase in unemployment, together with a continued push for opportunities for the disadvantaged, plus the addition of returning veterans to the labor force.

III. POSSIBLE DIRECTIONS FOR ACTION

Our attention has been focused on an analysis of the economic and social situation faced by the blue-collar worker and not on private or public steps that might be taken to relieve the pressures he faces. Still, the analysis itself identifies several specific areas of concern:

Upgrading. What can be done to assist the worker in moving out of a dead-end job?

Income. Upgrading will provide more income, but this may need to be augmented by a job for the wife, and perhaps in other ways.

Expenses. The workingman's budget squeeze can be relieved through subsidized housing, transportation, recreation, and education and various kinds of tax relief.

Social Issues. Such things as low status of blue-collar work, poor urban environment, and inadequate medical facilities contribute to a feeling of neglect and should be addressed.

Again, though we have not developed a specific action program, some ideas appear worthy of consideration by the Nixon Administration to reach out and come to grips with many of the basic needs:

1. Job upgrading

The JOBS program is placing a new emphasis on upgrading for both disadvantaged and others but even more manpower services could be provided the blue-collar worker. Much authority exists but imaginative proposals are needed for such things as instruction in plants, community college courses designed to meet specific skill shortages, worker leave of absences, and loans for non-instruction expenses. The Employment Service could do more to help the blue-collar worker get ahead—through such steps as counseling and upgrading, soliciting jobs for experienced workers and opening its offices nights and Saturdays to serve the employed as well as the unemployed.

2. Child care

The Nixon Family Assistance Plan will provide child care facilities for welfare mothers who go to work. Child care facilities might next be provided to slightly higher income groups on a partial fee basis. This would enable many more mothers to work and relieve the costs of child care for those who already work. Steady expansion of part-time employment opportunities can open new avenues for wives to work without neglecting their family role. Tax relief for child care is now limited to families earning less than $6,900 and this could be raised to $10,000 with deductions increased to $900 for the first child and $1,200 for two or more children. This change can be made with little revenue loss. The public pressure for action in this area is expected to mount.

3. Education for adults

The Vocational Education Act of 1968 is already financing evening courses for about three million adults. However, this meets only a fraction of the need. Moreover, above and beyond vocational education, there is a need to allow workers to study for high school diplomas and for two-year community college degrees. For many blue-collar workers and their wives, the result should be new or better jobs and promotions. Increased education also frequently leads to less racial hostility.

4. Higher education for the worker's children

The right to higher education implicit in the President's Higher Education Message for college loans and grants where families are earning less than $10,000 is a significant promise to the blue-collar workers. The President also proposed a $100 million program for training in critical occupations in community colleges. This should be the first step in a steady thrust toward increased Federal support of these colleges which are of such importance to the blue-collar worker's children. These opportunities should be targeted to these people.

5. Tax policy

The Tax Reform Act will give a tax reduction to families earning $5,000 to $10,000. However, this does not go very far in alleviating the squeeze on this group. Revenue sharing should be emphasized since it will tend to help them by raising taxes through the progressive Federal tax system rather than through the regressive local and State systems. In addition, a review should be made of possible further ways to relieve the tax burden on this group, including possibly increasing the amount of the tax exemption for older children, since budget costs for them are greater.

6. Higher status for blue-collar work

Efforts should be made to enhance the status of blue-collar work. Public relations work would help, as would more effective guidance and placement in blue-collar jobs by secondary schools (including more visits by workers to the schools). Other possibilities are National awards for outstanding craftsmen; portrayal of various skilled trades on postage stamps; a series of vocational guidance films for youth, on skilled trades; programs for school teachers to visit plants and officers; training for foremen and supervisors; Federal standards for decent working conditions and/or establishing a Job Environment Subcommittee of the Environmental Quality Council, to investigate oppressive noise, heat, air pollution, and the like.

7. Recreation facilities

Recreation and vacations, a major problem for the blue-collar worker and his family, might be made more available through vest-pocket parks, more development of public lands near metropolitan areas, and mortgage guarantees for low-income creation facilities.

8. Transportation

Automobile expenses are a major expense item to the blue-collar worker. Moderate budget costs for the U.S. automobile owner are more than $900 yearly for replacement, insurance, and maintenance. More mass transit is part of the answer. If "no-blame" auto insurance would reduce costs as much as has been claimed, it might also be helpful.

9. Housing

Action has been taken to pump more mortgage money into the housing market which should increase the houses available to low-income workers and reduce their cost. The most significant potential for reducing housing costs is probably in Operation Breakthrough and other efforts to increase productivity in construction. HUD and the Domestic Council are obvious focal points for policy direction.

10. Disability protection

On the job and off the job accidents are still a major hazard for the working population. New attempts should be made to develop modern temporary disability insurance and workmen's compensation systems.

11. The Federal Government as a model employer of blue-collar workers

The Federal Government should continue its policy of wages comparable with private employment. But it could go beyond this on non-wage matters. It could become a model employer by careful attention to such things as upgrading possibilities, subsidized child care, part-time employment for women, and partially subsidized recreation and vacation facilities for low-income Federal workers.

The White House working group under your chairmanship could develop feasible ways by which to meet the needs of blue-collar workers in some or all of these areas.

JEROME M. ROSOW,
Assistant Secretary for Policy, Evaluation and Research.

RESOLUTION APPROVED

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. LUJAN. Mr. Speaker, the following resolution was unanimously approved at the 1970 New Mexico Republican Platform Convention at Las Cruces, N. Mex., on June 27, 1970:

Whereas, this convention recognizes that the people of New Mexico and the United States want peace and withdrawal from the present hostilities in Indo-China, and

Whereas, it is essential that withdrawal be effected so as to give every possible protection to the lives of our servicemen and the lives of Americans who are prisoners of the communists, and

Whereas, we have an abiding faith in the Constitution of the United States, and in the wisdom of its provision for the separation of the powers of government among the legislative, executive, and judicial branches, and

Whereas, we are convinced that the majority of Americans do support the general policies of the present administration in its efforts to withdraw from the present hostilities in Indo-China as soon as feasible and with the least possible cost of human life and suffering,

Now, therefore, be it resolved: That this convention go on record as supporting the efforts of the present administration to withdraw from the present hostilities in Indo-China as soon as feasible, giving priority in this regard to the ultimate saving of life of both our servicemen and Americans who are prisoners of the communists, the alleviation of further suffering and the achievement of an honorable and just resolution of these unfortunate hostilities.

Be it further resolved that this convention call upon the Congress of the United States to carefully consider and faithfully discharge its constitutional responsibilities in aiding the administration in achieving the above objectives.

BRIDGING THE GENERATION GAP

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BLATNIK. Mr. Speaker, not long ago I had the good fortune of attending the commencement exercises at Ursuline Academy, a girls' school in suburban Bethesda, Md. I say good fortune, because our colleague, the Honorable JOHN S. MONAGAN, delivered a noteworthy commencement address.

We all have the familiar experience of the generation gap which is supposed to be a bridgeless chasm. Yet anyone who was present at this ceremony could have felt the past joyfully joined to the present with each word of the address. In my discussions with parents, teachers, and students I saw little evidence of the so-called generation gap. Moreover, in my discussions with students after the ceremony, I noticed an acumen that could only come from cooperation with teachers.

But the highlight of the commencement ceremony was Congressman MONAGAN's inspiring address. There was no preaching and yet there was something to be learned. There was good humor, and yet prudence and good judgment prevailed. The address was delivered with a deep affection that did not detract from an objective assessment.

In speaking to the graduation class, Mr. MONAGAN was also speaking to his daughter, Parthy. The beautiful feeling and warmth pervaded the entire class, and no doubt made them feel as if he were their own father.

I felt privileged to attend the commencement, and stimulated by the warmth of Mr. MONAGAN's refreshing and beautiful message, I want to take this opportunity to commend his affectionate and yet effective remarks to the attention of my colleagues:

COMMENCEMENT ADDRESS BY
JOHN S. MONAGAN

It is a brave man or a very foolish one who has the temerity to make a commencement speech today.

This is particularly true of a Member of Congress who is the epitome of an Establishment figure. In addition, a Congressman in today's folklore is presented as a figure of fun and a cross between Groucho Marx and Sir Toby Belch. At any rate we are used to dealing with the slings and arrows of outrageous fortune and so for this reason if no other, we may be the only people qualified to make commencement speeches in this year of 1970.

In some ways however, I am in enviable position. I have a captive audience, I have a polite audience. I have an audience schooled in Christian virtues. At least to this point there has been no invasion by Black Panthers or the SDS, nor has anyone grabbed the microphone for a revolutionary tirade.

Yet, one is puzzled to know exactly what note to strike. I have a natural desire to be brilliant because of the presence in this distinguished Class of my talented and lovely daughter, and for her sake alone I would hope to utter winged words that might be classed with those of Ralph Waldo Emerson or at least, Spiro T. Agnew, but the achievement of this goal is difficult indeed in today's climate.

Dean Acheson, in his recent book said that "commencement speeches are a ritual to be endured without hearing." If this were so you could relax and think of more pleasant things but even the elegant Dean was not exact in his comparison since he was introducing a discussion of the famous Harvard speech of General Marshall which sparked the revival of Western Europe and changed the tide of history.

I cannot help think how commencements have changed since I first started attending them. Somehow I always carry memories of potted palms, the smell of fresh varnish and graded files of girls in white dresses, white shoes, white stockings and white hair ribbons and boys in blue serge Knickerbocker suits marching two by two with a tinkling piano playing the "Soldiers March" and "Faust" and a chorus later singing the Barcarole from the "Tales of Hoffman" in two parts.

In those days it was not difficult to select a theme for a commencement speech. Then the road ahead stretched placidly forward into a rosy future. The class motto in Latin might easily have been and doubtless was "per aspera ad astra" and even though it suggested struggle and difficulties, nevertheless the stars of achievement always beckoned their invitation in the attainable distance.

Horatio Alger, the apostle of the Puritan ethic—was no longer a best seller, but his influence lingered on and one might hear in the commencement addresses of those days the echoes of his tales of the clean-living shoe shine boy or the industrious newsie who stopped the runaway horse, saved the life of the little girl with golden hair and was placed on the first rung of the ladder to success by her grateful, bank-executive father.

Some of the titles of his books will give you an idea of what I mean. They were:

Luck and Pluck.

From Farm Boy to Senator.

From Rags to Riches.

Strong and Steady—or Paddle Your Own Canoe.

Tattered Tom—or The Story of A Street Arab.

Ben, the Luggage Boy—or Among the Wharves.

This was the time also of "Frank Merriwell at Yale" a Yale which would not even have known what Black Panthers were—much less have given them aid and comfort.

Those days have long gone.

Today it is noteworthy for a school to have a commencement. Undoubtedly many will not have any ceremonies this year.

The affluent society, instant communications, the omnipresence of overwhelming national and international problems all join to raise questions as to the relevance of our traditional attitudes and our customary observances, and to make difficult the task of one who would pontificate or dogmatize.

No area of our social organization is free today from the thrust of searching questions. All the foundations upon which we have built are being reexamined and tested for their soundness and permanence. Many of our cherished beliefs have been exploded and our prejudgments have been swept away.

Much of this winnowing has been good. Renovation can be profitable if it forces us to sweep out the rubbish and the useless ac-

cumulations and make judgments as to what is necessary to retain and what is surplusage.

This revolution in thinking has left no traditional social unit untouched. Our schools, our universities, our corporations, our legislatures, our military services, our social service institutions and our churches have all felt the winds of change.

We have eliminated much cant and prejudice. We have learned to look through the appearance of things to matters of substance. We have opened up new areas of opportunity. We have abandoned many catch phrases and phony labels. We have discovered new sympathies between people of different races and forged new bonds between different sects with similar religious traditions. We have discovered the dross in material things and have concluded that these alone cannot bring satisfaction of our yearning for heaven.

The revolution which has taken place in the liturgy of our Roman Church may perhaps be taken as a symbol of this all-pervasive change of which I speak.

We have nearly abandoned the Latin service. We have shortened our observances. We have eliminated duplication and unnecessary ceremonial. We have tried to substitute the participant for the passive and even somnolent observer.

And yet.

There are moments when the over thirty (that is the magic line of demarcation) traditionalist has qualms as he sees the bulldozer methodically pressing on its levelling course.

Shall we never again thrill to those majestic hymns of St. Thomas Aquinas—the Tantum Ergo—or the Pange Lingua? Is Palestrina consigned forever to outer darkness? Can the guitar Mass fill the void left by the removal of Hayden or Mozart or William Byrd?

Which is preferable? the traditional Rheims version:

"Consider the lilies of the field how they grow. They labour not neither do they spin and yet I say to you that not even Solomon, in all his glory, was arrayed as one of these," or (the improved version)

"As for clothes, why be concerned: Learn a lesson from the way the wild flowers grow. They do not work. They do not spin. Yet I assure you not even Solomon in all his splendor was arrayed like one of these."

One feels that the revisionists barely avoided saying, "Man, look at them lilies."

The point I make in this connection and in our examination of all the changes that are thrust upon us today is that there is a compelling need for judgment, for discrimination and for the exercise of a sense of historical perspective in deciding where we are heading.

Let us eliminate the shoddy and the superfluous and the second-rate, but let us, for Heaven's sake and our own, retain the sound, the valuable, the tried and the good. Granted that these are value judgments, nevertheless, let us look at our own history and that of the world. Let us profit by our experience and by the tragic fate of other nations.

Let us recall the long, slow climb from barbarism and slavery to a system of laws that protects human freedom and not abandon our hard-won gains in a surge of emotion or a momentary passion.

Perhaps there was some good in the Puritan ethic. Perhaps the Ten Commandments and the seven deadly sins had some validity. Perhaps the Constitution with its Bill of Rights still shines as a beacon to Czechs and Poles and Russians. At least it is worth thinking about before we toss out the whole works.

Renewal Si! Demolition No!

What I am suggesting is that one can easily go over the line from freedom to excess and from change to destruction—without the balance which is provided by history and experience.

The danger, of course, is that we shall come to a time of confrontation if large segments of our population continue to move in contrary directions. The recent parades of the hard-hatted construction workers evidence an aroused conservative reaction.

I also suggest that some bounds be set to criticism as destruction and that, recognizing human frailities and defects, we seek to recreate the consensus which once obtained concerning the worth and relevance of our public institutions.

It may be that we are coming to a time of revulsion against the excuses which have been permitted—as they have never been permitted in responsible societies before (can one imagine the New Haven debacle being allowed in England or in France?)

Students can take over dormitories and can burn banks, but can they run an educational organization or a financial system?

Black Panthers can disrupt court sessions and bring the administration of justice to a standstill, but given their liberty, would they provide a jury system, habeas corpus, appeals, the discovery of evidence and the other guarantees which are now guaranteed to all our citizens.

We can strike down the barriers to the erotic and the sensual in print and on the stage—but can we provide a firm and consistent statement of human goals that will compel admiration and agreement.

These are the real questions which we must face as we struggle to find our way among the contending forces of contemporary life.

In the old days, one would have closed a commencement speech with a series of admonitions or exhortations depending on the cast of mind of the speaker.

This would not do today. General propositions are suspect—and calls to virtue are subject to the pejorative designation of "Victorian morality".

So I shall confine myself to thanking the faculty and students of Ursuline for the pleasure which Rosemary and I have derived from being associated with this School, and to expressing appreciation for the friendships which Parthy has made and for the experiences which she has shared and the knowledge and maturity which she has gained. There has been a tolerance, an inspiration and an understanding on the part of the Ursuline Faculty which are truly noteworthy. There has been a friendliness, a warmth, an enthusiasm and what I might term a "zaniness" about the girls in this school which I find wholly admirable—and I must confess that there have been times when I have wished that I were in the late teen group myself.

Our hope for you, then, is that you will retain permanently something of the special character that is yours today, that this warmth, this enthusiasm, this tolerance, this friendliness, this respect for tradition, and yes, this zaniness of which I have spoken will not be lost—but will be treasured and will be transmitted to others as you go through life.

You have today an idealism, a balance, a self-respect and a reverence that are unique in today's world. May you retain these qualities and may the world regain an appreciation of their value. Perhaps it might not be too much to hope that you could lead the way to such a renovation by your example.

Good luck and God bless you all!

BATTLING JUNK SLAVERY

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ROBISON. Mr. Speaker, the Christian Science Monitor's worthwhile exposé on drug addiction has turned to the domestic ramifications and I am pleased to insert the following article in the RECORD for the benefit of my colleagues. This article makes one appreciate the difficulties faced by the customs agents in trying to stem the flow of narcotics into the country and also the enormity of the task facing the narcotics officers who work in every city trying to break the drug rings. The tone of the article is not hopeful, but then neither are the lives of those who live in the shadow of addiction; but perhaps the realism of the article will help us find the key to successfully stopping the narcotic traffic.

The article follows:

[From the Christian Science Monitor, July 15, 1970]

AMERICA'S DRUG STRUGGLE: II—FREEDOM FROM HEROIN: BATTLING JUNK SLAVERY

(By Gil Scott)

NEW YORK.—They languish in a world of unfaithful enchantment, indifference to the society from which they have become alienated, indifferent to the abuse they have heaped upon their minds and their bodies.

Street corners, doorways, abandoned tenements are some of the communes they inhabit in shared despair.

A boy wrestled in slow motion to keep his body upright as he leaned against a parked car, fighting off the nod, that irresistible inclination to sleep. A short distance away, a man ambled across the street as he jabbed his left hand in one direction and poked his right hand in another, boxing an imaginary opponent while his eyes waged a losing struggle to remain open.

These are heroin addicts, and you can see them huddled in small knots in Harlem or any other ghetto. Here the United States heroin traffic made its first stop. Here heroin addiction is already a third-generation problem.

The craving for heroin takes up practically the whole of an addict's life. In his endless scramble for another "fix," the addict's job, friends, and family become neglected. He often resorts to crime to support his habit, which could cost as much as $75 to $100 a day. This amount is about one-fourth of the value of the goods he has stolen and sold.

When stealing becomes too much for a hassle, many addicts end up as small-time pushers in the traffic as well as its victims.

A longtime Harlem resident called drug trafficking the community's "No. 1 industry."

Many bars and beauty parlors give tacit support to the addict by buying his stolen goods.

"It's the vice that turns people against each other," the Harlemite said. "The tenant upstairs buys the television off the tenant downstairs after it has been stolen by the junkie."

"I'm a dope fiend . . . been using it for 17 years," says a 33-year-old addict, who has spent 11 of those years in prison. "I don't like doing it, because I know it's a thing that places me in the penitentiary yearly. I go to jail every year steady. I'm one of the best thieves out here by everybody's say-so."

SECURITY JOB ASSAILED

He has a wife and four children and says he had to steal about $200 a day to support his family and his habit. He specialized in men's suits.

"If whitey knew what it was costing him, he wouldn't put dope in Harlem," the addict argues. "We get dope from the Mafia, and we pay for it by stealing from the Jewish guys downtown. The thing is continuous."

None of the addicts interviewed believed that the federal, state, or city governments are making serious efforts to stop the heroin traffic.

They were equally critical of the police de-

partment, accusing some of the police of not only doing little or nothing about the drug business, but actually engaging in it themselves.

"A cop will give you two bundles [that he allegedly took from another addict] and tell you to sell it for $200 and the time you are to bring the money back to him," an addict said. "And you'd better be there with the money or he'll get you later! That's why we have no respect for the rogue."

"It's a game," said an addict in Brooklyn's Bedford-Stuyvesant section. "They [the police] know what's happening. They make a lot of money on it themselves."

INVOLVEMENT CALLED ISOLATED

Deputy Chief Inspector John McCahey, commanding officer of New York City's narcotics division, says the addicts' allegations are not supported by facts. "Let's face it. They can't like us. We're depriving them. The only thing the addict looks for is his next fix."

There have been instances of individual police involvement in pushing drugs, but Chief McCahey says they were "exceptions to the rule," adding that "we take steps to prevent that from happening."

But police officials are quick to admit their failure to halt the heroin traffic in this nation's drug capital. Harlem now harbors an estimated 100,000 heroin users.

Police Commissioner Howard R. Leary said that "while arrests have been increasing, the illegal drug trade . . . continues unabated, and we must, as always, face up to realities."

The department has attempted to meet the problem by increasing its narcotics squad from 300 to 700 members within the past year.

Chief McCahey said his unit makes about 3,000 arrests a month, half of which result from an agent's actually purchasing drugs from a seller. The unit also raids and closes down 30 to 40 drug "factories." "And yet, the flow seems to continue," Chief McCahey said.

Part of the problem, says one ex-addict who was on heroin 17 years, is that the police only get to the small-time street pushers. "These guys can't even afford a pair of shoes—they're really just little bums like I turned out to be," he said.

DEALER SOPHISTICATION REPORTED

Chief McCahey said big dealers of heroin and other drugs are sophisticated people with a keen business sense.

He explained that only those persons considered trusted and reliable, in the underworld lexicon, have the connections and are able to buy pure heroin in large quantities from whoever smuggles it into the United States.

If the price for a kilo (2.2 pounds) is $5,000 to $6,000, a dealer can sell it for $11,000 to $14,000 for a quick profit. He has ended his part of a transaction and does not want to have anything to do with street sales, which, according to Mr. McCahey, are the "most vulnerable" point of the operation in terms of chances of being arrested.

Big dealers stay away from the "factories," too, where pure heroin is diluted with milk sugar or quinine, thereby making several kilos of adulterated heroin from the original package.

Instead the "pros" pay others to take the risks.

"I used to get $200 for working three afternoons a week cutting drugs in a Harlem hotel room," said a 15-year-old Puerto Rican girl who has been on heroin since she was 12.

"This business is very fluid," Chief McCahey comments. "An awful lot of people are getting in. On a regular basis, a person gets a good income from it and his chances of being arrested are almost nil."

"There is a tremendous amount of trust at the upper levels and you don't get them to inform. Otherwise our job would be much easier," he added.

"You want to know who's behind the drug traffic? asked a white addict in Brooklyn. "It goes up to big business people . . . people you can't touch in a million years. Ain't nobody, even the president of the United States, going to get close to them. There are so many channels. Dope goes through 10 or 15 people. You cannot stop it."

MAFIA RULE QUESTIONED

William H. Tendy, chief of the narcotics unit of the U.S. attorney's office for the southern district of New York, told a House committee on crime recently that 15 Mafia members control nearly all of this country's dope traffic.

But Chief McCahey said he does not believe that the Mafia is involved directly in narcotics. Its role, he said, is to provide loans for persons engaging in the illegal traffic.

In Harlem, one resident, who has been an outspoken critic of the dope pushers in that community, said a "black and Cuban Mafia" has emerged to reap its profits.

"Heroin is coming into this country in greater quantities than ever before," Chief McCahey said. "Increasing narcotics arrests in this city cannot curb drug abuse as long as tons of heroin are smuggled across our nation's borders each year.

"Large numbers of pushers and dealers are being arrested after painstaking investigations, but these efforts are frustrated by the continued illegal import of drugs which flow endlessly through the organized criminal market and into the bloodstream of a growing addict population."

Nearly 400 persons have perished from drug abuse since the begining of the year, according to the chief medical examiner's office. And the number of known heroin users in the city's high schools increased 400 percent during a 1968–69 period.

The use of heroin has not only increased, it has spread beyond the black enclaves to the city's white high schools, city colleges, and even Columbia University—whose students have access to the same dealers as do Harlem's pusher-addicts.

Some Harlemites point to the spread of heroin to the white community with a sad but ironic hopefulness. "The best way to cure the dope problem is to have some son of a senator or judge get hooked," said an ex-addict working in one of the city's drug treatment centers.

Black community leaders are beginning to mount their own antidrug campaigns. New York State Sen. Waldaba Stewart (D) of Brooklyn is supporting male citizen-action groups that make it their business to approach known pushers and tell them to move out. The Black Panther Party in Queens announced recently that it is prepared to use whatever means necessary to force out "the pusher man."

GROUP PURSUES INFORMATION

A year-old group called Mothers Against Drugs (MAD) urges community residents to record the names, addresses, and license-plate numbers of known traffickers, suppliers, and pushers. MAD then turns this information over to the district attorney's office.

These groups are trying to make a dent in the flow of heroin into their own communities. But they also appeal to federal officials to increase efforts to prevent the drugs from entering the country in the first place.

The Bureau of Customs, a branch of the Treasury Department, has the seemingly insurmountable task of blocking illegal drugs at port of entry. With millions of persons traveling to and from the United States annually by air or ship, every person is a potential smuggler of an illegal narcotic drug.

The Congress recently provided $9 million in a supplemental appropriation which helped increase the customs service and strengthened its investigative powers.

Under what is called the department's accelerated inspection system, which began in early June, customs inspectors at Kennedy Airport, after primary questioning, select 20 percent of the passengers entering the country for secondary examinations and thorough inspections of all their baggage.

CUSTOMS AGENT'S SEARCH POWERS

There are about 300 customs inspectors at Kennedy Airport, which is acknowledged as a major distribution center for drugs.

Customs agents, who belong to the service's enforcement branch, have unusual authority to make a complete search of a person's baggage, personal effects, and his body.

This unit makes wide use of paid informers, some of whom are entitled to 25 percent of the value of the contraband recovered by the government. The amount paid is not to exceed $50,000 for any one case.

"We've had cases where an individual informer, as a result of information furnished to us, has received several hundred thousand dollars," the customs spokesman said.

The department is also conducting experiments on methods of detecting heroin or cocaine, both of which are almost odorless.

But according to Commissioner of Customs Myles J. Ambrose, the results of these efforts are still negligible. Testifying recently before a congressional committee, he said that the stepped-up baggage inspection system has so far failed to make any "significant" gains in curbing heroin smuggling. And tips from informers account for only about 5 percent of the seizures of drugs at customs, the bureau says.

FEDERAL CRACKDOWN CHALKED UP

The Bureau of Narcotics and Dangerous Drugs, a branch of the Justice Department, is the other major federal agency attempting to curb the illegal drug traffic.

Recently, federal agents made raids in New York and nine other cities, arrested 135 persons, and seized heroin and cocaine valued at $2.5 million on the retail market.

The target, said Attorney General John N. Mitchell, was a nationwide ring handling about 30 percent of all heroin sales and about 75 to 80 percent of cocaine sales in the United States.

But heroin is still very much available. "The raid wasn't even felt out on the street," said John Maxwell, an ex-addict who helps at Phoenix House, one of the city's drug treatment centers. "I can see the fellows out on the street copping just as big as life."

According to Justice Department officials, much of the evidence on which the raids were based came about through wiretapping. Mr. Mitchell is seeking new legislation which would allow the searching of dwellings without notice: the so-called "no-knock" law.

USE OF EXISTING LAWS URGED

Some black community leaders say that even without the support of such legislation, local police could effectively harass suspected big dealers.

"Right next door to this drug treatment center is the biggest dope drop in Brooklyn," said Dr. Barry Primm, director of the Addiction Research and Treatment Center in Bedford-Stuyvesant. "Maybe the police can't catch 'Brooklyn Slim' with the drug. But they could get him on something else—like the pile of garbage in his backyard."

According to John E. Ingersoll, director of the Bureau of Narcotics and Dangerous Drugs, his department is hoping for stronger

narcotics laws that would impose stiffer penalties on sellers and stress leniency for youngsters who buy drugs for their own use. Mr. Ingersoll says that the bureau is also "working very hard to get rid of the source in Turkey and France particularly."

But in the end Mr. Ingersoll and other law-enforcement officials suggest that the only way to stop the heroin traffic is to stop the demand for heroin. He stressed the need for more educational programs to deter drug use.

"You've got to get inside the skin of people and turn them off drugs and turn them on to something else—something constructive. People are going to have to resolve their problems without the use of drugs. It's a very, very difficult and frustrating kind of undertaking, but I think we'd better get on with it."

CAPTIVE NATIONS WEEK

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1970

Mr. FISH. Mr. Speaker, 11 years ago this month the 89th Congress during the administration of the late Dwight D. Eisenhower, designated the third week in July as Captive Nations Week. This year, from July 12 through July 18, the people of the United States and 17 other free nations will again mark that anniversary.

As is pointed out in the Captive Nations Week manifesto of 1970, this week's observance falls just 2 months after the 25th anniversary of one of the most poignant anniversaries ever marked in our time. For it was 25 years ago in May, as World War II drew to a victorious close, that the 100 million people from east and central Europe began to be drawn into the Communist domination of Russia. Even as these once free and independent people were celebrating their liberation from the Nazi tyranny, they were being absorbed by the Communists.

Living in freedom we often forget what a priceless possession freedom is, and that even as we enjoy our freedom much of the world still knows only Communist oppression. Yet the revolts of Hungary and Poland in 1956, and more recently the tragic crushing of liberalizing movements in Czechoslovakia should remind us how much those people held under Communist domination for nearly a generation desire freedom. They show us the sacrifices those brave people held captive will make to possess something we take for granted.

Therefore, this week-long observance of Captive Nations Week should give us all an opportunity to reaffirm, not only our efforts on behalf of all repressed people, but give us also the chance to ponder the danger and suffering that can occur through freedom's loss. Let us this week rededicate ourselves to the principal that all men should be free, and strengthen our spirits with that love for freedom that has marked us as a nation from our birth.

THE MOD CORPS

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. CHARLES H. WILSON. Mr. Speaker, on July 9 the Washington Post reported the formation of a national sports committee to help fight drug abuse among America's youngsters. To be known as the MOD Corps, with MOD signifying March on Drugs, five professional athletes were the first recruits in a group expected to reach several hundred. These athletes will make speeches, meet youngsters and explain the dangers of narcotics.

The establishment and growth of drug subcultures among this Nation's youngsters spreads daily. As John Schmitt, center of the New York Jets, stated "when the Jets asked me to talk to some young people a few months ago I was amazed at what I heard. Kids in the early grades, even kindergarten, knew more about drugs than we did—and we thought we were well briefed."

I applaud creation of this committee and hope that more and more athletes will participate in the fight against drug abuse.

For my colleagues' information, I am including the story by Steve Snider into the RECORD:

ATHLETES JOIN MARCH ON DRUGS

(By Steve Snider)

NEW YORK, July 9.—A national sports committee to help fight drug abuse among America's youngsters began forming today under the direction of the MOD Corps—the March on Drugs.

Five professional athletes were the first recruits in a group expected to reach several hundred who will make speeches, meet youngsters and explain the dangers of narcotics:

Rickie Harris, defensive halfback, Washington Redskins—"I went to high school at the edge of the Watts section in Los Angeles and the problem was terrific even then. I escaped because I was busy being an athlete. Yes, I have taken pep pills from a licensed physician to get me through a football game but that's far different than from a pusher on the street. I don't take pep pills any more. And no pain-killers with a needle, either."

Ron Woods, outfielder, New York Yankees—"About 40 percent of the kids in my school at Compton, Calif., were taking drugs. Like Rickie, I stayed away because of sports. The way things are today, with so much around, I don't know whether I could avoid it again without some help."

John Schmitt, center, New York Jets—"I went to a private school on Long Island and the biggest deal was sneaking off for a beer. But when the Jets asked me to talk to some young people a few months ago I was amazed at what I heard. Kids in the early grades, even kindergarten, knew more about drugs than we did—and we thought we were well briefed."

Tom Nieporte, professional golfer—"I have nine children ranging from one to 14 years. I'll do anything I can to protect them. Already I'm amazed at some of the things my 5-year-old son repeats from conversations with older boys."

Mike Bass, defensive halfback, Washington Redskins—"I went to high school in Ypsilanti, Mich., a comparative small, conservative town. Drugs were not a problem. But as Rickie and I went around the country this summer as consultants to the Office of Economic Opportunity, I found that something has been lost by the youngsters. The adults are partly to blame. Between them, they have to find the happy medium."

Norman King, a New York advertising man and chairman of the March on Drugs, said the committee will be expanded to include chapters in all sections of the nation with star athletes being sought for the speakers' bureau.

"The athletes are young," said King. "Kids can relate to them better than they can to adults."

Harris and Bass were winding up a 30-city tour, mostly together but occasionally apart, to explain the new program drawn up by the Office of Economic Opportunity in Washington.

"The OEO is certain that just throwing out a bat and ball for the kids in the summer time isn't going to do much good," Bass said. "We explained the OEO's program on job education to officials and talked to kids. One thing we did was to explain to the youngsters that being a plumber or an electrician or something like that may not be glamorous but it sure can pay off."

Today's youngsters, on the average, are a long way from being blase about sports and athletes, Harris said.

"They still send us lots of fan mail and they're down there after a game for autographs," he said. "If they weren't looking up to us a little bit they wouldn't be wasting their time.

"I think we can do a lot of good in the MOD Corps."

PLANNING FOR MORE PEOPLE

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BUSH. Mr. Speaker, the Republican Task Force on Earth Resources and Population, of which I am chairman, released its final report on July 8, entitled "Earth Resources and Population—Problems and Directions." I have been delighted to see the positive response that this report has already received. Of particular satisfaction to me was the editorial in the Houston Chronicle last week entitled "Planning for More People." I offer this editorial for the RECORD for the benefit of my colleagues:

PLANNING FOR MORE PEOPLE

The United States may be moving to meet the demands of its rapidly expanding population. But is it moving fast enough?

The House Republican Task Force on Earth Resources and Population has urged the federal government to give emphasis to research and development of potential reservoirs of food and minerals equal to the effort on our space exploration program.

We are exhausting our great stores of natural resources and fuels. Presently we must look elsewhere for more raw materials, for the "potential reservoirs." The sea is one such possible source.

In its final report on the problems of a growing population and its needs, the Task Force, headed by Republican Cong. George Bush of Houston, has stressed the effect of overpopulation on America:

Our cities are overcrowded. They have been

termed "sick" because of it. The resulting friction causes social problems and unrest. Our transportation facilities cannot handle the demands of urbanization.

Fortunately, the United States does not have population problems as severe as many other countries. It can support itself. It produces enough food for its citizens and will continue to do so for many years to come. Yet the increased productivity has been achieved only with fertilizers and pesticides. And they can cause ecological damage.

As we gear our technology to the increase in numbers, we severely strain the environment. How much longer can the earth cleanse itself? No one knows. But at the rate the population has been growing (scientists forecast the world's population will double by 2009) we may find out all too soon.

ROSE L. STURDYVIN, WINNER OF VA'S DISTINGUISHED SERVICE AWARD: MODEL FOR THE NATION

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. MATSUNAGA. Mr. Speaker, rendering assistance to disabled veterans is a delicate matter.

According to Rose L. Sturdyvin, who has been supplying such assistance in Hawaii for 21 years, the disabled veteran needs help, but may resent overt sympathy. Says Mrs. Sturdyvin:

You have to be sympathetic without appearing to be, and help them to help themselves.

For over two decades, Rose Sturdyvin has been helping disabled veterans help themselves, for most of that time as National Service Officer of the Disabled American Veterans in Hawaii.

She was recently honored by the Veterans' Administration as a recipient of their Distinguished Service Award, the highest honor bestowed by the agency.

Mrs. Sturdyvin's story was warmly told in a recent article in the Honolulu Star-Bulletin, and I submit that article for inclusion in the RECORD because I believe she stands as a model for the entire Nation:

SHE HELPS VETERANS GET WHAT THEY DESERVE

(By Kathy Gautier)

If your job title is "national service officer" you have some explaining to do at cocktail parties. It isn't like saying, "I'm a doctor," (or teacher or secretary or high wire acrobat.) Everyone knows what they do.

But being a national service officer for the Disabled American Veterans is something else. Not to mention being the only female national service officer in charge of a DAV office in the United States.

"Basically my job is to counsel veterans, their widows and dependents on the benefits available to them," said Mrs. Rose L. Sturdyvin, who IS the only woman to fill this position in the States. She is in charge of the Hawaii DAV office at 680 Ala Moana Blvd.

"I represent them before the rating board of the Veterans' Administration in matters concerning their claims," Mrs. Sturdyvin continued. "That is my job, supposedly, but I usually end up getting involved in their personal problems too. First they come in for their disability claim, then they tell you, their troubles, anything from their children's education to 'My wife left me and I don't know what to do.' "

Mrs. Sturdyvin last month received the highest honor bestowed by the agency, the Distinguished Service Award, for continuing service in 21 years with Hawaii DAV. She has been head of the office for the last 15.

"I came to this office in 1949 as a part-time secretary," the Honolulu born Mrs. Sturdyvin said. "I never intended to stay but somehow the contacts I made, the people—you get engrossed in helping people and you must stay and stay, so here I am."

Besides helping veterans and widows of veterans, there is another aspect of her job which she considers very important—helping the wives of veterans to help their husbands—tactfully.

"Disabled veterans need help," she said, "and the wives are generally understanding and sympathetic. The problem is that the disabled man—even if he's an amputee—resents help and sympathy. You have to be sympathetic without appearing to be, and help them to help themselves."

As a national service officer, Mrs. Sturdyvin is accredited by the Veterans' Administration to bring cases before the VA rating board in the manner of a lawyer before a court. Accreditation also gives her access to the confidential records of the VA.

Mrs. Sturdyvin emphasized that the DAV is not part of the VA, but a separate organization (chartered by the U.S. Congress in 1920) working out of the VA office.

It is not necessary to go through the DAV to obtain veterans' benefits—application can be made through the VA office directly—but Mrs. Sturdyvin feels the DAV performs a necessary function in making families aware of what is available to them and acting as intermediary.

"Some veterans and widows are unaware of the benefits they can get," Mrs. Sturdyvin said, "such as education through the G.I. bill, job training, education for their children. Also, they don't always know their limitations. A widow of a veteran who dies of a service-connected disability is entitled to full death compensation, but if a veteran dies of a heart condition 20 years later, she cannot receive compensation unless she's below a certain income criterion."

Not knowing this frequently causes problems and panic for widows in the following manner, the service officer said:

A widow who is working receives compensation checks regularly from the VA. She doesn't realize that she is not entitled to the full amount she is receiving. At the end of the year the VA sends her an income questionnaire which she fills out. Then it happens—she gets a letter from the VA office telling her she has received an overpayment of $4,000, and asking her to return the money.

"By then of course she has spent it," said Mrs. Sturdyvin. "And usually she is unable to pay."

At this point, if the widow has contact with the DAV office, Mrs. Sturdyvin steps in and takes her case before the board.

"Usually I've been successful in getting a waiver of overpayment so she doesn't have to pay back the money," she said. "In most cases she can't pay because she's getting so little anyway. Some widows don't know about the service and they borrow, beg or try to get the money somehow."

Cases like this are frequent, she said, although most of them run only to sums in the hundreds, not thousands. Most such problems she thinks could be avoided if the widow consulted the DAV office about her rights, obligations and benefits in the first place.

"Some of them have the attitude that because they have lost a husband or son they are entitled to anything the government gives them," she said.

Twice a widow herself, although not a military widow, Mrs. Sturdyvin finds it easy to sympathize with their problems. Since the death of her second husband, Earl Sturdyvin, former deputy tax director for the State, in 1965, she has lived by herself in a condominium at the Kapiolani Bel-Aire. She has no children.

"I keep busy with organization work," she said, "most of it connected with veterans."

She is a member of the State Executive Committee for the Disabled American Veterans, Department of Hawaii, and has served on the DAV's fund raising drive. She is a member of the DAV Auxiliary, Oahu No. 1, a past president and current member of the VFW Ladies' Auxiliary, a member of the Zonta Club of Honolulu, and former president of the same club's Wahiawa chapter.

She lived in Wahiawa when Sturdyvin operated the Town and Country Lodge, a Wahaiwa restaurant now out of business.

"I didn't have anything to do with the restaurant," she said. "I was too busy here, but I do love to cook. I don't do as much now that I'm alone—occasionally I bake pies and things."

The service officer also knits (she has made several dresses for herself) and loves fashion. Before she was first married she operated her own dress shop.

"But I don't have much time for knitting or much else now," she said. "My job is from 7:30 to 4 supposedly, but really from 7:30 until I'm done."

SOVIET NUCLEAR SUPERIORITY

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BOB WILSON. Mr. Speaker, the Sunday, June 28, 1970, edition of the San Diego Union carried an informative editorial reviewing the conflicting views surrounding our position of superiority to the Sovet Union in strategic nuclear arms. This editorial does much to place in perspective the overriding need to support the bolstering of our nuclear arms. The author, Adm. Ruthven E. Libby, USN, retired, attempts to turn the public on to the pressing situation and I feel this commendable effort should be brought to the attention of my House colleagues:

SOVIET UNION GAINING NUCLEAR SUPERIORITY, SAYS WRITER

(By Ruthven E. Libby)

Aesop is probably too square to be read by the youngsters of today, but the oldsters will remember his fable of the race between the hare and the tortoise.

The tortoise won by proceeding steadily, albeit slowly, while the hare rushed ahead and then doped off.

This famous fabler would have been hard put to construct a tale illustrative either of the rise of the Soviet Union to a position of superiority in strategic nuclear arms, or of the mental state of the American public which let this happen. He probably would have likened us somehow to the lemmings.

But, as the House Armed Service Committee said in a report released in late April, "There has not been an arms race; the Soviets have been running at full speed by themselves."

The American public, government officials and our allies have been warned repeatedly of the present situation and informed succinctly of the rapidity with which Soviet superiority is growing. Because of the sources and the number of these warnings, the public cannot possibly plead ignorance. Our refusal so far to act must be ascribed to other reasons.

President Nixon repeatedly has demonstrated his trust and confidence in the members of the armed forces, men and women who have devoted their lives—and often sacrificed them—to defend this nation. As commander-in-chief, he has demonstrated "loyalty down" which is the wellspring of "loyalty up" and the keystone of military morale.

He is unhappy about the tendency of many Americans to view patriotism with scorn, their desire to cut back on national defense, to regard military forces and military spending as inherently evil.

He recognizes the high motives of those who wish to reduce the defense budget in order to improve the domestic environment—but he warns that unless the country has adequate defenses, there may be no environment to worry about. And, he gives us chapter and verse to prove that our defenses, already woefully inadequate, are steadily becoming less so in the face of burgeoning Soviet power.

Both he and Secretary of Defense Melvin Laird have told us that we are now at the point—or very close to it—where we must decide whether we are to continue as a first-class power or settle for a state of subservience to Russia.

Laird has revealed many detailed statistics about the Russians' steadily increasing preponderance in intercontinental ballistic missiles, in SS–9 missiles explicitly designed to knock out our Minuteman silos, in missile-launching submarines, in fractional orbital bombardment systems, in undersea long-range missile systems—in the entire spectrum of offensive first-strike nuclear arms—and in antiballistic missile systems designed to protect themselves against our attack capability.

He has warned us, and the North Atlantic Treaty Organization, that the Soviet momentum in arms development is a grave danger to the survival of the West.

He has warned that if no progress occurs in the Stategic Arms Limitation Talks in Vienna, hard, tough decisions on nuclear arms must be made by the United States, decisions which will require the European members of NATO to shoulder more and more of the burden of their own defense. In return, the NATO defense ministers recognize and are concerned about the continuing growth of the armed forces of Russia.

The House Armed Services Report of April 27 said, "In the last five years the Soviets have increased their strategic offensive missiles from around 300 to 1,500 and have achieved a fourfold increase in the megatonnage of their strategic arsenal.

"The United States, by contrast, is proceeding on a strategic offensive force level that was determined in the mid-'60s and in which no essential change has been made despite a change in the nature of the threat. In the comparable time frame, the United States has reduced its nuclear megatonnage by more than 40 per cent.

"It should be kept in mind that the decision to make MIRV (multiple independently targeted reentry vehicles) a part of the U.S. Minuteman force was made in the 1965 to 1967 time frame. Since this step was considered . . . necessary against the then projected threat, it should be apparent that the continuation of the MIRV and ABM programs are but the continuation of deployment for a deterrent policy adequate to meet the threat as it then existed."

Since this decision was made, the threat has increased many times over. Yet we have done nothing to increase our capability to meet the new threat.

On the contrary, even the continuation of the present limited Safeguard and MIRV programs is in danger from the Senate anti-war coalition.

Last August a 50–50 Senate vote just barely failed to defeat the deployment of even the limited Safeguard program.

This coalition now enjoys a majority in the Senate, and seems increasingly able to convince the public that funding for correction of domestic woes should take precedence over funding for defense, and that money spent on new weapons systems does not really increase our security anyway. Some of the coalition seem convinced that if we bug out of Southeast Asia and unilaterally disarm, peace will automatically descend upon the world.

Perhaps they should be reminded once again of the Communists' dogma that "peace" exists when the Communist takeover of the world is proceeding on schedule, and "lasting peace" will prevail when it has been accomplished.

They also would do well to consider that whatever human frailties may afflict the rulers of the Soviet Union, compassion and failure to take advantage of opportunities to further Communist aims are not included.

Now that the Supreme Court has relieved our young men of any obligation to fight to defend the liberties they have inherited from their forebears who fought to establish and maintain them, our destruction in short order is assured if we fail to bolster our nuclear deterrent to the point that we are not vulnerable to nuclear blackmail.

CONGRESSMAN WYDLER'S 1970 QUESTIONNAIRE RESULTS

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WYDLER. Mr. Speaker, it has become a tradition in the "Fabulous Fourth" Congressional District to send reports of my activities to constituents and, once each year, to ask for their views on important current national issues, by means of a questionnaire. The questionnaire is now in its seventh consecutive year.

I send the questionnaire to every resident who lives in the Fabulous Fourth Congressional District, regardless of party. In this way, I can truly test the prevailing opinion on great national issues.

Once again, many thousands of people of the Fourth Congressional District have answered the questionnaire. The results have been carefully tabulated and I am still busy answering the many comments that have been made to me on the questionnaire returns. The enthusiastic response proves, once again, that people do care about their Government.

I am now sending a copy of the questionnaire results to each home in the Fourth Congressional District. These results show the prevailing opinions in the district.

As for the results, which were obtained mainly in the early spring, three out of every four persons approved the way President Nixon was handling the situation in Vietnam.

More than 90 percent approved a Federal agency to enforce environmental standards, and to make it a Federal offense to send obscene materials through the mails to individuals under 16 years of age. I have sponsored legislation to accomplish both these ends.

Finally, people have rated the control of violence as the No. 1 domestic problem, with pollution and race relations as Nos. 2 and 3.

The complete questionnaire results follow:

RESULTS OF THE SEVENTH ANNUAL "FABULOUS FOURTH" QUESTIONNAIRE OF THE FOURTH CONGRESSIONAL DISTRICT, NASSAU COUNTY, N.Y.

[In percent]

1. The Vietnamese conflict: Do you approve or disapprove of the way President Nixon is handling the situation in Vietnam?

Approve	68.58
Disapprove	20.26
Undecided	11.16

2. The inflationary spiral: Do you approve or disapprove of stronger government controls on consumer spending such as restrictions on the distribution of unsolicited credit cards?

Approve	86.80
Disapprove	9.26
Undecided	3.94

3. The rights of consumers: Do you approve or disapprove of increased budgetary appropriations for the governmental agencies concerned with enforcing food and drug regulations?

Approve	84.72
Disapprove	8.60
Undecided	6.68

Do you approve or disapprove of more stringent regulations with regard to food additives or substitutes?

Approve	88.38
Disapprove	4.38
Undecided	7.24

4. The natural environment: Do you approve or disapprove of specific federal standards for keeping our environment unpolluted with an agency designated to enforce these standards?

Approve	94.80
Disapprove	2.18
Undecided	3.02

5. The welfare reform: Do you approve or disapprove of the President's "family assistance plan"—a federally supported "floor" under the income of American families, irrespective of where they live?

Approve	45.96
Disapprove	33.44
Undecided	20.60

6. The social security system: Do you approve or disapprove of tying social security payments directly to the cost-of-living index?

Approve	80.42
Disapprove	11.22
Undecided	8.36

7. The high cost of college: Do you approve or disapprove of allowing income tax credits for college tuition expenses?

Approve	74.24
Disapprove	19.86
Undecided	5.90

8. The transportation setup: Do you approve or disapprove of federal subsidies to localities with major mass transportation problems?

Approve	63.94
Disapprove	26.68
Undecided	9.38

9. The voting age: Do you approve or disapprove of amending the Constitution to permit 18-year-olds to vote?

Approve	39.66
Disapprove	53.66
Undecided	6.68

10. The post office: Do you approve or disapprove of converting the Post Office Department to a government-owned corporation operating on a self-sustaining basis?

Approve	69.38
Disapprove	16.80
Undecided	13.82

11. The abuse of the mails: Do you approve or disapprove of my bill making it a federal offense to send obscene or pornographic materials through the mail to individuals under 16 years of age?

Approve	93.82
Disapprove	3.34
Undecided	2.84

12. The new federalism: Do you approve or disapprove of the President's proposal for a federal-state partnership with the federal government sharing its revenues with states and localities?

Approve	66.88
Disapprove	12.94
Undecided	20.18

THE DECADE OF THE 1970'S

Please give a numerical rating to these domestic problems indicating the order of priority you feel they should have during the next ten years.

	Number
Race relations	3
Environmental pollution	2
Improved quality of education	4
Population explosion	8
Mass housing	7
Adequate food supply	9
Decay of the cities	6
Mass transportation	5
Control of violence	1
Other	10

CON SON PRISON

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. MOSS. Mr. Speaker, I am happy to inform the House of Representatives that an important news development has been reported from Saigon—important because it reflects another step forward to a more humanitarian world. The Saigon government has anounced that the notorious "tiger cages" at Con Son prison will be demolished—erased from the face of the earth.

I hope the South Vietnamese Government will now move quickly to wipe out the last vestiges of brutality and neglect which have typified many of its other prisons and interrogation centers.

At the same time, we should call upon any Americans in Vietnam who have had a role in this disgraceful picture—whether it be directly or by turning their backs—to cleanse themselves also.

Only then can we demand with a clear conscience that the North Vietnamese halt the inhumane treatment of American and South Vietnamese prisoners of war.

The International Red Cross should now be given open and full access to all prisons and detention centers in Vietnam—both North and South—to determine whether necessary reforms have been taken. They should be allowed to interview any and all prisoners they wish. Their reports should be made public so the full weight of world public opinion may be brought to bear on any remaining injustices.

TEXT OF STATEMENT BY I. L. KENEN

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD the excellent statement of I. L. Kenen on the situation in the Near East before the Subcommittee on Near East of the House Foreign Affairs Committee. Mr. Kenen is the editor of the Near East Report, a biweekly newsletter on American policy in the Near East, and executive vice chairman of the American Israel Public Affairs Committee, a national organization which conducts public action to strengthen United States-Israel friendship.

Si Kenen has held a responsible position in the American Jewish community over the years. Between 1943 and 1947, he was secretary of the American Jewish Conference. In 1947, when the United Nations took up the Palestine question, he was director of information for the Jewish agency's delegation, and between 1948 and 1950, he served in the same post in the first Israeli U.N. delegation.

Si Kenen has been a newspaperman both in Toronto, Canada, and Cleveland, Ohio. A founder of the American Newspaper Guild in 1933, he was the recipient of the Guild's Heywood Broun Memorial Award in 1943.

Si Kenen is to be complimented for his fine work for the security of Israel and the Israeli people and for his dedication to peace.

The statement follows:

TEXT OF STATEMENT BY I. L. KENEN

In the Near East today we are witnessing a grim spectacle.

Twenty-five years have passed since World War II revealed the destruction of some six million Jews, the degradation of the survivors of that holocaust and the desolation of the Jewish people around the world. At that time, the civilized international community reacted vigorously and, like the League of Nations after World War I, the United Nations reaffirmed the right of the Jewish people to establish its homeland in Palestine, with which it has been linked for thousands of years of recorded history.

But today that homeland is in danger and there is an incredible indifference to its fate.

Today the tiny nation of Israel, with her three million people, is defending herself from the attacks of the Arab states and the Arab terrorists who have waged war against her since her establishment in 1948.

Israel is caught up in the crossfire of three wars: the war between the Arab states and herself; the Arab-Arab conflict between the radical Soviet-supported states and the conservative Western-oriented states; the cold war between East and West, where she finds herself defending the interests of the Free World but without its active support.

The crucial Arab-Israel issue is the Arab refusal to recognize Israel's right to exist. From the beginning, the Arab states, in violation of the UN Charter and their UN obligations, have persisted in a state of war against a neighbor. In contrast, Israel has steadfastly offered to negotiate peace treaties.

The United Nations has been powerless to cope with violations and to establish peace.

There is a major reason. The Soviet Union, on the diplomatic and military fronts, backs the Arab states as part of her strategy to dominate the Near East. Whatever may be her intention—whether it is to destroy Israel or merely to exploit tensions to further her own imperialism—is a matter for speculation. What is alarming is that the Soviet Union can pursue this evil policy without effective challenge from any source.

But while the Soviet Union must bear primary responsibility for the long struggle—so costly in life and resources to both Arabs and Jews—our own Government has some share in the blame. Over the years, American policy in the Near East has been equivocal, erratic and inconsistent. We have often reversed ourselves. We have been reluctant to take a strong position. We have been immobilized by doubts and fears. As a result, the Arab states still like to believe that the United States will ultimately abandon Israel.

What explains the U.S. attitude?

First, there is fear that the Arab states may retaliate against America's economic and strategic interests. Second, there is danger that the Soviet Union may gain prestige and power in a polarized Near East. And, third, there are the pressures of special interests concerned with short-term advantage, trying to buy some space and time for themselves by offering up bits and pieces of Israel to appease the Arabs. They like to identify their own interests with those of the United States; they wrap the flag around oil derricks.

These special interests always claim that the United States favored Israel over the Arab states because of pressures exerted by Israel's friends and that we need a more "even-handed" policy.

The record refutes the myth.

The fact is that we have been less than even-handed.

In the beginning, in 1947, the United States reluctantly endorsed the UN proposal for the partition of Palestine. But we did nothing to implement that decision. We failed to help Israel to defend her right to the promised state. Instead, we imposed an arms embargo depriving Israel of military assistance from this country. Then, responding to pro-Arab lobbying in and outside the Government, we reversed ourselves; we tried to set partition aside and to substitute an unrealistic UN trusteeship plan.

Subsequently, the United States recurrently pressured Israel to abandon territories she had won in the struggle with the Arabs. While we gave generous economic assistance to both Israel and the Arab states—and Congress was primarily responsible for initiating that program—we repeatedly refused Israel's requests for arms, even after the Soviet Union began arming the Arab states. We detoured her to other countries. In lieu of arms, we offered guarantees, but these faded into scraps of paper when the time came to carry them out.

We declined to support Israel's pleas for direct Arab-Israel peace negotiations. We failed to challenge the Arab boycott. We imprudently perpetuated the Arab refugee problem by urging unrealistic repatriation proposals and by failing to insist on resettlement. And often, over the years, we seemed to be in competition with the Soviet Union for the favor of the Arab states, and certain charismatic Arab leaders, like President Nasser of Egypt.

THE ATTITUDE OF CONGRESS

Throughout this period Congress has displayed greater realism on these issues.

The restoration of the Jewish national homeland was supported by Congress in 1922 and again in 1945—and in the post-war debate, a large majority of the Senate and

House vigorously favored the same objective; they were reflecting the views of most Americans.

The State of Israel came into being with the help of Congress, which also assisted her remarkable development. It was Congress which initiated the economic aid program for Israel, which called for direct Arab-Israel talks, which advocated resettlement of the Arab refugees, which urged arms for Israel, which sought to combat the Arab boycott, which questioned our unrequited affection for Nasser.

Regrettably, its views have not always been accepted by the Executive Branch.

Congressional support for Israel is denigrated and disparaged by pro-Arab forces, which insinuate that Congressmen yield to pressures. The implication is that a minority are prejudicing America's interests and that American Congressmen sacrifice judgment and patriotism for selfish political ambitions.

Those who circulate this mischievous slander reflect on the loyalty of Israel's supporters and impugn the integrity of America's political leaders.

The best answer to this smear is that history shows that Congress actually has been right on these issues.

Support for Israel has been consistent with the highest interests of the United States from every standpoint.

ISRAEL'S ROLE

Israel has proved to be a situation of strength in the Near East, resisting the attempts of radical Arab states and the Soviet Union to dominate the region. The destruction of Israel would permit anti-democratic forces to gain control over every government, every economic resource and strategic outpost.

The first countries which might face a Soviet takeover are the so-called moderate Arab states where the United States has substantial economic interests.

There are many governments in the Near East—Arab as well as non-Arab—which regard Israel as a balancing factor checking the spread of the radical Arab states which are led by President Nasser and supported by the Kremlin. Whatever may be their public posture, they would not grieve if we strengthened our support for Israel.

But further, and of prime importance, Israel is an eloquent advocate of democracy and freedom, informing many people by its example, by its instruction and by its cooperation that independence for the state is not enough—that the individual must also be free and that men can advance to higher standards in a democratic and open society.

Men will defend their institutions from aggression and subversion if they have a stake in their society as free, equal and secure citizens.

We read in the press about the daily exchanges of fire across Israel's frontiers. What we do not read—and what may some day prove of great significance in man's struggle for freedom—is about the daily exchange of learning.

Israel's program of international cooperation today involves some 80 countries all over the world.

Each year more than 1,000 trainees arrive in Israel for courses in agriculture, labor, economics, science and technology—some 12,000 in the last 11 years.

At the same time, Israel annually sends out some 450 experts to help other peoples; 3,000 in 64 countries in the last 11 years.

The program continues despite the war, at a higher rate in 1969 than in 1968.

THE COMMITMENT

In the last few years many Americans have become more isolationist because of reaction to Viet Nam. Some American diplomats have tried to give the impression that we have no commitments to Israel. This trend toward disengagement is predicated on the claim that what happens to Israel is not of vital interest to the United States.

That view has now been challenged by President Nixon's welcome observations on July 1.

Mr. Nixon and his aides have spoken vigorously on the dangers that now confront the Near East. They warned that the situation there is more dangerous than in Viet Nam, that we need to take action to induce the Russians to pull out their forces.

They made it clear that the United States would not permit the arms balance to be tipped against Israel. They differentiated between the aggressive intentions of the Arabs and Israel's desire for peace.

The White House pointed out that the Soviet combat base in Egypt may transform the Mediterranean into a Soviet sea, obstructing the U.S. Sixth Fleet, putting land bases and oil supplies at the disposal of the Soviet Union and endangering moderate Arab regimes, NATO countries and Iran.

WHAT WE CAN DO

The President's views justify full support for Israel at this time.

1. At the very least we should quickly end our inexplicable tactic of withholding military aid at this critical moment. Such aid should be open so that there is no misunderstanding in either the Kremlin or Cairo. If we are diffident and weak the Arab states and the Soviet Union will be emboldened to push their war further. Symbols and tokens are inadequate to block the Soviet advance.

2. The Administration and Congress should consider what can be done to help ease Israel's economic crisis. We have never given any arms to Israel, and grant economic aid to Israel ended almost a decade ago. Israel has had to pay high prices in life and resources to maintain her security and survival. If the Israel citizen is defending the interests of the United States and the Free World, we should not ask him to carry the entire burden alone.

Israel's defense expenditures have tripled since the six-day war. They will approximate $1.2 billion in the current year—about 22 percent of Israel's gross national product, which is three times the proportionate burden borne by the United States. The foreign exchange debt will increase in 1970 by $570 million, reaching a total of $2.7 billion.

Israelis have heavily mortgaged their future. Israel's per capita foreign debt is the highest in the world; the Israelis are assessed extremely high taxes and forced loans.

Foreign currency reserves dropped to about $400 million by the end of 1969—the lowest figure since 1962—and since the trade deficit has risen because of huge defense expenditures, Israel's reserves are descending to a bare working minimum.

It is obvious that Israel urgently needs large-scale economic assistance from friendly foreign governments to maintain economic stability.

I do not need to recall to this Committee that we have given $239 million in grant military assistance to seven Arab states, and that our economic aid and military aid to Greece, Turkey and Iran has been in the billions.

In addition, we have provided billions in aid to strengthen countries which are on the Sino-Soviet periphery. Now for the first time, Soviet military personnel have moved into the Near East, along with huge quantities of sophisticated armaments.

Today Israel faces a much graver threat than ever confronted most of the countries which have enjoyed massive economic and military support from the United States. In the light of our record everywhere else, it is difficult to understand hesitation to provide Israel with assistance.

3. The direct Soviet military involvement in the Near East should be condemned by world opinion. We should mobilize other nations to join in the demand that Russian military personnel withdraw from Egypt. How can the Soviet Union pretend to be a peacemaker in the Big Four talks in the light of her brazen military operations?

4. We should not condone Arab terrorism nor should we reward and encourage it by diplomatic gestures; we should act vigorously to condemn and to combat it. We should withhold assistance from countries which are involved in harboring or subsidizing El Fatah and other guerrilla groups. There is no glamor or heroism in a movement which "resists" Israel by shooting down passenger planes, by murdering civilians in cafeterias and supermarkets, school busses and bus stations. The international community should impose sanctions against countries which provide sanctuary for terrorists who are involved in hijacking or attacks on planes. We should not permit their planes to land at our airports, nor should our planes land at theirs.

5. Above all, we should insist on a real peace. Arabs and Israelis must negotiate treaties. We cannot be satisfied with halfway measures which fall short of a real peace. We should reconsider our involvement in procedures like the Big Four talks which enable the Soviet Union to try to dictate the terms of a settlement and to entrench itself as the dominant power in the region.

THE RECORD SINCE 1967

When the six-day war ended back in 1967, there was a real chance for an Arab-Israel peace. Many of us believed that two measures were essential:

1. To promote peace, urge the parties to talk over their differences in direct negotiations;

2. To prevent war, keep the Israelis strong enough to deter the Arabs and the Russians from military action.

To its credit, our Government rejected Soviet pressures that we repeat our 1957 blunder. The United States refused to go along with the Soviet-Arab demand that we pressure Israel to withdraw to the 1967 lines. Instead, our Government endorsed the view that the parties themselves must reach agreement on frontiers, as part of a comprehensive peace agreement.

And it is pertinent to note that more recently, in his television interview on July 1, President Nixon rightly emphasized the need for what he called "defensible frontiers."

The resolution unanimously adopted by the United Nations in November 1967 provided for a UN envoy "to proceed to the Middle East to establish and maintain contacts with the States concerned in order to promote agreement and assist efforts to achieve a peaceful and accepted settlement in accordance with the provisions and principles in this resolution."

The resolution meant different things to the differing parties.

1. The Arab states and the Soviet Union have insisted that the resolution obligated Israel to withdraw completely and unconditionally to the 1967 armistice lines.

2. To the United States and to Israel the language and the legislative history showed that the frontiers had to be agreed upon, by the parties.

Both the Arab states and Israel insist that they have accepted the resolution. But while some Arab governments give lip service to the resolution, Syria, Iraq, Algeria and the terrorist organizations have summarily rejected the document and will have nothing to do with it. Their declared objective is the liquidation of the state of Israel as a Jewish state. Arab leaders have emphasized that they do not commit the Arab terrorists and that these organizations have the right to reject the resolution because it does not satisfy their objectives.

Thus, President Nasser told the Palestine National Council on Feb. 1, 1969:

"The UAR appreciates the resistance organizations' stand in rejecting, the Nov. 22, 1967 Security Council resolution, which the UAR has accepted. It is the Palestinian organizations' right to reject this resolution. This resolution may be adequate to eliminate the consequences of the June 1967 aggression but it is inadequate to fulfill the Palestinian destiny."

Can this double interpretation be considered as a sincere acceptance?

The United Nations' attempt to bring the parties together to implement the resolution failed.

The Arabs blamed the Israelis. They insisted that the resolution was self-executing. If the parties accepted its principles, it would then be up to Israel to withdraw completely. But the Israelis insisted that the resolution was not self-executing and that it was up to the UN envoy to bring the parties together to reach agreement.

The Russians supported the Arab position.

Our Government has supported Israel's stand. This was made clear by former Under Secretary of State Eugene Rostow, who has said on a number of occasions that it was the Russians and the Arabs, not the Israelis, who were obstructing implementation.

On March 1, 1969, at San Francisco, Mr. Restow said:

"The basic obstacle to peace has been the continuance and intensification of terrorist activities supported or condoned by some Arab governments, and the policy embodied in the Khartoum formula—'no negotiations, no recognition, no peace'."

And he went on to say that the UAR—

"Bears primary responsibility at this time for the stalemate in the Jarring mission. . . . It says that it is ready to implement the Security Council resolution as a package deal. . . . But thus far, at least, it has not made clear its willingness to implement the provision of the resolution requiring it to make an agreement establishing peace, nor its acceptance of any practical procedure for reaching such an agreement with Israel."

THE BIG FOUR TALKS

The Arabs and the Russians had another objective. Because of the stalemate over interpretation, they insisted that the Great Powers draw up guidelines for the Jarring mission. In actuality, the Arabs and Russians want the Great Powers to impose a settlement. They regard the Big Four as an admirable instrument to formulate such guidelines because the United States is outnumbered and outpressured in that forum.

Long ago, in 1964, Sir Bernard Lewis wrote that the Arabs want an imposed settlement "in which, perhaps, Soviet arms would wield the knife, while Western diplomacy administered the anaesthetic."

The Israelis kept appealing for direct negotiations but Arab sympathizers in this country mocked this demand as an insincere tactic to avoid settlement. They oppose direct negotiations for they consider that it would be a humiliation and beneath Arab dignity to sit with the Israelis.

DIRECT NEGOTIATIONS

The call for direct negotiations is not merely a bargaining tactic. Israel learned in 1949, after the successful Rhodes armistice talks, that agreements could be reached when she met directly with the Arab states.

But in 1949 and 1950 the UN Palestine Conciliation Commission yielded to the Arabs at the Lausanne talks and, as a result, the Israelis were in one hotel, the Arabs in another, the UN commission in a third. The parties never met; the negotiations were stalemated for a year and a half. Israel learned its lesson at that time.

A principle is involved. The Israelis believe that if the Arab states are not ready to meet and to negotiate the issues directly with them, they are not really ready to live in understanding and peace. What the Israelis are looking for is more than uneasy coexistence. What they want is a full peace of sincere reconciliation which will end incitement to hate and which will open frontiers to an exchange of goods and goodwill—a cooperative effort toward security and a higher standard of living for all the peoples of the area.

Years ago I heard the leader of the American Friends of the Middle East tell an audience that our duty was to keep Arab and Jew apart—not to bring them together. This curious line drew some support from the Department of State.

In 1961 the Democratic platform called for direct Arab-Israel talks and Candidate John Kennedy announced that he would try to bring the parties to the peace table.

But in the fall of 1961 the U.S. delegation voted at the United Nations against the so-called Brazzaville resolution, which was initiated by Afro-Asian countries and which called upon the Arab states and Israel to negotiate. That negative vote was a blunder which was criticized by many Members of Congress.

We hoped that this strange opposition to direct negotiations had ended in 1967, but there was no sign of it in the diplomacy of this period.

In the summer of 1967, King Hussein could have reached an agreement with Israel if he had entered negotiations with her. But there is no evidence that the United States encouraged the Jordanians to meet with Israelis at that time.

If Hussein had moved, he might have anticipated and averted the growth of a terrorist movement which now shares control over his country, blocks a peace and incites a never-ending war against Israel. Instead of going to Jerusalem, as he might have done, the Jordanian king elected to go to Khartoum in Sudan, where he and Nasser obtained their subsidies from the oil-rich Arab states to sustain their economies and strengthen their war machines.

Early in 1969, the Administration accepted the French proposal for Four Power talks. This meant that the Arab states would no longer be under any need to negotiate directly with Israel. It also meant that the United States would be under strong pressure from the Russians to accept their interpretation of the resolution.

The United States did in fact retreat on a number of major issues. This became evident in the proposals offered by Secretary of State William P. Rogers in December 1969 for Egypt and Jordan. These proposals critically undermined Israel's position in any future negotiations.

I would like to put into the record (as appendix 1) the policy statement adopted by the American Israel Public Affairs Committee which comments on these proposals.

After the Big Four talks began in 1969, 70 Members of the Senate and 282 Members of the House joined in a declaration which insisted that there could be no half-way measures and that there was no effective substitute for direct talks.

It is no coincidence that just about the time the Big Four began to meet, Nasser was emboldened to denounce the UN cease-fire, which all the parties had accepted, and to open his war of attrition against Israel.

ISRAEL'S ARMS REQUEST

On the Suez front, the Egyptians outgun and outnumber Israel and they inflicted heavy casualties. The Israelis used their highly efficient air arm to silence the Egyptian guns and to reduce the heavy casualty toll.

At the same time, the Israelis renewed their appeal to the United States for additional planes. The French were refusing to deliver Mirage planes which Israel had already paid for. After a long delay, the United States announced in March that it believed that Israel still had a qualitative advantage over the Arab states—even though the Arabs had a four-to-one advantage—and that it would therefore defer action on Israel's request.

This decision was taken despite the news that the Russians had already agreed to install the sophisticated SAM–3s inside Egypt. The State Department said that it had taken this into account, characterizing that new Russian initiative as merely "defensive."

Our country had several reasons:

1. It feared Arab retaliation against U.S. economic interests, specifically the flow of oil and the profits from oil.

2. It hoped that the Arabs might be more receptive to a peace settlement.

3. It hoped that the Russians might similarly curtail the flow of arms.

I do not propose to debate an issue as sacred as oil. But I do recall that both in 1956 and again in 1967, the Arab states realized they were courting economic disaster when they tried to withhold their oil from the West. Moreover, we should bear in mind that Nasser and Hussein would collapse if the oil-rich Arab states had to cut off their subsidies.

Now it is quite possible that the West might suffer short-term losses if it helped Israel, but this short-range prospect ignores the implications of a Soviet diplomatic and military victory. If the Soviet Union is permitted to weaken or destroy Israel, then every state in the Near East will be vulnerable to Egyptian-Soviet subversion and pressures for nationalization.

Israel's existence is *a priori* protection for American oil interests in the Persian Gulf—in Saudi Arabia, in Kuwait and Bahrein, in the Trucial States, and in Southern Arabia and Iran.

The plain fact is that Israel is the only stabilizing factor in the entire Near East—the only factor that keeps the area from flying apart, from becoming a scene of chaos—with the Arab states, goaded on by the Soviet Union, at each other's throats.

Without an Israel, Jordan would long ago have disappeared, swallowed up by either Syria or Egypt, probably the spoils of a war between them. And Lebanon would have gone the way of Jordan. Without an Israel, Nasser and the Soviet Union would be well on their way, through Yemen, to Saudi Arabia and the rich oil fields there and in the Persian Gulf.

Without Nasser's defeat by Israel, he and the Russians would have rushed in to fill the vacuum left by the British at Aden, exposing the oil-rich areas of the southern tip of the Arabian peninsula, such as Muscat and Oman, to their ambitions.

Our negative answer to Israel's request for planes did not produce a more receptive Arab attitude toward the U.S. peace initiative. On the contrary. When Mr. Sisco visited the Arab states, feeling was so high against the United States in Jordan that our Ambassador thought it unwise for Mr. Siso to enter that country.

On the major issue—the arms race—the Russians soon showed that they had no intention of reducing their involvement. Twenty-five days after the Rogers press conference it was learned that the Soviet Union was sending pilots into Egypt. Obviously, the Russian action was not defensive. The new Russian technicians help in the installation and use of the new missiles which provide an air cover for offensive action along the Canal, while the pilots undertake missions against the Israel air force.

Meanwhile, in Washington, there were reports that the Administration was hesitating to say yes to Israel because there were some doubts about the attitude of Congress. There was a swift answer on Capitol Hill. In a remarkable demonstration of support for Israel, a letter was signed or endorsed by 79 Senators—and there were similar communications to the President endorsed by 239

Members of the House. These letters all urged the Administration to provide planes to Israel.

This was not the first such demonstration. Earlier this year, a declaration calling for direct negotiations and military support for Israel was endorsed by 70 Senators and 281 Representatives.

THE NEW PEACE INITIATIVE

Yet the Administration was still reluctant to grant Israel's request. And on June 25, Mr. Rogers announced a new space initiative, the reactivation of the Jarring mission and a 90-day truce period during which neither side would attempt to gain a new military advantage. In order to win acquiescence of both sides, the United States apparently will delay action on Israel's request for planes.

It has been widely reported that the United States is using Israel's application for planes as leverage. It is a carrot to be fed the Israelis if they cooperate with our peace proposals; it is a stick to flay the Arabs if they are not. Accordingly we may expect the Russians and the Arabs to stall for time. They will claim to be receptive to the Rogers peace initiative while they continue to prepare to force Israel to withdraw from the Suez Canal.

Both the Egyptians and the Russians want to reopen the Suez Canal—the Russians particularly because they want to send their fleet and shipping from Odessa in the Black Sea to the Indian Ocean, Africa, India and Viet Nam; the Egyptians because the Canal is a money maker. They can do it if they can wrest control of the air from Israel. They can do it if Israel begins to run out of planes.

Nasser said in Libya on June 25:

"The Egyptian army has completed its canal-crossing training, and once the army has acquired a balance in the air, no power in the world can stop it from crossing.

"We will be able very soon to make up for Israel's air superiority by obtaining a balance in the air because we are training hundreds of pilots and obtaining hundreds of planes."

Why must Israel hold the Suez until there is a peace settlement? Because Israel's frontiers are now much shorter and more defensible than they were in 1967. Israel now, for the first time, has defense in depth. Its front lines are far removed from its populated cities.

Today there are more Arab soldiers on Israel's frontiers than in 1967, but the Israelis do not have to mobilize as they did in 1967, paralyzing their economy, for they not only have distance from the Suez Canal front but they also have the depth of the Canal to bar the advance of Egyptian forces.

Meanwhile, there are inspired dispatches which assure us that Nasser is for a peaceful solution—that he does not really wish to drive Israel into the sea.

But on the very day that Mr. Rogers announced his peace initiative, Nasser said in Libya:

"The Arab masses know that their strength lies in their unity, . . . and unity means the end of imperialism and its collaborators and the liquidation of Israeli aggression and the Zionist entity."

All Arab calculations are predicated on their hope to intimidate the United States into standing aside.

The involvement of Soviet pilots has diminished—if not eliminated—Israel's qualitative superiority. The Israelis have begun to lose planes in their battle to defend the Suez sky—and prevent an Egyptian crossing. And their older French planes are wearing out.

There have been reports that Israel is getting some replacements for planes she has lost. I hope this is true. However, we are told that the United States will not announce the extent of any new military supplies to Israel.

But many are asking, why not? Can we deter the Arabs and the Russians from pressing their war to the finish if we do not put them on public notice that we are standing firmly with Israel? Our past experience with the Russians has shown that they will push aggressively into every corner where they encounter no resistance, that they increase arms shipments precisely when we hold back. If we want to stop Russian penetration in the area, we must move to strengthen Israel at once. That is the most practical and most effective deterrent. If the Russians are determined on reckless military adventure, it must be made expensive for them. They must be made to realize that they will have to pay a very high price.

THE OPPOSITION PRESSURE

Unfortunately, there is a school of thought in Washington which argues the other way. They do not want to make it harder for the Russians. They seem to think that we must placate the Arabs and that we will gain popularity among them if we exercise "restraint" in our support of Israel. This, of course, would make it easier for Nasser and his Russian friends.

I know Arabists in Washington who believe that Israel's victory in 1967 was a disaster for the West, for, they argue, it enabled the Soviet Union to pick up the pieces and reinstate Nasser. Some even suggest that the Soviet Union tricked Nasser into war in 1967 in order that he might lose so that the Soviet Union might come in as his savior.

And today there are some who think that we would be better off if we stood aside and permitted the Russians a free hand in the area. They are paralyzed by an obsession with polarization.

I am not debating here with imaginary straw men. Recently, one of our ex-cryptodiplomats, an ex-CIA agent in Cairo, Miles Copeland, published a book which reveals how he and other CIA agents tried to court Nasser in Egypt.

That book is damaging to the United States because it confirms for many Arabs—as well as for Israelis—that the United States had a major objective in the Near East—to build up Nasser as its protege and agent. It is interesting to note Mr. Copeland's views on Phantoms:

In a letter to the Paris *Herald Tribune*, on June 13, 1970, Mr. Copeland reveals that in a recent visit to Washington he was assured that "the principal fear of the Executive Branch . . . unlike those Senators who are up for reelection—is not what the Soviets are doing in Egypt but of what our own Government may be forced by domestic politics to do for Israel."

Mr. Copeland believes that the Soviet Union wants us to supply Phantoms to Israel because that will enable them to win all the Arabs over to their side, to the prejudice of American interests. The implication of Mr. Copeland's thesis is that any military aid we give Israel really helps the Russians. He attributes this view to American diplomats in Washington. Would he turn this around to argue that the way to stop the Russians is to withdraw all aid from Israel and join the Russians in prayers over Israel's memory?

I believe that such arguments impede progress toward peace in the Near East, and are inimical to American interests. For they feed the flames of Arab intransigence. They encourage the Arabs to believe that ultimately a frightened United States will abandon Israel to Cairo.

THE HOPE FOR PEACE

We should not be pessimistic about the prospects of peace in the Near East. It will take a long time before the Arab states become reconciled to Israel's existence and perhaps new Arab leadership will be needed. But I like to think that eventually the people of the Arab world will come to understand that they can live at peace with Israel and that they stand to gain more by reconciliation and peace than by hatred and war.

We need to have positive goals in the Near East. We need to reaffirm principles which offer new opportunity and hope to the peoples there.

Our current policy appears to be based on negative considerations: the avoidance of dangers, the avoidance of a nuclear confrontation between the Soviet Union and the United States, the avoidance of an interruption in communication lines, the avoidance of nationalization, the avoidance of polarization. But what are we for? We seem to be on the defensive and we seem to be reacting to dangers rather than creating a new climate and environmnt for the acceptance of ideas and ideals cherished by America and the Free World.

There is a vast difference between Israel and the Arab states. All of them struggled and won independence from foreign domination. But the people in Israel have gained something more than independence for the state. In Israel the people achieved freedom and equality for the individual, democratic institutions to enable them to find self-expression, social security to ensure them a stake in their country. This has not been the case in the Arab world where any experimentation with democracy has been short-lived and where people are ruled by military dictatorship or by feudal and dynastic regimes.

I am not suggesting that the way to peace is for us to promote new coups to overthrow the military dictators and thus to establish democratic societies.

But I do submit that it is our task to stand firmly with those who resist totalitarian aggression and who cherish freedom for the individual and democracy for his community. When the ballot box replaces rule by rifle in the Arab Near East, we may hope for a change in the Arab attitude.

If the Arab states and the Soviet Union continue to defy the UN cease-fire and to prosecute their war of attrition against Israel, it is because they believe that they can weaken both Israel and the United States to the point where our country will feel that it must surrender to what the Soviet Union is pleased to call a political solution.

If we can make it clear that we are enlisted with Israel in the struggle for a genuine peace—and that we are enlisted for the duration and will not waver—the time may come when wiser men will come to power in the Arab lands to lead their people away from destruction and war to genuine cooperation and peace with all their neighbors.

APPENDIX II

STATEMENT OF POLICY ADOPTED AT THE ELEVENTH NATIONAL POLICY CONFERENCE OF THE AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE, MAY 11–12, 1970

The alarming intervention of Soviet pilots, soldiers and technicians in the Arab war against Israel has drastically changed the balance of power in the Near East and represents an immediate threat to Israel's existence.

The United States Government should act at once to meet this new danger and to deter the Arabs states and their Russian ally from launching a fourth war against Israel.

We appeal to our Government to provide additional supersonic planes to Israel without further delay. Any postponement will weaken Israel's deterrent military position, materially and psychologically. Delay will make her more vulnerable to attack and, at the same time, fortify Arab resistance to peace negotiations.

The immediate supply of U.S. arms to Israel would serve our national interests and would honor our commitment to preserve the integrity and independence of a staunch democracy.

The people of Israel are carrying a stag-

gering economic burden of war forced upon them by the Arab states and the Soviet Union. We urge U.S. economic assistance to Israel. Israel must not be asked to stand alone and unassisted in her struggle for survival and in the defense of democracy and freedom.

The goal of the United States in the Near East is an Arab-Israel peace. Its achievement requires direct negotiations between Israel and the Arab states leading to binding peace treaties.

Such negotiations have been retarded because Big Power talks have encouraged the Arab states to believe that the Powers would dictate a settlement responsive to Soviet-Arab demands and prejudicial to Israel's security. The militant partisanship of the Soviet Union and France has discredited them as objective participants. Our Government's withdrawal from these talks and their termination would hasten direct negotiations and serve cause of peace.

THE ISSUES

1. The Big Power talks

The Big Power talks began early in 1969 after the United Nations failed to implement the resolution of November 22, 1967, which empowered a UN envoy to work toward an agreement between Israel and the Arab states.

Israel favored direct negotiations to implement that resolution, but the Arab states rejected any talks with Israel, demanding her unconditional withdrawal from all territories occupied in the June 1967 war.

As the Big Power talks began, Egypt repudiated the UN cease-fire on the ground that Israel had refused to withdraw from all the occupied territories.

The November 22 resolution is not self-executing and does not call for total withdrawal. All attempts to make the resolution require total withdrawal were defeated. The intent of the resolution is that withdrawal must be to "secure and recognize boundaries."

For the Big Powers to draft specific proposals prior to negotiations between the parties is contrary to the intent of the resolution.

During the Big Power talks, the United States yielded to strong Soviet-Arab pressures to retreat from its positions with respect to three major issues:

A. Boundaries

In the past, our Government advocated negotiations by the parties to determine boundaries. But in the 1969 proposal for Egypt, the United States called categorically for reinstatement of the old Sinai international frontier. In the case of Jordan, it called for a return to approximately the former armistice lines—with only "insubstantial" changes.

These proposals limit Israel's ability to negotiate secure frontiers. Return to the 1967 lines means retreat to 1967 close-range exposure to terrorism and siege. These lines, far from preventing war, are conducive to war.

Moreover, the U.S. proposals on the Sinai frontier encouraged the Arab states to demand that the United States press for restoring the old international frontier with Syria. This would permit return of Syrian forces to the Golan Heights, making Israel's Galilee and Jordan Valley villages a ready target, and would enable Syria to renew schemes to divert the major sources of Israel's water supply.

B. Jerusalem

While continuing to maintain that Jerusalem should be a unified city and opposing arbitrary return to its partition, our Government now proposes that Jordan become a partner in its administration. Such binational rule is neither equitable nor practical. Jordan merits no reward for 20 years of misrule in Jerusalem, Jordan seized the Old City in defiance of the 1947 UN resolution. Jordan closed the gates to all Jews, as well as to Christian and Moslem Israelis; Jordan desecrated synagogues and cemeteries. Jordan fired the first shots on Jerusalem in 1967—shelling the New City.

Jerusalem is the capital of Israel and must remain a united city. Israel's policy provides safeguards for universal responsibility in matters pertaining to Moslem and Christian Holy Places. Israel had restored the shrines of Jerusalem and opened the Holy Places to peoples of all faiths.

C. Refugees

The United States has proposed that Israel permit the Arab refugees to opt for repatriation to Israel or resettlement in Arab lands, and that an annual quota be fixed between Israel and Jordan.

Mass repatriation would mean the destruction of Israel by a hostile fifth column. The U.S. proposal goes beyond past UN resolutions and feeds irredentist opposition to resettlement, the only realistic solution.

The Arab war against Israel created two refugee problems.

More than 500,000 Jews were forced to leave Arab lands, where they were the victims of discrimination and oppression. Most of them were resettled in Israel.

A similar number of Arabs fled what became Israel in 1948. They fled because Arab leaders destroyed their right to self-determination by starting a war against the UN resolution that would have established an Arab Palestine. While many of these refugees have been settled in other Arab lands, the majority have been denied resettlement and have been exploited as hostages by Arab governments in their war against Israel.

Arab governments must assume their share of responsibility for solving the refugee problem. Arab refugees must be resettled in Arab lands where there is room and opportunity for them to lead useful lives. Israel has announced that she is prepared, even in advance of a general settlement, to enter into international discussions to work out a five-year plan for resolving the refugee problem with international and regional aid.

II. Jews in Arab countries

The remnant of Jews who still remain in Arab countries are victims of imprisonment, torture and murder.

We are dismayed by the refusal of the United Nations to concern itself with this violation of human rights. This indifference becomes all the more shameful in the light of UN preoccupation with unfounded Arab charges of mistreatment of Arabs inside Israel-administered areas. The Arab states must permit Jews to emigrate.

III. Self-determination

Israel's right to self-determination in the ancestral home of the Jewish people was recognized by the international community and confirmed in the decisions of the League of Nations in 1922 and the United Nations in 1947. Israel has been a member of the United Nations since 1949.

Since World War II, 14 Arab states achieved independence and became members of the UN. One of them, Jordan, was awarded a large area of Arab Palestine by the British in 1922, and Jordan seized an additional part of Palestine—the West Bank and the Old City of Jerusalem—in 1948.

The Near East is not a domain reserved exclusively for the Arabs where they may deny self-determination to other nations and veto autonomy and equal rights for minorities. It is a vast region where many peoples, Israelis as well as Arabs, are entitled to self-determination and sovereignty.

IV. Freedom of navigation

International waterways such as the Suez Canal and the Straits of Tiran must be open to the shipping of all nations, including Israel, in conformity with international convention and law. There can be no compromise with this principle.

V. Terrorism

Arab terrorism has gone far beyond Israel's borders. Arab terrorists have attacked civilian aircraft of many flags, murdering and injuring innocent men, women and children. Piracy in the skies must not be tolerated. Sanctions should be imposed against countries harboring terrorists.

From the very beginning, the United Nations has been unable to cope with Arab terrorism—a major cause of the three Arab wars against Israel—which is destroying the possibility of Arab-Israel understanding and which eventually may lead to a fourth war.

CONGRESSIONAL DECLARATIONS FOR PEACE

We call attention to a 1969 Declaration endorsed by 70 Members of the Senate and 282 Members of the House of Representatives calling for direct negotiations as a major goal of American policy.

The 1969 Declaration states:

"We believe that the issues which divide Israel and the Arab states can be resolved in the spirit and service of peace, if the leaders of the Arab states would agree to meet with Israelis in face-to-face negotiations. There is no effective substitute for the procedure. The parties to the conflict must be parties to the settlement. We oppose any attempt by outside powers to impose halfway measures not conducive to a permanent peace.

"To ensure direct negotiations and to secure a contractual peace settlement, freely and sincerely signed by the parties themselves, the United States should oppose all pressures upon Israel to withdraw prematurely and unconditionally from any of the territories which Israel now administers. . . .

"Peace will outlaw belligerence, define final boundaries, end boycotts and blockades, curb terrorism, promote disarmament, facilitate refugee resettlement, ensure freedom of navigation through international waterways, and promote economic co-operation in the interests of all people."

In 1970, Congress reaffirmed these views when a large majority—70 Senators and 281 Representatives—signed a declaration calling for direct negotiations and the provision of arms to Israel.

The American people must persist in the effort to achieve an Arab-Israel peace, which would serve the highest interests of the United States.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

RESOLUTION REIMPOSING THE EXCESS PROFITS TAX

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. O'NEILL of Massachusetts. Mr. Speaker, the Massachusetts House of Representatives has passed a resolution memorializing the Congress of the United States to adopt legislation reimposing the excess profits tax. I support and urge my colleagues to support the reenactment of the excess profits tax on manufacturers of war materiel.

During the last 6 years, the American economy has been suffering from an inflationary spiral. Recently, the American economy has been undergoing a serious recession. Since the inflation and subsequent recession has been a resulting outgrowth of the war in Vietnam, it seems appropriate that the economic burden of the war be shared by the manufacturers of war materiel which reap the benefits of the war. Nonmilitary manufacturers and American taxpayers have been overburdened long enough.

Emergency measures for raising revenues were enacted during World War II and the Korean war. Since the war in Vietnam is costing every American more than the war in Korea, it seems only equitable that the defense manufacturers which profit most from the war be most heavily taxed. Moreover, with no relief in sight for the continuing recession, the need for more revenue is essential. The increased revenues derived from the excess profits tax could be used for badly needed and long overdue domestic programs.

Higher taxes on consumers, taxpayers, and nonmilitary manufacturers is unacceptable despite the need for more revenue. It is unfair for Americans to assume the full economic burden of the war while some manufacturers of war materiel are allowed to accumulate enormous profits. War operations thrive while most manufacturing operations suffer from such adverse economic conditions as tighter money, less demand, and smaller profits with consequent layoffs. We must not allow this intolerable condition to prevail.

If we are to convert our economy from war to nonwar, as we must, we must divert war industries from becoming preoccupied with the potential profits of war. The interests and incentives in industry which support war must be abolished.

As we all know, military appropriations and outlays are enormous. I am concerned and troubled by poor and inefficient management of defense industries, cost overruns, and the accumulation of tremendous profits by defense industries. The excess profits tax could curtail some of the detrimental conditions which exist in our defense industries. The excess profits tax which was used during World War II and the Korean war did not tax the defense industries which were struggling or making reasonable profits. The excess profits tax, as is name implies, only taxes defense industries which make unreasonable or excess profits. It is for the above reasons that I wholeheartedly support the resolution and commend it to my colleagues.

MASSACHUSETTS HOUSE RESOLUTION

Resolutions memorializing the Congress of the United States to adopt legislation reimposing the excess profits tax

Whereas, Emergency wartime measures for raising revenues were enacted during World War II and the Korean War; and

Whereas, In view of the tremendous financial burden imposed by the Vietnam Conflict on the taxpayers of the Commonwealth and of the United States, and for the purpose of alleviating this burden, the emergency wartime measures for raising revenue by imposing the Excess Profits Tax on manufacturers of war materiel should be reenacted for the duration of the Vietnam Conflict; therefore be it

Resolved, That the Massachusetts House of Representatives respectfully urges the Congress of the United States to enact legislation imposing the Excess Profits Tax on manufacturers of war materiel; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Secretary of the Commonwealth to the President of the United States, the presiding officer of each branch of Congress and to the members thereof from this Commonwealth.

House of Representatives, adopted, July 7, 1970.

WALLACE C. MILLS, *Clerk.*

A true copy.
Attest:

JOHN F. X. DAVOREN,
Secretary of the Commonwealth.

JETS TO ISRAEL

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. LEGGETT. Mr. Speaker, we must sell the Israelis the jets they have asked for.

I am not one of those who believes in exporting arms for the sake of our balance of payments, nor do I believe that every underdeveloped country needs a supersonic air force to protect it from communism while its people starve. In my view, it will be no loss if the Cooper-Church amendment causes the military sales bill to be held in conference forever.

Nor do I believe that the present semi-cold war in the Middle East can lead anywhere but to disaster for everyone concerned.

Nevertheless, in the short run we have no choice. If Israel cannot replace her aircraft losses, she will cease to exist. I am inserting the editorial entitled, "The Time To Help Israel Is Now," from the San Francisco Examiner of July 15, 1970, in the RECORD at this point:

THE TIME TO HELP ISRAEL IS NOW

Judging by our mail, most of our readers agree with us that the Nixon Administration should stop stalling and sell Israel those 125 jet warplanes she has been pleading to buy from the United States.

A move to spur such action now has been launched in Congress. Senators Peter H. Dominick, of Colorado, and Henry M. Jackson, of Washington, have introduced the following self-explanatory amendment to the pending Armed Services appropriation bill:

"The Congress views with great concern the deepening involvement of the Soviet Union in the Middle East and the clear and present danger to world peace resulting from such involvement, which cannot be ignored by the United States.

"In order to restore and maintain the military balance in the Middle East, by furnishing to Israel the means of providing for its own security, the President is authorized to transfer to Israel, by sale, credit sale or guaranty, such aircraft as may be necessary to counteract any past, present, or future increased military assistance provided to other countries of the Middle East."

We would like to see this amendment passed quickly and unanimously by both houses of Congress.

If you feel the same way, you can help by clipping this editorial and mailing it to your favorite senator or representative.

DRUG IDENTIFICATION

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ZWACH. Mr. Speaker, I am today introducing legislation to correct a problem which poses a serious danger to the lives and health of all of the American people—the problem of drug identification.

I have just received a report issued by Dr. Charles G. Moertel of the Mayo Clinic. I would like to bring a portion of this report to the attention of my colleagues:

During the year 1968, approximately 100,000 patients were seen at the Mayo Clinic for general medical examinations. The drug consumption of a large random sampling of these patients was surveyed as well as our accuracy in properly identifying these drugs. These figures were then projected to our yearly patient registration. Of the total 100,000 patients, 77,000 were taking one or more oral drugs immediately prior to their clinic examination. 35,000 patients were unable to identify the drugs they were taking. Since many patients were taking more than one drug, there was a total of 51,000 individual drugs which their examining physicians had to attempt to identify. After using all the time and assistance we were able to devote to this task, there still remained 22,000 drugs which we could not identify.

In the time that might be spent identifying five drugs, a complete history could be taken and a detailed physical examination could be performed on one more patient. Consider the fact that we have 51,000 drugs to identify each year. The cost of time spent trying to identify drugs must of necessity be reflected in the medical charges assessed to our patients. But even more important that the economic factors is the influence of 22,000 drugs we could not identify on the quality of medical care we delivered to these patients. For such patients, it is possible that the drug effects may have obscured our diagnostic studies and we may fail to recognize a disease disguised by treatment, or perhaps an illness induced by the drug itself. If we withdrew the unknown drug from the patient we may be taking away vital therapy; if we prescribed therapy in addition to the unknown drug, we may produce a hazardous

compounding of drug effect. Obviously this situation is intolerably detrimental to good medical practice, and this is not a problem peculiar to us alone. It exists in every hospital, clinic, and doctor's office the country over. This situation is both tragic and absurd. It cannot be allowed to continue.

The magnitude of this problem has been recognized and corrective actions strongly urged by medical groups. Although a handful of pharmaceutical companies have voluntarily acted to properly identify their products, it is obvious that this significant hazard can only be adequately eliminated by legislative action.

The lives and health of the American people are at stake, and I believe it is imperative that we act to correct this problem.

OPERATION KEELHAUL

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ASHBROOK. Mr. Speaker, since coming to Congress I have had numerous occasions to criticize the State Department and have recommended a complete review and overhaul of this agency's operations. My preoccupation with State and its much needed revitalization has been acquired over the years and for various reasons. Nor am I the only one by far who has appreciated the need for vast corrective measures. A number of Presidents have been severely critical to the extent that they too called for a revamping. For various reasons and over an extended period of time many others generally recognized the necessity for drastic changes in a department which handles vital international affairs for this Nation.

The case of Operation Keelhaul serves as an excellent illustration of why knowledgeable people have had grave misgivings down through the years with operations at Foggy Bottom. Although taking place in 1945, the depressing story of Operation Keelhaul emphasizes the crying need for vast changes, changes much talked about but to this date not effected.

Briefly, Operation Keelhaul was the code name for the operation which repatriated between 1 and 2 million Ukrainians and Russians, against their wishes, to Russia at the end of World War II. They were prisoners of war and civilians who had fallen into the hands of American liberating forces in Germany, having fled Russia during the war and who were at the end of the war residing in camps in Germany.

Mr. Julius Epstein, now with the Hoover Institution on War, Revolution and Peace at Stanford University, has for years sought to have made public the details of this wholesale repatriation but has been stymied in securing the necessary documents from the Department of Army on the basis of national security reasons. Just recently the Supreme Court refused to review his case for release of the documents, thus ending the avenue of judicial action.

In May 1956, Mr. Epstein appeared before the Senate Internal Security Subcommittee and testified as to State Department involvement in the Keelhaul operation. One can appreciate the magnitude and importance of this case when one recalls the Soviet treatment of its own people, the actual millions of human beings brutally murdered since 1917. It is not at all surprising that some of the repatriates commit suicide rather than return to certain slavery or death. History will probably never record the eventual fates of these unfortunate people, but the record should be made straight as to the sickening and pathetic role played by the United States in this tragic episode. It was for this reason that Mr. Epstein has worked for years to bring the full story to public attention.

I insert at this point excerpts from Mr. Epstein's testimony of May 16, 1956, before the Senate Internal Security Subcommittee and a letter by him appearing in the June 25 issue of the Arizona Republic:

TESTIMONY OF JULIUS EPSTEIN

Mr. MORRIS. Mr. Epstein, will you give your full name and address to the reporter?

Mr. EPSTEIN. Julius Epstein, E-p-s-t-e-i-n, 470 Fourth Avenue, New York, N.Y.

Mr. MORRIS. Where were you born?

Mr. EPSTEIN. Vienna, Austria.

Mr. MORRIS. When did you come to the United States?

Mr. EPSTEIN. On March 9, 1939.

Mr. MORRIS. What is your business or profession?

Mr. EPSTEIN. I am a writer and a foreign correspondent for German newspapers.

Mr. MORRIS. Now, Mr. Epstein, do you have any knowledge of the subject matter which was discussed by a man who has testified before this subcommittee as Mr. Andriyve, about people being in the United States on false papers?

Mr. EPSTEIN. Yes, sir.

Mr. MORRIS. Will you tell us what you know about that and the sources of your knowledge?

Mr. EPSTEIN. This is a very old problem in the United States. There are now 20,000, at least, maybe thirty or forty thousand, former Soviet nationals living in the United States.

They had to falsify their identities in Europe, mostly in German refugee camps, in order to escape forced repatriation behind the Iron Curtain.

Mr. MORRIS. Will you explain that, please?

Mr. EPSTEIN. Yes; I would like to quote our President, who mentioned their case in his wonderful message to Congress, on February 8, 1956, when he said:

"A large group of refugees in this country obtained visas by the use of false identities in order to escape forcible repatriation behind the Iron Curtain; the number may run into the thousands. Under existing law, such falsification is a mandatory ground for deportation. The law should give relief to these unfortunate people."

These are the words of President Eisenhower on February 8.

I understand there is now an amendment pending in Congress which would deal with this problem. But I want to point out——

Mr. MORRIS. Who are these people; these people, I mean, that are the subject of this beneficial legislation?

Mr. EPSTEIN. Ukrainians, Russians, some Poles. You know that according to the Yalta agreement, we had to repatriate these people. They didn't want to go back, even those who were deported by Hitler to Germany from Russia. Millions of them preferred to stay in Germany.

But we repatriated between 1 and 2 million of those people, prisoners of war as well as civilians, against their wishes.

Now, many who are afraid of this tried to save themselves by falsifying their identities.

Mr. MORRIS. Will you explain that? They wanted to conceal the fact that they were Soviet citizens; is that right? Because if they were Soviet citizens, they would have been forced to return to the Soviet Union.

Mr. EPSTEIN. Yes; without any regard to their individual wishes.

Mr. MORRIS. You say there were more than a million people forced to return?

Mr. EPSTEIN. Yes.

Senator JENNER. On what basis were they caused to return?

Mr. EPSTEIN. Well, on the basis of the Yalta agreement on the exchange of prisoners of war and liberated civilians—it was signed under the protest of our Acting Secretary of State, Joseph C. Grew, who, wired our Secretary of State Stettinius, then in Yalta, and warned him against a conclusion of any agreement which could enforce repatriation of prisoners and civilians.

Mr. MORRIS. How do you know that?

Mr. EPSTEIN. I studied very carefully the Yalta documents and I came across a little note, "not printed." A certain document, surprisingly, does not appear in the Yalta papers. So I asked Secretary Dulles to release this diplomatic note to me.

A few days later, I got a letter signed by the Chief of the State Department of Historical Division, Bernard Noble, dated April 28, 1955:

"DEAR MR. EPSTEIN: Enclosed is a copy of the Department's note of February 1, 1945, to the Soviet Embassy relating to prisoners of war. You requested this in your letter of April 11, 1955.

"You also requested a copy of any answer to the message of February 9, 1945, from the Secretary of State, Edward R. Stettinius, Jr., to Acting Secretary Joseph C. Grew. No record of such an answer has been found."

Now, this note, which was presented to the Washington representative of the Soviet Union, Mr. Novikoff, on February 1, 1945, exactly 3 days before the beginning of the Yalta Conference, explained to the Soviet Government which wanted repatriation of Soviet prisoners then in the United States, captured in German uniforms.

Now the State Department, over our Acting Secretary Grew's signature, told the Soviet Government that—

"We will never return these people. We cannot repatriate these people, because this would be a gross violation of the Geneva Convention. They were captured in German uniforms, and the Geneva Convention does not permit us to look behind the uniform."

Mr. MORRIS. What is the date of the Grew letter?

Mr. EPSTEIN. The note was presented to Mr. Nicolai V. Novikoff on February 1, 1945.

Mr. MORRIS. And you say that note was a protest that we would never return these people because a repatriation would be a violation of the Geneva Convention, and that was dated February 1, 1945?

Mr. EPSTEIN. Yes. I quote:

"I would like to outline to you the reasons why, in the opinion of the American authorities, these persons cannot, without presenting serious difficulties, be delivered for shipment to the Soviet Union. It appears to the appropriate American authorities, who have given most careful consideration to this situation, that the clear intention of the Convention," meaning the Geneva Convention of July 27, 1929, "is that prisoners of

war shall be treated on the basis of the uniforms they are wearing when captured, and since the containing power shall not look behind the uniforms to question the citizenships."

Senator JENNER. So our State Department then was aware that returning these refugees by force after 1945 was a violation of the Geneva Convention.

Mr. EPSTEIN. Absolutely. This was not only a violation of the Geneva Convention, but also a complete reversal of the old American tradition of ready asylum for political exiles, because we also repatriated by force hundreds of thousands of civilians.

If you will permit me to read a very illustrative letter which American Ambassador Grew wrote me on September 19, 1955, I will do that.

"I appreciate very much the facts you have set forth about the part I tried to play in the forced repatriation issue. I remember one occasion when as Acting Secretary of State I learned that a ship had already sailed from one of our ports carrying prisoners for forced repatriation. I gave immediate orders which resulted in the ship being held up and returned to port for a thorough screening of those sailors who wanted to return and those who wanted to stay. The figures of the result of such episode are not now before me."

Mr. MORRIS. Now, Mr. Epstein, you read a while ago in the first letter from Mr. Dulles that such a note is not in existence?

Mr. EPSTEIN. Yes; but it doesn't appear in the Yalta papers although the Yalta papers contain about 64 documents which were issued before the beginning of the Yalta Conference. There is a reference in one of the cables to this note. Since there is a little footnote "not printed," I had a feeling that might be an important document which proves in official State Department terms that the forced repatriation of about 2 million anti-Communists, prisoners, and civilians, was a violation of the Geneva Convention.

We do not know who overruled at Yalta this well-established State Department policy.

Senator JENNER. When did you get this letter from Secretary Dulles? Would you read the date of that again?

Mr. EPSTEIN. Yes; on April 28, 1955.

Mr. MORRIS. Mr. Epstein, in other words, may I be sure I understand your position?

You have learned now of the existence of a letter from Mr. Grew dated February 1, 1945, in which he unqualifiedly stated the position of the United States Government to be that they would never permit the return of these 2 million people back to the Soviet Union.

Mr. EPSTEIN. This is not quite correct, Judge Morris. This note deals with the Soviet prisoners of war captured in German uniforms fighting on the west front.

Now, for instance, a lot of people, many other Soviet nationals enlisted in the German Army in the hope that they would get the opportunity to fight against the Soviet Union.

Mr. MORRIS. Were there 2 million of those people?

Mr. EPSTEIN. There were about 1 million of those people, 900,000 to 1 million.

Mr. MORRIS. And Mr. Grew made the point that the United States cannot return them because it would be a violation of the Geneva Convention.

Mr. EPSTEIN. It would be a violation of the Geneva Convention, and also jeopardize our own people. We had many foreign nationals in our own Army who were in fact in exactly the same position. They fought in American uniforms, but they were Germans. We did not want to jeopardize their fate.

Mr. MORRIS. The Yalta Conference was held a few days after that?

Mr. EPSTEIN. Yes; the Yalta Conference opened on February 4, 1945.

Mr. MORRIS. Do you know what happened at the Yalta Conference to overrule the United States position on this matter?

Mr. EPSTEIN. Yes. When it became clear that the British and Soviet were going to sign the agreement on the exchange of prisoners, Grew sent a telegram to Stettinius and told him:

"We cannot sign this; we just delivered an official diplomatic note to the Soviets which explains that we cannot forcibly repatriate Soviet nationals captured in German uniforms.

"In additionl to that, we have many prisoners who were not citizens of the Soviet Union on September 1, 1939."

This is the essence of Grew's telegram of February 7, 1945.

Two days later, Stettinius wired back and informed Grew that we have to sign it because we want our boys, who are now in prisoner-of-war camps in Germany in the Soviet Union, back as soon as possible; that we cannot deal with the intricacies of the Geneva Convention; that we cannot deal with these considerations of humanitarian principles in the Geneva Convention.

Mr. MORRIS. In other words, we acquiesced in yielding up the terms of the convention?

Mr. EPSTEIN. Yes. General Dean signed for the Americans and General Grizlov signed for the Soviets the now famous Yalta agreement on the exchange of prisoners of war and liberated civilians.

Mr. MORRIS. How many people were sent back?

Mr. EPSTEIN. That is a very difficult question, Judge Morris. Nobody knows the exact figure. Maybe the Pentagon knows. But everything concerning the repatriation is highly classified, even now.

I had a lengthy correspondence with the Secretary of the Army and the people in G–2 and so forth, and I couldn't get one paper because they told me they are all highly classified.

In one letter they wrote me, they said that a representative of the Department of the Army will confer with Senator Eastland about the declassification of the key paper. This is a paper called Operation Keelhaul.

Senator JENNER. At this point I want to direct our staff to communicate with the proper officials to ascertain what are the true facts in the position of the United States Government in the breakdown of the Geneva Convention.

Mr. MORRIS. It shall be done, Senator.

Mr. EPSTEIN. May I give you the exact number and title of this document? This is a highly classified document. The number is 383.7–14.1, Forcible Repatriation of Displaced Soviet Citizens, Operation Keelhaul.

This document was issued for internal use only, and is now deposited—at least I hope so—in the Historical Records Section of the Army in Alexandria, Va.

Mr. MORRIS. Is that Keelhaul?

Mr. EPSTEIN. That is right. It was named for one of the most barbaric punishments in the old British and Dutch Navies.

According to Webster, it means:

"To haul under the keel of a ship, either athwartships or from bow to stern, by ropes attached to the yardarms on each side. It was formerly a punishment in the Dutch and British Navies, and a method of torture used by pirates."

[From the Arizona Republic, June 25, 1970]

"TOP SECRET" CLASSIFICATION UNWARRANTED

EDITOR, THE ARIZONA REPUBLIC:

The denial by the Supreme Court to review my legal action "Epstein vs. Resor," as reported in the press June 15, makes the miscarriage of justice in the lower courts final.

By this denial, the Supreme Court declared the "Freedom of Information Act" a dead letter.

The Supreme Court's denial raises the question: "What is the American Congress going to do?"

"Human Events" of May 30 carried an article, "Is the 'Freedom of Information Act' really working?" by Carol D. Bauman. The writer of this article lists "Epstein vs. Resor" among the key lawsuits based upon the "Freedom of Information Act."

Miss Bauman writes: "The appellate court upheld the decision of a lower court denying release of the document. However, Freedom of Information specialists say that the case was significant since it was the first time the appellate court clarified its authority to determine whether information is being 'secret' legitimately.

"Some congressmen are calling for a congressional investigation into the continued classification of the Operation Keelhaul files."

The two lower courts found that non-disclosure was warranted in the interest of foreign policy and national security. They miraculously found so without ever having seen and examined a single document of the three volumes comprising "Operation Keelhaul" (whereby refugees from communism were forcibly returned at the end of World War II).

Material classified on the ground of protecting foreign policy and national security is indeed exempted from disclosure but only if disclosure would really harm American foreign policy or national security, in other words, only if the documents in question were rightfully and properly classified.

According to the "Freedom of Information Act" and a sworn affidavit submitted in court by the act's sponsor and author, Congressman John E. Moss of Sacramento, the intent of Congress was to give the courts the "widest latitude" to examine classified documents—in camera—in order to find out whether they had been properly or improperly classified.

The army itself proved beyond the shadow of reasonable doubt that it was improperly classifying "Operation Keelhaul" documents when the Secretary of the Army, Stanley Resor, the defendant in my lawsuit, suddenly released four documents from "Operation Keelhaul."

Not a single one of these documents warranted a Top Secret classification. In one of these documents, ALCOM, Rome asked for more Russian interpreters. This purely technical document bore for more than 23 years the stamp "Top Secret!"

Why? Would its declassification have resulted in breaking of diplomatic relations, in an outbreak of war or in compromising intelligence data, the only valid reasons for Top Secret classification as laid down by President Eisenhower in his Executive Order 10501?

The American Civil Liberties Union of Northern California stated in its Brief of Amicus Curiae in Support of a Petition for a Writ of Certiorari submitted to the Supreme Court of the United States:

"Finally, the judgment (of the lower courts) makes no sense. How can judges decide important questions without having the crucial facts before them? There was no compelling national interest to be served by precluding not only disclosure but also review in camera of the file.

"A citizen's right to know, a historian's scholarly research, the open disclosure policy of Congress, and the interest, vital to our judicial process, of having an adequate record to review were all sacrificed for a false sense of security."

JULIUS EPSTEIN,
Hoover Institution,
Stanford, Calif.

CONTRIBUTIONS OF THE ARKANSAS WATER RESOURCES RESEARCH CENTER

HON. DAVID PRYOR

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. PRYOR of Arkansas. Mr. Speaker, Mr. Aubrey E. Harvey, the director of the Water Resources Research Center of the University of Arkansas, has recently corresponded with me regarding his interest in the enactment of H.R. 15957 and S. 3553, which would amend the Water Resources Research Act of 1964 to increase the authorization for water resources research and institutes. I am pleased to learn that the Water and Power Resources Subcommittee of the Senate Committee on Interior and Insular Affairs, chaired by the distinguished Senator from New Mexico, the Honorable CLINTON P. ANDERSON, held a hearing on July 20 on this proposed legislation.

I would like at this time to direct to the attention of my colleagues a summary of the contributions of the Arkansas Water Resources Research Center. The center is in great need of the increased allotment proposed in H.R. 15957 and S. 3553 if it is to meet the research needs of the State of Arkansas. I hope that the Congress will give its speedy approval to this legislative measure.

Under leave granted to extend my remarks, I include the summary:

ARKANSAS WATER RESOURCES RESEARCH CENTER

CONTRIBUTION OF CENTER TO WATER RESOURCES TRAINING

Number of students trained with equipment and supplies purchased totally or in part with P.L. 88-379 funds—312.

Number of Master's Thesis published in water related fields—15.

Number of new courses in water related fields added to the University of Arkansas curriculum as a result of the Center's involvement in water resources research—12.

Number of reports and journal publications—26.

INVOLVEMENT OF CENTER IN PUBLIC AFFAIRS

The Director of the Center is a member of the Governor's Coordinating Committee on Water Resources under the Office of the Governor.

A member of the research staff has served as chairman of the Arkansas State Committee on Stream Preservation.

Research personnel have served as consultants to a project at the Arkansas Medical Center concerning rapid changes of oxygen level in measurements of reaction rates of flavoenzyme oxidazes.

Research personnel have consulted with the United States Fish and Wildlife Service in regard to the measurement and control of oxygen consumptions by fish in a controlled environment.

Research personnel have consulted with personnel at the Robert S. Kerr Water Research Center at Ada, Oklahoma, in regard to measurement of water quality parameters.

Research personnel have made presentations before the Arkansas Water Resources Planning Committee and have testified before the Parks and Recreations Sub-Committee on Senate Interior and Insular Affairs Committee concerning the need for National Park Service protection of the Buffalo River in northern Arkansas.

Research personnel have consulted with Southwestern Research Associates regarding the study of the dispersion of chloride into Lake Catherine, Arkansas as a by-product from a vanadium mining operation and have also cooperated with Greers Ferry National Fish Hatchery in regard to controlling manganese concentration in the water supply.

Research personnel have consulted with the Water Conservation Service concerning the effect of impoundment on small watershed impoundments constructed under P.L. 566.

Research personnel have cooperated with the University of Arkansas at Little Rock in advising Arkansas Power & Light Company in their long-range study of thermal pollution in conjunction with their nuclear power plant scheduled for operation by 1972.

Research personnel have played an important role in developing water quality standards which were submitted to the Federal Water Pollution Control Administration by the Arkansas Pollution Control Commission.

One publication of the Center concerning sub-surface irrigation has received considerable interest including several international inquiries.

Reports resulting from one project of the Center have been used directly by the Arkansas-Oklahoma Compact Committee. The Committee was formed with the specific purpose of apportioning the joint water resources of Arkansas and Oklahoma.

The Center co-sponsored with Ouachita Baptist University a seminar on the DeGray Reservoir, an impoundment constructed on the Caddo River by the U.S. Corps of Engineers. This seminar was attended by fourteen federal, state, and local agencies and organizations.

WILL ECONOMIC POWER WITHOUT ARMS BE POSSIBLE?

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. MATSUNAGA. Mr. Speaker, the wonder that is the economy of Japan since World War II may present the world with a political model as well as an economic one.

A recent editorial in the Honolulu Star-Bulletin pointed out that Japan plans to be an exception to the historical rule that no nation retains economic power without becoming a military power as well. If she can succeed at this, Japan will have lighted the way for other nations toward a path of competition in trade rather than in weapons systems, saving billions of dollars and perhaps an entire civilization.

In the hope that my colleagues and others readers of the CONGRESSIONAL RECORD will find it instructive, I include the full text of the Star-Bulletin editorial of July 4, 1970, at this point:

POWER WITHOUT ARMS

The relative calm in Japan as the government announced its intention to continue in effect its Security Pact with the U.S. is in marked contrast with the stormy demonstrations 10 years ago when the pact went into effect.

The 1960 riots were so violent, it will be recalled, that they prevented a visit to Japan by Dwight Eisenhower, then President of the United States.

A press service dispatch totalling up the number of antipact demonstrators all over Japan as approximately 750,000 conveys a wrong impression of a violently outraged minority.

The truth appears to be that the demonstrations, while substantial, fell far below the hope of their sponsors who had hoped they would be the most dramatic in history. Instead, they were somewhat mild even by contrast with last November's demonstrations over the reversion of Okinawa. They reflect the same mood as last December's elections in which the government won overwhelming support.

For a few years, at least, the U.S.-Japan Pact now seems likely to continue undisturbed. That, hopefully, will be long enough for the U.S. to get itself out of Indochina.

Implicitly, the Security Pact states the intention of Japan not to rearm itself and to rely instead on U.S. protection.

Prime Minister Sato said this week that world history shows that no nation has ever remained an economic power without also becoming a military power.

Japan intends to be the exception to that rule, he said: "It will be a stupendous task but we will do it." Japan's neighbors and the U.S. have almost as much at stake in this effort as Japan itself.

If Japan pulls it off, other nations may also see a way out of the disproportionate arms spending in which the world is now engaged.

CHEYENNE FRONTIER DAYS: THE DADDY OF 'EM ALL

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WOLD. Mr. Speaker, an estimated 150,000 people from the 50 States and many nations are journeying to Cheyenne, Wyo., for the biggest happening of the year—Cheyenne Frontier Days. It started Tuesday and runs for 6 big days.

The "daddy of 'em all," Frontier Days is the biggest, best, and oldest rodeo in the world. This is its 74th edition.

Frontier Days come on the heels of another event conspicuous in our history: the 80th anniversary of Wyoming statehood on July 10. There is such a close connection between Frontier Days and Wyoming's existence as a State that I think it would be appropriate to have an excellent article written by Pat Hall of the Wyoming Tribune-Eagle, included in my remarks. The article makes clear that statehood was celebrated with as much gusto in Cheyenne as Frontier Days is today:

GREAT DAY 80 YEARS AGO

(By Pat Hall)

"Wyoming is out of the woods," read the telegraph message from Delegate Joseph M. Carey in Washington. In a few days the world will see the new American star."

The date was June 27th, 1890 and the occasion was the passage by the Senate of the bill to admit Wyoming as the nation's 44th state.

Flamboyant editor Edward A. Slack printed

the next day's edition of his Cheyenne Sun in red and blue ink and an enormous rooster crowed on page one—"Wyoming—Ain't She a Bird?"

According to Slack's account, the day had been an unusual one for Cheyenne. Dark clouds had covered the sun and rain poured down in the early afternoon "making the superstitious think it was an omen of disappointment." Crowds had gathered downtown all day, waiting for news of the Senate's vote, the House already having passed the statehood bill on March 27.

"At exactly 3:30 p.m. the dark clouds rolled away from the heavens," Slack wrote, "and the sun shone brightly on the city as the news flashed over the wires from Washington that Wyoming had become a state."

Editors in those days couldn't resist such things as "omens". Looking back through the collection of statehood editions in the files of the Cheyenne Newspapers, it is difficult to sift the real news out of columns of type about omens, political recriminations and damnation of the opposing newspapers.

Slack's reporting of what happened in town is interesting, though. According to him, runners were dispatched from the various newspaper offices to all parts of the town to post copies of the telegram from Carey.

"Then pandemonium seemed let loose. Hundreds of men and boys could be seen running in every direction, shouting and gesticulating as though a cyclone had just struck the city, but their smiling faces soon dispelled any idea of a calamity.

"In less than five minutes, the streets were thronged with people," continued Slack. Boys and men blew bazoos and amid the din of revelry hundreds were hurrying in different directions with bundles of bunting, flags and fireworks. Soon the business portion of the city was a flowing mass of looped streamers and flags and fireworks exploded with repeated concussion."

Slack was an intelligent man who couldn't resist the opportunity to display the prowess of his vocabulary. Reading Slack is a bit like reading today's Times magazine—there are always two or three words in every issue that you've never heard of.

He tells about women and children wearing tri-colored sashes to celebrate the event. "A number of ladies looked very pretty," said Slack, "by arranging the parallel lines of red, white and blue in the form of a vichu on the bosom of their breasts and wearing miniature flags on their cuffs."

The Cheyenne Ramblers rated a mention, too. "They entwined the wheels of their machines with the national colors, eliciting universal admiration. Each member of the club carried a rifle from which they would continually fire blank cartridges like a feu-de-joie as they rode around the business streets in single file."

If you were one of the great unwashed who didn't know what a "vichu" was or what a "feu-de-joie" looked like, it really didn't matter on the statehood celebration day.

Cowboys who were in town galloped back to outlying ranches with the news, Slack reported, and the Union Pacific band started an impromptu parade while the Swedish society carried an enormous stuffed eagle. Other stuffed eagles seemed to appear from everywhere.

"At 4:40 the artillery from Fort Russell galloped up to the state capitol under the command of General Mizner . . . and quickly unlimbered near the south entrance. Forty-three rounds were fired in the direction of the city to represent the number of states in the Union."

Evidently the artillery were poor shots or they were firing blanks as Slack doesn't report that the city suffered any damage.

The exuberant editor goes on to tell about "young and middle-aged persons playing leap-frog on Ferguson Street" (Carey Ave.) and "buggies and carriages . . . burning red fire."

As the day wore on into night, a huge bonfire was started at the corner of Ferguson and 17th Sts. and a number of politicians made speeches from the balcony of T. A. Kent's bank "but it was impossible to distinctly understand what the speakers said on account of the noise."

"At the end of each short speech, the band played a patriotic air, the gun club fired a volley and rockets ascended into the sky."

Slack reported that "Mr. Madison and five or six other colored gentlemen came on the platform and sang an impromptu song about Wyoming's statehood to the tune of "Marching Through Georgia."

In the window of Rhodes & Troxell's store was displayed another stuffed eagle on which was inscribed "Wyoming—No. 43—You Bet, She's a Bird."

(The celebrants were a little premature in naming Wyoming as the 43rd state to enter the Union. A week later, President Harrison signed the bill to admit Idaho seven days before he got around to signing the Wyoming bill.)

Even the Cheyenne dogs showed their patriotism. Slack said many had sleigh bells tied to them and "in some cases their hair was dyed with a succession of red, white and blue circles."

All in all, it was a great day for Wyoming—a day that took about a month to live down.

The city was quiet on July 10, the day that President Benjamin Harrison signed the bill admitting Wyoming into the Union. They were too busy organizing the "official" celebration which came on July 23.

That was the Cheyenne of 80 years ago when the state was admitted into the Union. Though we might say it a bit differently today, the sentiment is still the same: "Wyoming—Ain't She a Bird."

In 1897, only 7 years after our achieving statehood, Frontier Days was held for the first time. Since then the Frontier Days has grown right along with Cheyenne and has helped to give our capital city a prominent place on the American map. It brings together in one arena the top rodeo performers in the business and the best animals in the world. The lure is the largest purse in rodeo and daily crowds of over 20,000 people.

Frontier Days is more than a rodeo; It is a week of thrills, chills and excitement for everyone from the youngest to the oldest. There is something for everyone, including free chuckwagon breakfasts, exhibitions, Indian dancing, parades, and concerts, and just about anything you can name. Frontier Days is a week to relive the frontier spirit which is the basis of so much of America's heritage. It is a bridge between our past and our future.

The whole community of Cheyenne pitches in to put together Frontier Days. To me this is a most significant aspect of the week—watching the whole community working together to make certain that the visitors receive the best hospitality it is possible to offer.

Despite all the other attractions, however, the rodeo is still the feature. More than any man in the West the competing cowboy has a close kinship with the pioneer who opened up this vast land of ours and won it against what seemed like impossible odds.

A rodeo event is more than just a sport; it is an individual test of a man's courage, strength, and pure cussiveness.

In many ways the cowboy of today is markedly different from his ancestor. He is as much a businessman as a horseman. He is as likely to use a jeep, a trailbike or helicopter as he is to use a horse, but still he faces many of the same hardships and trials as did the cowboy during the 19th century. The genesis of the rodeo is in the real everyday workings of the cowboys of the frontier. The summer, 1970, issue of the Good Life in Wyoming contains an article entitled "Rodeo, the Last Frontier." It is an excellent summary of the origins of the rodeo:

Trail drivers were tough men and independent, living in the saddle and sleeping under the open sky. They drove their cattle through drought and dust and blizzard across some of the wildest country man has pioneered.

They knew their cattle as a craftsman knows his tools. They carried guns—to kill coyotes and other range varmints—but they worked with a rope on a horse.

Occasionally they'd hit a trail town where they blew off enough steam in the brief moment of history to keep generations of fiction writers busy ever since. A visit to town, in the long monotony of their lives, was an unexpected pleasure.

Between towns they made up their own amusements. These men created recreation that was typically tough. The hands of the different cattle outfits coming together on the trail bet their scant wages on their skill at riding rank broncs or roping longhorn steers. It was a rough sport for short stakes. The prize—the cowboys' own bets—was held in a hat.

Frontier Days has a long and glorious history. Generations of spectators, generations of riders, have participated in this annual event. I believe, however, this year's edition is going to be the biggest and the best of them all. So I urge everyone with free time and the desire to relive a bit of the Old West to hit the trail for the Daddy of 'Em All in Cheyenne, Wyo.

WHERE WE STAND—LET US LOOK AT THE RECORD

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. FOREMAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following:

WHERE WE STAND—LET US LOOK AT THE RECORD

During my recent travels throughout New Mexico, and in reviewing the thousands of returns from my second annual legislative questionnaire, three of the most-often mentioned topics of concern are (1) inflation, (2) the war in Southeast Asia, and (3) domestic disorder. I am pleased to respond with a current review and status report on these subjects.

THE DOMESTIC ECONOMY

The efforts of this Administration, and of a good many Members of Congress from both political parties, has been to taper off inflation without the kind of recession that usually follows the type of wild spending spree our nation experienced in the Sixties.

Although unemployment has been up, close to 5%, it is considerably below the 6.7% unemployment of 1961, just prior to the build-up of troops in Vietnam, and the 5.1% average of 1960 through 1968. Noteworthy, however, is the fact that total employment has hit an all-time record high

this year—over 79 million Americans are employed—total employment is now almost 1½ million higher than it was one year ago.

Real per capita disposable income—what individuals have available to spend after allowing for taxes and inflation—was at the highest rate in history in the first half of 1970.

We are now passing through the first phase of a successful campaign against inflation in which the rate of inflation ceases to rise. As a part of this campaign, the Administration has slowed down the expansion rate of federal spending drastically, from an average rate of 12 percent a year in 1965–69 to 7 percent in 1970 and is projected at less than 4 percent in 1971. This has enabled us to keep the budget close to balance in fiscal 1970 and fiscal 1971. We have achieved this restraint on total federal spending while recognizing important new national priorities with respect to the environment, welfare, transportation and other purposes. To do this, it was necessary to keep firm control of defense spending, cutback less urgent nondefense programs and press for greater efficiency throughout government.

The Administration and Congress have not run for the superficially attractive solution of wage-price controls, which no one would want one month after they had been put into effect. The runaway spiral was set in motion by the "new economics" political doctrine of the 60's which promised lower taxes and inaugurated record federal deficits that sank the government into a *59 billion dollar hole*—culminating in the record-staggering $25 billion deficit in 1968 alone. The new Administration initiated sound, responsible economic policies that gave us a fiscal year 1969 surplus of $3 billion, reduced the annual increase in federal spending by better than 50%, and curbed the *causes* of zooming prices.

SOUTHEAST ASIA

When President Nixon took office last year he inherited a full-scale war in Southeast Asia in which approximately 550,000 U.S. military personnel were engaged. Whether this was a "moral" or "legal" war was irrelevant. It existed and he had to deal with it intelligently. Since that inheritance, he has completely changed the direction, through his Vietnamization Program, from an American responsibility to a South Vietnamese responsibility. There's already been an overall reduction of 125,000 Americans who were committed in Southeast Asia, and there'll be 150,000 less by Spring of next year . . . meaning that one-half of the boys committed to the War in 8 years of the two previous Administrations will have been brought home in the first 2 years of the present Administration.

For all practical purposes, we will have withdrawn our combat troops and the forces remaining will be primarily supply and logistics units. That means we shall have disengaged and turned the fighting over to a well-trained, million-man South Vietnamese Army. Our noncombatants also can come home as rapidly as this Army develops its capability to handle the supply and logistics tasks. There is no magic button here in Washington, unfortunately, which can be pushed and accomplish all these things instantly.

The action against the North Vietnamese Communists in the Cambodian sanctuaries proved extremely crippling to their future ability to interfere with our orderly withdrawal and with the South's developing strength. In excess of 8 million rounds of small-arms ammunition have been seized and over 20,000 mortar rounds, and 2,000 land mines. This and other captured Communist war material will not be used to carry out Hanoi's orders to its troops in the sanctuaries to kill no less than 100 Americans per week to keep the political pressure on Washington. It will not be available to keep us pinned down in a faraway place we desperately want out of.

Some people believe that passing the so-called "amendment to end the war" will make the war disappear. By withholding money, the amendment would restrict how, where, and when action is taken to get us out of this mess. Frankly, I think the idea is dangerous and counterproductive. Hamstringing the President will not make it any easier or quicker to cool off the fighting and breathe life into the Paris talks.

In expressing these views I do not feel at all omnipotent. I have a decent respect for those whose outlook differs from mine. I am prepared to change my mind if I am in error and trust that other people would do likewise. Pride is not important here—ending the war and keeping out of others is. I think it is also important in the dialog on this subject to maintain a decent respect for our country and its President and a balanced perspective on the deep responsibilities of North Vietnam for perpetuating the war.

RESTORATION OF SOCIAL ORDER

I have discussed what we've done to try to bring about order in an inflated economy, and order in a divided world. As I see it, order is not an end in itself . . . it is the only democratic way to more freedom, more justice, more change for the better. In that spirit, let's briefly examine the third great area of concern in which order is necessary . . . in the way we live with one another.

There can be no greater evidence of disorder in society than the sound of gunfire on a college campus. From Kent State to Jackson State, we have seen the citadels of reason turn into fortresses of force, and as a result the nation has witnessed the saddest semester in the history of American education.

However, let's keep the campus disruptions and student violence in the proper perspective. Out of some 2400 colleges and universities in this country, only about 400 of them experienced disruption and/or suspension of the academic program during the recent student unrest . . . and reliable research on the situation reveals that less than 10% of the students were involved in the campus disorders at the 400 affected institutions. Therefore, only 10% of 1/6th, or 1/60th . . . less than 2% are creating 100% of the havoc and doing a grave disservice to the reputation of the overwhelming majority of our fine, respectable young Americans of today.

The hope for order in our society goes far beyond the intelligent use of restraint in keeping the peace; it draws upon the natural revulsion to violence on the part of the American people, which is making itself felt now within every group and each generation.

In this regard, it is a hopeful sign that the increase in crime in this country is beginning to come under control. We are still far from our goal, but the explosive rate of increase has been cut in half. Moreover, one of the greatest contributors to crime, the drug traffic, is under an attack the likes of which it has never seen before. This attack is especially directed at the suppliers and pushers who prey most viciously on our young people.

We've established an effective, capable Department of Justice that is letting the hopheads, thieves, crooks and criminals understand that crime doesn't pay like it once did . . . and as a result of President Nixon's appointments, for the first time in 13 years, the Supreme Court is becoming independent of the activist, liberal coalition which has ruled it.

There are times when the shock of tragedy awaken a people to the futility of violent actions and reactions, and I believe we are going through such a time. This Administration is doing everything that responsive leadership and cool judgment can do, to hasten the return to the tradition of peaceful change.

Admittedly, there are still many perplexing problems and challenges, domestically and internationally, confronting us today. They can be resolved. But it won't be easy. It won't be done by negative thoughts, nor by tearing down, nor by protesting and condemning. It will be done by level-headed, strong-willed, resolute builders who constructively work to make their dreams come true. It can, and will, be done by a united, proud, patriotic nation of free people in a Great Constitutional Republic known as the United States of America.

ORDERLY MARKETING LEGISLATION AND DOMESTIC PRICES

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. WYMAN. Mr. Speaker, some rather extreme statements have been made by free trade enthusiasts claiming that the enactment of orderly marketing legislation (the Mills bill as an example) will result in sharply increased retail consumer prices in the United States. One gross example of this has been the claim that passage of this legislation would result in a 30-percent retail price increase for shoes and shirts.

This is not only a ridiculous exaggeration but it is impossible to avoid the impression that it is designedly misleading in its origination. In this connection I commend to the review of those concerned with this legislation a reading of the following fact sheet of the American Footwear Manufacturers Association and the Tanners Council of America:

AMERICAN FOOTWEAR MANUFACTURERS ASSOCIATION, TANNERS' COUNCIL OF AMERICA, INC.

FACT SHEET ON PROPOSED IMPORT QUOTAS FOR SHOES

Why quotas? In less than ten years shoe imports into the United States have increased by 1,000%. In 1969 shoe imports reached 195,480,000 pairs and accounted for 33.7% of U.S. domestic shoe production which was the lowest in 15 years. Imports caused the closing of 72 shoe factories with the loss of more than 19,000 jobs. Shoe imports have increased in 1970 by another 20%. There is one cause and only one cause for the import flood—low wages abroad. Shoe factory workers in foreign plants earn from ⅓ to 1/10 the wages paid in the U.S. Shoe imports represent the export of jobs from U.S. labor intensive industries, jobs that are crucially needed both in urban and rural areas.

The quota principle. Would imports of foreign shoes be stopped or eliminated by the Bill which the House Ways & Means Committee approved? Nothing of the kind. It is only proposed that imports be held to the high water mark of 1967–1969. Furthermore, the House measure would actually permit further growth of imports as the domestic market grows. Foreign shoes, in other words, would remain a major competitive factor in the U.S. It is absolutely not protectionism to urge a realistic foreign trade policy for the U.S.

Import quotas and prices. It is absolutely false to imply or suggest that import quotas will raise prices to consumers. This view is false because shoes will continue to be imported in huge volume and because the domestic shoe industry is an exceedingly competitive business with more than adequate capacity.

Workers and consumers. Without payrolls there can be no consumers. Factory closings in shoes, leather, textiles or other products due to imports will mean reduced income and lower consumption. It is in the interest of the entire economic community, including retailers, newspapers and service industries, to keep production going, to maintain job opportunty in shoes and similar industries. Factory payrolls are the base for consumption. Shoe factories are the major source of payroll income in hundreds of U.S. communities. Shoe factories employ workers from groups where unemployment is greatest.

Productivity. Productivity in the U.S. shoe industry is the highest in the world, 25% to 35% greater than anywhere else abroad. But productivity cannot cross the gap of low wages and child labor in Japan, Taiwan, Hong Kong, Italy, Spain, Greece, Brazil, and a score of other countries. Labor is a principal cost in making shoes. Therefore, wages and working conditions which are not tolerated in the United States give foreign producers a tremendous cost advantage.

Style. The claim has been made publicly that foreign shoes have more style. The fact is that every important new style in the shoe business originates in the U.S. However, new models and patterns designed in America are sent abroad to be made by cheap foreign labor. This has been publicly admitted by shoe manufacturers who assert that they are helpless unless import quotas help equalize competition.

Foreign retaliation. One of the most misleading charges against the principle of reasonable import restraints and quotas is the spectre of foreign retaliation. The truth is foreigners do not buy U.S. products from love of principle. They buy what they need in the U.S. because they cannot get it elsewhere. Therefore, to talk of retaliation or trade war is a gross deception. Furthermore, the U.S. Government has finally acknowledged that almost all other countries discriminate against the U.S. with artificial and illegal trade barriers. For years the U.S. has vainly appealed to countries such as Japan to lower obstacles against U.S. goods. Secretary of Commerce Maurice Stans has pointed out that the U.S. has been the victim of one-sided trade policy and he described the U.S. as "Uncle Sucker."

Adjustment assistance. Opponents of quota legislation argue that other means of relief should be given industries and workers oppressed by imports. They have argued "adjustment assistance" and retraining programs. Question—If jobs are exported on a huge scale for what jobs will workers be retrained? There is only one answer and that is the relief rolls. It is not the answer needed by a viable economy.

The dollar. When the giveaways are deducted from U.S. exports, the U.S. foreign trade balance is in the red. Shoe imports alone added $500 million to the deficit in 1969. If imports are not restrained through reasonable and moderate means the dollar and the U.S. economy will be in jeopardy.

NOTHING SUCCEEDS LIKE FAILURE

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. ROBISON. Mr. Speaker, I am including in the RECORD an article written by one of my favorite political humorists, Art Buchwald. In his column titled "Nothing Succeeds Like Failure" Mr. Buchwald points, in his inimitable style, to some of the difficulties and attitudes that seemingly pervade governmental sponsorship of programs—somehow those that fail stay with us, and those that have succeeded.

Mr. Buchwald's article follows:

NOTHING SUCCEEDS LIKE FAILURE

(By Art Buchwald)

WASHINGTON.—Despite everything you hear about the government, there still is plenty of money around for projects. The only trouble is, you can't get the money if you have a plan that works. You must have one that no one is quite sure about.

A vice president of a university system in the Northeast told me about this the other day when he applied for money for a program to run summer schools for students who needed extra help to get into college. He told me the meeting went something like this:

"Now Mr. Haas, from our records it appears that you're applying for a grant of $500,000 to run a summer school project for students hoping to keep up in college this fall."

"That's correct. We did it last year, and it was tremendously successful. We only had a drop-out rate of 6 per cent."

"Oh, dear me. Then this is not a pilot project."

"No, it's not. We know it works."

"What a shame."

"What do you mean what a shame?"

"Well, if this were a pilot project the government would be happy to finance it. We'd be very interested in knowing what could come of it. But we can't very well give money to something that's been proven, can we?"

"Why the hell not?"

"Mr. Haas, we're very willing to fund any educational program, providing it's iffy. But we can't throw money away on things that work. Congress would have a fit."

"I still don't understand why."

"I'm trying to explain it to you. The government has no trouble getting money from Congress for study programs. It doesn't matter how much it costs to study a program; we can get the funds. But once we ask for money for a program that has been proven successful, Congress will be committed to it, and nobody wants that, do they?"

"Suppose that I request the money for a study project. Could I get it then?"

"But you already told me that it had worked last summer. There's no sense having a study of it, if it works."

"I'm not trying to be difficult, but this is a very important project. We are taking in people this year who are going to find it tough sledding to keep up in the fall unless they have some remedial work."

"It's not our fault that your program worked last summer, Mr. Haas. Had it failed, we would have given you a blank check to try it a different way. But we're not here to dole out taxpayers' money for programs that have succeeded.

"Just the other day a superintendent of a public system in the Midwest tried a visual-reading program for his state which turned into a disaster. The machines didn't work, the teachers couldn't handle them and the students lost interest after the first five minutes.

"Did we cut him off? We did not. We gave him another $10 million to find out why he failed. And we're ready to pour in another $10 million if he doesn't come up with answers. The whole department is excited by the failure."

"Is there any possible way of getting the $500,000, knowing what you know about my program?"

"I hardly think so, Mr. Haas. You've made a mess of things as it is. Our motto in the government is 'Nothing fails like success.'"

EXPLOITATION OF FISHERY RESOURCES

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. O'NEILL of Massachusetts. Mr. Speaker, the Massachusetts House of Representatives has passed a resolution memorializing the Congress of the United States to request the President of the United States to convene an international conference to discuss the unrestrained exploitation of the fishery resources in international waters adjacent to our Atlantic shoreline. Since the fishing banks of our country have been seriously depleted by the unrestrained exploitation of this resource by European mobile fishing fleets, I strongly support resolutions memorializing Congress to request the President to convene an international conference.

I call this deplorable condition to the attention of my colleagues because something must be done to correct this development. Overfishing by foreign fleets has seriously threatened our fishing industry and the livelihood of the fishermen. I am concerned about the fate of our fishing industry, and I am determined to rectify the plight of our fishermen. The fishing industry and the fishermen are not the only Americans afflicted by the increasing overfishing by foreign fleets. The American consumers will also suffer because of the higher price they will have to pay for imported fish and fish by-products. By having to import more fish, our economy would suffer because we would be increasing an already massive balance-of-payments deficit.

I will use the Massachusetts fishing industry as an example of the predicament of the domestic fishing industry. Intensive overfishing by the Soviet fleet has steadily decreased the supply of haddock since 1965. Without conversion to an alternate species—the pollock—the Massachusetts fishing industry would have been destroyed and mass unemployment of fishermen would have resulted. The development of an alternate species has been expensive; however, and complications still exist. To perpetuate the fishing industry, research, promotion of the new species, and vessel conversion had to be accomplished in a short period of time. These problems are indicative of the difficulties facing our domestic fishing industry.

One of the most acute problems has been the inability of our domestic fishing operations to compete with the sophisticated and nationally supported fishing industries of Japan, Korea, and the Soviet Union.

Futhermore, I would like to reemphasize an incident several months ago when Russian ships were dumping untreated sewage and garbage off of our coast. This sewage and garbage eventually came to rest on our shoreline, polluting our beaches and scenic coast. If an international conference were con-

vened, it could study and hopefully deter such disgraceful acts.

It is for the above reasons that I strongly support the following resolution and commend it to my colleagues:

MASSACHUSETTS HOUSE RESOLUTION

Resolutions memorializing Congress to request the President of the United States to take the necessary steps to convene an international conference to discuss the unrestrained exploitation of the fishery resources in international waters adjacent to our Atlantic shoreline

Whereas, The New England fishing banks have been seriously depleted by the unrestrained exploitation of this resource by the European mobile fishing fleets; and

Whereas, The International Commission for the Northwest Atlantic Fisheries has been unable to contain this exploitation; and

Whereas, The traditional employment of the Massachusetts fisherman is threatened with extinction because of this exploitation; therefore, be it

Resolved, That the Massachusetts House of Representatives urges the Congress of the United States to request the President of the United States to take the necessary steps to convene an international conference to establish the rights of its national to the fishery resources of the super-adjacent waters of the continental shelf adjacent to our shores and to establish such rules and procedures as are necessary to conserve, protect and perpetuate these fishery resources for the benefit of the citizens of the United States; and be it further

Resolved, That a copy of these resolutions be sent by the Secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of Congress and to each member thereof from this Commonwealth.

EPITOME OF HYPOCRISY?

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1970

Mr. BOB WILSON. Mr. Speaker, misinterpretation in all forms is an ever-increasing problem. I have just read a fine article in the Joe Holmes Commentary in which the author, Mr. Holmes, cites examples of this common occurrence. Furthermore, some misconceptions of the city of San Diego, which I represent, are clarified. I should like to share this perceptive article with my colleagues by including it in the RECORD:

Some years ago I worked on a newspaper which had quite a campaign against drunken driving. Always a worthy cause. The kicker in the story was that most of the editorials were written by a newsman who used to stumble into the office completely smashed every evening after he drank his dinner.

It was the epitome of hypocrisy.

My newsman friend comes to mind quite clearly these days as I watch various publications take up the banner of integrity, credibility.

Last Sunday the Los Angeles Times had a lead story on Page One of the United States allegedly paying various Asian nations to send troops into South Vietnam.

The headline said the U.S. was paying mercenaries to fight the war. Obviously the headline was designed to paint the U.S. in the most unfavorable light.

Webster's Dictionary defines a mercenary as one who "serves merely for pay or gain".

If I had not read the rest of Sunday's Los Angeles Times I might have accepted that organization of the loftiest ideals and possibly felt that they had the right to criticize the U.S. Government of dollar diplomacy.

However, the Los Angeles Times has little room to be a critic of mercenary tactics.

One of the supplements to that same Sunday publication was a tabloid section listing all the honor students in Los Angeles schools. On the surface it certainly looked noble. That is, until you turned to page eighteen of the forty page section where the "A" students of such high schools as Sylmar, Taft, Temple City, University City, Torrance are listed and, you find a half page advertisement.

The copy in the advertisement reads, in part, as follows:

"Mr. Bow Herbert, managing general partner and the Employees of the Horseshoe Club and the Gardena Club congratulate the A Students in the Los Angeles area."

The Horseshoe Club and the Gardena Club are two wide open poker gambling palaces, lavishly furnished and very similar to Vegas and Reno establishments on a smaller scale.

Apparently the Gardena gambling clubs wanted to plant the seed early with Los Angeles youth and, obviously the Los Angeles Times was pleased to cooperate.

It is most difficult to believe that an advertisement of a gambling operation in a high school student section was for any reason but "merely for gain".

Who is the Los Angeles Times to accuse anyone else of being mercenary?

I am unhappy over the expenditure of seventy-five cents for the magazine San Diego, a state of mind caused by the lure of a headline.

The headline: "Union-Tribune—Zapped Again".

I read the story and now I know how the housewife purchaser of a movie magazine feels. Her headline lure was likely, "Exclusive—Jackie Kennedy's New Love"—the story on the inside, of course, was about a new puppy in the Kennedy family.

San Diego Magazine's article had about as much zap as an argument between Supervisors Walsh and Austin.

The local magazine devoted one-third of the article to reprints of somewhat ancient writings by Newsweek and Time Magazine. In the trade that would be termed "lazy writing" but since the author was the publisher, there is little likelihood he will be fired.

The remainder of the article deserves some analysis.

San Diego Magazine thought it amusing that Midnite Cowboy won the Academy Award and great acclaim while the Union-Tribune refused to admit it, or any other rated movie existed.

There is no question that production of motion pictures has taken on a new tone today. Filth, degeneracy, abnormality have taken over much of the motion picture industry and any media organization which refuses to perpetuate it is simply reflecting the will of this community.

Stripping away all of the surrounding prose, San Diego Magazine blames the Union and Tribune for:

Not publishing publicity or advertisements about "Midnite Cowboys" and X-rated movie with heavy overtones of homosexuality.

We can only presume that San Diego Magazine is in favor of that new motion picture industry which has "glamourized" abnormality and lewd behavior.

Contributing to the perpetuation of a national image of San Diego as a city dominated by right wing crackpots and the Navy.

If there is any perpetuation of this erroneous concept it is done by such publications as San Diego Magazine.

For the fact that the Navy installations here were shut down, jobs rolls slashed and big vessels of the fleet ordered to other West Coast ports.

What a fantastic distortion of facts. Maybe two Navy offices have been moved, there have not been any major San Diego Naval Installation moved or closed! The Navy payroll in San Diego today is just as great as it was one year ago and as far as major Navy ships are concerned if the writer will check the bay next week he will see the Kitty Hawk back after repairs and the aircraft carrier Ticonderoga arriving to make San Diego her new homeport. If the U–T is being held responsible for the Navy actions in San Diego, they deserve some credit.

For failing to negate the Nixon's administration anti-narcotics activity, Operation Intercept and Operation Cooperation because, in the thinking of San Diego Magazine the Union-Tribune should be dominating National Policy.

In effect what the Magazine says is that the Union-Tribune did not oppose narcotics enforcement. This is some kind of a ridiculous charge.

There are many other areas where San Diego Magazine takes the U–T to task and the points are just as thin.

As a matter of fact, bad journalistic practices, inadequate reporting, suppression, all of the charges filed by the magazine against the newspaper are rampant throughout their very attack.

SENATE—*Thursday, July 23, 1970*

The Senate met at 11 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Lord most holy, our hearts, our words, and our records are open to Thee. Have mercy on us when we have failed Thee. Add Thy blessing to our work which is well done. Now give us faith to count on Thy mercy for the past and to count on Thy power for the future.

Make us Thy servants. Lead us through the crucial decisions of this day so that we may lead others into a brighter tomorrow.

In the name of Him whose life was the light of men. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 23, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Wednesday, July 22, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent to limit statements to 3 minutes in relation to the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

NARROWS UNIT, MISSOURI RIVER BASIN, COLO.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 992, S. 3547, and that in its consideration the Pastore rule of germaneness not apply.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered and the bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. S. 3547, to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colorado, and for other purposes.

The ACTING PRESIDENT pro tempore. Is there objection to the consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 3, after line 13, insert a new section, as follows:

SEC. 6. The interest rate used for purposes of computing interest during construction and interest on the unpaid balance of the capital costs allocated to interest-bearing features of the project shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction is initiated, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable obligations, which are neither due nor callable for redemption for fifteen years from date of issue.

At the beginning of line 23, change the section number from "6" to "7"; and on page 4, line 6, after the word "the", strike out "unit and for future costs, if any, incurred under section 2 of this Act." and insert "unit."; so as to make the bill read:

S. 3547

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Narrows unit, heretofore authorized as an integral part of the Missouri River Basin project by section 9 of the Flood Control Act of December 22, 1944, as amended and supplemented, is hereby reauthorized as a unit of that project for the purposes of providing irrigation water for one hundred and sixty-six thousand acres of land, flood control, fish and wildlife conservation and development, public outdoor recreation, potential future municipal and industrial supplies, and for other purposes. The construction, operation, and maintenance of the Narrows unit shall be subject to the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 388, and Acts amendatory thereof or supplementary thereto). The principal features of the Narrows unit shall include the Narrows Dam and Reservoir, fish hatchery and rearing ponds, acquisition and development of the existing Jackson Lake Reservoir, including some rehabilitation of Jackson Lake Dam, for public outdoor recreation and fish and wildlife enhancement, and other necessary works and facilities to effect its purpose.

SEC. 2. The conservation and development of the fish and wildlife resources and the enhancement of recreation opportunities in connection with the Narrows unit shall be in accordance with provisions of the Federal Water Project Recreation Act (79 Stat. 213).

SEC. 3. The Narrows unit shall be integrated physically and financially with the other Federal works constructed under the comprehensive plan approved by section 9 of the Flood Control Act of December 22, 1944, as amended and supplemented.

SEC. 4. For a period of ten years from the date of enactment of this Act, no water from the unit authorized by this Act shall be delivered to any water user for the production on newly irrigated lands of any basic agricultural commodity, as defined in the Agricultural Act of 1949, or any amendment thereof, if the total supply of such commodity for the marketing year in which the bulk of the crop would normally be marketed is in excess of the normal supply as defined in section 301(b)(10) of the Agricultural Adjustment Act of 1938, as amended, unless the Secretary of Agriculture calls for an increase in production of such commodity in the interest of national security.

SEC. 5. To the extent that project water constitutes a supplemental irrigation supply, the provisions of the Act of June 16, 1938, relating to the Colorado-Big Thompson project in Colorado are hereby made equally applicable to the Narrows unit.

SEC. 6. The interest rate used for purposes of computing interest during construction and interest on the unpaid balance of the capital costs allocated to interest-bearing features of the project shall be determined by the Secretary of the Treasury, as of the beginning of the fiscal year in which construction is initiated, on the basis of the computed average interest rate payable by the Treasury upon its outstanding marketable public obligations, which are neither due nor callable for redemption for fifteen years from date of issue.

SEC. 7. There is hereby authorized to be appropriated for construction of the Narrows unit as authorized in this Act the sum of $68,050,000 (based upon January 1969 prices), plus or minus such amounts, if any, as may be justified by reason of ordinary fluctuations in construction costs as indicated by engineering costs indexes applicable to the types of construction involved herein. There are also authorized to be appropriated such additional sums as may be required for operation and maintenance of the unit.

Mr. ALLOTT. Mr. President, I wish to express my appreciation to the chairman of the Subcommittee on Water and Power Resources (Mr. ANDERSON) and to the chairman of the full Committee on Interior and Insular Affairs (Mr. JACKSON), for their cooperation and assistance in moving this measure through the committee and bringing it before the Senate.

I also wish to express my thanks to Gov. John Love, the Colorado Water Conservation Board, the Lower South Platte Water Conservancy District, the Bureau of Reclamation, the U.S. Army Corps of Engineers, and the many other interested officials and individuals without whose support and assistance this legislation would not be before us today.

As Senators well know, one of the basic principles of the reclamation program is the detention and storage of surplus or flood flows of water for release and use at times when water is in short supply, thereby putting what would otherwise be waste water to a beneficial use. The project to be authorized by S. 3547 is the exemplification of that principle.

The Narrows unit was originally authorized by the Flood Control Act of 1944, as part of the comprehensive plan for the Missouri River Basin project. However, Public Law 88–442 in authorizing appropriations for the continued prosecution of projects authorized under the comprehensive plan, deauthorized projects not already started with the following language:

No part of the funds hereby authorized to be appropriated shall be available to initiate construction of any unit of the Missouri River Basin project, whether included in said comprehensive plan or not, which is not hereafter authorized by Act of Congress.

Consequently, a new feasibility study had to be conducted. Public Law 89–561 authorized the Secretary "to complete his analysis and studies and to process reports" on proposals which he anticipated would be substantially complete by June 30, 1966.

The Narrows unit will provide an average total supplemental supply of 140,700 acre-feet of water annually to the project service area. While this additional supply will not completely fill the average annual shortage of 178,000 acre-feet experienced in the Lower South Platte Water Conservancy District, it will move the area very close to a State of water solvency.

It should be noted that no distribution system is being authorized by this legislation. The distribution system already exists and was constructed by the users. This existing distribution system will be used to deliver the water made available by this project.

The physical features of this project include: the Narrows Dam and Reservoir and a fish hatchery. The fish hatchery will take advantage of the unique opportunity afforded by the construction of this dam and reservoir to enhance the recreation, fish, and wildlife enjoyment potential. There is a distinct shortage of recreational opportunities of the type afforded by large bodies of water in the area, as is characteristic of the high plains area of the Nation.

I am informed that the State of Colorado has indicated its intent to agree to administer the areas of the unit for recreation and fish and wildlife benefits, and will bear one-half of the separable costs attributable to those functional benefits, plus interest during construction. The State would also provide for the annual costs of operation, main-

tenance, and replacement in accordance with the provisions of the Federal Water Project Recreation Act.

Periodic floods have caused major damage in the Lower South Platte Valley. The last and perhaps the most serious flood in the history of the State, occurred in June of 1965. Many lives were lost, and property damage, both public and private, exceeded the half-billion dollar mark, statewide. I first introduced legislation to reauthorize the Narrows unit early in the 90th Congress, but due to the fact that there was considerable reconsideration of how best to control the great flood flows that have originated in the Bijou Creek Basin, action on that measure was deferred. The Narrows Dam and Reservoir is on the main stem of the South Platte River, but it is upstream from the confluence of the Bijou Creek and the South Platte River about 3 or 4 miles, and, therefore, provides no control of the Bijou Creek Basin. However, the main stem of the South Platte River poses a serious threat of flood damage due to its very large drainage area. The Narrows Dam will provide substantial protection from this threat.

Mr. President, in my March 4, 1970, introductory statement on this legislation, beginning on page 5970 of the RECORD, I set forth in detail the chronology of events which led to the abandonment of the earlier proposal to construct a diversion channel from Bijou Creek into the Narrows Reservoir, and I wish to incorporate that statement by reference at this time.

Mr. President, the Narrows unit will provide supplemental irrigation water for 166,370 acres of fertile farmland in northeastern Colorado. But, more than this, by insuring a more stable and adequate supply of water, it will help to stabilize the economy of the area. Investments in stabilizing the economies of the towns and small cities of our Nation yield not only economic benefits but many social benefits. A stable economic base is a natural antecedent to a better quality of life for the residents of a given area. In this sense the Narrows unit is an investment, and I believe it to be a very good investment in the future of not only northeastern Colorado and its people but the Nation as well.

By standards generally applied to such multipurpose reclamation projects the Narrows unit enjoys a good benefit-cost ratio—1.89 to 1 for total benefits. However, if one considers the benefits in human terms, its benefit-cost ratio is even more favorable. Benefits such as greater economic stability, greatly increased recreational opportunities, enhancement of fish and wildlife, and greater security from the hazards of devastating floods cannot be adequately measured in dollars and cents. While no one has yet devised a method for measuring such benefits with mathematical precision, these are significant benefits and should not be overlooked in our consideration of such projects.

Additionally, as the Assistant Secretary of the Interior Smith pointed out during the hearings, the project will have the added benefit of improving the quality of water in the South Platte River Basin below the dam.

Mr. President, in light of all the benefits to be derived from this project, and its very favorable benefit-cost ratio, I heartily recommend the Narrows unit of the Missouri River Basin project, and urge the passage of S. 3574, which will authorize its construction.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of the executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

AMBASSADOR

The assistant legislative clerk read the nomination of John G. Hurd, of Texas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of South Africa.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—IN THE DIPLOMATIC AND FOREIGN SERVICE

The assistant legislative clerk proceeded to read sundry nominations in the Diplomatic and Foreign Service, which had been placed on the Secretary's desk.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PASTORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore (Mr. METCALF). Without objection, it is so ordered.

ANNOUNCEMENT OF HEARING ON SENATE JOINT RESOLUTION 209 BEFORE THE SUBCOMMITTEE ON COMMUNICATIONS

Mr. PASTORE. Mr. President, for the information of the Senate, I am today announcing that the Subcommittee on Communications will open hearings on Senate Joint Resolution 209 which would amend the Communications Act so as to require broadcast licensees to provide public service time to authorized representatives of the U.S. Senate and the House of Representatives to present the views of their respective bodies on issues of public importance.

The hearings will begin at 10 a.m. on August 4 in room 5110, New Senate Office Building. In announcing the hearings I have stated that during the past few weeks numerous requests have been made by elected officials and other public figures for an opportunity to present differing viewpoints on issues of public importance. The issues surrounding these requests involve the FCC's fairness doctrine. I expect during these hearings to develop every aspect of this important subject matter so that the committee may be in a position to take whatever appropriate legislative action is necessary.

I am inviting all of my colleagues, and especially I would hope that all members of the Commerce Committee, whether members of the subcommittee or not, will attend the hearings. I expect to hear from the chairman of the Democratic National Committee. I expect to hear from the chairman of the Republican National Committee. I expect to hear from the FCC, the networks, and all interested parties.

I think in this area there is a state of confusion at this time. I think it ought to be resolved once and for all. I am going to have the representatives of the public, the networks, the broadcasting companies, and anyone else interested in the matter present their views to the committee.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. SCOTT. Mr. President, I congratulate the Senator for setting down this matter for hearings. There has been a great deal of controversy about it. Everyone has his own definition of what constitutes fairness. It is important that all sides be heard on national controversies.

It is not an exact parallel, perhaps, when a legislator replies to a President,

no matter how important the legislator might be, or when the chairman of a national committee replies to a legislator or to a President. I do not know whether the principle would be evolved which would lead to some system or theory of matching up the matter of who ought to reply to whom. But I do think the whole thing needs to be clarified.

Charges have been leveled that one of the networks indulges in bias. I suppose that the networks will all vigorously deny it.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. SCOTT. Mr. President, I ask unanimous consent that the Senator be permitted to continue for an additional 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, I am sure that the public will, with equal concern and reaction, disbelieve them. However, here is a good chance to explore this matter and to find out whether there does exist any bias in the networks pro or con a political party or political individual and who would probably have the right to cite that situation and bring about a redress.

I am aware of the fact that sometimes the networks on Sundays feature almost entirely the members of one party or the other. I am told the answer to that situation is that it is difficult to get members of one particular party on that Sunday. That may well be the reason.

It would be well to explore the matter. As a member of the Senator's subcommittee, I am very glad to join in this matter.

Mr. PASTORE. Mr. President, this is a very complex problem. The President of the Unted States is the President of the United States, whether he be a Republican or a Democrat. Indeed, he is the President of all of the people of the United States, with the right and responsibility to communicate with them. But there have been instances where certain very delicate areas have been intruded upon that actually create a dilemma for the networks and the broadcasters. Some people resent the particular things that are being said. They dissent and feel that they should be allowed to explain their side of the issue.

I think it is the privilege of the President of the United States to say, "I have sent a bill to Congress on such and such a subject, and the Congress has not done anything about it."

I think the President has the perfect right to express his opinion. But whether the President can make such a statement without someone answering him—that is the important question. Such a statement as "I have sent a bill to the Congress, but the Democratic Congress has done nothing about it," involves getting into partisan politics. That raises a question. That is where the dilemma arises.

I would think that the President is perfectly free to say that if he wants to say it. I cannot stop him. But if we are going to follow the rule that the President of the United States is the President of the United States and speaking for all the people, then we get into an area that is more or less political. We get a popping up of people who resent it.

No one is more sensitive than a politician, especially when he is up for election.

Mr. SCOTT. How true.

Mr. PASTORE. Take the case of Senator MANSFIELD. He was given the opportunity to answer the President of the United States. He gave a very gentlemanly performance.

Mr. SCOTT. I agree.

Mr. PASTORE. Mr. President, Senator MANSFIELD'S opponent in Montana was immediately on all of the stations under the fairness rule for 25 minutes.

We ought to make some sense out of this. I do not know what the answer is at the moment.

Mr. SCOTT. Mr. President, the President of the United States is hardly in a position to get up and demand equal time whenever any columnist or cartoonist tries to do him in. He could hardly do that. It is not compatible with the dignity of his office.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. SCOTT. Mr. President, I ask unanimous consent that the Senator be allowed to continue for an additional 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, there is this gray area. Every time the President speaks, he speaks as the Chief Executive of the United States. He speaks also at times as the Commander in Chief of the Armed Forces. At other times he speaks as the head of his party.

At times some Senators might see implications which some may think to be highly political. Most of it may not be.

That decision should not be left in the hands of network presidents, some of whom in my respectful opinion have not always been totally free of a little leaning themselves to one side or the other. Each of them has built for himself his own mental lean-to over the years. It may lean to one side or the other.

It is too much power to put in the hands of the presidents of networks, for them to be the sole judge as to whether the President of the United States is speaking as President, as Commander in Chief, as party leader, or all three.

Mr. PASTORE. Mr. President, that is the reason why we have the fairness doctrine which has been substantiated and affirmed by the Supreme Court. We have section 315 that has to do with equal time. We have the Federal Communications Commission, which is Republican controlled. It has the supervision of the broadcast industry—not the networks, but the broadcasting industry.

I quite agree with the Senator from Pennsylvania. I know how fair the Senator from Pennsylvania is. He is a member of my subcommittee. I would hope that he would come to the hearings. I assure him that there is nothing politically partisan in what I am undertaking. It is bigger than the Senator from Pennsylvania or the Senator from Rhode Island as a Republican or a Democrat. It has to do with informing the public properly. It has to do with informing the President of the United States. It has something to do with maintaining the integrity of the Congress of the United States. All of these items are involved.

There are so many imponderables involved that I worry sometimes as to whether we can legislate on the whole thing. It comes down to the matter that we are all human beings. We all have our own dogmas, our own prejudices. Any strong-minded man must have an opinion of his own. It is hard for him to alienate himself from his opinion.

The Senator from Pennsylvania has been in public life longer than I have been—and I have been in it for 35 years. We know only too well that usually we have a life of responsibility and not a life of glory.

Mr. SCOTT. Not that alone, but I am trying—and there are days when I try more than others—to avoid the situation in which the public would get all their opinions from a great complex of invisible government of networks. The networks are not under the jurisdiction of the FCC as the rest of the broadcasting industry is.

I am just as anxious as is the Senator from Rhode Island to clarify it on a nonpartisan basis and try to make sure that everyone is fairly treated, because, after all, if discrimination and unfairness exist that erodes the whole concept of the democratic structure of Government.

Mr. PASTORE. I agree implicitly with the Senator from Pennsylvania. I hope we can be fair about this, and I expect to be fair. I have no ax to grind and neither has the Senator from Pennsylvania. We should straighten out this matter once and for all because there has been too much feuding going on in the newspapers, and it has solved nothing. We should solve it, if we can. This election is immaterial and the next election is immaterial, but for the future we should straighten out the entire matter.

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. PASTORE. I yield.

Mr. GRIFFIN. Mr. President, as another member of the subcommittee, I wish to join in commending the Senator for scheduling the hearings. I am sure they will be useful.

The Senator referred to a bill which would allow TV time for Members of the House and Senate.

Mr. PASTORE. That is the Fulbright bill. Senator FULBRIGHT introduced the measure.

Mr. GRIFFIN. I believe the intent is clear from the colloquy this morning that the scope of the hearings and the testimony would extend beyond that.

Mr. PASTORE. It is as broad as the distance between the Atlantic Ocean and the Pacific Ocean.

Mr. GRIFFIN. The whole subject.

Mr. PASTORE. That is correct.

Mr. GRIFFIN. The distinguished minority leader made reference to the fact that, of course, it is very difficult for the President, who is attacked politically all

the time by various spokesmen, and some of them in Congress. The President is attacked on television and in other forums. Obviously he is not in a position to ask, or would not respond or ask for, equal time in each such situation. I think it is quite obvious—and some people are pressing for this kind of situation—that we could get to the point where every time the President speaks to the people as the President, equal time would be allotted for political attacks against him. That could push a President into a position of not communicating with people as the President, or putting him in the position of communicating only as a politician rather than as the President. I think that would be very unfortunate.

Mr. PASTORE. I do not want that.

Mr. GRIFFIN. We are moving in that direction, as I see it, with some of the demands that have been made.

Mr. PASTORE. That is why we are holding the hearings. We do not want to be pushed into that corner. I might say to my distinguished colleague that it is not only the President who carries this cross of people criticizing him and he has no way to answer every time. The Senator and I have lived that kind of a life for a long time. Let us face it.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. SCOTT. Mr. President, I ask unanimous consent that I may proceed for 1 additional minute on another matter.

The ACTING PRESIDENT pro tempore. The Senator from Pennsylvania is recognized.

AMERICAN PRISONERS OF WAR

Mr. SCOTT. Mr. President, as the war in Vietnam continues, and a certain amount of unrest continues to surface here at home, I often think of the sentence from the Book of Jeremiah, chapter 31, verse 29:

> The fathers have eaten sour grapes, and the children's teeth are set on edge.

This may be so, but there is one thing we must remember. Over 1,400 American men are still held prionsers of war by the North Vietnamese in violation of the Geneva Convention. This we must never forget. Let their sad plight, and the relieving of it, be our daily concern.

THE CASE AGAINST DENIAL OF TAX DEDUCTIBILITY OF CONTRIBUTIONS TO PRIVATE SCHOOLS IN THE SOUTH

Mr. ALLEN. Mr. President, a recent editorial in the Montgomery, Ala., Advertiser-Journal makes an irrefutable case against the recent action of the Internal Revenue Service in denying the deductibility, for income tax purposes, of contributions to private elementary and secondary schools in the South.

I have given notice to the Senate that when a revenue measure of any sort comes over from the House I will offer an amendment that, if adopted, would require the continuation of the allowance of such deductions. At that time the issue will be discussed in depth.

In the meantime, I believe that my colleagues would profit by reading this editorial, and I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Montgomery (Ala.) Advertiser-Journal]

PUNISHING THE HERETICS

The recent Internal Revenue ruling that private schools would not be entitled to tax-exempt status unless they can prove that they aren't "private" at all seems to be an extension of the tax law which properly belongs to Congress.

But let's assume, for the sake of argument, that IRS was legally empowered to do what it did; that it can by administrative ukase decree that private means public and can enforce this. The precedent is thus clearly established for a long overdue ruling on the tax status of some 30,000 foundations—a great many set up as simple tax dodges, others to attempt to change laws or public policy.

The precedent is also set for acting against religious organizations that have much of their estimated $100 billion in net worth invested in wholly unreligious activities—from wineries to skating rinks, parking lots and girdle factories.

Last year, former Commissioner of Internal Revenue Mortimer M. Caplin, in testimony before the House Ways and Means Committee, attacked these church-owned businesses:

"A number of churches have entered into active and aggressive commercial endeavors. One, for example, has become a wholesale distributor of popular phonograph records. Another has acquired at least seven sportswear and clothing manufacturing businesses. Others conduct real estate development businesses, provide petroleum storage facilities and carry on a broad variety of manufacturing enterprises."

There has been little done to penetrate these privileged tax sanctuaries, or those of the foundations, including some run by and for hoods.

Private schools established in the South in recent years will, at best, break even. Many will collapse, and would have before IRS tried to make assurance doubly sure. Few have any taxable profits and rich donors are fast disappearing. There are now so many struggling private schools, even the wealthiest benefactor can't give to one without offending others.

Large gifts had all but disappeared before the IRS ruling. Parents who contribute to building funds for their schools will be penalized, but who cares about them? They are in the group which pays most of the income taxes anyway and have never been accustomed to anything more than piddling exemptions and deductions. (Tuition is not involved, since it has never been a tax-exempt contribution.)

IRS was careful to point out that it wasn't getting into the religious, foundation or fraternal organization thicket. Why not? Because these represent political power and billions of dollars, whereas private school patrons and their benefactors are few, the money involved is relatively trivial, and Negro militants wanted something done about the "white flight" to private schools.

Senator Allen raked the Administration in Congress the other day for ignoring the foundations while concentrating on Southerners who "carry a double burden." They continue to support public schools, Allen said, then pay high tuition rates for the only right of free choice and association left to them.

In May, the Justice Department filed a brief supporting tax-exempt status of all private schools. But an internal squabble in the Administration resulted in a strategic withdrawal.

Columnist David Lawrence asked an irreverent question: How can tax deductions "be justified for gifts to an organization known as the 'National Association for the Advancement of Colored People' and yet be denied when made to organizations which seek to advance the education of white people?"

The doctrine liberal answer would be that this is different because the NAACP has defended minority rights and done nothing unconstitutional. Just so. But the record will show that NAACP has for years, before and after the school decisions, challenged laws and decisions it didn't like.

Parents who send their children to private schools are not doing anything nearly so bold. They are not challenging laws or refusing to pay their school taxes, but merely opting out of the federalized system for reasons they think are good. They are conscientious objectors.

What could be more American than this silent, peaceful dissent, paying for schools they left as well as those they choose to send their children to?

But, as we said at the outset, assume that IRS is right, legally and morally, and that private school patrons and their vanishing contributors are wrong, legally and morally. Then the ukase must be extended to foundations and religious organizations.

The Cathedral of Tomorrow Church of Akron, Ohio, owns the Real Form Girdle Company and a plastics corporation on Long Island. Churches own millions in stock in an infinite variety of companies, including some their own members may think quite sinful. They pay no taxes on their income and their records are not reported.

Writing in Look for May 19, Kenneth Gross revealed that one New York City church had an investment portfolio of $257,000,000; another of $175,000,000.

One-third of the land in New York City is untaxed. Churches and synagogues own most of it. The lowest estimated value of the land they occupy is $726,000,000, but tax experts say a more realistic accounting would amount to at least twice that.

Not all of it is used for non-religious purposes of course, but much of it is. Many churches are landlords and giants of industry and commerce. More than a few are slumlords.

In 1969, Congress would not tamper with the ancient privilege, although the tax reform law did give the churches six years to get rid of businesses unrelated to religious purposes. The grace period will almost certainly be extended indefinitely.

The IRS, following the private school precedent, could crack down now with its own directive. Will it? Of course not. It even exempted religious private schools from its July 10th directive.

We believe in the absolute necessity of public education, but that is not the issue. The issue is whether or not a minority of Americans who choose to remove their children from the system, for whatever reason, are to be tainted with the label of illegality, while thousands upon thousands of infinitely wealthier enterprises enjoy tax-exempt status simply because they are too powerful for IRS to tangle with.

The issue, in essence, is freedom, not money; so little is involved. For political purposes, the Administration has chosen to stigmatize a group of Americans who are dissenting lawfully and constitutionally,

even as they bear the load for both public and private education. As parents, they have elected to pay this price, which most of them can't afford.

Some may be prejudiced, but then prejudice in the purest sense is evident in every religion, every fraternal organization in all groups where people choose to associate with those with whom they have ideological, ethnic, religious or other reasons for common understanding.

Of all these, only one has now been declared a taxable "prejudice"—the desire of parents, for whatever reason, to seek what they consider the best for their children, their dearest possessions. They may be wrong in their beliefs, just as other groups may be; but they alone have been singled out for damnation by IRS, which picks on the weak and blinks at the powerful.

If it is tax money IRS is seeking, it could find, without half looking, so much richer fields as to beggar comparison. But it's not that. IRS has simply been used, willingly it appears, as an instrument of quasi-religious excommunication of heretics.

The secular theology pronounced in Washington is total integration. Those who quietly decide they won't accept the dogma are to be punished by double taxation, a crude perversion of equal justice under the law.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore (Mr. METCALF). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WEAPONS SYSTEMS COSTS—REPLY TO SENATOR PROXMIRE

Mr. STENNIS. Mr. President, I think all Members of the Senate know that I have long been concerned by the question of cost growth in connection with our major weapons systems. For this reason I asked the Department of Defense in January 1969, to establish a system whereby the status of the schedule, cost, and performance characteristics of major weapons systems would be reported to the Senate Committee on Armed Services on a quarterly basis. My concern in this area has continued and our surveillance of the major weapons systems has been intensified.

It was for this and other reasons that I was greatly interested in the comments of the distinguished Senator from Wisconsin (Mr. PROXMIRE) on the floor of the Senate on July 20, 1970, with respect to cost increases of major weapons systems. Since the Senator's comments dealt with a subject matter which is of intense interest to me, I would like to take a few minutes to comment briefly on his statement.

I want to make clear that I admire the Senator from Wisconsin and his work very much, and think that he does a great deal of good in this field. I think in this instance, though, the facts that were given him were somewhat incomplete, and his conclusions, therefore, were not fully justified on the basis of all the facts.

The distinguished Senator stated that the costs of 38 selected major weapons systems had increased by $3.6 billion to $23.8 billion over the planned costs in the 9 months period from June 30, 1969, to March 31, 1970.

That is just a period of 9 short months, and if those figures were the entire story, we would have an alarming and drastic situation indeed.

The Senator added that the figures which he had recited were taken "from a report by the Comptroller General of the United States," which he had earlier requested.

He asserted that "the major cost increases occurred on four programs—Safeguard ABM, P–3C aircraft, Minuteman II, and Minuteman III." He listed a cost increase for Safeguard ABM of $1,754 million; for P–3C aircraft of $291.1 million; for Minuteman II of $464.4 million; and for Minuteman III of $1,142.8 million.

He stated:

> In only one of these 4 systems, Minuteman III, was the cost overrun attributable to any extent to an increase in the number of units purchased. Even in the case of that program a major portion of the added costs was caused by reasons unrelated to the change of the number of units.

I repeat that my remarks today are not intended to be critical of the Senator from Wisconsin in any way. I admire the fine work he has done with his subcommittee. What I say today is merely for the purpose of making the record with respect to these weapons systems clear and complete.

In the first place, most of the figures furnished the Senator by the General Accounting Office represented data obtained from the March 31, 1970, selected acquisition reports—SAR. These are the reports which I mentioned as being established pursuant to my request back in January 1969. Copies of these are furnished each quarter to the Senate Armed Services Committee, the House Armed Services Committee, the Senate Appropriations Committee, the House Appropriations Committee, and the General Accounting Office. The General Accounting Office merely took the estimated cost data off of these SAR's and as it states in a letter to me of July 14, 1970, it "made no audit or verification of the reported data." Some of the systems in the GAO reports are not reported on quarterly SAR's and, therefore, the figures represented a one-time report as of June 1969.

Mr. President, I have already explained how difficult it is to get at the true basis or the beginning of these so-called estimates. Error crept into the Senator's statement, as I see it, because of some incomplete information that he had, although the figures were furnished by the Department of Defense itself.

We should recognize that cost analyses, and the determination of whether or not there has been, and, if so, the extent of, cost growth is a complex, difficult and demanding function. A simplistic approach to the problem simply is not adequate. There must be assurance that apples and oranges are not being compared. Thus it often becomes necessary, in considering currently estimated costs, to make appropriate adjustments for changes in quantities, scope of the work, and performance characteristics. Also, it can be misleading to compare a current "hard" estimate of cost to completion with the "initial planning estimate" made before the specifications and detailed characteristics of a weapon system had been laid down and agreed upon and before the realistic cost data which is necessary for a firm estimate had been developed. If these and other pertinent factors are not taken into consideration, the conclusions can be inaccurate and misleading.

That is exactly what has happened with a great many of these estimates on weapons programs without anyone being at fault, either the Pentagon or the Members who might be using these figures. It is just a failure to take into consideration these hard and difficult problems affecting the original guess—and it cannot be any more than a guess, as I explained yesterday; guess as to what a weapon may cost, long before it has really been conceived or its dimensions or specifications have been settled. The guess occurs at a stage when there is just a concept of a need that is coming up or is going to appear on the horizon.

This proposition, I believe, is made abundantly clear by the history and cost reporting status of several of the programs which the Senator from Wisconsin mentioned in his floor statement. I will comment on one or two.

For example, in citing the increase of $1,754 million for the Safeguard ABM system, the distinguished Senator failed to mention that $1,345 million of this increase results from Presidential approval of the modified phase II Safeguard program, which includes a third site at Whiteman Air Force Base. For the Minuteman II program, the Senator cited an increase of $464.4 million. I would like to point out that $356 million of this amount is for military construction costs that were not in the earlier quarterly reports because of the definition of program costs in effect at that time.

That was certainly not his fault, and I lay no fault at his feet; but the hard fact is that if the Department of Defense had reported all costs on June 30, 1969, it would have shown that $356 million of this amount, as I have stated, was for military construction costs that are entirely apart from the cost of the weapon itself. One of the areas where we have improved the reporting system is requiring the inclusion of total program costs, and when the Department of Defense was not including these items of total program costs, it was creating an error in the thinking of all of us. So we now demand—well, I do not like that word "demand"—and now require that in reporting these costs, they include the total program costs.

The Senator has referred to these increases as program "cost overruns," but I doubt very much that the Senator would consider the program cost decreases that he reports for the F–111 and

C-5A programs to be "cost underruns." And indeed they are not. The point is, Mr. President, that to really have an accurate figure as to overruns, a firm starting point should be established other than the original planning estimate that is made long before the program details are grimly established or the program under contract. The additional point is that adding quantities to a program or enlarging the scope of work such as in the Safeguard program are not properly classified as "cost overruns."

They are just simply additions to the program, like a man starts to build a seven-room house and decides to enlarge it by putting on two additional rooms. That is not a cost overrun; it is just an additional cost because of additions or added buildings that go onto the original plans, added as an afterthought.

I would just like to add one brief comment, Mr. President, regarding the reports on major weapons systems. The Committee on Armed Services is now monitoring some 36 major on-going weapons systems with projected costs estimated at about $100 billion on the latest quarterly reports for the period ending March 30, 1970. The GAO report that Senator PROXMIRE refers to covers 38 weapons systems with a projected cost of about $66 billion. These include such older programs as the Titan III missile and the Mark-46 Torpedo where most of the program funds have already been authorized and appropriated. It is important to emphasize, as I have before, that of the projected cost of $100 billion reported to the Armed Services Committee, as of March 30, 1970—and this is a very important point—only about 34 per cent of the funds have been authorized and appropriated. It is also important to point out that some of these program costs are projections into the 1980 time frame—fully 10 years in advance. That is another reason why they cannot be absolutely certain. But the big point here is that of those amounts, only about 34 percent of the funds referred to, on March 30, 1970, had been authorized and appropriated.

The Senator from Wisconsin, in good faith, states:

> In my judgment, the cost overruns in these programs are largely the result of waste and mismanagement.

He also states:

> They represent public funds that are being used foolishly and that probably ought not to be spent by the Department of Defense at all.

Mr. President, the inference that the funds for all of these programs have been authorized and appropriated should be corrected. Only 34 percent of them have been authorized and appropriated. In fact, Mr. President, the majority of the funds for the current on-going programs have yet to be approved by the Congress.

It is easy to use words. It is easy to have a statement before you, which the Senator had before him, which unadvertently does not give all the facts. I say that it is easy to use words, but I submit that to paste the label of waste and mismanagement on all these funds to which he was referring, when two-thirds of it had not even been appropriated—much less spent—is inaccurate. How could it be called waste, when Congress had not even authorized it or appropriated the funds, and how could it be called mismanagement?

Those words go out on the wires and are put in the columns of the newspapers, they are commented upon by columnists, and the original error goes back to a mistake of fact.

The Senator said that the money was used foolishly. Mr. President, two-thirds of these funds have not even been used. They could not be used foolishly, when they have not been used—that is, two-thirds have not ever been appropriated. The Senator concluded from these erroneous facts that they probably ought not be spent at all. Well, that is a matter of judgment. But I point out that two-thirds of the funds had not been appropriated, and they have not been spent yet.

So I emphasize how easy it is to paste a department of government with labels and charges that are based upon incomplete information. This influences public opinion, but we cannot act on matters unless we have all the facts.

I know that this is error. I have talked with the Senator from Wisconsin a great deal, and he gets a world of information. I know he is always very frank and candid about matters when he has all of the facts and the complete story.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the Senator be permitted to proceed for an additional 5 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. STENNIS. I have another matter in mind carried over from last year, and I mention this for the sake of clarity. Last year, a speech was made on the floor of the Senate that did not charge that some $23 billion, I believe it was—a very large sum, in any event—had been wasted, but it was picked up by someone who inferred that the Senator charged waste. I am not referring now to the Senator from Wisconsin.

Then someone else picked that up, and finally many of the columns all read that this $23 billion had been extravagant waste. I found out about that later. I was busy holding hearings and later got into a detailed analysis of it. I found that in those items that were charged to waste were some of the most reliable missiles we had in the early stages of missile programs—the ones we relied on and spanned the gap, and the ones that made the difference. The old Atlas and Titan I missiles, I recall, were on the list. They became outdated and passed into oblivion, but they were the very workhorses of our program for a long time.

When those facts were brought out, only a very small percentage of this large sum could have been charged to waste, and that was merely with respect to cases in which the weapon did not work out well and had to be abandoned. In research, you get part of your money's worth even if a program does not prove to be successful.

I am merely trying to put what I think is the proper light on these matters, particularly in view of the forthcoming debate we will have—and a very good and timely one—on the military procurement bill.

Mr. President, I am furnishing the Senator from Wisconsin a copy of this statement. I came directly to the Chamber from a meeting of a subcommittee at which I had to be the presiding officer, and I did not have a chance to get in touch with him; but I have done so through this statement.

I yield the floor.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Berry, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (S. 3279) to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes, and it was signed by the Acting President pro tempore (Mr. ALLEN).

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

REPORT ON PROPERTY ACQUISITIONS OF EMERGENCY SUPPLIES AND EQUIPMENT

A letter from the Director of Civil Defense, reporting, pursuant to law, on property acquisitions of emergency supplies and equipment by the Office of Civil Defense for the quarter ended June 30, 1970; to the Committee on Armed Services.

PROPOSED LEGISLATION TO AUTHORIZE THE DISPOSAL OF CELESTITE FROM THE NATIONAL STOCKPILE AND THE SUPPLEMENTAL STOCKPILE

A letter from the Assistant Administrator, General Services Administration, transmitting a draft of proposed legislation to authorize the disposal of celestite from the national stockpile and the supplemental stockpile (with accompanying papers); to the Committee on Armed Services.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on progress and problems in implementing the Federal Claims Collection Act of 1966, dated July 23, 1970 (with an accompanying report); to the Committee on Government Operations.

RECOMMENDATIONS OF FIRST CONSTITUTIONAL CONVENTION OF GUAM

A letter from the Governor, Territory of Guam, transmitting, for the First Constitutional Convention of Guam; to the Committee on Interior and Insular Affairs.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. MUSKIE, from the Committee on Public Works, with amendments:

S. 2005. A bill to amend the Solid Waste Disposal Act in order to provide financial assistance for the construction of solid waste disposal facilities, to improve research programs pursuant to such act, and for other purposes (Rept. No. 91–1034).

Mr. MANSFIELD subsequently said. Mr. President, I ask unanimous consent that the Committee on Public Works have authority to file its report on S. 2005 together with the individual views of the Senator from Florida (Mr. GURNEY).

The PRESIDING OFFICER (Mr. COOK). Without objection, it is so ordered.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. PASTORE, from the Committee on Commerce:

Clay T. Whitehead, of California, to be Director of the Office of Telecommunications Policy.

By Mr. YARBOROUGH, from the Committee on Labor and Public Welfare:

Colston A. Lewis, of Virginia, to be a member of the Equal Employment Opportunity Commission.

Mr. YARBOROUGH. Mr. President, from the Committee on Labor and Public Welfare, I report favorably sundry nominations in the Public Health Service which have previously appeared in the CONGRESSIONAL RECORD and ask unanimous consent, to save the expense of printing them on the Executive Calendar, that they lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Charles M. Bowyer, and sundry other candidates, for personnel action in the regular corps of the Public Health Service.

Mr. STENNIS. Mr. President, as in executive session, from the Committee on Armed Services I report favorably the nominations of 10 flag and general officers in the Army, Navy, and Air Force. I ask that these names be placed on the Executive Calendar.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). Without objection, it is so ordered.

The nominations, ordered to be placed on the Executive Calendar, are as follows:

Lt. Gen. John S. Hardy (major general, Regular Air Force), U.S. Air Force, to be placed on the retired list in the grade of lieutenant general;

Maj. Gen. John MacNair Wright, Jr., U.S. Army, to be assigned to a position of importance and responsibility designated by the President, to be lieutenant general;

Maj. Gen. Edward Leon Rowny, U.S. Army, to be assigned to a position of importance and responsibility designated by the President; to be lieutenant general;

Lt. Gen. Ferdinand Thomas Unger, Army of the United States (major general, U.S. Army); and Lt. Gen. Frank Joseph Sackton, Army of the United States (major general, U.S. Army), to be placed on the retired list in the grade of lieutenant general;

Rear Adm. Fred G. Bennett, U.S. Navy, for commands and other duties determined by the President, for appointment to the grade of vice admiral while so serving;

Rear Adm. Dick H. Guinn, U.S. Navy, for appointment as Chief of Naval Personnel;

Rear Adm. Dick H. Guinn, U.S. Navy, for appointment to the grade of vice admiral;

Rear Adm. Ralph Weymouth, U.S. Navy, for commands and other duties determined by the President, for appointment to the grade of vice admiral while so serving;

Vice Adm. Ralph W. Cousins, U.S. Navy, for commands and other duties determined by the President, for appointment to the grade of admiral while so serving; and

Rear Adm. Gerald E. Miller, U.S. Navy, for commands and other duties determined by the President, for appointment to the grade of vice admiral while so serving.

Mr. STENNIS. Mr. President, in addition, I report favorably 1,830 appointments and promotions in the Army in the grade of major; and 2,700 promotions in the Navy in grade of lieutnant commander and below. Since these names have already been printed in the CONGRESSIONAL RECORD, in order to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Darrel W. Basom, and sundry other persons, for appointment in the Regular Army of the United States;

Gasper V. Abene, and sundry other officers, for promotion in the Regular Army of the United States; and

Ralph P. Abenante, and sundry other officers, for promotion in the U.S. Navy.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MATHIAS (for himself and Mr. SPONG):

S. 4111. A bill to amend chapter 55 of title 10, United States Code, to provide for the continuation of certain benefits to mentally retarded and physically handicapped dependents of members of the uniformed services after the death of such member or after his discharge or release from active duty for a service-connected disability; to the Committee on Armed Services.

(The remarks of Mr. MATHIAS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. TYDINGS:

S. 4112. A bill to improve judicial machinery by amending title 28 of the United States Code, to provide for the defense of suits against Federal employees, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. TYDINGS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. BAKER:

S. 4113. A bill to provide for the return of certain war trophies to Jack D. McKeehan; to the Committee on Finance.

By Mr. JACKSON (by request):

S. 4114. A bill to amend certain laws relating to Indians; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. JACKSON when he introduced the bill which appear under a separate heading.)

By Mr. JACKSON (for himself, Mr. ALLOTT and Mr. HANSEN) (by request):

S. 4115. A bill to establish within the Department of the Interior the position of an additional Assistant Secretary of the Interior, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. JACKSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. JACKSON (for himself, Mr. ALLOTT, Mr. FANNIN, and Mr. HANSEN) (by request):

S. 4116. A bill to provide for financing the economic development of Indians and Indian organizations, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. JACKSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MONDALE:

S. 4117. A bill to make permanent the provisions of the Agricultural Trade Development Act of 1954, as amended; to the Committee on Agriculture and Forestry.

(The remarks of Mr. MONDALE when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 4111—INTRODUCTION OF A BILL TO PROVIDE BENEFITS FOR VIETNAM WAR VETERANS

Mr. MATHIAS. Mr. President, last week, on July 17, I reported to the Senate my concern over the present unfortunate situation in which the dependents of a serviceman killed in action can be left without the benefits of special remedial and handicapped medical aid, as provided for in chapter 55, title 10, of the U.S. Code. This section, in part, provides for the diagnosis, treatment, training, rehabilitation, special education, and institutional care if such inflicted dependents while a serviceman is on active duty for at least 30 days. This program, which is contracted by the Secretary of Defense, has my strong and admiring support. We pride our society on our willing and humane acceptance of responsibility for each other, especially the small children who enter our world seriously handicapped. Chapter 55 of title 10 assumes part of that responsibility and I would like to take this opportunity to commend the Defense Department for the administration of the program as currently authorized.

I feel that it would be in accordance, not only with the overall purpose of the present program, but also with the moral obligation of our society for youngsters orphaned by war, to extend this program to include dependents of those servicemen who have died or been disabled in service to their country. There is now no area in veterans benefits which provides for the specialized medical and health care to which I am referring. The medical burdens of a family in such cases are drastically increased. For war widows, such as Mrs. James H. Palmer of Falls Church, Va., medical costs can increase by as much as $150 a month. Such a hardship only compounds the painful adjustments which must be made when a soldier returns disabled or not at all. I feel that we have an obligation to correct such past inequities and to ensure that they shall not occur again.

For these reasons I now introduce the bill with the cosponsorship of the Senator from Virginia (Mr. SPONG), I hope that the members of the Armed Services Committee will share my concern and act expeditiously in support of it.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The bill will be received and appropriately referred.

The bill (S. 4111) to amend chapter 55 of title 10, United States Code, to provide for the continuation of certain benefits to mentally retarded and physically handicapped dependents of members of the uniformed services after the death of such member or after his discharge or release from active duty for a service-connected disability introduced by Mr. MATHIAS, for himself and Mr. SPONG, was received, read twice by its title and referred to the Committee on Armed Services.

S. 4112—INTRODUCTION OF A BILL—AMENDMENT OF TITLE 28, UNITED STATES CODE, TO PROVIDE FOR THE DEFENSE OF SUITS AGAINST FEDERAL EMPLOYEES

Mr. TYDINGS. Mr. President, by the provisions of the Federal Tort Claims Act of 1946, the United States waived its sovereign immunity and provided for redress for damage to or loss of property or personal injury or death brought about by the negligence or wrongful act or omission of a Government employee while acting within the scope of his office or employment. The act provided that the United States would be liable to the injured party for such acts by its employees under circumstances where a private person would be so liable under the applicable State law where the act or omission causing the damage of injury occurred.

As originally enacted, the Federal Tort Claims Act did not provide a bar to an action against the employee personally, although a judgment in a civil action brought under the act would bar an action against the employee for damages arising from the same act or omission—28 United States Code, section 2676. In practice the continued right to sue an employee personally has not provided any additional meaningful protection for claimants.

In 1961 and 1965, statutes were enacted which barred personal action against two classes of Federal employees. In 1961, Public Law 87–258, the so-called Government Drivers Act, was enacted providing that suits against the United States under 28 United States Code, section 1346(b) for damages resulting from the operation of a motor vehicle by an employee of the Government while acting within the scope of his office or employment shall be exclusive—see 28 United States Code, section 2679 (b) and (c) for procedures for its invocation. The 1965 act—Public Law 89–311, 38 United States Code, section 4116—provides similar protection for medical personnel of the Veterans' Administration. Although bills have been introduced in subsequent sessions of Congress to provide other classes of employees with the same type of immunity from personal suit, no final action to provide such protection has been taken.

The time has come to provide such protection for all Federal employees while in the discharge of their official duties. There is no reason why, for example, the driver of a Government vehicle or a Veterans' Administration physician should be so insulated while a physician or lawyer in another branch of the Government stands outside the charmed circle of such coverage, particularly since, as a practical matter, the availability of the personal suit burdens the Government employee without significantly benefiting the potential plaintiff. In the military service, for example, the physician, functioning for the Government in the same manner as his counterpart in the Veterans' Administration must personally carry professional liability insurance or stand under the cloud of possible personal private litigation, litigation from which the Veterans' Administration physician has complete immunity. This untenable situation has an adverse impact on the retention of much needed physicians for career military service.

The bill that I am introducing today, for appropriate reference, will eliminate the present inequity by repealing 38 United States Code, section 4116 and providing all Federal employees with immunity from personal linability in tort through the exclusiveness of a remedy provision contained in the proposed amendment to 28 United States Code, section 2679(b).

In addition, this bill closes another avenue of possible action against a Federal employee by removing the possibility of suit in a State court, when an alternative system of benefits or compensation has been provided. In *Feres* v. *United States*, 340 U.S. 135 (1950), the court held that an injured serviceman was barred from suit under the Federal Tort Claims Act because Congress had provided an alternative system of compensation under chapter 61, title 10, United States Code. While this decision serves under the facts of that case as a bar to suit against the Government, it does not protect the alleged tortfeasor from suit in a State court, despite the fact that the injured party is entitled to or is in receipt of such alternate compensation. This bill clarifies the presently vague state of the law by making it clear that immunity is provided to the alleged tortfeasor, as well as the Government, when an alternate system of compensation has been provided.

The legislation that I am introducing today makes one other improvement in the law, title 28, section 2680(h) in its present form subjects medical personnel, rather than the Federal Government, to personal suit because of a technical assault or battery arising out of the performance of medical, dental, or related treatment or clinical studies or investigations, because of the language excluding suits based on a theory of assault or battery from the coverage of the Federal Tort Claims Act. 38 United States Code, section 4116 provides protection from such claims to Veterans' Administration medical personnel. Section 3 of the bill repeals section 4116 and provides instead such protection for all Government medical personnel, including Veterans' Administration physicians or paramedical personnel, bringing them all under the same protection of the Federal Tort Claims Act.

In my opinion the protection that would be provided by this legislation to Government medical and other personnel, particularly those in the armed services, is long overdue. I hope that the legislation will be enacted this year.

I ask unanimous consent that the text of the legislation be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4112) to improve judicial machinery by amending title 28 of the United States Code, to provide for the defense of suits against Federal employees, and for other purposes, introduced by Mr. TYDINGS, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 4112

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2679(b) of title 28, United States Code, is amended to read as follows:

"(b) The remedy against the United States provided by section 1346(b) and 2672 of this title, or by alternative benefits provided by the United States for injury or loss of property or personal injury or death, caused by the negligent or wrongful act or omission of any employee of the Government while acting within the scope of his office or employment, shall hereafter be exclusive of any other civil action or proceeding arising out of or relating to the same subject matter against the employee or his estate whose act or omission gave rise to the claim, or against the estate of such employee."

SEC. 2. Section 2676(d) of title 28, United States Code, is amended to read as follows:

"(d) Upon a certification by the Attorney General that the defendant employee was acting within the scope of his office or employment at the time of the incident out of which the suit arose, any such civil action or proceeding commenced in a State court shall be removed without bond at any time before trial by the Attorney General to the district court of the United States for the district and division embracing the place wherein it is pending and the proceedings deemed a tort action brought against the United States under the provisions of this title and all references thereto. After removal the United States shall have available all defenses to which it would have been entitled if the action had originally been commenced against the United States under the Federal Tort Claims Act. Should a United States district court determined on a hearing on a motion to remand held before a trial on the merits that the employee whose act or omission gave rise to the suit was not acting within the scope of this office or employment, the case shall be remanded to the State court."

SEC. 3. Section 2680(h) of title 28, United States Code, is amended to read as follows:

"(h) Any claim arising out of assault or battery (other than assault or battery arising

out of the performance of medical, surgical, dental, or related functions, including the conduct of clinical studies or investigations), false imprisonment, false arrest, malicious prosecution, abuse of process, libel, slander, misrepresentation, deceit, or interference with contract rights."

SEC. 4. Section 4116 of title 38, United States Code, is repealed.

SEC. 5. This Act shall apply to all claims accruing on or after the first day of the third month which begins following the date of its enactment.

S. 4114, S. 4115, AND S. 4116—INTRODUCTION OF BILLS RELATING TO INDIANS, AND ESTABLISHMENT OF AN ADDITIONAL ASSISTANT SECRETARY OF THE INTERIOR

Mr. JACKSON. Mr. President, I introduce, for appropriate reference, three proposed bills submitted by the Secretary of the Interior in furtherance of President Nixon's message of July 8 on American Indian Affairs.

Other Senators may wish to join in the sponsorship of these measures, and I will be happy to include their names if they will so advise me.

Mr. President, I ask unanimous consent that the letter from the Secretary of the Interior asking that these bills be introduced be printed in the RECORD following my remarks.

The PRESIDING OFFICER (Mr. BELLMON). The bills will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bills, introduced by Mr. JACKSON, were received, read twice by their titles, and referred to the Committee on Interior and Insular Affairs, as follows:

By Mr. JACKSON (by request):

S. 4114. A bill to amend certain laws relating to Indians.

By Mr. JACKSON (for himself, Mr. ALLOTT, and Mr. HANSEN) (by request):

S. 4115. A bill to establish within the Department of the Interior the position of an additional Assistant Secretary of the Interior, and for other purposes.

By Mr. JACKSON (for himself, Mr. ALLOTT, Mr. FANNIN, and Mr. HANSEN) (by request):

S. 4116. A bill to provide for financing the economic development of Indians and Indian organizations, and for other purposes.

The letter, presented by Mr. JACKSON, is as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., July 2, 1970.

Hon. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed are three legislative proposals that are submitted as a part of the legislative package that were discussed by President Nixon in his message to the Congress on Indians on July 8, 1970.

We recommend that each of the proposals be referred to the appropriate committee for consideration and that they be enacted.

We will in the near future submit remaining proposals needed to fully implement the new Indian policy enunciated by the President in his message.

The Office of Management and Budget advises that the enactment of the proposed legislation would be in accord with the program of the President.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

S. 4117—INTRODUCTION OF A BILL TO MAKE PUBLIC LAW 480, THE FOOD FOR PEACE PROGRAM, PERMANENT

Mr. MONDALE. Mr. President, I am introducing legislation to make Public Law 480, the important and highly successful food for peace program, permanent.

Programs carried on under this act are now in their 16th year and the basic legislation expires at the end of 1970.

Last month President Nixon forwarded to the Congress, as required by law, a report on activities carried out under Public Law 480 during the period January 1 through December 31, 1969.

The President, in forwarding the report, described the law's scope and benefits in these words:

> The Food for Peace Program enables the United States to pursue its food assistance goals and development objectives in a number of ways: bilaterally, through concessional sales programs and government-administered donations programs; privately, through religious and charitable voluntary agencies such as CARE; multilaterally, through institutions such as the World Food Program.
>
> In addition, local currencies generated through Title I concessional sales and received through repayments of earlier loans continue to provide balance of payments benefits to the United States by permitting expenditures of U.S.-owned currencies rather than dollars in many countries. Such currencies have also been used to finance projects undertaken to increase our commercial sales of agricultural commodities, and thereby helped to develop an increased market for U.S. agricultural products. These projects helped in 1969 to reverse the downward trend of U.S. farm exports in recent years.
>
> The Food for Peace Program enables the enormous technological capability and productive capacity of American agriculture to be utilized to assist low income countries in developing their agricultural sectors, and in feeding their citizens while they still require outside help in doing so. . . .

U.S. farm products shipped under Public Law 480 programs from its inception, July 1954 to December 31, 1969, totaled $18.6 billion, 23 percent of total agricultural exports during that period.

Wheat and flour accounted for half of the exports under Public Law 480 during this 15-year period. Other products which have accounted for $1 billion or more in exports under Public Law 480 are cotton, $2.1 billion; dairy products, $1.5 billion; rice, $1.2 billion; and soybean oil, $1.1 billion. These basic shipments are saving hundreds of thousands of lives in underdeveloped nations as well as helping U.S. balance of payments.

Sales for foreign currencies accounted for almost two-thirds of the total exports under Public Law 480 during the 15-year period, totaling $11.7 billion. Donations through voluntary agencies totaled $2.4, barter totaled $1.7, long-term dollar and convertible currency credit sales totaled $1.6, and government to government donations for disaster relief totaled $1.1 billion during this period.

In recent years sales agreements have increasingly called for dollar rather than local currency settlements as provided in the more recent amendments to the basic legislation. In the 1969 calendar year 39 sales agreements or amendments were signed having a total value of approximately $1 billion, 34 percent of which involved local currency financing, 49 percent local currency convertible to dollars and 17 percent long-term dollar credit.

Aggressive worldwide market development programs have been undertaken under Public Law 480 throughout its 16-year life. U.S. private trade and producer groups have joined with the Government, investing $96 million in market development programs as a supplement to $116 million made available under Public Law 480. In calendar year 1969, private market development funds of $15.1 million exceeded the Government's contribution of $12.5 million.

These funds have been used to sponsor trade mission tours, participation in trade fairs overseas, and publicity and advertising campaigns. Some 70 private U.S. agricultural trade and producer groups have cooperated with the Government in market development projects which have reached 70 different countries. Largely as a result of these market development programs commercial sales of agricultural products agroad have increased from $3.4 billion in 1960 to approximately $5 billion in each of the last few years.

These increased commercial agricultural exports have contributed importantly to an easing of our balance-of-payments problem. Foreign currencies generated through Public Law 480 sales also yield balance-of-payments benefits to United States. They are used in part to pay the upkeep of embassies and defense installations. These uses of local currencies plus interest and principal payments on dollar credit sales under Public Law 480 amounted to $258 million in 1969.

There are some who point to the sharply increased production of food grains in India, Pakistan, the Philippines and other underdeveloped countries in recent years as an indication that Public Law 480 programs are no longer needed. It is true that food shortages in these countries are not as acute as in earlier years. Imports under Public Law 480 provisions may be as urgently needed in many countries as in earlier years. But the gap between food needs in the less-developed countries and food supplies is still far too wide in many countries. I can do no better than to repeat President Nixon's statement in transmitting his 1969 report:

> The Food for Peace Program enables the enormous technological capability and productive capacity of American agriculture to be utilized to assist low-income countries in developing their agricultural sectors, and in feeding their citizens while they still require outside help in doing so.

These programs must be continued until they have fully achieved their goals.

The PRESIDING OFFICER (Mr. JORDAN of Idaho). The bill will be received and appropriately referred.

The bill (S. 4117) to make permanent the provisions of the Agricultural Trade Development Act of 1954, as amended, introduced by Mr. MONDALE was received, read twice by its title and referred to the Committee on Agriculture and Forestry.

ADDITIONAL COSPONSORS OF BILLS

S. 3720

Mr. BAKER. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Kentucky (Mr. COOK) be added as a cosponsor of S. 3720, to preserve nationally televised news and public interest programs.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

S. 3835

Mr. HUGHES. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Ohio (Mr. SAXBE), the Senator from Colorado (Mr. DOMINICK), and the Senator from Wisconsin (Mr. NELSON) be added as cosponsors of S. 3835, the Comprehensive Alcohol Abuse and Alcoholism Prevention and Rehabilitation Act of 1970.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

S. 3984

Mr. McGOVERN. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Massachusetts (Mr. KENNEDY) and the Senator from Minnesota (Mr. MONDALE) be added as cosponsors of S. 3984, the American Indian Development Bank Act of 1970.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

S. 4104

Mr. JAVITS. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Oregon (Mr. HATFIELD) be added as a cosponsor of S. 4104, the School Breakfast Act of 1970.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

EMPLOYMENT AND TRAINING OPPORTUNITIES ACT OF 1970—AMENDMENTS

AMENDMENT NO. 790

Mr. CRANSTON submitted amendments, intended to be proposed by him, to the bill (S. 3867) to assure opportunities for employment and training to unemployed and underemployed persons, to assist States and local communities in providing needed public services, and for other purposes, which were referred to the Committee on Labor and Public Welfare and ordered to be printed.

AMENDMENT OF CLEAN AIR ACT—AMENDMENTS

AMENDMENTS NOS. 791 AND 792

Mr. NELSON. Mr. President, today I submit two amendments to the Air Quality Improvement Act, S. 3229. The first measure calls for strict inspection of Federal Government automobiles through periodic testing at various mileage intervals and stopping the production of any model that fails to comply with national emission standards for motor vehicles.

The amendment requires automobile manufacturers to comply with a 50,000-mile warranty provision that would give automobile owners legal standing to have their cars, emitting pollutants above national standards, repaired at the expense of the manufacturer.

In addition, the Secretary of Health, Education, and Welfare is authorized to test production-line cars to determine if the cars comply with emission characteristics of their prototypes. Test procedures for prototypes, production line vehicles and automobiles in use would be required to be geared to differing driving and weather patterns throughout the Nation.

The second amendment would authorize $50 million annually to the National Air Pollution Control Administration for the development of prototype low-emission engines. The funds requested by the administration are inadequate. If we want to develop an alternative to the internal combustion engine in this decade, then we will have to move quickly and decisively.

Earlier in the legislative session I introduced S. 3276, the Low-Emission Vehicle Act, which would ban the manufacture and sale of the internal combustion engine if a low-emission motor could be produced. Motor vehicles account for 60 percent of all air pollution and in some cities, such as Washington, D.C., produce up to 90 percent of the air pollution problem.

If the wind takes a holiday, the result can be disastrous. Los Angeles has already established what are called "red alert" days when parents and schools are advised not to allow children out to play strenuously because of the heavy smog. New York City was threatened by disaster in 1966, and Chicago in 1969. In 1952, heavy smog hung over London and was largely responsible for the deaths of 4,000 persons.

We have for too long been breathing the exhaust fumes of a technological society. It is time we introduced legislation for a consumer's society. The first amendment is similar to a proposal offered recently by the United Auto Workers, Environmental Action, National Audubon Society, Zero Population Growth, Sierra Club, Friends of the Earth, and the Wilderness Society.

Mr. President, I ask unanimous consent that the two amendments be printed, referred to the appropriate committee, and be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. BELLMON). The amendments will be received and printed, and will be appropriately referred; and, without objection, the amendments will be printed in the RECORD.

The amendments (Nos. 791 and 792) were referred to the Committee on Public Works, as follows:

AMENDMENT NO. 791

On page 8, between lines 16 and 17, insert the following:

"MOTOR VEHICLE AND MOTOR VEHICLE ENGINE COMPLIANCE TESTING AND CERTIFICATION

"SEC. 207(a) The Secretary shall test, or require to be tested in such manner as he deems appropriate, any new motor vehicle or new motor vehicle engine submitted by a manufacturer to determine whether such vehicle or engine conforms with the regulations prescribed under this Act. If such vehicle or engine conforms to such regulations, the Secretary shall issue a certificate of conformity upon such terms, and for such period (not in excess of one year), as he may prescribe.

"(b)(1) In order to determine whether new motor vehicles or new motor vehicles engines being manufactured by a manufacturer do in fact conform with the regulations with respect to which the certificate of conformity was issued, the Secretary shall test such vehicles or engines. Such tests shall be conducted by the Secretary directly.

"(2)(A) If, based on such tests, the Secretary determines that such vehicles or engines do not conform with the regulations with respect to which the certificate of conformity was issued, he may suspend or revoke such certificate in whole or in part, and shall so notify the manufacturer. Such suspension or revocation shall apply in the case of any new motor vehicles or new motor vehicle engines manufactured after the date of such notification (or manufactured before such date if still in the hands of the manufacturer), and until such time as the Secretary finds that vehicles and engines manufactured by the manufacturer do conform to such regulations. If, during any period of suspension or revocation, the Secretary finds that a vehicle or engine actually conforms to such regulations, he shall issue a certificate of conformity applicable to such vehicle or engine.

"(B)(i) At the request of any manufacturer whose certificate of conformity has been suspended or revoked, the Secretary shall grant the manufacturer a hearing as to whether the tests conducted on the vehicles or engines are appropriate, whether any sampling methods which have been applied are appropriate, or whether the tests have been properly conducted, and make a determination on the record with respect to such suspension or revocation; but suspension or revocation under subparagraph (A) shall not be stayed by reason of such hearing.

"(ii) In any case of actual controversy as to the validity of any determination under clause (i), the manufacturer may at any time prior to the sixtieth day after such determination is made file a petition with the United States court of appeals for the Circuit wherein such manufacturer resides or has his principal place of business, for a judicial review of such determination. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary or other officer designated by him for that purpose. The Secretary thereupon shall file in the court the record of the proceedings on which the Secretary based his determination, as provided in section 2112 of title 28 of the United States Code. The findings of the Secretary in any public hearing held in accordance with section 554 of title 5 of the United States Code, if supported by substantial evidence on the record considered as a whole, shall be conclusive.

"(C) The Secretary shall establish methods and procedures for making tests under this section and inform the manufacturers with respect thereto. The methods and procedures established by the Secretary shall take account of varying driving and climatological conditions throughout the United States and shall be reasonably calculated to assure compliance with the emissions standards prescribed under Section 202 under these varying conditions.

"(D) Every new motor vehicle or new motor vehicle engine sold by a manufacturer shall be warranted to have systems or devices for the control or reduction of substances

emitted from the vehicle or engine that are substantially of the same construction and performance as systems or devices, on test vehicles or test engines, for which a certificate has been issued to the manufacturer under subsection (a), and the manufacturer shall furnish with each vehicle or engine written instructions for necessary maintenance by the ultimate purchaser. In addition, the manufacturer shall indicate by means of a label or tag permanently affixed to such vehicle or engine that such vehicle or engine is covered by a certificate of conformity issued for the purpose of assuring achievement of emissions standards prescribed under this Act. Such label or tag shall contain such other information relating to control of motor vehicle emissions as the Secretary shall prescribe by regulation. The manufacturer shall warrant that the system or devices for the control or reduction of emissions from motor vehicles or motor vehicle engines will meet the standards prescribed under this Act.

"(c) (1) In order to determine whether motor vehicles or motor vehicle engines in use do in fact conform with the regulation prescribed under this Act, the Secretary shall test motor vehicles or engines owned by the United States Government.

"(2) (A) If, based on such tests, the Secretary determines that such vehicles or engines do not conform with the regulations with respect to which the certificate of conformity was issued, he may suspend or revoke such certificate in whole or in part, and shall so notify the manufacturer. Such suspension or revocation shall apply in the case of any new motor vehicles or new motor vehicle engines manufactured after the date of such notification (or manufactured before such date if still in the hands of the manufacturer), and until such time as the Secretary finds that vehicles and engines manufactured by the manufacturer do conform to such regulations. If, during any period of suspension or revocation, the Secretary finds that a vehicle or engine actually conforms to such regulations, he shall issue a certificate of conformity applicable to such vehicle or engine.

"(B) (i) At the request of any manufacturer whose certificate of conformity has been suspended or revoked the Secretary shall grant the manufacturer a hearing as to whether the tests conducted on the vehicles or engines are appropriate, whether any sampling methods which have been applied are appropriate, or whether the tests have been properly conducted, and make a determination on the record with respect to such suspension or revocation; but suspension or revocation under subparagraph (A) shall not be stayed by reason of such hearing.

"(ii) In any case of actual controversy as to the validity of any determination under clause (i), the manufacturer may at any time prior to the sixtieth day after such determination is made file a petition with the United States court of appeals for the circuit wherein such manufacturer resides or has his principal place of business, for a judicial review of such determination. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Secretary or other officer designated by him for that purpose. The Secretary thereupon shall file in the court the record of the proceedings on which the Secretary based his determination, as provided in section 2112 of title 28 of the United States Code. The findings of the Secretary in any public hearing held in accordance with section 554 of title 5 of the United States Code, if supported by substantial evidence on the record considered as a whole, shall be conclusive."

On pages 8 through 17, redesignate sections 207 through 213 as sections 208 through 214, respectively.

AMENDMENT NO. 792

On page 2, line 3, after "Sec. 103." insert "(a)", and between lines 9 and 10 insert the following:

"(b) Such section 104 (c) is further amended by inserting after the first sentence the following: "In addition there are authorized to be appropriated for the fiscal year ending June 30, 1971, and each of the two succeeding fiscal years, $50,000,000 for the development pursuant to this section of prototypes of alternatives to the internal combustion engine for the purposes of this Act."

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business?

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

RECESS

Mr. GRIFFIN. Mr. President, after consultation with the distinguished majority leader, I ask unanimous consent that the Senate stand in recess subject to the call of the chair.

The ACTING PRESIDENT pro tempore (Mr. METCALF). Without objection, it is so ordered.

Thereupon (at 11:56 a.m.), the Senate took a recess subject to the call of the chair.

The Senate reassembled (at 11:59 a.m.), when called to order by the Acting President pro tempore (Mr. ALLEN).

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

Mr. FANNIN. Mr. President, I am in support of the District of Columbia crime bill as reported by the conference committee.

There are a few details I would change if the choice were within my judgment, but the measure taken as a whole does accomplish one mission that has been sorely neglected in this critical period.

It reaches those who would abuse constitutional rights.

How long, Mr. President, are we going to continue our full time and attention to protecting the constitutional rights of those who would yell fire in a crowded theater, while we continue to ignore the victims?

Our forefathers created the greatness of this Nation the moment they stood firmly for individual rights and dignity.

But never was there any suggestion that our citizenship carried no responsibilities.

Never was there any suggestion that those who abuse constitutional rights or violate laws to the injury of others, should not bear the responsibility for that abuse and violation.

We must safeguard the constitutional rights of the individual, but that does not mean we must mollycoddle the criminal, or give his constitutional rights higher privilege than those of the victim.

No nation on this earth does a better job in safeguarding constitutional rights for the criminal.

It is about time we do as well for the criminal's victim—whose constitutional rights have been violated.

Mr. President, at least 29 States, including my own State of Arizona, recognize and approve a limited no-knock exception to preserve evidence and assist police.

The no-knock provision in the District of Columbia crime bill has been one of the controversial items, but it is less tough on the criminal than the law recognized in New York, and it basically follows the doctrine set out in the latest decisions of our U.S. Supreme Court.

Therefore, the District of Columbia crime bill goes no further than prevailing and existing law.

In addition, no-knock authority is not something new being created by this bill in the District of Columbia.

Police, armed with a search warrant, now may break and enter, over the occupant's objection, under Federal law. The "knock and wait" is the time-honored procedure, but since common law times, exigent circumstances have authorized no-knock searches and seizures.

Earlier this month, FBI agents raided 13 locations in the Washington area. They knocked and waited—and the occupants at several locations meanwhile destroyed the evidence while the agents stood at the door.

This is one example in which the no-knock provision, if enacted, would have saved the evidence by allowing police to enter without knocking. The provision also would allow no-knocking if there were supporting evidence the occupants would seek to escape, or were armed and dangerous.

What the no-knock provision in the District of Columbia crime bill does is to fix in the statutes the exceptions allowing no-knock entry, and it requires that police must obtain in advance such permission from the court, just as a search warrant must be obtained.

Thus, it spells out clearly the rules to police, and it safeguards the individual by allowing such police exception only with court permission.

Opponents of the no-knock provision have expressed concern that a court that has granted police a no-knock warrant, upon proper showing, would be loath to suppress evidence challenged at trial.

Rather, it would seem to me, a defendant is safeguarded in two respects. First, at the time of the trial he may challenge the initial showing of police to the court in obtaining the no-knock permission, and, of course, he may still challenge the seizure of the evidence by a motion to suppress.

Again, it would seem to me, the individual benefits by the fact that the court will not consider lightly the request of police to "no-knock." A showing must be made to the court to justify this exception.

Concern has been expressed by opponents of no-knock that the court will have to act as a prophet or soothsayer to guess future circumstances in granting no-knock exceptions. They insist that the circumstances cannot be known in advance.

Again, Mr. President, I say that supporting facts must be given to the court. This permission for an exception to "knock and wait" will not be granted carte blanche.

If a criminal in escaping has shot and killed a police officer, certainly it is a fact that the criminal is armed and dangerous. Who wants to knock at the criminal's door and announce a purpose of arrest—then wait for the door to open?

If a known narcotics peddler is heard, when police on an earlier occasion knock and wait at the door, to be scurrying around and flushing the toilet, should this not be ample reason to believe no-knock entry is necessary to preserve the evidence?

Concern also is expressed by opponents that the no-knock provision will spawn shoot-outs, by the sudden unannounced breaking in of a door "in one's own castle."

Mr. President, one can always conjure up circumstances under any rule where some unfortunate result may occur. No democracy is foolproof, else our Supreme Court would have no work to do.

However, Mr. President, constitutional rights and responsibilities are relative matters. Exercise of rights by one individual may abuse those of another. This is an ill-defined marginal area.

Our opponents to the no-knock provision have no easy solution to the experience recently of the two FBI agents who knocked at the door of the wife of a Washington area bank robber and announced their purpose, waiting. They were greeted by a burst of gunfire. Both were killed. Are we no longer concerned with the rights those agents may have had, or their widows and children?

There must be a balancing of rights. The citizens have a right to be protected.

They want to be secure in their person from those with criminal intent. They have the constitutional right to the pursuit of happiness, with safety.

They want to walk peaceably wherever and whenever they have a constitutional right so to do.

And they want those who violate our laws and do violence, to be brought to justice. This too, is a right in our society, and must be balanced with individual rights.

Assuredly, the right to be secure in one's own castle is as long as our history, and that right is safeguarded by requiring judicial determination.

With court order, the landlord today can have the tenant's household goods taken from the tenant's castle and set out on the street—all proper and constitutional. This right of law has not jeopardized the right of a citizen to be secure in his home.

The courts will safeguard the individual from abuse of the no-knock provision as well.

In a sense, the no-knock determination by the court against an individual does no more injustice to the individual than an indictment. It is a step in the process of justice and nothing more. It does inconvenience the individual—but so does the requirement to report and pay taxes.

Mr. President, the distinguished senior Senator from North Carolina has made a capable and persuasive argument in his opposition to the District of Columbia crime bill, and especially the predetention provision.

I may say in sincerity that I sleep easier knowing that the distinguished Senator is safeguarding the Constitution as he so ably does.

However, pretrial detention is not a new concept. As the distinguished Senator noted in citing statistics of those in jail awaiting trial in May 1970, 10 percent had been waiting for a year or more.

Nor is a speedy trial alone the solution. For whatever reason that motivates them, there are criminals whose record and behavior justifies pretrial detention.

It may be that the defendant is a professional criminal with a long record, it may be that he is a narcotics addict who must support his habit by crime, or he may be bent on building a kitty before anticipated imprisonment.

A little more than a month ago, a District of Columbia police officer, father of four, stopped a suspected car matching the description of the getaway car involved in a robbery minutes earlier. The officer, Ronald R. Watson, was critically wounded when a man in the rear seat opened fire. The officer exchanged fire and killed one of the suspects.

The dead suspect was free on personal bond on a robbery charge with a dangerous weapon only 3 weeks earlier, and he was identified as one of two men who had participated in a liquor store robbery the day before he was stopped by Officer Watson.

Mr. President, I ask unanimous consent to have printed in the RECORD the account of this incident in the June 19, 1970, issue of the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOUNDED OFFICER KILLS HOLDUP SUSPECT

(By Alfred E. Lewis and Martin Weil)

A Washington policeman shot and killed a fleeing robbery suspect at New Jersey Avenue and K Street NW yesterday after the officer had been shot twice by the suspect, police said.

The officer, Ronald R. Watson, 25, of the traffic division, was shot in the neck and chest about 3:15 p.m. after he stopped a Volkswagen that matched the description of the getaway vehicle in a robbery that occurred minutes earlier, police said.

After being hit, Officer Watson fired six shots at two men who ran from the car, police said. They said three of the shots hit and killed Franklin E. Moyler, 23, of 1805 Belmont St. NW who, they said, had shot the officer.

Watson, a District Heights resident and a member of the force for four years, was reported in critical condition at Washington Hospital Center last night. He is married and the father of four.

A second suspect, Richard Frank Newell, 25, of 3531 Jay St. NE, was arrested last night at 7th and S Streets NW, police said. After questioning, police charged him with homicide, and robbery holdup with a gun.

They said he was picked up at 9:30 p.m. by two officers who responded to a call that the owner of a car wanted to report it was stolen. Newell was identified by police as the owner of the Volkswagen involved in the shooting.

Moyler was pronounced dead at Rogers Memorial Hospital at 3:30 p.m. with gunshot wounds in the right shoulder, chest and right arm.

Police said Moyler was free on personal bond after being arrested June 1 on a charge of robbery and carrying a dangerous weapon.

They said he had previously been convicted of robbery and assault on an officer and of assault.

Capsules suspected of being heroin were found in his pockets yesterday, police said. They said $918 was found in the car.

Police said Moyler, who collapsed about 30 feet from the southeast corner of New Jersey and K Streets NW after being shot, had been identified by a witness as one of the two men who earlier yesterday held up the G and B Liquor Store a few blocks away at 300 Massachusetts Ave. NW.

The robbery of the liquor store, in which an undetermined amount of money was taken by two men, one armed, touched off the chase that led to the shottings, police officials said:

This is the account they give:

As the robbers fled the store with the money, Adela Gotkin, co-owner, and one of four persons inside at the time of the robbery, ran from the store in pursuit.

She saw the pair come out of an alley in the 800 block of 4th Street NW in a light tan Volkswagen, with the license plate 697-468.

She returned to the vicinity of the store just in time to flag down three motorcycle officers that had just finished their 7 a.m. to 3 p.m. tours of duty.

Armed with Mrs. Gotkin's description of the getaway vehicle, the officers split up and fanned out through the neighborhood.

One of the three officers was Watson.

Shortly after starting north on 4th Street NW, police said, he caught sight of the alleged getaway vehicle.

At the intersection of New Jersey Avenue and K Street NW he caught up with the car and stopped it in the middle of the street.

Dismounting from his motorcycle, he approached the auto, gun drawn.

He told the driver to turn off the ignition and hand him the keys.

When the driver attempted to pull away, police said, Officer Watson grabbed for the keys.

At that point, police said, the man on the back seat of the car fired three shots at Officer Watson, hitting him twice.

Then, the two men bolted from the auto and ran south on New Jersey Avenue.

Hit in the neck and chest by the suspect's shots, Watson leaned against the left side of the Volkswagen's hood and fired six shots.

Moyler fell about 30 feet from the corner, in the driveway of a service station.

Two bullets hit the window and grille of a taxicab northbound on New Jersey Avenue NW, apparently causing no injury.

A revolver, which police said belonged to the dead suspect, was found in the intersection beside the open door of the abandoned Volkswagen.

Police said that the wounded officer's prospects were improved at the hospital when 23 blood donors responded to a call for six donors of AB negative blood.

Yesterday's incident appears to mark the second year that a Washington police officer shot and killed a man in the line of duty.

The number of such killings declined last year to 6, from 13 in 1968, despite an increase in the size of the force.

After a brief civil disturbance followed one of the 1968 shootings and public outcry fol-

lowed others, one of the city's actions was to issue new guidelines on the use of firearms by police.

The new guidelines state that an officer may fire at a fleeing suspect if the crime involved "an actual or threatened attack which the officer has reasonable cause to believe would result in death of serious injury."

Mr. FANNIN. Mr. President, in another case, the defendant attempted to rob a service station manager, who wrestled the gun from the defendant. In the struggle the gun fired, but no one was injured and the defendant fled. He was arrested a few minutes later.

Four days later, the defendant was released on his own recognizance. Two weeks later, two men robbed a Safeway store. One of the men, brandishing a .45 caliber automatic pistol, was identified as the defendant from photos the next day by a witness to the robbery, though he was not apprehended until 8 months later. On both charges and in separate trials, the defendant was found guilty by juries.

Mr. President, I ask unanimous consent to have printed in the RECORD summaries of five additional criminal cases, which summaries are in the records of the Department of Justice.

There being no objection, the summaries were ordered to be printed in the RECORD, as follows:

No. 1—KENNETH H. JACKSON

CRIMINAL NO. 190–68

At about 8:00 A.M. on December 26, 1967, John Myers was sitting in his car in front of the Wholesale Auto Parts Store at 1821 14th St., N.W., waiting for the store to open, when he was approached by a man subsequently identified as Kenneth H. Jackson. Jackson pulled a knife, held it to Myers' throat, and demanded his money. When Jackson attempted to search Myers' pockets, the two men struggled and they were observed by Officers Glen Hilton and Burtell Jefferson who were on routine patrol in the area. The officers arrested Jackson and he was released on personal bond the same day in the Court of General Sessions.

CRIMINAL NO. 514–68

Less than three weeks later at about 7:45 P.M., on January 13, 1968, Jane Doe, a sixteen year-old girl, was walking in the 2400 block of Nichols Avenue, S.E., when she was grabbed off the street by three men, dragged onto the Birney School playground near the corner of Nichols Avenue and Sumner Road, S.E., beaten about the face and head with the fists of her assailants, and raped several times. Miss Doe subsequently identified Kenneth H. Jackson from photographs as one of her attackers. Jackson was rearrested and was again released on personal recognizance on March 1, 1968.

Juries returned verdicts of guilty as to both the rape and robbery charges on November 8, 1968 and December 9, 1968, respectively.

No. 2—DANIEL BETHEL

CRIMINAL NO. 1087–67

At approximately 1:00 A.M., on June 19, 1967, Ellen von Nardroff, 38 years old, was awakened in her home at 1852 Irving Street, N.W., by unknown sounds downstairs. She put on a robe and began to leave her bedroom to ascertain their source when she observed the stairwell light go on and heard the breaking of glass. She stayed in the bedroom and shut the door, placing a chair against it as she heard footsteps ascend the stairs. She was unable to hold the door closed as a man, subsequently identified as Daniel Bethel, forced his way into her room, pushed her down on the bed, unzipped his pants and climbed on top of her, trying to force her legs apart. He was unable to make penetration solely because his victim was using sanitary napkins. He then got off her, asked for her money, and took a black purse containing $40.00. He then escaped.

Three weeks later at approximately 4:25 in the morning on July 10, 1967, Ellen von Nardoff's home was again broken into. Following the first break-in, however, she had purchased a twenty-gauge shotgun for her protection, and this time she and a friend held the intruder, again identified as Bethel, at bay until the arrival of the police. Bethel was subsequently released on his personal recognizance for both offenses on October 26, 1967.

CRIMINAL NO. 423–68

At 10:35 in the morning on February 5, 1968, two men entered Karl's Dry Cleaners at 6228 Third Street, N.W. One of the men brandished a .45 calibre revolver and told the store's owner, Norman Gray, to "give me your money," while the other man, subsequently identified as Bethel, went through Gray's pockets, removing some money and a watch. The two men then escaped in Bethel's car.

Bethel subsequently pleaded guilty to housebreaking and robbery on January 22, 1968, in connection with the two entries into the von Nardoff home. He pleaded guilty to the dry cleaning store robbery on October 4, 1968.

No. 3—NATHANIEL LEE, JR.

CRIMINAL NO. 125–68

At 6:25 P.M. on November 20, 1967, three men entered and held-up a McDonald's Drive-in at 1603 Good Hope Road, S.E. One man was armed with a .22 calibre pistol, another with a .38 calibre pistol and the third with a sawed-off shotgun. After taking an undetermined amount of money the men escaped. Nathaniel Lee, Jr., was subsequently identified by two eye-witnesses from photographs as the subject with the .22 calibre pistol. Lee was arrested on November 28, 1967, and was subsequently released on Personal Recognizance on January 30, 1968.

CRIMINAL NO. 462–68

Less than one month later at 2:05 A.M., on February 24, 1968, Larry Wise, a D. C. Transit Driver, was operating his bus in the vicinity of 15th Street and Stanton Road, S.E., when he felt a hard object in his back and was told: "Close the door and drive on straight, or I will kill you." Wise complied and, upon a further demand, turned over his money, his change carrier and his watch to the assailant, who was subsequently identified as Nathaniel Lee, Jr. Lee left the bus at 14th Place and Stanton Road, S.E., and was apprehended and held by a citizen who observed him running from the bus with the change carrier in his hand.

On November 4, 1968, Lee pleaded guilty to both the McDonald's and the bus robberies.

No. 4—JOHNNY L. PETERSON

CRIMINAL NO. 1520–67

Early in the afternoon of November 6, 1967, Hubert Madison, returning from a lunch break while serving as a juror in the Court of General Sessions, was standing in an elevator in the courthouse when Johnny L. Peterson, a defendant in a criminal case in which Madison was sitting, told Madison that the jurors "had better be right on the inside or they will be right on the outside." Peterson was charged with obstructing justice and was released on personal recognizance on January 26, 1968.

CRIMINAL NO. 651–68

Six weeks later at 5:05 A.M., Leon Hladchuk was removing newspapers from his panel truck in front of 3058 Mount Pleasant Street, N.W., when he was approached by three men, struck in the back of the neck by an unknown object, beaten about the head and face by his assailants, and searched for money. Hladchuk fought off his attackers and called the police. Officers Kenneth Brown and Wendell Huffstutler arrested the three men near the scene of the crime and Hladchuk identified one of them as Johnny L. Peterson.

Peterson was found not guilty solely by reason of insanity on the obstructing justice in a non-jury trial on October 7, 1968. He subsequently pleaded guilty to a lesser included offense of Attempted Robbery in the other case on January 9, 1969.

No. 5—JEROME OLNEY

CRIMINAL NO. 735–68

At 3:10 in the morning on March 2, 1968, Hugo Barlow, a D.C. Transit driver, was operating his bus in the vicinity of 14th Street and Independence Avenue, S.W., when he was approached by a subject subsequently identified as Jerome Olney who threatened Barlow with a knife and demanded his money. Barlow and Olney fought, and Olney was arrested a short distance from the scene after leaving the bus. He was released on personal recognizance later the same morning of his arrest.

CRIMINAL NO. 735–68

Ten days later at approximately 10:45 in the evening of March 12, 1968, James Sullivan, another D.C. Transit driver, was operating his bus in the vicinity of 9th Street and New York Avenue, N.W., when a man pulled a knife and placed it against Sullivan's neck with his right hand while holding his left arm around the victim's neck and demanding his money. Sullivan complied and his assailant, subsequently identified from photographs as Jerome Olney, escaped. Olney was arrested on a warrant two days later.

On August 7, 1968, Olney pleaded guilty to the lesser included offense of assault with a dangerous weapon in the Barlow robbery, and to robbery in the attack on the theft from James Sullivan.

Mr. FANNIN. These cases, Mr. President, illustrate that pretrial detention is necessary to safeguard the rights of this society.

However, it is to be emphasized that under the District of Columbia crime bill, such pretrial detention must be determined by the court, safeguarding all constitutional rights of the individual concerned.

In 1966 the Congress enacted the Bail Reform Act, which has decreased reliance upon money bond as a condition for release. The purpose of the 1966 act was to end the discriminatory practice of high bond that caught the poor but did not deprive the liberty of the defendant who could afford the bond.

However, the 1966 act also deprived the courts of any legal authority to hold potentially dangerous defendants.

The trial judge is faced often with a decision against his better judgment for the safety of society by releasing a dangerous suspect to bail, or in the subterfuge of setting high bond—when the money bond only is to assure the appearance at trial of the defendant and not to pass judgment of his behavior.

Recent studies of the bail practices in the District of Columbia show that 30 percent or more of those charged with criminal offense are currently under detention because of their inability to post bond. The detention rate for felonies is 40 percent.

Some consideration should be permissible on the part of the trial judge in the interest of society in cases involving compulsive, notorious, and incorrigible offenders. And that is the purpose of the pretrial detention provision in the bill.

Pretrial detention, Mr. President, is a fact of life and should not be hidden behind the money bail bond system.

A safeguard is provided in the bill that within 60 days the defendant, under pretrial detention, is to be brought before the judicial officer.

The distinguished senior senator from North Carolina has expressed concern that the defendant still might be detained indefinitely without trial.

In view of the statistics cited by the distinguished Senator showing that four District of Columbia detainees in May 1970 had been awaiting trial for 3 years or more, it would appear that the proposed provision, at its worst, would be an improvement over today's procedure. At the end of 60 days, the defendant will be before the court for judicial determination as to his detention.

We cannot overlook that a major change under the District of Columbia crime bill is the reform of the court system in the District of Columbia, and the addition of more judges to speed the trial process and end the backlog.

Mr. President, serious crimes have been rising here in the Nation's Capital at the alarming rate of 22 percent a year. In the past 5 years, the number of reported felonies in the District has risen 122 percent.

I do not wish to repeat crime statistics in the District of Columbia, Mr. President. But to emphasize the frightening aspect, I wish to note that the number of American soldiers killed in Vietnam in the first 6 months this year was only approximately 10 times the number of homicides committed in the District last year.

It means, Mr. President, that we have a war right here at home, a war of crime.

I am convinced that the District of Columbia crime bill will help reduce this sad record in our Nation's Capital.

And it will accomplish this goal by balancing rights and safeguarding constitutional privileges.

I fear that if we do not take action now to approve these reforms, we will only continue to build to the frightening record of crime in the District.

Back in the Civil War crisis, Abraham Lincoln was attacked by his critics—and even by historians today—for being lax on certain constitutional rights.

Lincoln reminded his critics that he had that sacred document, the Constitution, at the White House and that he was guarding it every moment.

Today, every one of the millions of our citizens are watchful that constitutional rights of the individual are protected. If anything, the atmosphere including that in our judicial system has been to lean over backward in preserving such rights.

Such watchfulness must ever be diligent. And I feel assured the District of Columbia crime bill does nothing to jeopardize those rights. I am concerned that we have been going a long way to forget those rights that have been violated of the victims. We must show more diligence in this direction.

Both the no-knock and the pretrial detention must be determined by the court. This is adequate safeguard.

Defense counsel can move to exclude the evidence if there is an absence of facts to allow the court to grant an exception to the traditional "knock and wait" rule, or if the police fail to get prior court authority to no-knock.

Pretrial detention procedure will place greater pressure for speedy trial, with judicial appearance provided after 60 days.

There are many other merits to the bill, Mr. President. One of these is the provision for mandatory sentence of 5 years for second offenders after conviction of a serious crime with a deadly weapon.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. FANNIN. Mr. President, I ask unanimous consent that I be permitted to proceed for not to exceed 5 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. FANNIN. Mr. President, I would like to see a mandatory sentence of 5 years for any conviction of a crime of violence with a deadly weapon. This would place the penalty for misconduct in gun possession where it belongs.

We do not need to penalize the innocent with gun registration, which will not stop deadly weapons from getting into the criminal's hands.

The certainty and sureness of punishment to the criminal for carrying a deadly weapon will provide the type of control that society needs to deal with abuse.

Mr. President, I do wish to note that the mandatory minimum penalty provided for second offenders in the District of Columbia Crime bill also is not new. The Omnibus Crime Control and Safe Streets Act of 1968 provided:

> In the case of his second or subsequent conviction under this subsection, such person shall be sentenced to a term of imprisonment for not less than five years nor more than 25 years and notwithstanding any other provision of law, the court shall not suspend the sentence of such person or give him a probationary sentence.

I also support the provision that a person is not excused in using force to resist an arrest when such arrest is made by an individual the person has reason to believe is a law enforcement officer, whether or not such arrest is lawful.

Mr. President, opponents to the bill have expressed concern that innocent persons under this provision my fall victim to an impersonator. By this argument, I fail to see that one who would impersonate a police officer would be dissuaded easily by resistance.

Nor do I see any evil in assisting our law enforcement officers in their duties.

We subject our police officers now to unpleasant duty of law enforcement, verbal abuse, stoning, bodily injury, and the presence of danger to their lives in carrying out their duties. Now, the opponents to this provision suggest we should add on to the shoulders of our police officers the right of the individual to use force in resisting arrest, lawful or not.

Mr. President, I do not know how long we can continue to tell our police officers they must bear, without complaint and as a part of their job, lumps on their heads, broken bones, and verbal and physical abuse—whether they are right or wrong.

If they are wrong, they might expect the public to turn its back upon them. But, here we are suggesting to the law enforcement officers, even when you are right, we will not support you—rather, instead, we will stack the deck for the wrongdoer.

We in Congress have shown concern at the demonstrations on our campuses and in our streets. If we continue to go the road we have, if we continue to fail our law enforcement officers in the proper function, I can foresee the day when they will rise up in a mass and protest.

If our police methods need to be improved, if our police officers need to be better trained and better paid, we must meet those needs. But we cannot continue to heap the burdens and responsibility of growing crime upon our police, without supporting and aiding them. Else, someday they will surely react.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. SPONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR CERTAIN ACTION TO BE TAKEN DURING TODAY'S ADJOURNMENT

Mr. SPONG. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to receive duly enrolled bills from the House of Representatives and that the President pro tempore or the Acting President pro tempore be authorized to sign duly enrolled bills during the adjournment of the Senate until midnight tonight.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPONG. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HUGHES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

Mr. HUGHES. Mr. President, at this time add my voice to those opposed to the adoption of the conference report on S. 2601, the District of Columbia anti-crime bill.

Like many of my colleagues who are also in opposition to the conference report, I believe that the majority of the provisions in this anticrime bill are of high merit and deserve our full support. Such reforms in the criminal justice system as court reorganization to assure speedier and more competent trials, juvenile law reform, a public defender system, and an improved bail system are urgently needed and long overdue—here in the District and elsewhere in the United States.

However, the provisions that threaten our individual constitutional rights and that run counter to informed modern concepts of corrections and penology are totally unacceptable. I refer particularly to pretrial detention, the expansion of wiretapping authority by police, the provision for no-knock entry of private homes and the lowering from 18 to 16 of the age at which juveniles in certain cases must be tried as adults.

I agree with Senator ERVIN that these and some of the other repressive provisions of the bill constitute a dangerous threat to the fourth, fifth, sixth and eighth amendments to the Constitution.

In our necessary and justifiable zeal to control rising crime in our society, there is a tendency to forget that these basic guarantees in our Bill of Rights protect every innocent and law-abiding citizen in the land—not just the dangerous criminals.

These guarantees also draw the line between our free society and the totalitarian state.

Only in the framework of law can human rights be preserved. However, the purchase of civil order and individual security at the price of justice and freedom is the certain route to the totalitarian state.

One does not have to be a civil libertarian to see the dangers in relaxing our vigilance against repression in our laws. History is full of lessons that prove that a little repression is like a little cancer; it spreads and ultimately destroys the individual rights on which a free society is built.

I am convinced that such provisions as pretrial detention, no-knock entry, and expanded wiretapping are the dangerous beginning of a current trend toward the suppression of our traditional liberties. I also have not been persuaded that they are necessary or would be as effective as pictured by their proponents in the war against crime, to which we are all committed.

I also do not accept for a moment the proposition that we must buy these repressive features or have no anticrime bill at all. As I said earlier, the bulk of the provisions in S. 2601 are sound and urgently needed. The all-or-nothing-at-all notion advanced by the proponents of the bill does not square with my ideas of keeping faith with the people through the legislative process.

I have therefore joined with more than 20 of my colleagues in sponsoring an alternative District of Columbia crime package which retains the good reform provisions of the conference report—court reorganization, bail reform, and the adoption of the interstate compact on juveniles—but eliminates the repressive provisions to which I alluded earlier.

The legal points involved in the District of Columbia anticrime bill have been masterfully handled here on the floor by such distinguished lawyers in the Senate as Senator TYDINGS and Senator ERVIN. Those of us who are nonlawyers in this body are deeply indebted to those members of the bar who have outlined the arguments, pro and con, so lucidly.

We are all aware that the legislation on which we will vote this afternoon is not limited in its significance to the District of Columbia. It will be considered a template for the Nation of long-needed reform in our system of criminal justice. It will have great influence on the legislation and administration of Justice in States and local jurisdictions throughout the land.

With so much at stake, I regret that the most controversial features of the bill, those added by the House, are being considered from a conference report in floor debate, without the benefit of in-depth Senate committee study.

There are some very subtle points involved.

For example, with regard to preventive detention, how long can a man be detained? Is it 60 days—or can it be repeated 60-day periods?

Exactly what is meant by "dangerous" to society? Does it mean that, in the opinion of the magistrate, the individual to be detained is likely to commit a crime if released? Or can it stretch to mean any "socially dangerous behavior," whether criminal or not?

To order detention, the magistrate must find that there is "substantial probability that the person to be detained committed the act."

What constitutes "substantial probability" vis-a-vis the traditional presumption of innocence until proved guilty?

At this late stage in the debate on the District of Columbia anticrime bill, every legal and technical point has been touched upon by colleagues better versed in the law than I am.

It occurs to me that the most useful note I can add is to speak to some of the practical consequences of the repressive aspects of the crime bill as seen by one who has served three terms as Governor of his native State.

The administration of justice, after all, is primarily a State and local responsibility, and I have had some firsthand experience with it.

My distinguished colleague, Senator BYRD of West Virginia, drew an eloquent picture of the imperative need for decisive action to control the disgraceful rise of crime in our National Capital.

It is, of course, a national trend.

According to a recent FBI report, reported crime in the United States was 13 percent higher in the first 3 months of 1970, compared with the same 3 months in 1969.

I believe that all of us—on both sides of this matter—recognize the urgency and share the objective of achieving law and order without sacrificing justice.

The pivotal question is whether or not repressive measures, such as no-knock, preventive detention, and mandatory sentencing, are necessary to make our society law abiding.

And the corollary question is, of course, whether or not the price is too great.

As Governor, I heard from constituents, throughout the years, who demanded that the National Guard be called out for even the most minor civil disturbance.

I believe we are drifting into a trend of thinking in this country that is forgetful of the value of our liberties and how they were won, and that places simplistic faith in force and repression as the only route to achieving law and order.

The truth of the matter is that there is no shortcut to achieving an orderly society.

Threatening oratory, repressive legislation, and the toughest law enforcement with existing public safety facilities are not going to bring us the security from crime that we need and want.

My able colleague from Missouri, Senator EAGLETON, laid this point on the line with reference to the District of Columbia crime bill.

Like most other things we need, the achievement of an orderly society is going to take cash—prudently programed and allocated.

We need more, better trained, and better equipped police. We need upgraded court systems giving speedier trials—and we need to be willing to pay for this reform as well as to legislate it.

We need intensive research into police and corrections systems, and what is being done is not even token.

We need to tend to basic social and economic conditions that are conducive to crime—as has been spelled out by the Eisenhower Commission and numerous other prestigious national study groups whose reports are gathering dust on the shelves.

We need these and many other things that cost money—substantial money—if we are to have an efficient, modern, criminal justice system that will provide the security we want.

According to Lloyd N. Cutler, former executive director of the President's Commission on the Causes and Prevention of Violence, the amount that America invests in the criminal justice system—all police, all courts, all corrections, Federal, State, and local—is less than three-quarters of 1 percent of our national income, and less than 2 percent of all Federal, State, and local tax revenues.

This is barely more than we have been spending on the space program.

Frankly, I think that very few of the people who are justifiably upset by the growth of crime and violence in this country realize how little of our public investment goes for this vital purpose.

In conveying the notion to an expectant public that there is a shortcut to law and order through repressive measures, such as the District of Columbia crime bill contains, we would be doing the Nation a grave disservice.

We will only get security in this land when we are ready to take the massive

measures to overcome the real and basic causes of our insecurity.

Finally, I would point out that the devotion to order in our democratic society does not belong exclusively to those who equate law and order with regimentation and repression.

We need—and must have—security in our homes and streets and places of business for our law-abiding citizens.

But repression is not the answer.

And the price is too great.

It is for these reasons that I urge your support of the alternative District of Columbia crime package which preserves the major reforms contained in the conference report, but with the cancerous threats to our constitutional rights cut out.

ORDER OF BUSINESS

The PRESIDING OFFICER. Is there further morning business?

Mr. DOLE. Mr. President, I ask unanimous consent to proceed for 6 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRETRIAL DETENTION

Mr. DOLE. Mr. President, many charges have been made with respect to the pretrial detention section of the conference report on S. 2601. My initial reaction to these charges is that they are somewhat short on documentation. If we are to accept and believe them, it would be helpful to have some compelling legal authority at hand.

One charge that is frequently made is that pretrial detention violates the eighth amendment. Opponents of pretrial detention argue that the bail clause in the eighth amendment which states, "excessive bail shall not be required," creates an absolute right to bail in noncapital cases.

Proponents of pretrial detention assert that the eighth amendment prohibits excessive bail whenever bail is set, but that subject to the due process clause of the fifth amendment, Congress may determine that for some serious offenses, bail need not be set as a matter of right.

By themselves, the six relevant words in the eighth amendment are susceptible to either interpretation. Consequently, those of us who are asked to interpret the amendment for ourselves would be greatly aided by citation to authoritative interpretation of the amendment in the past.

The statement of the bill's floor managers provides such authority, which is prefaced with the comment that:

> On the basis of existing authority the conferees could not locate persuasive evidence that a narrowly and fully protected detention alternative violates either the due process clause or the eighth amendment. The prohibitions against excessive bail cannot be read to mandate bail in all cases. . . .

Then the statement cites this authority:

> In *Carlson* v. *Landon*, 342 U.S. 524 (1952), the Supreme Court observed:
>
> "The bail clause was lifted with slight changes from the English Bill of Rights Act. In England that clause has never been thought to accord a right to bail in all cases, but merely to provide that bail shall not be excessive in those cases where it is proper to grant bail. When this clause was carried over into our Bill of Rights, nothing was said that indicated any different concept. The Eighth Amendment has not prevented Congress from defining the classes of cases in which bail shall be allowed in this country. Thus, in criminal cases, bail is not compulsory where the punishment may be death. Indeed, the very language of the amendment fails to say all arrests must be bailable."
>
> This interpretation was reaffirmed in the recent case of *United States ex rel. Covington* v. *Coparo*, 297 F. Supp. 203 (S.D.N.Y. 1969), in which the Court said:
>
> "Congress could, without running afoul of the Eighth Amendment, . . . provide . . . that persons accused of kidnapping, bank robbery with force and violence, or other serious noncapital crimes are not entitled to bail as a matter of right."

Additional cases can be cited to substantiate this interpretation of the eighth amendment. They include: *Bloss* v. *People of the State of Michigan*, 421 F. 2d 903 (6th Cir., 1970); *United States ex rel Covington* v. *Coparo*, 297 F. Supp. 203 (S.D.N.Y. 1969); *Mastrian* v. *Hedman*, 326 F. 2d 708 (8th Cir.), *Cert. denied*, 376 U.S. 695 (1964); *United States ex rel. Hyde* v. *McMann*, 263 F. 2d 940 (2d Cir.), *Cert. denied, United States ex rel Hyde* v. *Lavallee*, 360 U.S. 937 (1959); *United States ex rel. Fink* v. *Heyd*, 298 F. Supp. 716 (E.D. La. 1968); *Wansley* v. *Wilkerson*, 263 F. Supp. 54 (W.D. Va. 1967); Cf. *Vanderford* v. *Brand*, 126 Ga. 67, 54 S.E. 822 (1906); *People ex rel. Shapiro* v. *Keeper of City Prison*, 290 N.Y. 393, 49 N.E. 2d 498 (1943).

It would appear that proponents of pretrial detention have met their burden of production of authority on this point and that it is time for those on the other side to come forward with equally impressive authority to support their position that "the eighth amendment establishes an absolute right to bail in all noncapital cases." This task should present no difficulty, for the Senator from North Carolina (Mr. ERVIN) has stated repeatedly that—

> Preventive detention is a constitutionally questionable device whose survival depends on a frontal assault of the Eighth Amendment as it has been understood from its enactment. (Emphasis added).

In my judgment, failure to produce an equally impressive list of judicial authority would call for a directed verdict, so to speak, in favor of the bill on this point. Certainly, the legislation is not presumptively unconstitutional.

One additional point opponents of pretrial detention might wish to consider is an exchange which took place in 1965 during Judiciary Committee consideration of Federal bail reform legislation. On page 148 of the published hearings the following is recorded:

> Mr. CREECH. Going back to the Eighth Amendment, to excessive bail and the feeling of some legal authorities that there is a right to bail, do you feel that judges can properly detain a defendant accused of a noncapital offense because he considers the man a danger to the community?
>
> Judge CRAVEN. I will be honest with you. It would be hard to convince me, but if you did convince me that he is really dangerous and that if I let him out he would be likely to kill his wife or mother-in-law, I would not let him out.
>
> Senator ERVIN. I might state on that point, I had a case one time in connection with a suit for false imprisonment of a person who had been detaind on account of insanity. Of course, he did not admit it. And I ran into this proposition that said that on the basis of common law any person has a right to temporarily detain another if there is a likelihood that he will do injury either to himself or to others by violence, until processes of the law can be set in motion for his detainment according to the statute law. And I have no doubt in my mind that if a judge has reasonable grounds for belief that an accused who is before him for the purposes of bail would be likely to commit suicide or be likely to commit a homicide or any violent crime on another, he would have a right to detain him for a reasonable period of time.

The Senator from North Carolina's distinguished record on the bench is well known but something has transpired in the past 5 years to cause him to change an opinion based on experience at virtually every level of his State's judiciary. The logic of his statement seems unimpaired by the passage of time.

At the same time that opponents of pretrial detention are finding authority to support their position, I would be interested to know why they are so certain Congress can authorize the detention of capital defendants but cannot authorize the dtention of noncapital defendants. The six words of the bail clause in the eighth amendment make no distinction between capital defendants and noncapital defendants. Rape is a noncapital offense in the District of Columbia, but a capital offense in the special maritime and territorial jurisdictions of the United States. Why should it be constitutional for the U.S. Government to detain a rape defendant when the offense occurs in a national park or a national cemetery, but unconstitutional to detain him when he commits his offense in the District of Columbia? Why should the State of Virginia, which punishes rape with death, be able to hold a rape suspect without bail while the U.S. Government cannot hold a rape suspect in the District of Columbia? Why was it constitutional in 1966, under the Bail Reform Act, to detain a rape suspect in the District of Columbia when rape was a capital offense here, but unconstitutional for Congress to authorize the same man's detention today?

This question of the Federal Government's power to detain a noncapital defendant is important to the States, because it is generally agreed that the eighth amendment applies to the States through the due process clause of the 14th amendment. I ask unanimous consent to have printed in the RECORD a letter from the Deputy Attorney General to Senator ERVIN on this point at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. DOLE. If the eighth amendment forbids State governments to detain noncapital defendants, then States that abolish the death penalty would be forbidden to hold even the likes of Richard Speck before trial. Murder defendants in New York, where capital punishment has been largely abolished in practice, are held

routinely before trial. Is this unconstitutional?

In the State of Florida, the constitution authorizes the detention before trial of defendants charged with life imprisonment. The same is true in Rhode Island. The model State constitution has such a provision, and it was recently included in the proposed Oregon constitution.

Opponents of pretrial detention must concede, I think, that if their interpretation of the eighth amendment should prevail in court, these State provisions will be held unconstitutional.

Such a prospect appears to me to be highly undesirable and inimicable with the concepts of federalism and the States rights which are so often held up as fundamental precepts of our Union.

Mr. President, I yield the floor.

EXHIBIT 1

OFFICE OF THE DEPUTY
ATTORNEY GENERAL,
Washington, D.C., June 19, 1970.

Hon. SAM J. ERVIN, Jr.,
Chairman, Subcommittee on Constitutional Rights, Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR SENATOR ERVIN: During my testimony before the Senate Subcommittee on Constitutional Rights on May 22, the question was posed whether the "excessive bail" clause of the Eighth Amendment applies to the States through the due process clause of the Fourteenth Amendment. This letter will attempt to answer that question.

Although the Supreme Court has not yet held that the excessive bail clause of the Eighth Amendment applies to the States, the Court has ruled that the "cruel and unusual punishment" clause of the same amendment is incorporated into the Fourteenth Amendment, which applies to the States. In addition, several recent lower court decisions have held that the bail clause of the Eighth Amendment applies to the States. On the basis of this contemporary authority, I am confident the Supreme Court will apply the bail provision to the States when that issue is next presented and that, in the meantime, we should assume the Amendment does apply to state judges in the same way it applies to judges in federal courts. *Ex Parte Watkins*, 32 U.S. 357, 361 (1833).

As you know, the Bill of Rights was drafted in 1789 as a series of limitations upon the power of the federal government, not as a protection of certain rights against action by the States. Consonant with this objective, there are numerous opinions of the Supreme Court holding that the first nine amendments to the Constitution do not apply to the States.

Specifically, in *Collins* v. *Johnston*, 237 U.S. 502, 510–511 (1915), the Court remarked:

"The Eighth Amendment is also invoked, with its prohibition against cruel and unusual punishments; but, as has often been pointed out, this is a limitation upon the Federal Government, not upon the States. *Barron* v. *Mayor of Baltimore*, 7 Pet. 243, 247; *Pervear* v. *Commonwealth*, 5 Wall. 475, 480; *McElvaine* v. *Brush*, 142 U.S. 155, 158; *O'Neil* v. *Vermont*, 144 U.S. 323, 332; *Ensign* v. *Pennsylvania*, 227 U.S. 592, 597."

The Fourteenth Amendment was adopted in 1868. Since the 1930s, the Supreme Court has slowly incorporated the provisions of the Bill of Rights into the Due Process clause of the Fourteenth Amendment, which was designed as a limitation upon the power of the States. Thus, in *Robinson* v. *California*, 370 U.S. 660, 667 (1962), where a California statute made it a criminal offense to "be addicted to the use of narcotics," the Court said:

"We hold that a state law which imprisons a person thus afflicted as a criminal, even though he has never taken any narcotic drug within the State or been guilty of any irregular behavior there, inflicts a cruel and unusual punishment in violation of the Fourteenth Amendment."

Prior to this passage, the Court observed:

". . . [I]n the light of contemporary human knowledge, a law which made a criminal offense of such a disease [namely, mental illness, leprosy, or venereal disease] would doubtless be universally thought to be an *infliction of cruel and unusual punishment in violation of the Eighth and Fourteenth Amendments*. . . . We cannot but consider the statute before us as of but one in the same category." 370 U.S. at 666–667 (emphasis added).

In a concurring opinion, Justice Douglas said:

"The command of the Eighth Amendment banning 'cruel and unusual punishments,' stems from the Bill of Rights of 1688. See *Francis* v. *Resweber*, 329 U.S. 459, 463. And it is applicable to the States by reason of the Due Process clause of the Fourteenth Amendment. *Ibid.* 370 U.S. at 675."

Citing the *Robinson* case as authority, a number of lower courts have now concluded that the cruel and unusual punishment clause of the Eighth Amendment applies to the States. For example, in *Jackson* v. *Bishop*, 404 F. 2d 571, 576 (8th Cir. 1969), Judge (now Justice) Blackmun wrote:

"Despite earlier comments to the contrary . . . the Eighth Amendment's guarantee against cruel and unusual punishments seems now to have come to be regarded as directly applicable to the states through the due process clause of the Fourteenth Amendment. Robinson v. California, 370 U.S. 660, 666 . . ."

Likewise, in *Beard* v. *Lee*, 396 F. 2d 749, 751 (5th Cir. 1968), the court said:

"The Eighth Amendment to the Constitution of the United States forbids infliction of cruel and unusual punishments. Through the action of the Fourteenth Amendment it applies to the States. Robinson v. California . . ."

Thus, there is no doubt that at least one clause of the Eighth Amendment applies to the States. In light of other recent court decisions, there appears to be no reason why the "excessive bail" clause should not apply also.

For example, in *Pilkinton* v. *Circuit Court of Howell County, Missouri*, 324 F. 2d 45, 46 (8th Cir. 1963), a bail case, the court said:

"We take it for granted that, contrary to earlier cases . . . the prohibition in the Eighth Amendment against requiring excessive bail must now be regarded as applying to the States, under the Fourteenth Amendment."

This ruling was followed in the subsequent case of *Mastrian* v. *Hedman*, 326 F. 2d 708, 711 (8th Cir. 1964), a decision in which the Supreme Court denied certiorari. 376 U.S. 965 (1964).

In *Henderson* v. *Dutton*, 397 F. 2d 375, 377 (5th Cir. 1968), Chief Judge John R. Brown of the 5th Circuit wrote:

". . . [S]ince Robinson v. State of California . . . the Constitution prohibits the States from inflicting cruel and unusual punishments [3] . . . [3] And undoubtedly excessive bail as well]."

See also *United States ex rel. Covington* v. *Coparo*, 297 F. Supp. 203, 205 (S.D.N.Y. 1969); *United States ex rel. Fink* v. *Heyd*, 287 F. Supp. 716, 717 (E.D. La. 1968); *Wansley* v. *Wilkerson*, 263 F. Supp. 54, 56 (W.D. Va. 1967); *Dembrowski* v. *State*, —Ind.—, 240 N.E. 2d 815, 817 (1968). This is not an exhaustive list.

On the basis of these recent cases, there is little reason to doubt that the "excessive bail" clause of the Eighth Amendment now applies to the States. Moreover, whatever our differing interpretations of the Eighth Amendment may be, we both agree that the Amendment protects a fundamental right. It would be inconsistent to stress the importance of that right but at the same time argue that the right is not sufficiently fundamental to be incorporated into the due process clause of the Fourteenth Amendment.

Consequently, whatever interpretation is placed upon the Eighth Amendment's bail clause as a limitation upon federal power must also be carried over to apply as a limitation upon the power of the several States. In this connection, I am enclosing with this letter a brilliant opinion by Federal District Judge Edward Weinfeld, who held that bail could be denied to a murder suspect although murder is no longer a capital offense in New York.

Sincerely yours,

RICHARD G. KLEINDIENST,
Deputy Attorney General.

[297 F. Supp. 203]

UNITED STATES EX REL. COVINGTON *v.* COPARO
S.D. N.Y. 1969

Edward Weinfeld, District Judge.

The petitioner, held without bail upon an indictment returned by a New York County grand jury charging him with a triple murder in the first degree, seeks his release by way of a federal writ of habeas corpus unless reasonable bail pending trial is fixed either by the State Court or this Court. Petitioner contends he has an absolute right to bail under the Eighth Amendment to the Federal Constitution, since murder in the first degree is no longer a capital crime in New York State (with exceptions not here relevent).[1] The prosecution, in resisting petitioner's application in the State Court for bail,[2] denied such a constitutional right and also opposed the application on the ground that the three decedents named in the indictment were murdered in a dispute over narcotics; that petitioner had a criminal record; that he is a "professional hired killer"; and that if released on bail was unlikely to appear for trial. The denial of bail was affirmed by the Appellate Division without opinion and the Court of Appeals denied leave to appeal. Petitioner having exhausted the state process on this issue, federal habeas corpus is available to test the legality of his detention.[3]

Petitioner assumes that the Eighth Amendment, binding upon the State of New York under the Fourteenth Amendment,[4] requires that bail be granted as a matter of right in all except capital crimes. The Eighth Amendment, however, does not mention, much less distinguish between, capital and other felonies. It provides only that "excessive bail shall not be required * * *." It is true, as petitioner contends, that some courts have construed the Eighth Amendment to guarantee the right to bail in all but capital cases,[5] but such statements must be considered in the context of the Congressional statute governing bail, rather than as a command under the Eighth Amendment.

The Supreme Court has not spoken directly on the precise issue here presented. However, in considering a statutory provision authorizing the Attorney General to hold without bail alien communists under deportation charges, the Court observed that the Eighth Amendment did not confer a right to bail in every criminal prosecution. The Court also noted that it was within Congressional competence to define those classes of cases in which bail shall be allowed.[6] And from the Judiciary Act of 1789 to the present, Congress has always provided that an accused is entitled to bail as a matter of right in a non-capital case, whereas in capital cases bail is a discretionary matter.[7]

Congressional policy thus far has provided that only capital offenses are not bailable as

a matter of right. However, Congress could, without running afoul of the Eighth Amendment, also provide, for example, that persons accused of kidnapping, bank robbery with force and violence, or other serious noncapital crimes are not entitled to bail as a matter of right.[8] This Congressional power, of course, is confined by the due process clause of the Fifth Amendment. Thus, I am of the view that Mr. Justice Burton, in his dissent in Carlson v. Landon, correctly defined the scope of the Eighth Amendment to "prohibit * * * federal bail that is excessive in amount when seen in the light of all traditionally relevant circumstances. Likewise, it must prohibit unreasonable denial of bail."[9]

And as Congress is free, within constitutional limits, to define the classes of crimes which are bailable as a matter of right and those that are not, so, too, may the state legislatures. While the Supreme Court has not passed upon the direct issue, those federal courts which have are in accord that the Eighth and Fourteenth Amendments do not require the state to grant bail in all cases as a matter of right; all have recognized that a state may constitutionally provide that bail be granted in some cases as a matter of right and denied in others, provided that the power is exercised rationally, reasonably and without discrimination.[10] Thus, it is left to the courts to fix the amount of bail in all cases where it is a matter of right and also in those instances where the court exercises its discretion favorably; but, under the Eighth Amendment, where bail is fixed in either instance, it must not be excessive, and further, where bail is not a matter of right, the court may not arbitrarily or unreasonably deny bail.

New York State provides that admission to bail before conviction is a matter of right in misdemeanor cases and a matter of discretion in all other cases—including a non-capital murder charge, the charge against this petitioner.[11] New York's recent elimination of the death penalty upon conviction of murder in the first degree[12] following a course adopted in other states,[13] manifests an enlightened policy which should be deterred by a legislative concern that reduction of the penalty must automatically result in the granting of bail as a matter of constitutional right.[14] The penalty that may be imposed in the event of a conviction should not be the sole determinant on the issue whether bail is a matter of right; other factors, such as the nature of the offense, to mention but one, are also of substantial significance. No matter what the penalty, a murder charge remains a murder charge; a kidnapping charge remains a kidnaping charge, a rape charge remains a rape charge. Essentially, the basic purpose of bail remains whether, in the light of the nature of the charge and other significant factors, an accused will appear for trial and submit to sentence upon conviction.[15]

The state legislature may define types of crimes so that bail is not mandatory in all cases, leaving the determination of whether an accused is a good bail risk for the courts to decide in the exercise of their sound discretion.[16] And if the totality of circumstances is such that a court is of the view that no amount of bail will ensure the defendant's presence for trial, bail may be refused. A court's refusal of bail in an appropriate case does not trespass upon a defendant's federal constitutional rights under the Eighth and Fourteenth Amendments. In those instances where the court, in the exercise of discretion denies bail, the defendant's right to a speedy trial, a guarantee that prevents undue and oppressive incarceration prior to trial,[17] assumes significance. [18]

Petitioner here is charged with a triple murder; the state contends that he is a hired killer. The state could have found a real danger that petitioner, if released on bail, would take flight from the jurisdiction; that no amount of bail would assure his appearance for trial; also that his release might constitute danger to the community. The granting of bail under such circumstances might well amount to "irresponsible judicial action . . ."[19]

The petition is dismissed.

ADDITIONAL STATEMENTS OF SENATORS

REPLY BY UNITED ARAB REPUBLIC TO PRESIDENT'S PEACE PLAN

Mr. TOWER. Mr. President, we are now receiving optimistic responses to President Nixon's diplomatic initiatives in the Middle East. The Washington Post today reported that the United Arab Republic has replied to the peace plan proposed by the President. Al Ahram, the official voice of the Egyptian Government, published a text of the American peace proposal in its yesterday's edition. Although the text of the peace plan was altered in three specific instances to satisfy certain Egyptian requests, we should all be heartened by the simple fact that Egypt has responded to the proposal.

It now seems evident that the President's statement in his recent television interview to the effect that the security of the State of Israel is in the national interest of the United States has been taken quite seriously by the powers that be in both Moscow and Cairo. If Pravda is indeed correct when it states, as it did today, that Egypt is prepared to recognize the existence of Israel as an independent state, then we may soon envision the beginning of serious peace talks on the Arab-Israel conflict. As everyone who has followed this situation knows, recognition of Israel by the major Arab powers ranks first in the list of demands of the Israel Government.

President Nixon and Secretary of State Rogers should be commended for their effort to encourage meaningful negotiations between the conflicting parties. U.S. policy with regards to the Middle East has not changed: We support the maintenance of state sovereignty and national self-determination for all of the nations of that area of the world. From this basic policy premise President Nixon has embarked on this bold diplomatic initiative. He should be supported and commended by all Americans who pray for lasting world peace.

WATER RESOURCE PROJECTS APPROVED BY THE COMMITTEE ON PUBLIC WORKS

Mr. RANDOLPH. Mr. President, I wish to inform Senators and other interested parties of the various water resource

projects approved by the Committee on Public Works on July 16. These projects will aid in flood prevention and they are valuable to the communities where they will be located.

The projects, approved under the Watershed Protection and Flood Prevention Act, together with the estimated Federal cost, include Spadra Creek, Ark., $1,618,000; Upper Petit Jean, Ark., $3,973,000; Headwaters of the Chattooga, Ga., $2,815,000; North Oconee River, Ga., $2,795,000; Lost River, Ind., $4,883,000; St. Mary's River, Md., $1,484,000; Ppper Turtle River, N. Dak., $2,925,000; Pine Valley, Oreg., $1,711,000; Rocky Creek, S.C., $1,833,000; Hog Creek, Tex., $570,000 and Upper Cibolo, Tex., $941,000.

Also approved by the committee, under Section 201 of the Flood Control Act of 1965, was Mobile Harbor, Ala.—Theodore Ship Channel—which has an estimated Federal cost of $7,254,000.

A NEW POSTURE OF ISOLATION

Mr. GOLDWATER. Mr. President, having lived through that period of history represented by the twenties and the thirties, I can remember very easily and very completely the mood of the country. Eliminating the difficulties caused by a depression that went on and on, and eliminating the existence of the Volsted Act, I would say the dominant feeling of that period was one of isolation from the rest of the world. We were not a world power, in any sense of the word, and not a Military Establishment. After World War I, we went downhill as we are doing today; new weapons were not purchased, as is the inclination of a number of Members of Congress today, and we were very firmly placing our head in the sands of stupidity.

Instead of maintaining a strong posture, we maintained a weak one. Instead of being able to warn Hitler that any overt act on his part would bring us into it, we carefully stayed away from either the preparation or the interest. I have always believed that World War II would not have been fought had Hitler realized that America was strong and ready and willing to help its allies.

Now we jump from that period into the present time, in the interim having fought three wars, and we find the American people, urged on by some members of the Foreign Relations Committee and by other Members of Congress, acquiring a posture again of isolation. We are faced with the explosiveness of the Middle East, and yet we are not equipped or willing to do anything about what might happen there. What might happen, in my opinion, is that Russia could well wind up controlling the Suez Canal, the Mediterranean, the Straits of Gibraltar, the Indian Ocean, and the straits leading into the South Pacific. This would mean the end of freedom of the seas, and it would give Russia control of the waters of the world.

In this dangerous time of history, as we approach debate on the military authorization bill, we find quite a contingent of Congressmen presenting to Congress an elaborate, expensive, and thoroughly developed plan to further downgrade the military strength of our country.

Personally, I think we have gone too far in the cuts the administration and the Senate committee have already made, but to take the suggestions made by the group known as "Peace Through Law" would be a risk that free people cannot afford to take. As we move through these dangerous days there are too few voices being raised to point out the dangers and the ultimate results if we proceed as this weakening group would have us proceed.

One of the most consistent of these voices is Joseph Alsop, who writes again in an extremely knowledgeable way, not only about war and foreign policy, but particularly about the danger of military budget cuts. Another writer who has consistently been aware of these dangers is Mr. Richard Wilson.

I ask unanimous consent that two columns by these gentlemen be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

MORE MILITARY BUDGET CUTS WILL IMPERIL FUTURE OF U.S.

(By Joseph Alsop)

The administration's bitter inner struggle over next year's budget, and more particularly, next year's defense budget, amounts to a secret debate on the future of the United States.

To be sure, it is almost heresy, nowadays, to say that grave dangers can arise from the kind of very deep defense-cuts being planned by Secretary of Defense Melvin Laird.

The same view was taken when Secretary of Defense Louis Johnson was making defense cuts that were just as politically motivated. Almost everyone was deeply shocked when the natural result of Johnson's ruthless depletion of American power turned out to be the Korean War.

Secretary Laird, of course, is hacking away at a far larger budget, but he is also doing so in an infinitely more dangerous period. The near monopoly of nuclear weapons that this country enjoyed in Secretary Johnson's time has of course vanished long since.

With reckless shortsightedness, the five-to-one margin in nuclear-strategic weapons that this country still possessed in President Kennedy's time, has also been allowed to vanish. In intercontinental missiles today, the U.S.-Soviet ratio is in fact 1 to 1.2, and it will be 1 to 1.4 in no more than a year or so.

In short, a continuous deterioration of the balance of power between this country and the Soviet Union, had been permitted for some years. All this happened before Secretary Laird got out his little hatchet for the present round of defense cuts.

Furthermore, Laird is swinging his hatchet when Soviet policy has suddenly become marked by a quite new aggressiveness; and there is also every reason to suspect a constant increase of military influence on the Kremlin's decisions. In short, it is hard to conceive a more hair-raising time to cut the guts out of what remains of the national defense.

To give just one example of the dangers, there is the horror story (for it is no less) of the Sixth Fleet in the Mediterranean. Already, the Sixth Fleet has been permitted to decay to a point that can only be called insane, in view of the present deadly peril to Israel.

The Sixth Fleet today has two carriers, with their aircraft. These are its main striking force. Meanwhile, in addition to the large elements of the Soviet navy in the Mediterranean, the Kremlin can count on Alexandria and probably on Lattakieh in Syria, as bases for any number of aircraft, plus any number of missiles the Soviet defense ministerium chooses to emplace.

Reinforcement of the Sixth Fleet is *still* possible, but only on what the military call a "surge basis," which means that the reinforcement, even by as little as two additional carriers, cannot be maintained for more than about four months. This is because of past reductions in the strength of the U.S. Navy.

This is bad enough. The further reductions under the new program of Laird defense cuts will not only somewhat weaken the Sixth Fleet itself, even though its strength is so clearly inadequate in the changed situation, in addition, it will reduce the Navy's capability of "surge" reinforcement very greatly. In eighteen months or more, if the planned cuts are made, the Sixth Fleet may therefore have to be withdrawn from the Mediterranean!

That will first of all amount to turning the Mediterranean into a Soviet lake. Besides Alexandria and Lattakieh, the Soviets are already secretly using the Algerian base of Mers El Kebir. They are pouring Secret Service money into little Malta, in the hope of securing, at some future time, a pro-Soviet government in this island that was "the unsinkable aircraft carrier" of the Second World War.

Neither the French, nor the Italians, nor anyone else at all, can possibly offer any counterweight to the Soviet navy in the Mediterranean in the future conditions above summarized. Of course, turning the Mediterranean into a Soviet lake means, among other things, passing a sentence of death or subjugation on Israel and its people. But that, one must add, will be only the beginning.

Yet the foregoing is only one of several horror stories arising from the secret debate about this nation's future. It is a very hot debate. At least one of the Joint Chiefs of Staff is already known to have exercised every chief of staff's ultimate privilege. He has asked to present his "reclama"—meaning his warning that the defense cuts are going much too far—to the President in person.

This has not been asked for in a great many years, and it should be enough to indicate the terrible gravity of the issues that are now being argued behind closed doors. Yet the President will probably answer he can do nothing, because of the current insanity of most of the U.S. Senate. And in this, the President may well be right.

DREAMERS TALK WHILE SOVIETS CONTINUE ARMING

(By Richard Wilson)

WASHINGTON.—Will we never learn? Airy assumptions about a detente with Russia are being deflated again. Russia's missile buildup is continuing apace. We guessed wrong on her intentions in the Mideast. We have guessed wrong time and again that Russia might aid in a settlement in the Far East.

We guessed Russia was so preoccupied in her conflict with China that the Kremlin would try no new initiative elsewhere. Wrong again.

It is not a good record and it does not encourage confidence in those people in the State Department, the Defense Department, the Central Intelligence Agency and the White House who evaluate Russia's intentions and capabilities.

Anyone who stuck to the commonsense principle that Russian is continuously expanding, or trying to expand, its power and influence would have had a better record of foresight. If a chair is vacant a Russian will sit in it would be a better rule of thumb

than the complicated analyses on which policy has recently been based. There was a power vacuum in the Middle East and the Russians, following nature's laws, moved into it while the United States was heavily preoccupied with a public clamor against an unpopular war.

Now we have the dismal prospect of a confrontation with the already established Russian military presence in the Mideast while we are trying to beat a retreat from Indochina.

Retreating on one front because the American public wants no more of war and breathing defiance on another is not a very comfortable posture for the Nixon administration. The Cambodian operation, it was thought, might have a secondary effect of showing the Russians that Nixon means business.

But an in-and-out operation with the job half-done, while tactically successful, carries little persuasive power when all the reasons for the half-done job are looked at without rose-colored glasses. One of the reasons the job was half-done was that the Nixon administration couldn't carry the American public along with a longer and more complete operation.

The Senate of the United States bears an uncomfortable responsibility in this respect. It has persistently and over a long period of time sought to undermine the authority of the President to provide for the defense of the United States and conduct military operations.

There have been those in Washington, in the Senate and elsewhere, who have been saying that the Russians were tapering off their missile build-up. Defense Secretary Laird now states Russia is, in fact, continuing to set up long-range missiles at a rapid rate. The Soviet Union has also moved a vast army to the Chinese border areas. It has moved its aircraft pilots and missiles to the Suez. It is continuing to supply arms and munitions in large volume to the North Vietnamese.

And so it is the same old story. While the dreamers in the Senate talk about Russia responding if the United States will only cut back its defense effort and get out of Vietnam on prescribed schedule, the Soviet world-wide military deployment continues unaffected and perhaps hastened. It is carried forward with the confidence that grows from nuclear equality or superiority.

This, the President said last February, is "an inescapable reality of the 1970s . . . the Soviet Union's possession of powerful and sophisticated strategic forces approaching, and in some categories, exceeding ours in numbers and capability." As comparative strength is now projected the United States will have deployed 1,054 intercontinental ballistic missiles at the end of this year, and the Soviet Union will have deployed 1,290, which is a dramatic change from the 934 U.S. to 224 Soviet missiles deployed in 1965.

Russia's growing naval strength is another inescapable reality of the 1970s. And the most inescapable reality of all is that the periodic euphoria in which we indulge does not change for a moment the dedicated purpose of the Soviet Union in shifting the balance of world power to its side.

DR. VERNON E. WILSON BRINGS FINE QUALIFICATIONS TO HSMHA

Mr. EAGLETON. Mr. President, recently Dr. Vernon E. Wilson, formerly dean of the medical school at the University of Missouri and vice president of academic affairs there, was appointed Director of the Health Services and Mental Health Administration of the Department of Health, Education, and Welfare.

No man in the Nation is more eminently qualified to fill this key post in the health field than Vernon Wilson, whom I have known and respected for many years. His appointment is truly a case of Missouri's loss being the Nation's gain. Recently Star, the Sunday magazine of the Kansas City Star, contained a story about Dr. Wilson's career and his thoughts on his new job. I ask unanimous consent that the article entitled "Dr. Vernon Wilson's Capital Investment," written by Phillip S. Brimble, and published in the Kansas City Star of July 12, 1970, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. VERNON WILSON'S CAPITAL INVESTMENT

(By Phillip S. Brimble)

When Dr. Vernon E. Wilson left the comparative serenity of Columbia, Mo., this month to take over as head of the federal government's Health Services and Mental Health administration in Washington, he was acutely aware of the challenge that job holds.

As head of that agency, Dr. Wilson will be responsible for an annual budget of 3 billion dollars and 25,000 employees. As one friend put it, "Vernon has made the big time."

Not that Dr. Wilson has not been long acquainted with big plans and challenges, having during the last decade been dean of the University of Missouri medical school, Columbia, co-ordinator of the Missouri Regional Medical program, and, more recently, vice-president of academic affairs at M.U.

While dean of the M.U. medical school, Dr. Wilson was instrumental in expanding its enrollment, faculty and services. At the same time he helped forge several affiliations between the school and other health care agencies around the state, such as the St. Louis Baptist hospital, and the Kansas City General hospital.

He helped strengthen the relationship between the school and the state division of mental diseases and aided in the development of the Mid-Missouri and Western Missouri Mental Health centers.

For several years Dr. Wilson has helped in fashioning the Hospital Hill complex, including pushing for the new state medical school for which state funds were recently approved.

The development of the Missouri Regional Medical program, a federally funded and initiated program to bring the latest in medical techniques to the largest number of physicans, was a product of Dr. Wilson's drive to improve the delivery of medical care in the state.

"Frankly," said a Kansas City physician who has long been acquainted with Dr. Wilson's work, "without Vern's drive and the strength of confidence his fellow workers have had in him, the Missouri Regional Medical program would never have gotten off the ground as fast or as successfully as it did."

"Vern is one of those persons who does things, not for the accolades, but because they need doing. His goals are to meet a need, and he just happens to be working in the health delivery system."

A long-time friend believes Wilson's decision to step up to the national-level federal job was influenced in no small part by the fact that Dr. Clarke Wescoe, former dean at the K.U. Medical Center, and another former K.U. friend, Dr. Franklin Murphy, both have attained national prominence. Dr. Wescoe is an executive with a major drug firm and Dr. Murphy is an executive with the Times-Mirror Publishing company.

"If it's something Vernon doesn't lack, it's confidence in himself," said the long-time friend. "I think Vernon believes he has something to contribute to the national picture, and I think he is right."

Wilson is more modest. In an interview recently, he refused to speculate on what impact he might have in his new job.

"At this stage I'm just trying to get the feel of what is under that (Washington) iceberg," Dr. Wilson said.

"Sure, I've got some God and Motherhood aspirations. But I'd sound foolish saying now what I was going to do when I took over. There are just too many people involved. I believe I should first get acquainted with the staff to get their feelings on some of our health problems.

"I acepted the job because this particular agency has all the authority and support to deal with the gut issues in our health care problems. The agency has the staff to do research in the delivery system. I'll want to look at several ways to improve care and at the same time preserve the values of our health care system."

Asked about his personal politics, Dr. Wilson said: "I'm apolitical. I have no politics. I have purposely stayed out of partisan politics and have always voted my conscience."

Wilson would get an argument about his political leanings from at least one acquaintance who described him as "a superb medical politician. You deal with Vernon on his terms. He has a strict sense of the military, a strict table of organization. He is a capable operator."

Capable, he is. Wilson is known around the state political and medical circles as a man who makes things work. A fence mender and systems builder, Wilson has on different occasions been referred to as a "health czar" and "the gray fox" the latter probably because of his gray crewcut, which makes him appear years younger than 55, and because of his wily, quiet way of getting things done.

Wilson trades on the fact that he is a farm boy with a feel for the common man (He was born on a farm in Kingsley, Iowa). He calls himself a blue-collar man at heart, and, he says, this gives him the understanding, from experience, of the viewpoints of patients from every walk of life.

He is equally well-acquainted with the upper echelons of the national medical hierarchy, being a member of the American Medical association's council on medical education and the A.M.A.'s liaison committee on medical education.

The Wilsons will retain their home in Columbia.

"I have tremendous regret about leaving the University of Missouri," said Dr. Wilson. "My family and I have all kinds of roots and ties throughout the state. I have a tremendous sense of loss about leaving."

One thing worries some of Wilson's friends here. They wonder how Wilson, a man accustomed to rising early, working hard, and retiring early, will adjust to the hours and the pace of the big city.

"Vern's accustomed to going to bed by 9 o'clock and Washington doesn't run on hours like that," said one old friend. "Knowing Vern, one is tempted to wonder which will change, Washington or Wilson."

MATURING PROCESS IN OFFICE OF ECONOMIC OPPORTUNITY

Mr. TOWER. Mr. President, I invite the attention of Senators to a column written by Mr. Nick Thimmesch and copyrighted and distributed in June by Newsday, Inc. The article tells of the maturing process now going on at the Office of Economic Opportunity.

I ask unanimous consent that Mr. Thimmesch's column be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME TRUTH ABOUT THE GOP PROGRAM

(By Nick Thimmesch)

WASHINGTON.—The Office of Economic Opportunity, a pale horse limping in limbo in 1968, is now running in directions which please Director Donald Rumsfeld, and this makes some people unhappy.

Critics squawk that Rumsfeld, 37, is gutting programs, ignoring idealistic militants and changing the anti-poverty agency's role from that of advocate to enforcer. Rumsfeld doesn't agree.

"Teddy Kennedy and Fred Harris (the Oklahoma Senator) go around saying that President Nixon doesn't like blacks and wants to end the war on poverty," Rumsfeld said in his second floor office in the White House.

"Part of their future seems to be based on saying that everything is rotten in the country. If people would quit wringing their hands and get to work, maybe we'd make even more progress. How can Congressmen say the President is against the poor, when they cut his anti-poverty budget request by $100 million last year?

"Sure, there's unrest, but black people became cynical about promises long before we took office. We've cut the promises. Sometimes I meet with people (in poverty programs) who are hostile because they've heard the criticism of those who over-promised. Those people usually go away saying they have been fed a bunch of baloney about what we're doing."

After a year in office, Rumsfeld has a young staff which he calls "compassionate and tough-minded." The rhetoric is diminished and poverty is looked at with a colder eye. Instead of confrontation with traditional social agencies, Community Action Agencies funded by O.E.O. are encouraged to cooperate with them. Some lawyers in the Legal Services division are dismayed that Rumsfeld wants them to be more conciliatory and less contentious. Community Action agencies, often riddled with waste and controversy, have been told to shape up.

"I told a meeting of CAP agencies in Tennessee," says assistant O.E.O. Director Frank Carlucci, "that I'd shut them down if they didn't manage themselves right. They responded with a standing ovation. We've changed the attitude. O.E.O. is maturing."

O.E.O. is also involved in a "performance contract" experiment by which an educational firm will be paid on the basis on gains made in math and reading skills by backward students most of whom are poor. This is an idea the late Sen. Robert F. Kennedy unsuccessfully pushed several years ago—the government telling educators, "If you don't produce, no more federal money."

There's also a push for economic development by the poor. O.E.O. funded: a catfish farm in Hancock County, Ga; a supermarket and modular housing in Durham, N.C.; furniture and rug manufacture by Mexican-Americans and Indians in New Mexico, along with cattle feeding; and the Bedford-Stuyvesant neighborhood project in Brooklyn.

Other innovations are recruiting VISTA volunteers for specific duties rather than for some vague, idealistic impulse; funding a Kentucky program for midwifes; and making a $2 million grant for health manpower development by John W. Gardner's celebrated Urban Coalition, an outfit which so far has operated mostly on the luncheon circuit.

Despite all the noise about cutbacks in anti-poverty spending, the current budget is the same as 1969, and the administration is asking for an increase of $132 million next year. The current $1.948 billion budget shows big increases in health and nutrition; economic development; and research and evaluation. Administration opponents still sharply criticize the $108 million cut from the Job Corps and the $64 million trimmed from the program to get jobs for youth. Vice-President Agnew recently announced an administration request for an extra $50 million for summer youth employment.

What's happening at O.E.O. is that a Republican administration is seeking to employ a low-key, keep-your-voices lowered, practical approach to solving the program of the poor. Naturally, Democrats who authored and pushed the anti-poverty program are going to squawk. They just don't like the thought of Republicans running such a big program for the poor. Rumsfeld is determined to show them that Democrats have no monopoly on humanitarianism. This kind of competition between Democrats and Republicans is good for the nation.

COURT REFORM AND SPEEDY JUSTICE

Mr. TYDINGS. Mr. President, every knowledgeable authority on the subject of law enforcement recognizes the compelling need to make the criminal courts of our Nation swift, certain and smooth-running vehicles of justice. I know from my own work in law enforcement as the U.S. attorney for Maryland that better courts mean better law enforcement—that speedy justice can mean safer streets. And I think that it is critically important for those of us in Congress who have been entrusted with shaping our Federal courts to press for legislation that gives substance to the important constitutional principles of fair and speedy justice.

The importance of speedy justice cannot be overemphasized. First, fundamental fairness demands that society give a person accused of a crime the opportunity to quickly prove his innocence and clear his name. Second, fast but fair criminal trials are indispensible to society's interest in assuring that its laws are strictly and quickly enforced against the guilty, and that dangerous criminals are quickly removed from our communities and their behavior corrected. In this regard, it is woefully obvious that today's law-and-order crisis can be attributed in ample measure to the fact that in many of our criminal courts, the principle of speedy justice is more theory than fact.

We know that judicial delay obstructs law enforcement in multiple ways. First and most important, delay serves to increase the time during which additional crimes may be committed by criminals who remain at liberty while awaiting their trials.

Next, delay clearly increases a criminal's chances that either he will go scott free or receive a punishment that is not equal to the seriousness of his crime. Delay works to deteriorate evidence, dull the memories of important witnesses and diminish their interest in seeing justice done, as its cost to them in time, effort and anxiety increases. The prosecutor, seeing his case gradually disintegrating and feeling the pressure of an increased workload, often dismisses the case entirely or accepts a plea of guilty to a lesser offense. This helps explain why nearly half of those arrested for crime have the charges against them dismissed, and why the cases of over 90 percent of those not dismissed are resolved by a plea of guilty.

Finally, the inability of our criminal courts to expeditiously try and swiftly punish the criminal offender diminishes the public's confidence in the criminal justice system as a whole. It corrodes the law's deterrent effect by demonstrating that punishment for criminal violation is not swift and certain but slow and faltering. To those who consider careers in criminality, the percentages begin to appear more favorable as the certainty of retribution for criminal misconduct become increasingly less demonstrable.

Mr. President, President Johnson's Commission on Law Enforcement stated that the period between arrest of a person accused of committing a serious crime to the trial should be no more than 4 months. However, the sad fact is that few of our courts are satisfying this timetable.

In the criminal courts of the District of Columbia, on the average over 6 months is consumed between the time a criminal case is filed and disposed of. Moreover, at the end of the 1969 fiscal year, close to 2,500 Federal criminal cases not involving fugitive defendants, or about 20 percent of all criminal cases pending in Federal court, had been awaiting trial for over 1 year. Hundreds more have been pending over 2 years. According to the Judicial Conference of the United States, these delayed cases represent true "judicial emergencies."

Even more disconcerting is the fact that the existing problem of congestion and delay in our Federal criminal courts is being aggravated by the ever-rising level of criminal cases that are beginning to flood the dockets. For fiscal year 1969, the number of criminal cases, not to mention civil cases, rose 9.3 percent over the number of cases filed in fiscal year 1968. Cases involving robbery have jumped from 851 in 1965 to 1,570 cases in 1969. And the number of cases filed in Federal court for assault in fiscal 1965 had jumped by over 50 percent by the end of fiscal 1969.

Mr. President, as we look ahead to new remedies to solve this mounting problem in our criminal courts, we should not be unmindful of some of the meaningful steps we have already taken toward making justice on the Federal level speedy and fair. I am proud of my own role in that effort. In the last 5 years, as chairman of the Subcommittee on Improvements in Judicial Machinery, I have drafted, floor managed, cosponsored, and worked for the enactment of major innovative court reform legislation. Bringing the courts into the modern era after years of neglect is a difficult, slow-moving process, but we have made some progress:

First. The Federal Jury Selection and Service Act, the first major jury reform effort since Jefferson, which made the Federal judicial system much more fair by eliminating the possibility of discrimination in the selection of jurors by requiring that jury selection be made at random from broad-based source lists. I was the principal sponsor of this legislation, chaired the hearings and managed the bill on the floor. The legislation was signed into law on March 27, 1968.

Second. The Federal Magistrates Act, which reformed the first echelon of Federal criminal justice by replacing U.S. commissioners with a magistrate system,

requiring that all U.S. magistrates be attorneys and meet other standards designed to insure impartiality, and empowering the magistrates to try minor criminal offenders when the accused executes a knowledgeable waiver of both his right to trial before a U.S. district court and any right to a jury trial that he may have. Again I was the principal sponsor of the legislation, chaired the hearings, and managed the bill on the floor. The act was signed into law on October 17, 1969.

Third. The Federal Judicial Center Act, which established an institute to study and develop solutions to the problems of court congestion and delay in the Federal courts, and which has been called by the Eisenhower Commission on the Causes and Prevention of Violence one of the bright spots in a generally bleak criminal justice picture. With Senators McCLELLAN and METCALF, I led the Senate effort for the enactment of this legislation. The bill was signed into law on December 20, 1967.

Fourth. The Omnibus judgeship bill of 1967, creating much-needed Federal appellate judgeships to deal with the increasing delay in the Federal appellate process. Before being reported to the floor, this bill was studied carefully by the Subcommittee on Improvements in Judicial Machinery in hearings which I chaired.

Fifth. The omnibus judgeship bill of 1969, which created 61 Federal judgeships to meet the needs of our expanding Federal caseload. In studying this bill the Subcommittee on Improvements in Judicial Machinery made an extensive review of the problems facing the courts. As a result of this review, I recommended, and the subcommittee and Senate accepted, provisions in the bill that would have enabled the courts to experiment with electronic sound recording, provided them with managerial expertise at the operating level, and otherwise assisted them in speeding the judicial process. Unfortunately, these provisions were not accepted by the House of Representatives. I will continue to work for their enactment. The judgeships, however, were created, and the legislation was signed into law on June 2, 1970.

Sixth. The Bail Reform Act of 1966, which was designed to eliminate from the Federal criminal justice system the archaic, discriminatory system of money bail, under which the wealthy were released from prison pending trial while the poor remained behind bars. We are indebted to Senator Ervin's leadership for the enactment of this legislation. I am proud of the support that I gave him. This legislation was signed into law in 1966.

I think each of these measures has contributed toward making our Federal judicial system more fair and efficient. However, with crime increasing every day and further congesting our already badly clogged criminal court dockets, we cannot afford to rest for one moment on the laurels of our actions of the past. We must move ahead to find new solutions to the serious problems affecting our courts.

Mr. President, the District of Columbia Court Reform and Criminal Procedure Act, which the Senate shall vote upon today, represents another important stride toward the creation of a modern and efficient judicial system. The court reform and reorganization sections, which really are the heart and substance of the bill, were designed to make the criminal courts of our Nation's Capital operate with optimum speed and efficiency.

As chairman of the Subcommittee on Improvements in Judicial Machinery, I am very encouraged by the widespread support voiced in the Senate for the important court reform sections of this bill. I believe this support reflects a growing awareness of the fact that court reform, especially major improvements in our criminal courts, is essential to the waging of an effective war against crime. In this regard, I think it is noteworthy that some of my Senate colleagues, such as Senator ERVIN, have gone even one step further, asserting that speedy justice through judicial reform is the solution to the crime problem gripping the Nation.

Mr. President, I am hopeful that those in the Senate who now are addressing themselves to the issue of speedy justice, will translate their words into action and join me in support of a number of court reform proposals now pending before this body.

Among the court reform bills pending in the Senate, in addition to the District of Columbia court reorganization and crime bill, are: S. 3916, a bill to establish court executives at the operating levels of the Federal court system for the purpose of employing their managerial skills to solve the problems of court congestion and trial delay; S. 3289, the National Court Assistance Act, a bill to provide Federal grants and up-to-date information on judicial reform to State and local courts to enable these courts to improve and modernize their own judicial machinery; S. 4066, a bill to empower the Law Enforcement Assistance Administration to assist civil courts as well as criminal courts; S. 1507, a bill calling for mandatory retirement at age 70 for Federal judges and justices to assure that the Federal bench is manned by judges who can carry a full workload; S. 981, a bill to authorize the District Court of Maryland to sit in the Prince George's and Montgomery County area to facilitate justice in cases originating in those counties.

I believe that each of these proposals would enhance the quality, effectiveness and speed of our Nation's criminal justice system. And in the light of current awareness of the need for judicial reform and speedy justice, I again submit these measures to the Senate for consideration and support.

One additional measure designed to improve our courts is deserving of Senate consideration and support. This is S. 3936, the speedy justice bill, introduced by the distinguished senior Senator from North Carolina (Mr. ERVIN). This bill requires each Federal District Court to establish plans for trying criminal cases within 60 days after indictment, so long as this deadline does not interfere with the accused's right to adequate defense and a fair trial. I wish to register my own support for this measure and encourage my Senate colleagues to do likewise.

Mr. President, without diminishing the importance of the principle of speedy justice, I think that it is important for all of us to recognize that speedy trials, as envisioned by S. 3936 and by my own speedy justice proposals, do not represent a complete cure-all for the crime problems. Even if we succeed in implementing a system whereby trials are held in 60 days, society must still protect itself against demonstrably dangerous defendants who could be roaming our streets during that 60-day waiting period. Indeed, if a man is dangerous, he presents a threat to the community even if released for 1 day. In such cases, I believe that public safety demands that an expedited 60-day trial be combined with the pretrial detention of the dangerous defendant.

Mr. President, I am hopeful that the Senate will move ahead and enact the legislation which is critically needed to enable our courts to satisfy the important principle of swift and fair justice.

ANNIVERSARY OF ARRIVAL OF THE MORMONS AT SALT LAKE

Mr. JORDAN of Idaho. Mr. President, the history of the United States is a story of a sturdy, independent people who tamed a wilderness in the settlement of the West. The vision of Horace Greeley to "go west, young man, go west," was caught by hundreds of thousands of Americans as they sought adventure and a new home for themselves and their families. One of the great epics of that movement was the crossing of the plains in 1846 from Nauvoo, Ill., to what is now Salt Lake City, by the Mormon pioneers. Rooted in the doctrines and organization envisioned by Joseph Smith in Fayette, N.Y., 1830, the Church of Jesus Christ of Latter Day Saints, better known as Mormons, has risen from the original six men to the present membership nearing 3 million. Much of their determination and growth must have been caused by enduring the early persecution of the church which moved from New York to Ohio, to Independence, Mo., where they were driven to Illinois, finally settling in a swampy area which they named Nauvoo. Violence followed them there and reached its peak with the murder of Joseph Smith and Hiram Smith, the prophet and the patriarch of the church, at Carthage, Ill.

Brigham Young, president of the Council of Twelve Apostles, was named president to succeed Joseph Smith, and in the dead of winter crossed over the ice of the Missouri River along with the majority of the church to begin their epic march to what is now Utah. That trek, in adverse weather, with barely food and clothing enough to survive, began a crossing longer in distance than that of Moses and all of Israel. The distance which we so freely traverse by plane and car with all the ease and comfort of

highways and lodging was made by this determined people on foot, in wagon, and handcart. A tragically high percentage did not live to reach the great Salt Lake. Arriving at the top of the mountains overlooking the Salt Lake Valley on July 23, 1846, Brigham Young, at the time himself bedridden with sickness, uttered his now famous words: "This is the place," and on July 24 the Mormons had found their home in Salt Lake Valley.

I pay tribute today on this historic anniversary to the courage, determination, and vision of this pioneer people who have had such a profound influence in the settling of the West, including my own State of Idaho, where the celebration of the 24th of July is a sacred tradition.

Idaho's first permanent settlement at Franklin was a group of young Mormons sent by Brigham Young; and today the Latter Day Saints, as they are known, are a major contributor to the stability and progress of the State of Idaho. It is not surprising that Brigham Young, the organizer, the pioneer, the Mormon prophet, the first Governor of Utah, and one of the most controversial figures of his time, is now honored in Statuary Hall of the U.S. Capitol as one of America's foremost pioneers.

My personal relationship with the Mormon people of Idaho in my many years in public office has led me to commend their firm teachings of honesty, loyalty, and public spirit as citizens of the United States of America.

SCHOOL DESEGREGATION—UNANSWERED QUESTIONS

Mr. SPONG. Mr. President, on Monday I expressed regret that the Supreme Court has left many questions unanswered with regard to school desegregation. Yesterday, the Norfolk-Portsmouth Virginian-Pilot published a letter to the editor from Michael B. Wagenheim.

Mr. Wagenheim is a former chairman of the Norfolk School Board, a former president of the Virginia State Bar Association, and one of the most able practitioners of the law in the Commonwealth of Virginia. His observations parallel some of the thought expressed by me on the floor of the Senate on Monday. I ask unanimous consent that the text of his letter to the editor of the Virginian-Pilot, published July 22, 1970, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COURT-CREATED CONFUSION

EDITOR, VIRGINIAN-PILOT:

As a lawyer and former Chairman of the Norfolk School Board, on which I served for about 15 years, I am imbued with a sense of frustration and futility, coupled with apprehension, in attempting to diagnose the attitude of the Federal Courts toward giving our children the best possible education.

Since the Supreme Court's decision in the Brown case some 16 years ago, the public has been treated to some of the most fancy legal footwork and adroit sidestepping in the annals of American jurisprudence. What may have been relatively simple has become confused, and what was already confused has been thrown into utter chaos. A vain effort to reconcile some of the contradictory language in the opinions from the various Federal Courts leads one to the inevitable conclusion that the last of these has achieved the singular distinction of being more confusing than the first.

So here in Norfolk, after 16 years, where do we find ourselves? The U.S. Fourth Circuit Court of Appeals has rejected the Norfolk School Board's desegregation plan, which was approved by District Judge Walter E. Hoffman in a painstaking and scholarly opinion. A new plan must now be devised. The Supreme Court has been reluctant to render any helpful advice, and its previous decisions and rulings have added very little light on the troubled situation.

Compulsory busing simply to force a racial balance does not seem to be the answer. Aside from the financial aspects of the situation, such a disruptive course among small children is hardly calculated to improve the quality of education. Neither blacks nor whites are happy at the prospect of seeing their youngsters carted away from their little friends, neighbors, and playmates to some remote location in a futile effort to enforce a numerical racial balance.

I say let the Supreme Court meet this question head-on in the Charlotte case now on the appeal docket. The baby has been bounced around too often and too long. Parents are disturbed; children are frightened; educators are confused; the City officials are perplexed. Since the Circuit Court of Appeals has said that Norfolk's efforts to carry out a well-defined plan are wrong, the Supreme Court should now speak up in plain, unambiguous and unmistakable language and tell all of us what is right.

If compulsory busing is to become the unfortunate order of the day, let the Court have the courage to say so.

MICHAEL B. WAGENHEIM.

NORFOLK.

RED TERROR IN LITHUANIA, LATVIA, AND ESTONIA

Mr. SMITH of Illinois. Mr. President, June 15, 1940, was a tragic day for the Baltic people who have suffered in Soviet captivity for 30 long years.

On that day Soviet Russia seized Lithuania, Latvia, and Estonia by force of arms and 1 year later these cruel masters began the systematic deportation of Lithuanians, Latvians, and Estonians from their homelands to the desolation of Siberia and the terror of Soviet concentration camps.

This year I was privileged to join with the fine Lithuanian community in Chicago for the opening of their Captive Nations Genocide Day exhibition. It is indeed tragic that after 30 years it is necessary to remind the world that freedom has not yet been restored to the Captive Baltic Nations.

Mr. President, the Lithuanian American Community of the USA, Inc., speaking for the Baltic peoples of Lithuania, Latvia, and Estonia, has submitted a statement entitled "Red Terror in Lithuania, Latvia, and Estonia." This document speaks eloquently for itself.

Mr. President, I commend the statement to the Senate and ask unanimous consent that "Red Terror in Lithuania, Latvia, and Estonia" and House Concurrent Resolution 416 be printed in the RECORD.

There being no objection, the statement and resolution were ordered to be printed in the RECORD, as follows:

RED TERROR IN LITHUANIA, LATVIA, AND ESTONIA

(Enslavement of the Baltic States by the Soviets for thirty years)

The Kremlin is fond of saying that Russian imperialism died with the czar. But the fate of the Baltic nations—Lithuania, Latvia and Estonia—shows this to be a cruel fiction. The Communist regime did not come to power in the Baltic States by legal or democratic process. The Soviet Union took over Lithuania, Latvia and Estonia by force of arms. The Soviets invaded and occupied the Baltic States in June of 1940, and the Baltic peoples have been suffering in Russian-Communist slavery for 30 years.

The Balts are proud peoples who have lived peacefully on the shores of the Baltic from time immemorial. For instance, this year marks the 719th anniversary of the formation of the Lithuanian state when Mindaugas the Great unified all Lithuanian principalities into one kingdom in 1251.

The Lithuanians, Latvians and Estonians have suffered for centuries from the "accident of geography." From the West they were invaded by the Teutonic Knights, from the East by the Russians. It took remarkable spiritual and ethnic strength to survive the pressures from both sides. The Balts, it should be kept in mind, are ethnically related *neither to the Germans nor the Russians.*

After the Nazis and Soviets smashed Poland in September of 1939, the Kremlin moved troops into the Baltic republics and annexed them in June of 1940. In one of history's greatest frauds, "elections" were held under Red army guns. The Kremlin then claimed that Lithuania, Latvia and Estonia voted for inclusion in the Soviet empire.

Then began one of the most brutal occupations of all time. Hundreds of thousands of Balts were dragged off to trains and jammed into cars without food or water. Many died from suffocation. The pitiful survivors were dumped out in the Arctic or Siberia. The Baltic peoples have never experienced such an extermination and annihilation of their people in their long history through centuries as during the last three decades. Since June 15, 1940, these three nations have lost more than one fourth of their entire population. The genocidal operations and practices being carried out by the Soviets continue with no end in sight.

Since the very beginning of Soviet Russian occupation, however, the Balts have waged an intensive fight for freedom. During the period between 1940 and 1952 alone, some 30,000 Lithuanian freedom fighters lost their lives in an organized resistance movement against the invaders. The cessation of armed guerrilla warfare in 1952 did not spell the end of the Baltic resistance against Soviet domination. On the contrary, resistance by passive means gained a new impetus.

The Government of the United States of America has refused to recognize the seizure and forced "incorporation" of Lithuania, Latvia and Estonia by the Communists into the Union of Soviet Socialist Republics. Our Government maintains diplomatic relations with the former free Governments of the Baltic States. Since June of 1940, when the Soviet Union took over Lithuania, Latvia and Estonia, all the Presidents of the United States (Franklin D. Roosevelt, Harry S Truman, Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, and Richard M. Nixon) have stated, restated and confirmed our country's nonrecognition policy of the occupation of the Baltic States by the Kremlin dictators. However, our country has done very little, if anything, to help the suffering Baltic peoples to get rid of the Communist regimes in their countries.

The case of the Baltic States is not a question about the rights of self-rule of Lithu-

ania, Latvia and Estonia, since this is established beyond any reasonable doubt, but the question is how to stop the Soviet crime and restore the freedom and independence of these countries. The Select Committee of the House of Representatives to Investigate the Incorporation of the Baltic States into the U.S.S.R., created by the 83rd Congress, after having held 50 public hearings during which the testimony of 335 persons was taken, made a number of recommendations to our Government pertaining to the whole question of liberation of the Baltic States. According to the findings of this House committee, "no nation, including the Russian Federated Soviet Republic, has ever voluntarily adopted communism." All of them were enslaved by the use of infiltration, subversion, and force. The American foreign policy toward the Communist enslaved nations, the aforesaid House committee stated, must be guided by "the moral and political principles of the American Declaration of Independence." The present generation of Americans, this committee suggested, should recognize that the bonds which many Americans have with enslaved lands of their ancestry are a great asset to the struggle against communism and that, furthermore, the Communist danger should be abolished during the present generation. The only hope of avoiding a new world war, according to this committee, is a "bold, positive political offensive by the United States and the entire free world." The committee included a declaration of the U.S. Congress which states that the eventual liberation and self-determination of nations are "firm and unchanging parts of our policy."

At a time when the Western powers have granted freedom and independence to many nations in Africa, Asia and other parts of the world, we must insist that the Communist colonial empire likewise extends freedom and independence to the peoples of Lithuania, Latvia and Estonia whose lands have been unjustly occupied and whose rightful place among the nations of the world is being denied. Today and not tomorrow is the time to brand the Kremlin dictators as the largest colonial empire in the world. By timidity, we invite further Communist aggression.

Recently the U.S. Congress has made a right step in the right direction by adopting *H. Con. Res. 416* that calls for freedom for Lithuania, Latvia and Estonia. All freedom-loving Americans should urge the President of the United States to implement this legislation by bringing the issue of the liberation of the Baltic States to the United Nations. We should have a single standard for freedom. Its denial in the whole or in part, any place in the world, including the Soviet Union is surely intolerable.

HOUSE CONCURRENT RESOLUTION 416

Whereas the subjection of peoples to alien subjugation, domination, and exploitation constitutes a denial of fundamental human rights, is contrary to the Charter of the United Nations, and is an impediment to the promotion of world peace and cooperation; and

Whereas all peoples have the right to self-determination; by virtue of that right they freely determine their political status and freely pursue their economic, social, cultural, and religious development; and

Whereas the Baltic peoples of Estonia, Latvia, and Lithuania have been forcibly deprived of these rights by the Government of the Soviet Union; and

Whereas the Government of the Soviet Union, through a program of deportations and resettlement of peoples, continues in its effort to change the ethnic character of the populations of the Baltic States; and

Whereas it has been the firm and consistent policy of the Government of the United States to support the aspirations of Baltic peoples for self-determination and national independence; and

Whereas there exist many historical, cultural, and family ties between the peoples of the Baltic States and the American people: Be it

Resolved by the House of Representatives (the Senate concurring), That the House of Representatives of the United States urge the President of the United States—

(a) to direct the attention of world opinion at the United Nations and at other appropriate international forums and by such means as he deems appropriate, to the denial of the rights of self-determination for the peoples of Estonia, Lativa, and Lithuania, and

(b) to bring the force of world opinion to bear on behalf of the restoration of these rights to the Baltic peoples.

Passed the House of Representatives June 21, 1965.

Attest:

RALPH R. ROBERTS,
Clerk.

THE HUMAN RIGHTS CONVENTIONS: THE GAP BETWEEN RHETORIC AND ACTION

Mr. PROXMIRE. Mr. President, all of us in public life have had to face many forms of hypocrisy. The gap between words and action is unfortunately a common ingredient in American politics. Even so, Mr. President, I fail to see why we must continually condone the use of hypocritical statements that fail to meet the exigencies of a serious political problem. I speak here, in particular, of the failure of this Chamber to ratify the United Nations Human Rights Conventions. The Conventions on Genocide, Forced Labor, and Equal Rights for Women were submitted to the Senate in the decade or so following World War II. The Genocide Convention was the first of these, submitted by President Truman in 1949. Now, 20 years later, we have the opportunity to demonstrate that we stand, as a nation, by our words.

Unfortunately, there is not too much face left worth saving on this issue. Over 78 member nations have signed the Convention on Genocide. Our absence from this great list is more than merely a conspicuous absence; it is an acute embarrassment for all of us who believe that the United States has the responsibility to provide moral leadership and initiative to all nations—regardless of their system or ideology. Now, more than ever before, we must take a long look at ourselves and our record.

We must realize as a nation that moral issues are indeed involved in our foreign policy and treaty decisions. Therefore, we must carry into our foreign policy and treaty decisions a sense of ethics and morality. We simply cannot divorce the moral from the hard political issues.

I urge the Senate to ratify the Genocide Convention during this session of Congress.

LOYALTY AND PRIDE OF THE PEOPLE IN THEIR COUNTRY

Mr. FANNIN. Mr. President, I am impressed by the deep sense of loyalty and pride of our working people in their country.

Their pride and loyalty in the greatness of the Nation far outweighs their complaints. Problems they have, but they consider these secondary to the fact that there are those who avoid their duty to their country or who are maligners.

Mr. President, I ask unanimous consent to enter in the RECORD an excerpt from a letter to me from Mr. Herbert P. Voight, of Phoenix, Ariz., who so ably expresses his views:

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

As a foreign born American citizen I am often at a loss for the right words and expressions to make my point and have for that reason refrained writing to my Congressman or Senator in the past, although as father of a son who enlisted in the US Airforce 14 years ago at the age of 17 years I should have the privilege before a native father with a son of the same age, which refuses to serve and defend his country.

I am 100% in favor of the way Mr. Nixon is running the war in Vietnam, which he didn't start, except for one thing. He should give orders to bomb Hanoi and Haiphong out of existence, like the allies did with Berlin in the second World War.

* * * * *

After returning home from the war 1918 to East Germany I have been fighting the communists in Germany on and off in the big industrial Cities as a member of the new German Army and found out one thing, you can lick them, but you can't deal or compromise with them. Ever since I came to the United States in 1926 I predicted the rise of Hitler, as well as the decay in this country and couldn't understand, that nothing was done to stop the trend.

The Unions are much too powerful and making slaves out of the skilled workman, who is forced to pay and pay and carry 2 loafers and unskilled workers on his back. Everybody thinks the country owes him or her something. In my book there is a difference between a legitimate Charity Case and a good for nothing drunken bum, who is on Welfare ever since his schooldays ended. Let's take care of our real honest Welfare Cases, no matter what color or religion, but the hippies, drug addicts etc. put on road gangs and let them clean up our countryside, highways and waterways. Our courts better change their ways of interpreting the laws of the country, whether high court or low court, otherwise the honest people will be asking to be put in jail for two reasons, to be safe from the criminals roaming the streets of the cities and to be better fed and have better living conditions than they can afford on the outside.

Postal Reform should have come years ago, but I think now with the Postoffice Employees unionized we can expect slowdowns, walkouts and demoralization more than ever before.

Election of the president of the USA should be kept as is, but voting for 18 year olds should be permitted only to the ones entering the armed services and those willing to serve but being rejected for physical reasons.

As far as federal assistance is concerned to help families to buy a health Insurance, I would be satisfied if the Government would really stop Inflation, before my last few dollars are out the window, which I saved to live on in my old age. We, my wife is an invalid, unoperable, but can't collect Soc. Sec. manage to get along on $126.60 a month plus $700.00 Interests on Savings a year, living in our son's house, while he is overseas.

You think the president has troubles running the Country and the war, well I have a lot more but just the same, I'm willing to fight for this country yet if my health would permit.

THE URBAN CORPS: DEVELOPING A NEW GENERATION OF LEADERSHIP

Mr. TYDINGS. Mr. President, our urban centers find themselves with all of the problems and few of the resources with which to attack them. It is neither easy nor wise to escape this picture of the urban scene, but let us recognize it as the present-past and turn our attention to the needs of the future.

We need a different approach to our urban problems, more comprehensive than in the past. To effectively combat these problems, we need a new generation of practitioners to assist in this restructuring. These must be today's students. Unfortunately, many of our institutions of higher education are still turning out students trained in the theory of narrow traditional disciplines.

For all of these reasons, I firmly endorse the local Urban Corps student-involvement programs that are being developed in Maryland and throughout the Nation. Such locally-developed and locally-controlled programs serve as an interface between the academic community and urban government. Urban Corps interns have the opportunity to relate theory to reality and to apply their energies directly on problems within their field of interest. Such programs provide a practical experience which simply cannot be matched for those students who will comprise the new generation of practitioners.

In the Baltimore region there are now two Urban Corps programs: the Baltimore Urban Corps, developed and managed by the city of Baltimore, and the Baltimore Metropolitan Urban Corps, sponsored by the Regional Planning Council. The Baltimore Urban Corps works with city agencies and is directed by the office of the mayor, while the Metropolitan Urban Corps deals largely with State agencies. The two programs were independently initiated in the early fall of 1969, and will complement each other.

The Urban Corps in the Baltimore area will provide an educational experience for both the student intern and the city government employer—each gaining a better perspective of one another. In addition, such programs bring the academic community closer to the actual workings of urban government which can only help reduce the often-present alienation between the two.

Urban Corps programs across the Nation would not solve all of our urban problems, however, they are a beginning effort geared toward constructive action and change. I'm very encouraged about the establishment of two Urban Corps programs in my home State and applaud the national effort in helping to redirect our domestic priorities.

I ask unanimous consent to have printed in the RECORD a statement about the Urban Corps, a list of programs in operation or being developed, a Saturday Review article, and a New York Times article.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

AN INTRODUCTION TO THE URBAN CORPS

Our cities are faced with an overwhelming variety of serious and complex problems. It is clear that these problems cannot be resolved with our present resources; new sources of talented and motivated personnel must be found to aid in the solution of the crises of our cities.

Our colleges and universities are also undergoing a thorough re-evaluation of their goals. Students are asking for more "relevance" in their educational experience and for the opportunity to take an active part in shaping the future of the society in which they live. Simultaneously, institutions of higher learning are seeking ways of providing genuine service to the community at large. This growing desire to extend the learning experience beyond the campus gates, to test academic theory against the conditions in the real world present a challenge and an opportunity to both government and higher education.

Urban Corps programs meet that challenge by bringing together the city and the academic community through internships in urban government.

An Urban Corps program has four basic objectives:

1. To provide young men and women with the opportunity to participate first-hand in all aspects of urban government;
2. To provide the community with skilled and motivated manpower willing and able to perform important and meaningful assignments in the public interest;
3. To attract into local government the new talent it so urgently requires; and
4. To bring the unique capabilities and resources of the academic community to bear upon the problems of the city.

URBAN CORPS OPERATIONS

Urban Corps students may be involved in every aspect of Urban government. Assignments have ranged from community development and counseling to medical technology and legal research. Every assignment must contain two critical elements, each in sufficient quantity to render the program effective. These are the value of the assignment to the community, and the value of the experience to the student. If the latter is missing, the program becomes an employment service, while if the former is ignored, a truly significant resource is wasted.

Urban Corps students participate full-time during the summer vacation period, and take part in the program on a part-time basis while classes are in session. Increasingly, colleges are offering their students the opportunity to spend one or more semesters working off-campus in a full-time assignment related to their studies and interests.

An Urban Corps is a local program, locally developed and locally run. Each Urban Corps is based upon the specific needs and priorities of the particular community, and can vary in structure and emphasis to most effectively meet local requirements.

An Urban Corps may be a structural part of the city government, frequently a unit of the chief executive's office. Depending upon local circumstances it may also be joined with other related programs, such as youth opportunity or manpower agencies. Some Urban Corps programs are administered by multi-governmental organizations, such as councils of governments or metropolitan coordinating bodies. In a few instances, special purpose corporations, quasi-governmental or educational, have been formed to provide the most flexible home for Urban Corps.

An Urban Corps is a cooperative effort, with local colleges and universities taking an active part in designing the program to develop its educational value as well as meeting the needs of the city.

Once the program is launched, many communities invite more distant educational institutions to take part in their Urban Corps. This is especially useful for the local student who attends out-of-town college, and yet wants to get involved in his home town when he returns on vacation.

FUNDING AN URBAN CORPS

The uniqueness of the Urban Corps concept rests in large measure upon its economic feasibility.

The Federal College Work-Study Program offers a uniquely solid base for funding an Urban Corps.

Administered by the U.S. Office of Education, the College Work-Study Program provides funds to participating colleges for the employment of qualified students, either in work for the institution itself (for example, in the library or cafeteria), or in work in the public interest for a public agency or private non-profit organizations. It is this latter option under which an Urban Corps may obtain this source of support.

Through the College Work-Study Program, up to eighty percent of the student's compensation is provided by the Federal government, with the remaining twenty percent coming from local sources.

The College Work-Study Program has been substantially funded since its creation in 1965. Current authorizations for the program are in excess of $150-million annually, and authorized levels approach the third of a *billion* mark. More than two thousand colleges, universities and vocational schools (including proprietary institutions) take part in the College Work-Study Program, and hundreds more enroll each year.

Student eligibility for assistance under the College Work-Study Program is based on four elements:

1. He must be enrolled as a full-time student;
2. He must be in good academic standing;
3. He must be a citizen of the United States (or file a notice of intention to become a citizen); and
4. He must demonstrate, to the satisfaction of his college, that he needs the income from such employment in order to continue his higher education.

A great many students from various economic backgrounds must work, during the summer or part-time during the academic year, in order to remain in school, and these young people are often clearly eligible for College Work-Study grants. Naturally, priority is given to those students who demonstrate the greatest need.

The twenty per cent share is derived most often from local funds. This may take the form of money already being utilized for part-time or summer employment of college students, or it may entail modest new appropriations to initiate the program. In some situations, the state assists local municipalities in making the match. The College Work-Study Program is also unique among federal programs in that its matching requirement may be met with *other federal funds* (e.g., Model Cities, Community Action Programs, etc.).

Several communities have been able to obtain significant private sector support for their local Urban Corps. This introduces even further flexibility to the program, allowing for the involvement of highly qualified students who may not be eligible for College Work-Study Program assistance, and for the development of supplemental programming to increase the effectiveness of the Urban Corps as a learning experience.

An Urban Corps can be essentially self-supporting in terms of administrative staffing. The students themselves provide a uniquely capable pool of talented and motivated personnel, filling positions ranging from program developers to payroll auditors. Overhead costs may thus be kept to a bare minimum, while the energy and enthusiasm

of the students tends to keep the program dynamic and responsive.

THE HISTORY OF THE URBAN CORPS

The concept of the Urban Corps was pioneered in New York City by Mayor John V. Lindsay. In 1966 the nation's first Urban Corps took form there, with more than 1,000 students from 52 colleges and universities taking part in that initial effort.

Deputy Mayor Timothy W. Costello, who developed the first program, described the Urban Corps as a way to "bridge the gap between our city and its young people." A College professor himself, he stressed the importance of making the Urban Corps an intellectual as well as vocational experience.

The Urban Corps grew steadily in New York, each year adding more students to its enrollment, until in the summer of 1969 more than 3,000 young people took part in the program. Significantly, the desire of city agencies to use this new resource increased at an even more rapid rate, with latest figures showing more than twice as many requests as available students.

THE URBAN CORPS NATIONAL DEVELOPMENT OFFICE

In the fall of 1968 the Ford Foundation provided funds for the establishment of an *Urban Corps National Development Office* to assist cities in the development of their own local Urban Corps programs. During the summer of 1969, the Urban Corps National Development Office was instrumental in stimulating the development of local Urban Corps in more than fifteen cities from Boston to San Francisco. A subsequent renewal of the Ford grant, together with the active support and encouragement of the U.S. Office of Education and various national organizations (such as the International City Management Association and the President's Council on Youth Opportunity), has permitted the Urban Corps National Development Office to expand its efforts to over a hundred communities throughout the nation interested in establishing local Urban Corps programs. In addition, the National Development Office has begun work with several states towards the creation of state-wide student community involvement programs patterned along the Urban Corps model.

The Urban Corps National Development Office provides technical assistance, documentary materials and on-site consultation, all designed to simplify the process of developing a local Urban Corps. The *Urban Corps National News* provides a semi-monthly review of Urban Corps developments throughout the nation, including legal and legislative changes and examples of innovative programing and funding concepts.

Through the support of the Ford Foundation, the assistance of the Urban Corps National Development Office is available without charge to any governmental entity or institution of higher education.

URBAN CORP GOES NATIONAL

Across the Nation, in cities trapped in chronic crisis and mired in tired bureaucracies, there are tasks undone and programs never carried out for lack of funds and talented personnel. In those same cities are thousands of college students looking for ways to put their academic knowledge to practical use.

This past summer seventeen cities—from Boston to Atlanta to Minneapolis—adopted a program designed to meet the needs of both cities and students. The Urban Corps, as it is called, brings undergraduate and graduate students to work in city government on "internship assignments" in a wide range of fields. In Dayton, Ohio, for example, students worked for the Department of Community Development, the Division of Correction, and the Model Cities Planning Council, among others. In Minneapolis, they served as management and research assistants in city planning, the city attorney's office, the police and the parks departments.

The Urban Corps sees to it that these assignments are substantive activities that require the talents of college students, and not just make-work routine tasks. While there is a National Urban Corps office to provide information and help launch programs, each city develops its own plan and contracts independently with colleges and universities. Some cities prefer to use students only in already existing agencies. Others see the new manpower as an opportunity to develop projects long neglected for lack of time and talent. Minneapolis, for instance, needed a street-theater group to develop plays especially for neighborhood audiences.

The program is financed primarily by federal funds through the College Work-Study Program (CWSP). Through the colleges, the federal government provides 80 per cent of the needed money; the city supplies the other 20 per cent. Most of this goes for students' salaries—between $2.25 and $3.25 an hour. The program is student-administered, keeping overhead negligible and allowing a large project to operate on a minimal budget.

CWSP funds are available only to students who could not otherwise afford to stay in college. In a number of cities, therefore, the Urban Corps is seeking funds from other sources to allow a wider range of students to participate. In Atlanta, the Southern Regional Education Board and Atlanta businessmen helped to expand the program.

Urban Corps programs continue through the school year on a part-time basis, and other cities are expected to pick up the idea this fall. Further information can be obtained from Michael Goldstein, Urban Corps National Development Office, 250 Broadway, New York, New York 10007.—B. B. S.

CITY'S "PEACE CORPS" ENDS A PRODUCTIVE SUMMER

In a humid school auditorium in Harlem recently, a drama student from Queens College was staging his first theatrical production, an elaborate musical with sailors, pirates and monsters played by more than 300 excited youngsters enrolled in a city-run summer day camp.

At about the same time, in a crowded room of a rundown Bronx settlement house, a petite Radcliffe senior majoring in government was speaking before a loud and hostile community meeting as a representative of Borough President Herman Badillo.

At Bellevue Hospital, a Yeshiva College sophomore was expertly photographing patterns in cancer cells with an electron microscope.

These young people were members of the New York Urban Corps, a four-year-old city program that enables more than 3,000 students from 150 colleges and universities to work as "internes" in local government agencies and government-sponsored offices.

A U.S.-AIDED PROGRAM

In the program, which ended last Friday, the students earned an average of $2 to $3 an hour for a 40-hour work week. The Federal Government paid 80 per cent of each student's salary and the city paid 20 per cent. The city allocated $450,000 this year to support the organization, which Mayor Lindsay calls New York's "peace corps."

"Involving young people in the city is a good investment," said 49-year-old Martin Rose, executive director of the Urban Corps. "The city agencies know these students might stay on in city government. There

were 10,000 openings in the city for jobs this summer alone."

Impressed by New York's experience, a dozen cities in the country—including Boston, Atlanta and Detroit—started their own Urban Corps this summer.

The program here was marked by flexibility. Some of its participants worked in the city's slum neighborhoods—organizing the poor on a deteriorating Lower East Side block, providing recreation for youngsters in summer school, helping to train the mentally handicapped in city hospitals. Others were involved in city administrative work. Still others found opportunities to further their specialties in the arts and sciences.

MERRICK HAS IT EASY

When he applied for his Urban Corps job last spring, Greg Antonacci, the Queens College drama student, did not expect to be staging an original musical with a cast of 300 restless youngsters.

"David Merrick has it easy!" he said the other day. "I spent hours just yelling 'React! React!' to kids who stood with their hands folded in the middle of a jellyfish attack. I felt more like Vince Lombardi than a stage director.

"But I learned what I could do. I never thought I had it in me to put on that play and I surprised myself. I got those kids to communicate, and I felt proud of their pride."

In the marble hallways of the Bronx County Courthouse, Sandra Ravich, the Radcliffe senior working for the Borough President's office, had a different reaction, however.

"I don't feel I'm making that much of a contribution," she said. "I'm not sure there's much one person can do. Sometimes I'm pessimistic, sometimes I'm optimistic. I think I'm the one who's benefited from this summer, not necessarily anyone else."

AN ENCOUNTER WITH ANGER

An auburn-haired student from Winthrop, Mass., who had never before been in the Bronx, Miss Ravich worked in the section of the Borough President's office that acts as liaison with the county's local Community Planning Boards.

In this capacity, she attended several community meetings, including one in which a group of angry board members was upset because the City Council had voted to open membership on the board to those living outside the planning district. The board members felt Mr. Badillo's office was to blame.

"We all sat around a big table, and, believe me, at first I felt like crawling under it," said Miss Ravich. "But our office wasn't at fault, and I had to help soften the animosity. I learned a lot that night, more than you learn in a government course at Harvard."

While Miss Ravich saw the city bureaucracy function from the inside, four students were working with the residents of East Seventh Street on the Lower East Side, cleaning up a lot for use as a playground, obtaining intercoms for building entrances.

"You learn what a complex thing a block is," said Paul Andrews, a senior at Manhattan College. "We've got hippies, blacks, Spanish-speaking people, students, radicals, a publisher, a Democratic district leader, musicians, lawyers, a doctor—great human resources on one block that people dismiss as a slum.

"What this summer proved to me is that anything people want has to be done by themselves. Massive government programs aren't the answer."

A LOOK AT FUTURE JOBS

For some students the Urban Corps offered a way to learn more about a future profession. At Bellevue Hospital, Mark Rand, a Yeshiva College sophomore, stepped away from the shiny $40,000 electron microscope in a dark room on the second floor of the Pathology Building.

"I always wanted to be a doctor," Mr. Rand said. "But I never before realized the intensity of training that's required. And the dedication! You have to be a scientist and a day-to-day doctor. It takes a long time to reach that point."

Across the city, at the American Museum of Natural History, Cynthia Goddard, a Sarah Lawrence College junior, studied a book on craftwork in ancient Iran.

An anthropology major, she was doing research for Dr. Walter A. Fairservis Jr., curator of Asian ethnology, who wanted to know what craftwork in Iran was known to be indigenous and what was known to have been imported.

"I love the people here," she said. "They're beautiful. For me, the Urban Corps was a chance to really see firsthand the kind of work I probably will do after college."

CRIME IN THE STREETS

Mr. McINTYRE. Mr. President, at a time when the problem of crime is uppermost in our minds, I want to share a most interesting poetic interpretation of the problem by Mrs. Blanche Clark Nevers of Rye, N.H. I think she has expressed, with a good deal of impact, the uneasiness which many people feel as a result of the growing presence of crime in our Nation. She points up, in a different way, the need to act.

Mr. President, I ask unanimous consent to have Mrs. Nevers' poem printed in the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

CRIME IN THE STREETS

(By Blanche Clark Nevers)

Once upon a happier time we welcomed the dusk,
And the hushed awareness of the almost night.
Small voices chirped a litany in the grassy places;
Shy hand clasped hand and the street embraced our steps and our laughter.

Now fear's tenuous fingers claw the darkness,
And, like alley rats we scurry for cover . . .
Leaving the beauty of the night to desecration!

DRAJA MIKHAILOVICH—YUGOSLAV GUERRILLA LEADER

Mr. SMITH of Illinois. Mr. President, for more than 20 years a determined coalition of Americans and Yugoslavian refugees have struggled against overwhelming odds to clear the name and memory of World War II Yugoslav guerrilla leader Draja Mikhailovich.

After the war Mikhailovich was tried and executed by the Tito government for collaboration with Germany.

The Tucson Daily Citizen recently published an article by Richard Felman, an American flyer who safely escaped from occupied Yugoslavia with the aid of Mikhailovich and his Chetniks. I ask unanimous consent that Major Felman's story be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tucson (Ariz.) Daily Citizen, May 16, 1970]

D. MIKHAILOVICH: FATE WAS MERCILESS TO ME WHEN IT THREW ME INTO THIS MAELSTROM

(By Richard L. Felman)

(EDITOR'S NOTE.—Maj. Richard L. Felman (USAF, Ret.) has lived in Tucson the past two decades. He is a former New Yorker. He remains active in numerous ways in his fight to clear the name of Mikhailovich, recently attracting publicity against the Tito-backed entry of a lavish movie, "The Battle of Neretva," in last month's Oscar Award sweepstakes in the best foreign film category. It did not win.)

To the hundreds of us in uniform, home from history's greatest war (which was still unfinished behind us), there was no more beautiful sight in the world than New York harbor.

Drinking in the sights of New York—from shipside was diversion enough as we waited out the seemingly interminable time for anchoring.

I was hungrier for a newspaper than for a Red Cross coffee-doughnut feed and eagerly grasped a New York Times. On Page two, my whole homecoming jubilation was shattered.

There was a dispatch from Yugoslavia: "Marshall Tito announced his Partisan forces had successfully destroyed the large ammunition dump and a railroad terminal at Gorny Milovits after fighting off superior numbers of German and collaborating Chetnik troops."

Not true! I was on that raid. With the Chetniks. It was a Chetnik raid. There wasn't a Red Star—a Tito emblem—within 50 miles!

On April 6, 1941, the savage hordes of the Nazi juggernaut invaded Yugoslavia. Its popular king, Peter II, was smuggled into London to live the unsatisfactory life of a ruler in exile.

The Yugoslav Army Peter had left behind was poorly equipped, a sitting duck for the then exalted Wehrmacht Panzer divisions. Within a matter of days, Adolf Hitler had, for the moment, another country—proud Yugoslavia—in his pocket of world conquest.

Hitler had the country, true. But not its people. Though King Peter had fled he had left behind a man named Draja Mikhailovich, Peter's Minister of War and Commander-in-Chief of the Yugoslav armed forces.

Mikhailovich quickly assembled his makeshift, slingshot army and retreated to the hills. The first great guerrilla leader of World War II began to make himself known. Reports began sifting through the German occupation lines of his spectacular raids on German garrisons, his acts of sabotage and of constant harassment of the Nazis.

Top German staff officers eventually were to admit that Mikhailovich caused so much embarrassment to the invincible Nazi machine that Hitler had transferred four Panzer divisions from the Russian front to wipe him out at all costs; that the pullout of those same divisions spelled the difference in the balance of power on the Russian front and changed the tide of the war.

Since September, 1939, when Hitler overran Poland, no country or people had been able to offer anything more than token resistance to the onrushing Nazi steamroller.

When Mikhailovich took to the hills, and the exploits of his 300,000 beggarly-looking soldiers began resounding throughout the Allied world, it was as if the first flame of hope had lit up the skies of the free world in signal that the great German Army could, after all, be put down.

Americans viewed Mikailovich and his "Chetniks" as the 20th Century David, brazenly challenging Goliath. Newspapers paid tribute with admiring banners. Hollywood issued a box office cinch with its own version of the brave Chetniks. The May 25, 1942, edition of Time magazine emblazoned a

Draja Mikhailovich profile on its cover. Children dropped "Cowboys and Indians" and played "Chetniks."

I knew this man, this legend.

He and his Chetniks saved my life.

At the end of World War II, there were approximately 600 other American flyers who could say the same. Many of them, to this day, are as embroiled as I in a unique mission: to restore the glory of Mikhailovich which, long before the great war ended, was cloaked in undeserved ignominy by the fickle fortunes of international politics which placed the winning of the war above one man's honor. So we believe.

King Peter has twice bestowed coveted decorations on me, and has similarly honored some of the other Americans who still work to clear the name of their beloved Draja.

On Feb. 4, 1944, I won my wings and second lieutenant's commission. I picked up my 10-man crew at Westover Field, Mass., and a shiny, new B-24 Liberator bomber at Mitchell Field, N.Y.

At Morrison Field, Fla., we received our sealed, secret orders to be opened after takeoff. Nervously, we tore them open the instant we were outside the three-mile limit. "Assignment—98th Bombardment Group, 15th Air Force, Italy."

Trinidad, Brazil, Dakar, Marrakesch, Tunisia and, finally, Lecce, Italy.

We began to see what lay ahead of us our first night in Lecce. A bull session developed with the experienced crews . . . three crews lost that day, two the day before . . . 60 per cent crew turnover due to losses the previous two months . . . the neighboring "Fighting 100" completely wiped out.

We were not to remain rookies long. After a lone, brief orientation flight, our ship, which we had christened Never A Dull Moment, was thrown into Rumania, Germany, Yugoslavia, Northern Italy, Southern France, Austria and Hungary—23 missions in slightly more than one month!

We began to feel invincible, despite our share of fighter attacks, engine fires, emergency landings and other scrapes. After a mission to Munich, we counted 212 flak holes in our beloved ship.

Then came Ploesti.

The pre-dawn briefing officer was saying: "Gentlemen, our target for today is the Astro Romano oil refinery at Ploesti, Rumania . . . most heavily defended target in all of Europe . . . the German machine runs on oil; destroy his oil supplies and his entire system collapses . . . Ploesti supplies 80 per cent of the enemy's oil." Descriptions, photographs, number and location of enemy flak guns, enemy fighter bases pinpointed, where to expect our own fighter escort, etc.

And finally, a strange caution.

If we were forced to bail out over Yugoslavia, the briefing officer was saying, we were instructed to seek out "the guerrilla fighter with the Red Star on his hat."

That was our first word that Mikhailovich was no longer the guerrilla darling of the free world. The Red Stars meant Tito's men.

A new intelligence report had just come in from Yugoslavia, said the briefing officer, that Mikhailovich and his Chetnik guerrillas were "cutting off the ears" of downed Allied airmen and turning them over to the Nazis!

At 0513 hours we were off on Mission No. 24. It was a clear, sunny day as the silver ships soared over the deep blue Adriatic. The sky was full of airplanes, 250 of them, B-24s and B-17s. The coastline of Yugoslavia loomed up. We changed course to avert a flak area. Occasionally a plane would drop out of formation and head home with minor engine trouble, but the mighty air armada moved on.

At the Rumanian border, we picked up our fighter escort. To confuse ground tracking stations, we altered our course a few times. Everything was going very well.

Suddenly, 10 minutes out from the target, all hell broke loose! It seemed as if every one of Ploesti's 325 gun emplacements opened up as one. Bombers all around us were exploding or going down in black smoke. Me-109s were coming at us from every direction. The sky ahead was almost solidly black with flak-burst.

"Dear Lord, we've got 10,000 pounds of dynamite on board . . . keep heading for the target and get unloaded . . . hit me later, Jerry, but not until I unload . . ."

We drop the bombs. The plane jumps 100 feet higher with the emptying of the load. We rack over in the direction of home. We spot a single B-17 Flying Fortress in a lonely pattern and know it for what it is: one the Jerries captured intact and used to send up to fly formation with the Americans, who would think it one of theirs. It was calling off our altitude to Jerry's ground gun batteries.

Forty-five minutes later, there was a welcome lull in the fighting—but not for long. The Messerschmitts swarmed back and were all over us before we knew what had happened. Never A Dull Moment lived up to her name as never before. She was riddled with 30-millimeter shells. Half our tail assembly was shot away. Our aileron controls were out. Our rudder was gone. Huge chunks were torn from the left wing and the fuselage. The interphone was kaput and, for a crowning blow, our gas tanks were punctured.

"ABANDON SHIP!"

From 18,000 feet, I jumped—my first bail-out. The 'chute opened beautifully at the right time. I landed in an open field and made a move to get out of harness. It was only then I realized I had been hit and couldn't move my leg.

At that moment I was surrounded—by about 20 peasants, men, women and children. The bearded men kissed me. The women and children kept an awed distance. No red stars. Chetniks! Instinctively, the words of the briefing officer came to mind. I reached for my ears to protect them.

They didn't want my ears. They raised me on their shoulders and carried me about 500 yards to a group of three cabins and laid me comfortably in a small room.

More villagers came and filed by my bed, wearing friendly visages. They brought fruit, flowers and slivovitz, a Serbian 160-proof plum brandy. Music was played, children danced, toasts were drunk. Some slivovitz was poured over my wound and bandages were put on it.

An elderly peasant provided me with a crude crutch, clasped his hands as though saying grace and beckoned me to follow him. He led me to a small wooden structure nearby, which was the village chapel. We both knelt and prayed.

In the late afternoon, Col. Dragisha Vasich came to welcome me. A man of striking appearance, he was about 65 years old, was neatly dressed and had snow white hair and a trim goatee.

Before the war, he had been Belgrade's most noted editor-publisher. Soon after the invasion, he left his home and business and went into the hills. Mikhailovich had made him the Corps Commander of the area I was in. His wife, a former school teacher, spoke English and, for downed Americans, was an invaluable interpreter.

Vasich told me many things that day. How Chetniks cheered each time they saw American bombers overhead. How his people took to the hills in April, 1941. How Mikhailovich, as King Peter's Minister of War, had gathered a guerrilla force of more than 300,000 men. How they had wreaked havoc with the hated Nazi.

How Moscow-trained Tito suddenly was on the scene, declaring himself the representative of the Yugoslav government. How Tito had been virtually unheard of in the overall war effort until the Big Three conference at Teheran in November, 1943.

Stalin, Vasich explained, seized on the opportunity created by the chaotic conditions of wartime occupation and an absent king, insisting the Allies withdraw their support from Mikhailovich and recognize his man Tito. The wily Russian leader already was planning the bloodless addition of another country under his control after the war.

No official announcement was made, but gradually Allied support to Mikhailovich dropped off. Official communiques started to come out of Tito's headquarters and Mikhailovich was abandoned. But the Chetniks carried on.

Vasich explained the Germans were everywhere. There was a Nazi garrison of 500 troops just two miles away; another of 2,000 at 10 miles.

He assigned a bodyguard to me. I was to sleep at all times fully clothed, ready to move at a moment's notice. Chances of evacuation were virtually nil. Mikhailovich would keep in touch with my welfare at all times.

One by one, all but one of my crew members were found by the Chetniks and reunited with me. In each instance, the welcome was spectacular, with embraces, flowers, music, dancing, slivovitz.

We spent a month roaming the hills with different guerrilla bands. For security reasons, our crew never traveled more than three in the same group. We never stayed at one farmhouse or other location more than two nights consecutively. In that month, I must have covered well over 500 miles. And with me every mile was an indelible vision of my first days in the village.

About three days after we bailed out, Col. Vasich received an ultimatum from the nearest German garrison: turn over the 10 American flyers they had seen bail out or the Germans would wipe out an entire village of 200 women and children.

Most of us wanted to give ourselves up, preferring that, with its promise of possible escape opportunities, to seeing 200 innocent persons annihilated. Chetnik leaders would not hear of it.

It was a proud Yugoslav heritage that life without freedom was worse than death. The sacrificial village would rather spare one American flier who could drop one bomb on the enemy than to be spared itself.

The next day, I watched the burning of the village . . . .

Vasich preferred that we Americans take no part in the Chetnik guerrilla activities but he could hardly hold us back.

One night Mihodrag, the personal bodyguard who never left my side, and I joined a group of six Chetniks and stole down to a railroad yard. A railway worker had brought us news that a supply train was due to leave fully loaded in the morning for Rumania.

While the rest of us stood guard, a 15-year-old Chetnik slipped aboard the coal car and added what looked like more hunks of coal. The additions actually were pieces of coal hollowed out and filled with TNT.

The young Chetnik buried them a certain depth among the pieces of real coal—just deep enough not to hit the locomotive's incinerator until it had crossed the border into Rumania. An explosion in Yugoslavia would have meant wholesale retaliatory slaughter there.

Another method of sabotage we used was covering the axle gears of supply trucks, box cars and other vehicles with finely pulverized gravel. Many miles away and many days later, trucks and trains would "mysteriously" break down.

Meanwhile—always—we discussed plans for evacuation.

We had no means of communication with the Allies. Although Mikhailovich had a shortwave transmitter, he no longer was recognized by the Allies. And we had no pre-

arranged code or frequency on which to transmit.

With an increasing Allied offensive, more and more Americans were parachuting into our midst, along with a smattering of Russian, Italian, French, Canadian and British personnel. A pow-wow of ranking American officers decided an evacuation should be attempted. We decided our only chance was to risk a transmission in the clear and in the blind to 15th Air Force Headquarters at Bari, Italy.

"S.O.S. . . . S.O.S. . . . 150 American crew members in need of rescue . . . many sick and wounded . . . advise . . . S.O.S. . . ."

If ever received, the message sent repeatedly for two days was ignored.

With Mikhailovich persona non grata with Allied headquarters, we had to devise a code that would be believed. We came up with one, extremely complicated—and a bit absurd. But it worked.

It involved such things as the third letter in the hometown of the bartender at the Lecce Officers Club for use of the letter A; for B, the fourth letter in the name on the photograph on the Intelligence officer's desk at Brindisi. God knows how it was ever figured out.

All I know is that three days later, a reply came through: "Standby for aircraft 31 July 2200 hours . . ." just two days away.

The next day, cries of "Draja" rose up from our ranks. Heads turned toward a man approaching, surrounded by scores of laughing children. He went with us to a grazing meadow which could serve, if crudely, as a rescue airstrip. There, 1,000 of his troops put on a review in our honor.

Afterwards, we assembled under a huge tree and Mikhailovich, through an interpreter, spoke to us. He sat on a rock and discussed the state of the war with more than 100 bearded, shabbily dressed soldiers of a foreign country.

He stared into space as he related the Yugoslav's love of freedom to that of the American's. Then he expressed his disappointment that the Allied nations had abandoned him to favor Tito, a bitter irony of war which he saw as a deceitful power play by Stalin.

He was aware, he told us, of false reports Tito had broadcast about him. With moist eyes, he appealed to us "take back the truth to your homeland."

Quickly, then, he turned to the task at hand, getting us safely out of Yugoslavia. Within a day he would have more than 8,000 men surrounding the airstrip. If the enemy should discover the plan, his men could hold them off until all our planes were off the ground.

In parting, I insisted he accept my class ring, which he had previously admired. He took it and pressed upon me the ceremonial dagger he had so long carried at his side.

On Aug. 9, after much planning and many heartbreaking nights of waiting while rescuers tested and probed for a safe way to fly us out, evacuations began. It was a colossal success under the most trying circumstances.

In all, 243 Americans, plus an assortment of other Allied nationalities, were flown to Bari, Italy, in waves of C–47s with hordes of Mustang and Lightning fighter plane escorts.

The war in Europe ended in May, 1945.

On March 25, 1946, Tito announced Mikhailovich had been captured and would be tried as a "war collaborator."

Collaborate with the Nazis? Fantastic! I still have in my possession on a poster I ripped from a tree while traveling through Yugoslavia. It was one of many found all around the countryside and in the villages of Yugoslavia. It says, in part:

Reward—100,000 reichmarks in gold will be awarded to the person bringing in, dead or alive, the leader of the bandits, Draja Mikhailovich . . . By the Supreme Commander of the German troops.

I read anew of Tito's plans to try Mikhailovich as a war criminal and felt that someone had to take steps to clear his name, in behalf of the many Americans whose lives he helped to save and, indeed, in behalf of America itself whose engagement in war, I felt, was definitely shortened by the Chetniks' contributions to the frustration of the German war machine.

I went to every major newspaper plant in New York City, receiving dismissals sometimes curt, sometimes polite.

The Journal-American did not dismiss me. It told my story on page 1.

Immediately, letters of support poured in. Other airmen who had been saved by the forces of Mikhailovich volunteered their services. The Archbishop of the Serbian Orthodox Church in New York City wrote me: "It matters not whether Draja lives or dies . . . the important thing is to clear his name."

On April 3, I told my story over the National Broadcasting Company radio network. Soon afterwards, a few of my former buddies and I formed the Committee To Aid General Mikhailovich. In one week we received more than 300 deposits from airmen who had been with us in Yugoslavia.

On April 28, 1946, 20 of us, plus two Canadians, chartered a plane to Washington to plead not for blind amnesty for Mikhailovich but for a fair trial.

We specifically were not claiming to pass judgment on his guilt or innocence, a matter technically beyond our province; we merely wanted to offer the overwhelming evidence we had in his behalf to be presented at his trial.

The reception committee at the airport was impressive—a turnout of more than 2,000 people and a distinguished welcoming committee that included Senators Taft, LaFollette, Wiley, Revercomb and McClellan, along with Mrs. Alice Roosevelt Longworth and Maj. Gen. E. L. Oliver, father of one of the rescued airmen.

The following day we swarmed over Capitol Hill and pleaded our cause to Senators and representatives. An eloquent plea on the floor of the House of Representatives was made by Mrs. Bolton, Congresswoman from Ohio, and is recorded in the May 1, 1946, edition of the Congressional Record.

Although our request to see President Harry Truman was not granted, our efforts were not without results. Shortly thereafter, the State Department sent an official note to the Government of Yugoslavia.

". . . A number of these individuals (U.S. airmen) and others in the United States who were closely associated with General Mikhailovich possess firsthand evidence which cannot but have a bearing upon the charges of enemy collaboration which the Yugoslav authorities have indicated they will bring against General Mikhailovich.

"The United States Government, in these circumstances, is confident that in the interests of justice the Yugoslav Government will wish to make suitable arrangements whereby the evidence of any such persons who may so desire may be presented in the connection with the trial. . ."

Public indignation was rising. A group of prominent Americans took up the cause, forming the Committee For A Fair Trial for Draja Mikhailovich. Among its members were Sumner Welles, Justice Ferdinand Pecora, William Phillip Simms, Dorothy Thompson, Clare Booth Luce, Norman Thomas, Justice Francis Rivers, Miriam Hopkins.

The list of signatories endorsing the cause included approximately two dozen governors and Congressmen. The executive chairman was Ray Brock, then New York Times foreign correspondent.

The State Department sent a second note to Yugoslavia. A reply came back this time. Stonoej Simitch, Yugoslavian foreign minister, advised that the second note and any subsequent notes "would be ignored." (At the time, Yugoslavia was receiving 90 per cent of her economic subsistence from the United States.)

The committee reacted quickly, forming a Commission Of Inquiry In The Case Of Draja Mikhailovich. To hold the inquiry, four of the most prominent jurists in America were appointed—Arthur Garfield Hayes, chairman; Adolph A. Berle, former Assistant Secretary of State; Charles Poletti, former lieutenant-governor of New York, and Theodore Kiendl.

The Commission convened on May 17, 1946, at the County Lawyers Association Bldg., 14 Vesey St., New York. For a full week the Commission heard the evidence. Its full findings, together with almost 600 pages of testimony, were forwarded to the Government of Yugoslavia for presentation at the trial. The Commission's conclusion:

"We are convinced that the testimony given before us is material on the question of the guilt or innocence of General Mikhailovich as a war criminal and that under standards of justice which have been throughout the years, the exclusion of such testimony from the trial of the charges . . . would be so highly prejudicial as to prevent the possibility of his obtaining a fair trial."

An editorial in the New York Times, May 31, noted that the cause of a fair trial "probably is a lost cause . . . (the Tito government) intends to find (Mikhailovich) guilty of collaboration with the Germans and hang him or shoot him.

"This much has been done, however . . . a record has been made for history. That will be small solace for Mikhalovich as he goes to his death. But it will serve to mitigate, if it does not entirely clear, his memory."

On July 10, 1946, Mikhailovich went under trial as a war collaborator and traitor in a courtroom in Belgrade.

Just before sentence was pronounced, Mikhailovich, looking unutterably weary (and drugged, say some of his defenders), stood before the bench and stated his last public words:

"I wanted nothing for myself . . . I never wanted the old Yugoslavia, but I had a difficult legacy . . . I had against me a competitive organization, the Communist Party, which seeks its aims without compromise . . . I believed I was on the right road . . . But fate was merciless to me when it threw me into this maelstrom. I wanted much, I started much, but the gale of the world carried away me and my work."

On July 17, 1946, a Communist firing squad carried out the sentence of the court.

Is that, then, the end of Draja?

Maybe. Maybe not.

True, the wartime quid pro quo between Tito and Roosevelt, Stalin, Churchill is still functioning.

But so is the Committee To Aid General Mikhailovich.

FARMWORKER POWERLESSNESS AND UNEMPLOYMENT COMPENSATION COVERAGE

Mr. MONDALE. Mr. President, for those who have not yet weighed the import of the long series of hearings and investigations by the Migratory Labor Subcommittee on Migrant and Seasonal Farmworker Powerlessness, perhaps an editorial in a recent Washington Post, July 8, 1970, may be helpful.

The editorial urges immediate House and Senate action on the conference report on H.R. 14705, the Unemployment

Security Amendments of 1970. The major thesis of the editorial is that action on the report is essential to meet the serious problem of unemployment because the bill authorizes additional benefits for the unemployed, and extends benefits to workers not heretofore covered. That report, as I have pointed out previously on the floor of the Senate, eliminates coverage of farmworkers from the bill although such coverage had been included by the Senate Finance Committee and confirmed on the floor by a 42 to 36 vote.

Since the filing of the report, I joined with the Senator from Oklahoma (Mr. HARRIS) and the Senator from New York (Mr. JAVITS) in informing the Senate that perhaps the conference report should be rejected in the hopes that the conference committee would reconsider its action in eliminating coverage for farmworkers.

The Post editorial suggests that insistance on farmworker coverage would endanger the entire measure, and that "the bill should not be allowed to fail for want of these amendments." No reason is given for why farmworkers are expendable. Se la Vei.

Mr. President, I shall not at this time belabor the plight and the poverty of this Nation's farmworkers, particularly those who travel throughout this country in search of work and who work to pick our abundance of food. Our hearings on powerlessness during this Congress have adequately described this situation; the television documentary scheduled for July 16, 1970, at 7:30 p.m. will no doubt shed more light on this problem; and, our subcommittee hearings on July 20 and 21 should further serve to enlighten those who do not understand the tragedies of the farmworker's life.

But I do want the RECORD clearly to show yet another example of how the farmworker is expendable in the minds of some, at least, and that meeting the problems of farmworkers is still not a priority item. For that reason I ask unanimous consent to insert in the RECORD at this point, the editorial from the Washington Post of July 8, 1970.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNEMPLOYMENT: STILL A SERIOUS PROBLEM

If the decline in the seasonally adjusted unemployment rate from 5 per cent in May to 4.7 per cent in June should mark the beginning of a new trend, it would astonish the chart-watchers. Many economists have assumed that unemployment will reach 5½ per cent on the upward curve that has been in evidence in recent months before a turn for the better can be expected. Others who take a darker view of the general economic climate place the figure at 6 per cent or more. However powerful the hope that these forecasts will prove inaccurate, there is very little to cheer about in the Labor Department's June report.

One reason for the statistical decline was a reduction in the number of unemployed women and teen-agers. But since the labor force showed a shrinkage from 85 million in May to 84.1 million in June, the analysts assume that many women and youths have taken themselves out of the category of jobseekers because the outlook was so bleak. When unusual factors of this kind impinge upon the samples taken by the Labor Department, the adjusted seasonal rate for any given month may convey a quite inaccurate impression.

Certainly there is nothing in the report which relieves the urgency of enacting legislation to extend job-training programs and improve unemployment compensation. The continued stalling of Congress on the unemployment compensation bill is especially curious because the House-Senate conference reached agreement two months ago. The bill is important because it would authorize additional benefits for the unemployed when joblessness has remained at a national level of 4.5 per cent for three consecutive months. It would also extend benefits to 4.8 million additional employees and to a possible 436,000 more state and local employees, if state and local governments should give their approval.

It is said that there is some dissatisfaction in the Senate because the conference committee eliminated two amendments, although one was a rider having no direct bearing on unemployment compensation. The other is an amendment bringing workers on large farms under the system. The bill should not be allowed to fail for want of these amendments. Incidentally, the high unemployment in this period of economic recession also enhances the need for enactment of the bill for protection of workers' rights under private pension and welfare plans, which has made very little progress in either house.

BRISTOL BAY OIL SLICK

Mr. TOWER. Mr. President, last spring it was widely reported that an oil slick in Bristol Bay off the coast of Alaska was responsible for the deaths of 86,000 murres, seabirds. Implied in these reports was that oil companies had caused the oil slicks.

Subsequently, a joint investigation was conducted by the U.S. Department of the Interior and the Alaska Department of Fish and Game to determine the cause of death of these birds.

The report of this investigation stated in part:

The evidence suggests that it (the deaths) was a catastrophe of nature—

And that the birds—

probably died from a combination of starvation and exhaustion which was aggravated by a severe storm that prevented them from feeding during a critical few days. . . . None of the murres examined along the beaches were oil-stained. . . . Gas chromatograph and infra-red scan testing revealed no evidence of petroleum products in any of the samples.

Mr. President, often an accusing finger is pointed at companies in the oil industry as the ones causing damage to wildlife through oil spills and leaks. Regrettably, a few accidental leaks have occurred and these leaks have caused ecological disruptions. The oil companies responsible for these leaks do not desire to avoid blame for such accidents when blame is due them.

But, at the same time, they should not receive the blame for calamities to our precious wildlife when the blame is undeserved.

Therefore, I ask unanimous consent that the "Summary Report on Bristol Bay Murre Mortality," dated April 1970, be printed in the RECORD so that those companies which were blamed will be completely exonerated from any responsibility for the deaths of these birds.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SUMMARY REPORT ON BRISTOL BAY MURRE MORTALITY, APRIL 1970

At least 86,000 common murres died in Bristol Bay, Alaska during a brief period in late April of this year. Although the cause of death may never be completely resolved to everyone's satisfaction, the evidence suggests that it was a catastrophe of nature. The murres, apparently still weakened after wintering in the Bering Sea, probably died from a combination of starvation and exhaustion which was aggravated by a severe storm that prevented them from feeding during a critical few days.

Post-mortem examinations of murres by pathologists from the Bureau of Sport Fisheries and Wildlife research centers in North Dakota and Maryland, the Arctic Health Research Center in Fairbanks, the National Disease Laboratory in Iowa, and the California Department of Fish and Game in Sacramento found no evidence that pathogenic bacteria or viruses contributed to the mass mortality. Foods were not found in the digestive tracts of these birds. Tests for presence of toxins in the small quantities of fluid found in the intestines were inconclusive.

All specimens were emaciated and had no appreciable deposits in subcutaneous, abdominal and cardiac fat tissue. Thirteen of the dead birds varied in weight from 570 to 786 grams. Although comparable weight data were not available for this same time of the year, the 688-gram average weight of these birds was considerably less than the 972-gram average weight for male common murres and 1022-gram average weight for female common murres from Cape Thompson in northwestern Alaska in late June. The weight loss, lack of body fat and some hemorrhaging of the intestines suggest that the birds died from starvation, although all factors that could contribute to starvation may never be completely resolved.

Severe winds and turbulent seas probably precipitated the die-off that was first reported on April 24 by Ken Manthey of the Alaska Department of Fish and Game. During the two preceding days, winds reached peak velocities of 104 mph at Adak and 84 mph at Cold Bay, and winds gusted at lower velocities during this time at other reporting stations within the Aleutian Islands and along the Alaskan Peninsula. Three murres found on April 24 in the town of Cold Bay by residents were taken to the headquarters of the Izembek National Wildlife Range, but the incident seemed insignificant at the time because severe storms often blow pelagic birds inland.

"Wrecks of seabirds," occurrences where seabirds are driven far inland and are often found dead and dying along the beaches as a result of severe storms, have been reported frequently. Leslie M. Tuck, Canadian Wildlife Service biologist, summarized many observations of "wrecks of murres" in his monograph on their life history. Mass mortalities of thick-billed murres during stormy weather have been recorded over Anadyr in Siberia and at the Pribilof Islands, both in the Bering Sea. The most significant record of "wrecks of murres" is that of Beals and Longworth as reported for Unimak Island in 1941; they wrote:

"Between April 2 and 4 numerous dead and sick murres were along all the beaches. We counted 37 dead birds along 3 miles of beach. The condition was general along the strait, we were told. Oldtimers on Unimak told us that this happens every spring and that some years the beach is black with dead birds. Swimming in close to the waterline many of them appeared to be sick or very weak and hardly able to dive in shallow water. Altogether we saw 38 dead birds and 40 or more very weak ones along 3 miles

of beach. For three days before this, heavy winds and snow blew from the southeast."

Apparently "wrecks of murres" are not uncommon in this region, but seldom have the observers had the mobility of those this year who were able to assess the magnitude of loss.

Unresolved reports of oil sheens seen near the coast and a U.S. Coast Guard report of two Japanese trawlers that sank with 36 men aboard 100 miles west of Unimak Island during the severe storm gave rise to early speculation that the birds were succumbing to diesel fuel or gasoline escaping from the sunken vessels. None of the murres examined along the beach were oil-stained. Only one obviously oil-killed bird, a fulmar, was collected by the crews that combed portions of the beach. Organic extracts from samples of feathers taken from the dead murres and of beach sands were analyzed by chemists of the Federal Water Quality Administration's Portland laboratory. Gas chromatograph and infra-red scan testings revealed no evidence of petroleum products in any of the samples.

Tissues from these murres were tested for pesticides. Both DDE (a metabolite of DDT) and hexychlorobenzine were found in such small quantities, each less than 1 part per million, that they were not regarded as suspect causes of death.

Because almost all affected birds were murres, pollutants seemed to be an improbable cause of death. Observations of pelagic birds in the eastern Bering Sea and Bristol Bay indicate that in winter the murres are the most abundant birds, followed by glaucous-winged gulls and fulmars; and from spring through summer there are increasingly larger numbers of kittiwakes, shearwaters, and puffins. The few dead birds of other species found among the murres were in numbers that would be expected following most storms during April.

Perhaps one of the most unexpected findings from the pathological examinations of these murres was the presence of arsenic, 2.77 parts per million, in liver tissue. The significance of arsenic at this level is not known. However, some of the marine organisms upon which murres feed are reputedly concentrators of this element, and arsenic levels of this magnitude may be normal in healthy murres.

Murres (the "urre" of the word murre is pronounced like the "ur" in the word fur) are found throughout the northern hemisphere. Two species, the common murre and thick-billed murre, are found in the Bering Sea and Bristol Bay area. There is considerable overlap in the distribution of these species, but the thick-billed murre tends to have a more northerly distribution than the common murre. Studies of summer distribution of pelagic birds in Bristol Bay show that common murres are most abundant, but winter populations there may contain proportionately more thick-billed murres. Nesting colonies of murres in Alaska are found along rocky portions of the coast from Cape Lisburne, along the Aleutian Islands, to and including the Alexander Archipelago in southeastern Alaska. Some of the Alaska "bird cities," or nesting colonies, may contain tens of thousands of murres. Following the nesting season, when the pair attempts to raise a single young on a precipitous cliff, the birds return to the sea until next year. Murres feed chiefly on small fish, such as capelin, sculpins and codfish; but invertebrates, such as shrimp, mollusks and sea worms furnish a part of their diet.

Leslie M. Tuck ("The Murres," Canadian Wildlife Service, Ottawa; 1960) summarizes the life history of the murres as follows:

"Murres are relatively large sea-birds, weighing on the average two pounds, with sharply defined bi-coloured plumage. They are highly specialized for catching small fish under water. Specialized development for this purpose includes reduction of the length and area of the wing and so great modification of the bones and muscles of the legs that these birds walk very little and very awkwardly. They nest in large, compact colonies on steep cliffs facing the sea.

"Murres are essentially marine species and approach land only during the breeding season. They obtain most of their food by flying *under* water. They are the only seabirds in the Northern Hemisphere which habitually lay their eggs in exposed situations on bare ledges and rocks. They brood but a single egg and yet they are probably the most abundant sea-birds in the Northern Hemisphere.

"There are two species; the common murre (*Uria aalge*), with some tolerance for warmish water, and the thick-billed murre (*Uria lomvia*), largely restricted to arctic waters. They occupy in the Northern Hemisphere an ecological niche similar to that occupied in the Southern Hemisphere by penguins, which they resemble superficially in coloration and postures.

"The habit of nesting in large colonies (some colonies contain more than one million individuals) has made the species of substantial economic importance in some parts of the Northern Hemisphere. Their eggs, and to a lesser extent the birds themselves, have been traditionally used in the Old World for food, and were so used for a brief and overenthusiastic period in the New World. Recent investigations indicate that there is more nourishment in a murre's egg than in the equivalent volume of a domestic fowl's. The utilization of murres, with some minor exceptions, has been outlawed in the New World for more than half a century. Elsewhere utilization has decreased in some places (e.g., Great Britain), remained the same (e.g., the Faeroes), or increased (e.g., Russia). There is no evidence that murre populations are appreciably less numerous today than they were in historical times.

"Nesting murres require scarcely one square foot of territory per individual. Such compact colonies are possible because the food of murres is almost unlimited in summer. Murres provide a vital link in the ecology of the species which are their food. Their excrement, rich in potash, is important to the growth, and so to the abundance of small marine organisms. Their colonies are in many respects the fertilizing factories of the northern seas.

"A murre colony (loomery or bazaar) is an orderly aggregation of birds. It is basically composed of a core of experienced adults, surrounded on the submarginal fringe sites by less experienced birds or those breeding for the first time. Early in the breeding season, mature murres take part in communal displays in the sea at the base of the cliffs. It is believed that those communal displays not only stimulate the birds to breed but enable them to 'synchronize' their breeding cycles so that the maximum number of young are raised in a comparatively short period.

"The eggs and chicks are subjected to many dangers, not the least of which is the likelihood of being knocked off the narrow ledges. The surviving chicks are led to sea, and to comparative safety, by single adults, not necessarily their parents. In other ways also, murres show communal interest in the welfare of the eggs and chicks of the colony."

ANOTHER LOOPHOLE FOR THE OIL LOBBY

Mr. McINTYRE. Mr. President, I never cease to be amazed at the determination of the Washington lobbyists and defenders of the oil industry to find every possible way of extracting a few more unjustified dollars from the hard-pressed American public.

The American motorist who pays an artificially high price for fuel for his car, the conservationist who sees the priceless value of the American environment cheapened by the reckless drilling and transportation techniques which spill crude oil over our shores and valleys, the New England homeowner who each winter is forced to pay protection money to the oil barons in order to shield his wife and children from the bitter northern cold have been joined by a new target of the oil lobby—the American shareholder.

I am referring specifically to the latest proposal of the Nixon administration to place a charge on stockholders—which will, of course, be passed on to their customers—which will be based on all purchases and sales of shares—except shares in oil and gas interests. Once again the oil lobby has found a friend in the administration to speak in special treatment for the oil industry.

While the precise operation of the administration proposal is highly technical, the effect is that any investor, be he a small investor buying five shares of American Telephone & Telegraph, or a wealthy investor buying 10,000 shares of IBM, will have to contribute toward the costs of the administration's proposed insurance program for cash left in the brokers' care. Buyers or sellers of shares in oil rights, while receiving the very same insurance protection, will not be contributing toward those costs, as the program is initially planned.

Two articles in yesterday's Wall Street Journal indicate the growing interest among large brokerage firms in selling shares in oil drilling funds, which the administration proposes to exempt from the costs, but not the benefits, of the proposed insurance program. I ask unanimous consent that these two pieces be printed at the conclusion of my remarks.

Mr. President, I would remind the Senate that the specific types of funds mentioned in the Wall Street Journal article have been the beneficiaries of a special exemption in the Investment Company Act of 1940 for a generation, during which the operators of some of these funds have managed to develop large-scale methods of getting rich at the expense of unsophisticated investors. Last year the Senate finally voted to remove the special oil exemption; that legislation is now in the House.

And now the oil lobbys have come up with this new exemption. I am disturbed at the policy considerations which would lead the administration to seek special protection for the oil industry. I suppose this is the surface evidence of yet another payoff of the sort which has recently been described on the front pages of the Washington Post.

I think that it is worthy of note that the administration proposal was sent up in response to the leadership of the distinguished junior Senator from Maine (Mr. MUSKIE) in the area of broker insurance. His initial proposal, of course, contained no special giveaways to the oil industry of the sort buried in the fine print of the administration proposal.

Indeed, Senator MUSKIE has already questioned the SEC closely about the rationale of the special treatment for the oil barons which the Nixon administration proposes. I join his questioning, and wish to express my determination to rid any legislation which is finally adopted of this unique treatment for the oil industry fat cats who apparently have reason to believe that they can buy their way into the White House.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX REPORT: A SPECIAL SUMMARY AND FORECAST OF FEDERAL AND STATE TAX DEVELOPMENTS

Wary investors eye drilling funds as a tax shelter, alternative to sagging stocks.

Last year's tax law axed some shelters but didn't disturb oil and gas drilling funds—through which petroleum developers raise money by selling shares to the public. "Intangible" drilling costs—the hole-boring expenses that usually consume most of the investor's outlay—remain totally deductible from his ordinary income for tax purposes. (The 22% depletion allowance, down from 27½% prior to the 1969 act is applied to oil income once a well is operating.) Hopeful promoters filed $1.1 billion in drilling offerings with the SEC in this year's first half, up from $685 million in the year-before period. A few funds sell out, but many raise less than half their goal.

"Most people are so pessimistic they won't put money into anything," says one gloomy driller. Moreover, in eroding capital gains, the market slump lessens the demand for tax shelters. And some investors are turned off by the jungle of complex provisions many funds comprise. Skepticism steers many laymen toward funds sold by well-known brokers.

Congress, the SEC tone down threats of regulation as drillers consider self-policing moves. The Oil Investment Institute, a newly formed trade group, adopted a list of "business standards" last weekend.

Gloomy stock brokers look for a silver lining in drilling funds.

"Respected investment banking firms will impart a much higher tone to this business," says an official of E. F. Hutton, which plans to sponsor a $4 million offering for Tesoro Petroleum. Goodbody & Co. raised $30 million of a sought $75 million for Husky Oil in recent weeks. Bache, Bear-Stearns, White-Weld, Goldman-Sachs, Donaldson-Lufkin and Burnham also underwrite drillers or study doing so.

Oil experts advise investors to buy funds offering maximum liquidity, tax deductibility as close to 100% as possible, strict limits on additional assessments, and limited partnership arrangements that avoid unlimited liability. Only people in 45% or higher tax brackets who've first consulted their accountant should invest in oil funds, most authorities say.

GUN CONTROL LEGISLATION

Mr. HATFIELD. Mr. President, many Oregonians have written me to express their dismay or distaste for portions—or all—of the 1968 Gun Control Act.

The proper function of gun-control legislation should be to cope with crime and violence while not treading on the rights of those legitmately using guns. This was the intent of Congress in passing the Gun Control Act of 1968. I opposed and voted against the licensing and registration amendments which were proposed at that time and which were not adopted. I did vote for the act on final passage because the act, without those amendments, seemed to meet the following criteria of mine for realistic Federal gun legislation:

First, it provides support to Federal, State, and local law-enforcement officials in their fight against crime and violence;

Second, it makes no restrictions on the use of guns and ammunition for sports, personal protection, or any other lawful activity;

Third, it does not provide for licensing of individual owners of firearms, and

Fourth, it does not discourage or eliminate the private ownership or use of firearms by law-abiding citizens for lawful purposes, or provide for imposition by Federal regulations of any procedures or requirements other than those reasonably necessary to implement and effectuate the act.

The Gun Control Act of 1968, generally speaking, prohibits certain interstate transactions in firearms and ammunition; prohibits sale of firearms and ammunition to persons under 18 and sale of firearms other than shotguns or rifles and ammunition therefor to persons under 21; provides for licensing of firearm and ammunition businesses; prohibits the importation of foreign-made military surplus firearms into the United States; and prohibits gun sales to certain convicts, unlawful drug users or drug addicts, or mental defectives. It does necessitate obtaining by licensed dealers information regarding sales of firearms and ammunition to assure compliance with the act.

The Gun Control Act of 1968 does not prohibit hunting by persons under 18 years of age or by persons of any other age group. Hunting regulations are still a matter of State—not Federal—law. Restrictions on sales of firearms and ammunition are not to be interpreted as restrictions on hunting; information to the contrary which may have been published is incorrect.

At the time, Mr. President, I hoped that this act would assist in fighting crime and violence, and that it would be successful in navigating between the fundamentally opposing interests of freedom of firearm use and regulation of firearm misuse. At the time of passage, I favored a cautious wait-and-see attitude to determine the necessity and/or efficacy of the Gun Control Act of 1968 in general, and to earmark more precisely the specific sufficiencies and inadequacies of the various provisions of the act.

Already Congress has been able to move to eliminate certain portions of the act which were shown as ineffective deterrents to crime. In 1969, I supported an amendment, which ended recordkeeping requirements for shotgun and most rifle ammunition. Passage of this relieved millions of sportsmen from unnecessary harassment and inconvenience. I know that Oregonians who are sportsmen were gratified by this action.

At the present, I am involved in an effort to end another ineffective and burdensome segment of the 1968 act. I am a cosponsor, with Senator MCGEE, of S. 3724, which would remove Federal recordkeeping requirements for .22-caliber rimfire ammunition. This would eliminate the type of gun-control legislation which I believe has proved unnecessary and unwise.

A statement by the Treasury Department illustrates my feelings:

The Department has found that the records required of transactions in sporting type ammunition, i.e., shotgun, rifle and .22 caliber rimfire ammunition, is of little value in law enforcement.

Indeed, the Department knows of no instance where any of the recordkeeping provisions relating to sporting type ammunition has been helpful in law enforcement.

In short, the recordkeeping controls are not effective as a law enforcement tool. They do, however, because of the volume of transactions in sporting ammunition tend to generate criticism from sportsmen and others and detract from the effective enforcement of their provisions of the firearms laws."

S. 3724 is now being considered by the Senate Finance Committee. I intend to work for its adoption.

I am also cosponsoring, with the Senator from Pennsylvania (Mr. SCHWEIKER), an amendment which would protect the legal and lawful activities of the segment of our Nation's sportsmen who handload their ammunition. This amendment is to the explosive control bill and will allow a reasonable amount of smokeless powder and black powder to be exempt from the regulatory provisions of the act. It will retain the effect of deterring criminals from committing crimes without penalizing our law-abiding citizens.

Thus, I stand for a continuous review of the Gun Control Act of 1968 and all other gun laws, and for the swift elimination of those portions of this legislation which prove only an annoyance to decent citizens and are not useful weapons against crime. During this period of review, as in the past, I will vote against further gun-control legislation involving Federal licensing and registration, for it is not the answer to fighting crime.

I ask unanimous consent that my remarks in the Senate on July 15 be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

[From the CONGRESSIONAL RECORD, July 15, 1970]

"HAND-LOADERS" AND "MUZZLE-LOADERS" IN OREGON

Mr. HATFIELD. Mr. President, recently, I joined the distinguished Senator from Pennsylvania (Mr. SCHWEIKER) as a cosponsor of amendment 728 to S. 3650, a bill designed to strengthen Federal legislation concerning the illegal use, transportation, and possession of explosives. I agree with Senator SCHWEIKER that a new provision in the bill is needed to protect the legal and lawful activities of one segment of our Nation's sportsmen—those who hand-load their ammunition.

I support the goals of the explosive control bill, for I am shocked at recent bombings across the country. The amendment does not conflict with this goal. It does allow, however, continuation of a long-established tradition by those who hand load their ammunition.

In addition, muzzle loaders are able to recreate a sense of history in their activities. In my State, there are five muzzle loading clubs, and I participated at one of their

shoots at Banks, Oreg., while I was Governor. These clubs—the Multnomah Muzzle Loading Rifle Club in Portland, the High Desert Plainsmen, in Bend, the Little Butte Mountain Men, in Medford, the McKenzie Black Powder Club, in Eugene, and the Willamette Longrifles, in Salem—are attracting more Oregonians to their activities. Certainly the explosives control bill is not aimed at these sportsmen.

I believe the amendment does nothing to compromise the bill's goal, while allowing the sportsmen of the country to continue their activities.

THE INDIAN FILM: "A MAN CALLED HORSE"

Mr. McGOVERN. Mr. President, early this spring I was one of the sponsors of the showing of a moving picture depicting the life of the Sioux Indians in the early 19th century. The picture, "A Man Called Horse," has now been released publicly and is being shown throughout the country.

"A Man Called Horse," the recent release of Cinema Center Films, is a film of particular interest to anthropologists concerned with American Indian history and present-day relationships between Indian and non-Indian Americans.

This film depicts a young man of English descent who is captured by an Indian group—the Sioux Indians in the film version—and kept in captivity for a period of time. The young man is slowly socialized to the Indian way of life, his behavior and reactions to his captors-turned-hosts form the essential theme of the film. The film is an interpretive statement about Sioux life circa 1820 presented through the experiences and perceptions of a man who is placed in confrontation with an entirely different way of living. One of the stated explicit aims of the film is to present the details of Indian life as related by observers of the Sioux of that period.

The picture is being released at a time when American Indians have been particularly explicit about their problems in forging an Indian identity in the midst of American life. In recent months there have been several occasions when Indians have stated to anthropological gatherings that more attention should be given to communications about the American Indian heritage expressed in the indigenous languages of the Indian. Indians have further voiced the need of popularizing their history prior to extensive contact with non-Indians, when the Indian was neither an urban misfit nor the product of reservations. Such a history would emphasize neither Indian savagery nor barbarism but the integrity and inherent coherence of an indigenous Indian culture and social organization. It would also underscore the distinctiveness of each Indian nation as a people with its own political conflicts—in this film, the Sioux versus the Shoshone—above and beyond white-Indian struggles. Finally, many Indians have stated the need for accurately documented popular accounts from which the Indian may emerge as a man with a proud past and not just a graft on present-day American culture.

"A Man Called Horse" fulfills some of these criteria. First, it employed among the actors many members of the Rosebud Sioux Tribe in South Dakota. Major portions of the film dialog are conducted in the Sioux language. Second, the film plot centers around a white man's adaptation which succeeds through mutual efforts. This is in sharp contrast to traditional presentations of the unsuccessful Indian against white society. Third, the depiction of the sun vow is not mere sensationalism but is placed within the full context of Indian social and religious requirements. Finally, the conflict between the Sioux and the Shoshone illustrates the history of Indian people prior to the contact with whites.

The film on the whole is a documented, albeit stylized, monument to a way of life which we are urged to understand on its own terms, a way of life which is one of the mainsprings for much that is American Indian today.

Finally, the film is particularly useful as an educational tool. It challenges the viewer to go beyond his notions of Indian barbarism and savagery and to understand religious and social ceremonies within a holistic framework of a working lifestyle. The film can be used in the classroom as a heuristic device in discussing Indian history of the early 19th century: it also illustrates problems that arise when we attempt to create films from historical documents that supplement prose accounts of similar topics. This film has gone a long way from the stereotyped Hollywood western and presents the Indian in a better light. It is an engaging and challenging presentation.

Senators who have a strong interest in American Indian problems will doubtless find this film of interest.

I also ask unanimous consent that a proclamation of the Honorable M. E. Schirmer, the mayor of Sioux Falls, N. Dak., and a proclamation of the Honorable Frank Farrar, the Governor of the State of North Dakota, regarding the film be printed in the RECORD.

There being no objection, the proclamations were ordered to be printed in the RECORD, as follows:

PROCLAMATION, CITY OF SIOUX FALLS, S. DAK.

Whereas, Sandy Howard has the good fortune to read Dorothy Johnson's story, "A Man Called Horse"; and

Whereas, Sandy Howard had the foresight to purchase the film rights; and

Whereas, Sandy Howard had the vision to foresee a film of honesty and realism; and

Whereas, Sandy Howard assembled a staff to produce a film which presents the American Indian and his customs with fascinating realism:

Now, therefore, I, M. E. Schirmer, Mayor of the City of Sioux Falls, do hereby proclaim Sandy Howard an honorary citizen of the City of Sioux Falls and designate Thursday, April 23, 1970, as Sandy Howard Day in Sioux Falls and call upon all citizens to recognize his achievements in producing "A Man Called Horse" so that the entire world can be appraised of the Sioux Indian culture in the early nineteen hundreds.

In witness whereof, I have hereunto set my hand and caused the Seal of the City of Sioux Falls to be affixed.

Done in the City of Sioux Falls this twenty-second day of April in the Year of Our Lord Nineteen Hundred and Seventy.

M. E. SCHIRMER,
Mayor.

PROCLAMATION

Whereas, the motion picture, "A Man Called Horse" will be premiered Thursday, April 23, at the West Mall Theatre in Sioux Falls, hosted by the University of South Dakota; and

Whereas, the film represents a pioneering production departure in portraying the Indian People of South Dakota in 1825 as historically accurate as possible; and

Whereas, the film includes South Dakotans in the cast and as technical advisors.

Therefore, I, Frank L. Farrar, Governor of the State of South Dakota, urge my fellow South Dakotans to take note of this event which will bring national and international attention to the state.

In witness whereof, I have hereunto set my hand and affixed the Great Seal of the State of South Dakota, in Pierre, the Capital City, this 21st day of April, in the Year of Our Lord, Nineteen Hundred and Seventy.

FRANK L. FARRAR,
Governor.

Attest:

ALMA LARSON,
Secretary of State.

FOREIGN POLICY ADDRESS BY THE VICE PRESIDENT

Mr. ALLOTT. Mr. President, on June 24, in Denver, Colo., the Vice President gave a speech which should be read and pondered by all Americans interested in current debate about our foreign policy, and about the role of the Presidency in foreign affairs.

With regard to the evaluation of the limited operations in Cambodia, the Vice President chides those who made rash early judgments and who have remained wedded to those judgments in the fact of conclusive evidence that the Cambodian operations were successful.

With regard to the important debate about the constitutional powers and responsibilities of the President when acting as Commander in Chief, the Vice President is equally sound. He points out that history, theory, and commonsense are on the side of continuing to respect the President's traditional latitude in this role. Moreover, he detects an element of inconsistency in some of the current attempts to saddle the President with unprecedented and unconstitutional restraints.

Since we obviously are far from finished with debate about these matters, and since the Vice President has made a useful contribution to this ongoing debate, I ask unanimous consent that his address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE VICE PRESIDENT

Tonight I would talk with you about the Presidency as an institution, and of our President as a person of courage and high purpose.

Especially I want us to consider the impact of the long war in Southeast Asia upon the unique and much imitated Presidential form of government and upon the man who bears the tremendous pressures and responsibilities of leadership in that office today.

Since coming into office 17 months ago, the President has made many historic decisions, not a few of these have related to the war in Vietnam—a war which is *not* of his making. None of these decisions has been more difficult than the decision to send American troops into Cambodia. As a member of the

National Security Council, I was present when the President so very thoughtfully measured the dangerous repercussions which the expanded North Vietnamese military activity in Cambodia could have upon our troops and allies in South Vietnam. I saw him wrestle with the various options presented by the situation; the opportunities to wobble and equivocate: I saw him reject the short-run, politically expedient arguments for inaction. I saw him stand up and courageously decide to do what was right for our country, right for history, and most importantly right for our boys fighting in the jungles and rice paddies half a world away.

And so, the time came for the President to announce that American troops were moving into Cambodia in a limited operation to clean out enemy sanctuaries from which Americans had been attacked and killed for five years. At that point, and still today, millions of Americans—a clear majority of Americans—stood with him.

They were Americans of both political parties—patriots who believe that politics stop at the water's edge; that we have but one President at a time; that you back American troops and their Commander-in-Chief when they go into battle.

These Americans—and those who asked their fellow citizens to withhold final judgment on the President's decision—have been proven right.

But, there is a good deal of egg on a good deal of other faces—and it is well deserved.

Let us consider one young Senator who, at the President's announcement, called his decision "madness."

What that Senator rashly called "madness" has turned out to be the most successful military operation of the entire war. We have driven the enemy out of the privileged sanctuaries from which he has outfitted and launched attacks in to South Vietnam. We have disrupted his communications and forced him to flee leaving mountains of war supplies behind—more total supplies, in fact, than we seized during the last entire year of operations within South Vietnam proper.

Lincoln once wrote that they have a right to criticize who have a heart to help. Of what help have these gentlemen who joined in instant and harsh criticism of the President of the United States been to the cause of a just and honorable peace the President is seeking?

One Congressman said that the President's decision was "reckless"; another Senator said, "It was pretty ghastly."

What is reckless, what is ghastly, about capturing and destroying thousands of enemy weapons destined to shell South Vietnamese towns and kill American boys? Mr. Congressman and Mr. Senator—tell us today that it was reckless and ghastly to deny the enemy the use of millions of rounds of ammunition and thousands of rockets and mortars which could have been fired at young Americans.

Another Senator said, "It is now an Indochina War and I see an end to any hope of an early withdrawal."

Will that Senator now come forward and name the country which he blames for expanding the war in Cambodia? Was it the North Vietnamese who attacked neutral Cambodia's little army, encircled its capital and sought to link up sanctuaries into a 600 mile belt of enemy-controlled territory on South Vietnam's flank—or was it the President who responded to that military threat only after repeated warning? Will that Senator now come forward and tell America it was he who was both rash and wrong—and that now, not only will the President's withdrawal program continue, but it also will be sustained in confidence and 50,000 Americans can now surely come home before the 15th of October—and 100,000 more by next spring.

As you read the press and listen to the commentators, you keep hearing this great military success—possibly a victory of watershed proportions as we look to the future—described as a failure by the so-called pundits who are still wedded to their earlier forecasts of disaster. They have painted themselves into a corner and are now either intellectually incapable of evaluating the changed situation or disdainfully unwilling to disavow their past predictions of gloom and doom.

But, of course, it is too much to expect that these men will admit that they were precipitate and wrong—and the President was right.

And where are the Cassandras of the Senate now?

Are they now coming forward to say, perhaps we were wrong; perhaps we spoke too soon; perhaps the operation was indeed a limited one—and has indeed proved a successful one?

No, they are right now trying to forge new chains upon the President's freedom of action—even though the President has clearly demonstrated that he uses his powers responsibly—and use them to protect American lives in Vietnam.

Those who should be apologizing for their irrationalities the morning of May 1 are instead busying themselves trying to hobble the Commander-in-Chief of the Armed Forces—while four hundred thousand of his men remain vulnerable in the field.

Not only are they doing that, but they also are trying to stop us from giving help to other nations who want to defend themselves or to help each other against aggression.

The fact is our United States Senate is today engaged in a constitutional debate of major proportions, derived from amendments designed to undercut the President's authority to conduct this nation's business abroad.

As President of the Senate, I am not permitted to express my views on this issue in that august chamber, so I will air them here.

Historically, we Americans have shown an instinctive distrust of unlimited executive power. We rebelled against royal authority and the Thirteen Colonies began as a loose confederation, without any executive at all. That early experience with group decision-making—where it proved impossible even to raise an army to defend our country—impressed the founding fathers with the necessity of creating an effective executive authority.

A few years later, John Marshall, then a Member of Congress and later a great Chief Justice, commented on the executive role in foreign affairs. "The President is the sole organ of the Nation in its external relations and its sole representative with foreign nations. . . ."

The trend toward increased Presidential authority in foreign policy has steadily evolved as our country has risen to prominence in world affairs. Concurrent with America's growing power and involvement beyond our shores, the pace of events has quickened and communications have become instantaneous. As a result, swiftly moving events may reduce the decision-making process in today's nuclear age to a matter of hours or even minutes. In a complex world of 130-odd sovereign nations, some ruled by dictators uninhibited by popular sentiments or moral constraints, the President of the United States must be able to act quickly and decisively.

Writing in an academic journal in the fall of 1961, one of the favorite Senators of the present neo-isolationist crowd presented the following view on executive authority:

"The source of an effective foreign policy under our system is Presidential power. This proposition, valid in our own time, is certain to become more, rather than less, compelling in the decades ahead . . . It is my contention that for the existing requirements of American foreign policy we have hobbled the President by too niggardly a grant of power."

Now, which Senator do you suppose made those learned comments? Not Senator Dirksen. Not Senator Goldwater. It was Senator Fulbright. But he has conveniently forgotten his lofty words about the compelling need for Presidential pre-eminence in foreign affairs.

The Senate was intended by the framers of the Constitution to be a deliberative body not suited to crisis response. Certainly the five weeks so far consumed with debate on the Cooper-Church amendment illustrate the point. Even a threat a couple of weeks ago by the Senate Majority Leader in effect to cut off government funds unless the Cooper-Church amendment was brought to a vote has not hastened Senate consideration of the measure.

In any event, the Majority Leader's threat is beside the point. The Congressional penchant for endless debate has left it with insufficient time and energy to provide the government with funds. Only one appropriation bill has passed Congress. On June 30th all other government activities will legally run out of operating funds, and the Congress will have to pass an extension of past budgetary authority. The Cooper-Church amendment itself is hooked on the Military Sales Bill which seeks authority to expend funds during FY–70—FY–71. Even if the Senate passes that bill by June 30th, which now seems unlikely, it will be a year late—half the bill's life will already have expired.

The Senate's dilatory attention to the Military Sales Bill is extraordinary in one other way. More than half of the money sought in this bill would go to two friendly states in the Middle East, Iran and Israel. Yet the Senate has delayed this bill by extraneous amendments at the very time it is loudly decrying the growing dangers of an Arab-Israeli confrontation and Soviet penetration in the Middle East. It is simply ridiculous to hold up this important legislation—legislation which would assist Israel to pay old debts on equipment bought more than a year ago—while at the same time petitioning the President to provide Israel with more jet aircraft.

When the Senate gets so tangled up in inconsistencies like this, I am sure the nation gives thanks that we have a man of decisiveness and clear vision as our President.

Let me add one other thought—I think the President and his lovely family have brought a great sense of dignity to the White House. The moral and religious qualities which come so freely and naturally to them are a basic, but nowadays often overlooked, part of our national heritage and experience. It is those moral and religious underpinnings which make the President such a strong advocate of peace.

Despite all the rancorous cries of his critics—those self-appointed psychoanalysts of the *true* meaning of every Administration statement—I ask you to accept the proposition that the President *really* means what he says, that the President is genuine and sincere when he talks of the need for peace. Let's suppose, just for the sake of argument, that the President undertook five major peace initiatives, all in accordance with the unsolicited advice he has received from the Senate, and all in accordance with the enemy's stated preconditions for beginning meaningful peace negotiations. Would that not indicate a sincere desire on the President's part for peace? Would that not indicate that the President is not hidebound and stiff-necked in his attitude toward the enemy?

The truth of the matter is that the American Government has already made six concrete proposals which enemy negotiators, and coincidentally some Senators, have demanded. We have conceded the following

major points in an effort to urge forward meaningful discussions on the only issue which really counts—the issue of peace.

President Johnson stopped the bombing of the North.

President Nixon agreed in principle to the withdrawal of all American troops if the North Vietnamese would follow suit.

He announced the unilateral withdrawal of American troops on a phased basis.

He stated that we seek no bases, no military ties, and that we are willing to agree to a neutral South Vietnam if the people of that country freely so choose.

Despite the fact that South Vietnam has held several elections, President Thieu, with our full support, offered to hold internationally supervised elections in which *all* South Vietnamese factions that renounce violence might participate.

President Nixon indicated that in seeking a settlement we would insist on no rigid diplomatic formula or particular form of guarantees as long as the interests of all major South Vietnamese groups were adequately protected.

To date, a stubborn enemy continues to refuse to negotiate seriously. Instead, Hanoi has added two more preconditions for serious peace talks—that the U.S. leave South Vietnam completely, and that we topple the legally constituted government in Saigon on the way out. With preconditions like that, what would be left to negotiate?

These new demands are obviously unacceptable and most disheartening to the President. Still he has not given up in his quest for peace. We continue to remain at the table in Paris despite the abuse and invective—and despite the lack of progress.

The President's sincere desired for peace is manifest in the many other initiatives begun in the past 17 months. We already are engaged in the second round of strategic arms limitation talks with the Russians. We have signed the nuclear non-proliferation treaty and unilaterally renounced the use of chemical and biological warfare weapons. In visiting Rumania, President Nixon became the first American head of state to travel behind the Iron Curtain.

We have also eased restrictions on travel and trade with Communist China, and although talks have been temporarily postponed, the President did initiate discussions with the Chinese in Warsaw after a break of two years. We have sought to defuse the explosive Middle East situation in a variety of forums, including Four Power talks at the UN, and bilateral consultations with the Soviets.

Not all these efforts have yet borne fruit, but they clearly demonstrate the President's earnest desire to reduce tensions in the world.

But, make no mistake about one thing—the President has no intention of giving away the store. He will not compromise our vital interests in some vague hope of achieving "peace in our time" a la Neville Chamberlain.

The President has insisted that our defenses remain strong. To insure the credibility of our deterrent capability—but without jeopardizing the SALT negotiations—the President has gone ahead with the ABM and MIRV missile systems; to maintain the viability of our many treaty commitments—and thus spread the burden of keeping the peace—the President has refused to cut and run on our allies in South Vietnam.

In my view, the President has shown the world that America is strong, but fair; reliable with our friends, and reasonable toward our opponents—unless their aggressive actions clearly demand a firm response.

Let me observe particularly those qualities of decisiveness and courage that we see in foreign affairs are matched equally in the President's approach to domestic questions. As the President noted in his nationwide address on the economy a week ago, it is a sad, but inescapable truth that a country cannot move from a war time to a peace time economy without some pain and dislocation. Our very successes in Asia are having complicated and troublesome repercussions at home. Moreover, we are paying the piper today for mismanagement of the Federal government during the eight years before President Nixon took office—eight years of fiscal irresponsibility in which the Democrats spent $50 billion more than they took in.

Let me assure you, however, that there is nothing fundamentally wrong with this most powerful economy on earth. The President's perseverance in adhering to the hard but necessary policies of restraint will pay off. We will see an economic upturn before the end of the year.

I am confident that the prophets of doom, who were so wrong about the results of the President's actions in Cambodia, will prove equally wrong in their predictions of imminent depression and economic disaster.

In closing, let me say that I am growing terribly weary of America's noisy detractors. If this is such a terrible place to live, if our government is so oppressive and inept, why is there an endless waiting list of people seeking to immigrate to America, and why doesn't the so-called "brain drain" of Europe's brightest scientists and technicians moving to the US to work, run in the opposite direction.?

Today, we, the people of America, should vow to emphasize what is right, what is decent, what is good about our great country.

And let's begin to show some stronger and more vocal support for our President.

One of the deservedly most distinguished members of the Senate, George Aiken, said after the President's briefing on the Cambodian operation, that despite his own doubts, "If (the President's) strategy is successful and we are able to bring the war to an earlier conclusion and have less losses of our men, then we would have to call him a hero . . . as he would be."

Well, let me say to you tonight that is what I would call it—a decision and action of heroic proportions.

CONGRESSIONAL SUPPORT FOR BIG THICKET NATIONAL PARK: REPRESENTATIVES ECKHARDT AND BUSH PROPOSE REAL BIG THICKET NATIONAL PARKS

Mr. YARBOROUGH. Mr. President, for years I have advocated the preservation of the Big Thicket of southeast Texas. Since 1966, I have had bills pending in the Senate to preserve it as a national park. The establishment of the Big Thicket National Park is one of the highest priorities on my legislative agenda. Over the years it has given me great encouragement when individuals and groups have endorsed and supported my efforts to preserve the Big Thicket.

Today, it gives me particular pleasure to welcome two of my fellow Texas legislators to the ranks of those dedicated to the cause of preserving the Big Thicket as a national park.

On Thursday, July 16, 1970, Representative BOB ECKHARDT, of Houston, Tex., announced that he would introduce a bill to establish a Big Thicket National Park consisting of not more than 185,000 acres. On the same date, Representative GEORGE BUSH, also from Houston, announced the introduction of H.R. 18498, his bill for a Big Thicket National Park of not more than 150,000 acres.

The introduction of these bills to establish a Big Thicket National Park of adequate size is very encouraging and heartening, and I welcome with great enthusiasm this support in the House of Representatives by two south Texas gulf coast Congressmen, representing two political parties.

Mr. President, field hearings were held on S. 4, my bill to establish a Big Thicket National Park of not less than 100,000 acres on June 12, 1970, in Beaumont, Tex. The remarkable thing about the testimony at these hearings was the total unanimity of agreement that portions of the Big Thicket should be preserved. The issue discussed was not whether there should be a Big Thicket National Park. The only controversy dealt with how large the Big Thicket National Park should be. The fact that the discussion focused on this issue was most encouraging to me, and I consider it a tremendous victory in my long and often lonely battle to save the Big Thicket. Everyone who has given serious consideration to my proposal agrees that the Big Thicket should be preserved. Now we are able to discuss and attempt to resolve the issue of how large the Big Thicket National Park should be.

The Big Thicket proposal set forth by Congressman BOB ECKHARDT is most interesting and worthy of consideration. The proposal calls for a park of 185,000 acres. Included within this area are all units of the so-called string of pearls and land along the major rivers and creeks in the area.

The other proposal, which is for a 150,000-acre park, is also deserving of careful study.

Mr. President, either of these proposals could be incorporated into the legislation which I have introduced concerning the Big Thicket National Park. My bill, S. 4, calls for the establishment of a park consisting of land and interests in land of not less than 100,000 acres. Thus, while these two new proposals establish upper acreage limits, mine would establish a minimum of 100,000 acres and could go as high as necessary to incorporate additional lands which are worthy of inclusion in the park.

Since the approach of my bill is to establish a Big Thicket National Park with a minimum size limitation of 100,000 acres and does not establish a maximum limitation, either Representative ECKHARDT's or Representative BUSH's proposal would fit within the broad provisions of my bill, S. 4.

I welcome these proposals. They provide for a park of adequate size, and set forth good suggestions as to what should be included in the Big Thicket National Park.

In my opinion, the Big Thicket National Park should contain all of the so-called string of pearls, those unique individual units designated by the National Park Service as representative of the variety of Big Thicket ecosystems. Representative ECKHARDT's bill does include all of these units, while the other proposal omits some of them. The Big Thicket National Park should also include a Saratoga Unit in Hardin County. This unit will consist of approximately

40,000 acres and is bounded by highway numbers 770, 105, and 326. The park should also include the great hardwood forests of the Neches River bottoms, which would be about 60,000 acres. Connecting all of these units will be corridors along the major rivers and creeks which will tie all of the different park areas together. These areas which I have described would total 160,000 acres or even more, depending upon the width of the connecting corridors along the rivers and creeks.

The Big Thicket is basically a mixed southern hardwoods area. The creation of a national park of adequate size does not pose a serious threat to the lumber interests of the area, which are dependent upon pine forests for the bulk of their production.

The plan of some of the lumber interests is to bulldoze away the beautiful hardwood forests of the Big Thicket in order to plant pine trees in the future. My plan would save some of these hardwood forests.

I submit that the Big Thicket is big enough for a park of adequate size, such as I propose, and will still leave enough land for the bulldozers and tree farmers.

Mr. President, again I wish to welcome my two fellow Texas legislators to the battle for a Big Thicket National Park. Their prosopals would create a real park. Their support is sincerely appreciated. I commend them for their action to help save the Big Thicket. This is the first real legislative assistance in Congress in my long fight for a Big Thicket National Park.

The Big Thicket National Park is gaining strength. It is an idea whose time has come.

S. 3671—A MORE OBJECTIVE INTERPRETATION OF NATIONAL LABOR POLICY

Mr. TOWER. Mr. President, on July 21, the privilege was accorded me of being the leadoff witness before the Separation of Powers Subcommittee, Committee on the Judiciary, on S. 3671, a bill I introduced along with eight other Senators earlier this session.

It has now come to my attention that attempts are being made to paint this bill as antiunion. Nothing could be further from the truth. The bill has absolutely no effect on the substance of labor law. It is jurisdictional only. It does not redefine any unfair labor practices. It does not address itself to the relationships existing between unions, employees, and employers. It does attempt to reaffirm the prerogatives of Congress as the source of national labor policy. It does aim at a more objective interpretation of national labor policy.

Those who claim that S. 3671 is antilabor are tacitly agreeing with the critics of the National Labor Relations Board who have contended that the decisions of the Board are biased. If simply shifting jurisdiction over unfair labor practices to the Federal district courts is antilabor, then that is a reflection either on the Board or on the courts. It is either being claimed that the courts can be expected to be antilabor or that the Board has been prolabor. Since all our experience has been with the Board over the past 35 years, I suggest that the later alternative is closer the truth.

This contention is also supported by testimony which was received by the Separation of Powers Subcommittee in 1968 and by further evidence presented the subcommittee this week in hearings. I shall not go into this mass of evidence now. It is there for all who wish to go into this question.

In my own testimony I address myself to this very matter. Quoting from my statement:

> I hope it will not be said that S. 3671 represents an anti-union bias. I think I speak for the cosponsors of S. 3671, as well as for myself, in saying that collective bargaining was the very natural and necessary outgrowth of a social movement based upon contract. As such, it is an institution symbiotically linked to capitalism. On the individual level, it is the ultimate recognition of a system of private ownership of the means of production.
>
> No, if anything, this legislation is designed to include collective bargaining by making its institutions more responsible to the needs of its members, by creating an atmosphere of mutual respect between labor and management within their natural adversary roles, and—perhaps most importantly—reassert Congressional dominance over the Administrative framework.
>
> I want to point out that S. 3671 does not in any way change substantively our body of labor law. What is defined as an unfair labor practice today will still be an unfair labor practice at such time as this legislation may be signed into law. It simply reassigns jurisdiction.

Mr. President, there may be some who for one reason or another will misinterpret the meaning of S. 3671. I suppose that is a problem as old as politics itself and will be with us as long as political issues are debated.

As one who has expressed many times in the past his support of the union movement and even his desire to be a union member were he in a position to join, I state emphatically that S. 3671 is a bill designed to improve and strengthen the union movement by minimizing their failings and maximizing their value to both employers and members.

PRESIDENT BAILEY OF HAMLINE: A REFRESHING PERSPECTIVE ON THE COLLEGE PRESIDENCY

Mr. MONDALE. Mr. President, conditions on our campuses in recent years have given rise to a feeling that the office of a college president is becoming an increasingly embattled one, with the energies of the president becoming devoted more and more to the preservation of order and the protection of his office.

Although I would never disparage the enormously difficult and often trying responsibilities of a college president in these times, I feel that this image is both distorted and probably destructive of our efforts to restore calm and reason to our campuses.

In this light, I was delighted by a short article in the St. Paul Dispatch written by the president of Hamline University, Dr. Richard P. Bailey.

I commend this statement to all Senators as an example of a president and a campus where reason and respect have prevailed, and where a president and a student body are able to look upon one another with admiration, respect, and warm friendship. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the St. Paul (Minn.) Dispatch, June 30, 1970]

THE STUDENTS NEXT DOOR

(By Dr. Richard P. Bailey)

Everyone knows where Hamline's president lives—over there in that big white house with the pillars and the balcony. There are no fences, no alarms, no special police protection, and I own no guns. There is a dog but she barks only at squirrels and bites only dog biscuits. My wife is small and about as threatening as a faculty tea.

I am a sitting duck, exposed, identified, unprotected and vulnerable.

My nearest neighbors are 750 college students, far removed from home and parents. Physically I am closer to more Hamline students more of the time than any other member of faculty or staff. Few citizens in the nation of my generation have a similar residential opportunity; fewer still might want it. It seems a precarious position indeed given the tendency toward violence and disrespect we read about so prevalent among campus youth.

I would like to bask in an heroic role. But that would be dishonest and would bring hoots of derision from my 750 neighbors. The truth is that I feel safer, and probably am, than 99.44 per cent of my fellow citizens who live amid less youthful neighbors.

I have never been threatened, pillaged, derided or molested.

My sleep, alas, has often been disrupted. This spring my zestful neighbors were occasionally noisy and playful well beyond my normal 10:30 time for retiring. They sing, they play hide-go-seek, they explode what sound like firecrackers, they turn the volume of their hi-fi's up to decibels beyond middle-age tolerance, and they move over the campus from here to there and back with joyous sociability after dark. They beep the horns of their cars and squeal their tires.

One night I was awakened at 1:30 by the noise of a touch football game developing on the street just below my bedroom window.

"That's too much," I thought and I pulled on my trousers and assumed by "authoritative air" to express my presidential petulance in person. The game was being joined by other players even as I dressed. They had all finished studying for exams and were enjoying a recreational break before bedtime. Their schedule was not the same as mine. Did that make mine better? I decided not. Removing my "authoritative air" and my trousers I went back to sleep before the game ended.

Certainly they ask favors of me as would any neighbor. They run cords in my windows to light their outdoor dances, they borrow firewood to burn in their lounge fireplaces, they ask me to support their drives and campaigns, they have snowball fights in my yard, they strip my mountain ash tree of its fall berries for chemistry experiments, and once they borrowed my front door. But they also sing Christmas carols to my family, and perform sorority initiation stunts for my admiring 11-year-old.

Never have they been destructive in any way. Never have they purposely annoyed me. Never have they shown any of the disrespect for authority about which you have read so much.

On commencement evening this year as I was retiring I heard the beeping of a horn out on the street below my open window. I

looked out and someone I must identify as a departing Hamline graduate called out:

"So long, Rick!"

It had been a long day and commencement had been momentarily disrupted, you remember, by non-Hamline young radicals. I needed no more youthful demagoguery. My "authoritative air" began to form. . . .

But this was youthful friendship being offered—all of my friends call me Rick.

"So long, Piper," I called as the car and its unknown occupant sped away into the night. And to myself I whispered, "and God bless and keep you, young friend and Hamline—and 2,300 other colleges and universities and this our beloved country—and our neighbors who live beyond the borders of campus and nation."

MR. CHET HUNTLEY

Mr. ALLOTT. Mr. President, let us pause a moment and ponder the hazards of life experienced by Mr. Chet Huntley recently.

It is well known that Mr. Huntley, who is about to leave his position with the National Broadcasting Co., recently gave an interview to Life magazine. This interview quoted Mr. Huntley as saying some very harsh things about the present administration, and specifically about the President and the Vice President.

Now comes Mr. Huntley to say—of all things—that he has not been treated fairly by the media. He has confided to the Bozeman, Mont., Chronicle that he was misquoted by Life.

Mr. President, it is not entirely clear why Mr. Huntley thought the Bozeman Chronicle was the best place to deny the accuracy of an interview which was published in a magazine read by scores of millions of Americans. But be that as it may, it is even more curious that there is only one part of the Life interview which Mr. Huntley does not disavow.

This is the part where Mr. Huntley says some very hostile things about the Vice President. Of course what has mediaman Huntley upset about the Vice President is that the Vice President has said that the media is often unfair.

Evidently Mr. Huntley thinks Life is unfair to him, and it is fair for him to attack Life, but it is unfair of the Vice President to join Mr. Huntley in complaining about the media, so it is fair for Mr. Huntley to denounce the Vice President.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUNTLEY FINDS LIFE HAS ITS DRAWBACKS

BOZEMAN, MONT., July 21 (AP)—Chet Huntley of the Huntley-Brinkley news telecast says Life magazine incorrectly quoted him as saying it "frightens me" that Richard M. Nixon is president.

In a letter to the Bozeman Chronicle Huntley declared Monday that he actually said he "worried about all presidents of the United States—whether they will stay healthy, whether they can stand the strain, their power, the decisions they make, and our tendency to make monarchs out of them."

In New York, a Life spokesman said, "After reading the account of what he said, Mr. Huntley may have regretted saying it. But there is no question about the accuracy of what was reported. Mr. (Thomas) Thompson's (the Life reporter) notes are available if Mr. Huntley wants to see them."

Huntley, 58, retires from the telecast after the Friday night show and will devote full time to developing a Montana recreational complex.

The newscaster also disowned another quote in the Life interview: "The shallowness of the man—President Nixon—overwhelms me."

In disclaiming that quote, Huntley said he had ventured the judgment that the 1968 campaign, as waged by all candidates, was shallow and that the President's rationale for Cambodia was thin.

"But that was transformed into the statement that I think Mr. Nixon was shallow," Huntley said.

Huntley also denied having said he had "poured Scotch" for President Johnson.

"Well, so it goes," concluded Huntley. "The only reasonably accurate quote was the one about the Eastern Establishment."

In that passage the newscaster was quoted as saying "Spiro Agnew is appealing to the most base of elements" and that the networks had "almost created" Agnew through intensive news coverage.

THE CONGRESS AND THE WAR

Mr. McGOVERN. Mr. President, the constitutional considerations discussed in connection with Senate debate on the Church-Cooper amendment will doubtless occupy our attention again when the McGovern-Hatfield amendment to the military procurement authorization bill becomes the pending business.

That amendment, which would set a definite timetable for withdrawal of U.S. forces from Vietnam, does not seek to make any retrospective declarations on the constitutionality or legality of the war. It does not in any sense pose a legal challenge to the actions of President Johnson or President Nixon in the pursuit of the policies they have deemed appropriate. This is a matter over which there is room for substantial dispute, and many of us have strong feelings on the matter. But we should emphasize that our amendment does not seek to adjudicate the past; that it rather charts a course for the future.

In connection with our discussion, however, I do think it is pertinent to note the fashion in which constitutional issues are being drawn in court tests pending now. I refer specifically to two New York cases, Orlando against Laird in the U.S. District Court for the Eastern District of New York and *Berk* v. *Laird*, Docket No. 35007 in the U.S. Court of Appeals for the Second Circuit.

In the former case, the district court, in denying a preliminary injunction against enforcement of orders that would send the plaintiff to Indochina, concluded that Congress has ratified the war through many legislative acts and particularly through appropriations. It said:

The huge appropriations annually voted to sustain the expanding combat activity cannot be read out of being as extorted by the exigencies created by presidential seizures of combat initiatives. . . . The power of the purse was lodged in the House and the appropriation power was expressly limited when exercised to raise and support armies as part of the conscious constitutional scheme for controlling the Executive's resort to combat activities. Specific appropriation statutes here, as the Government's brief points out, leave no uncertainty about Congressional will and purpose.

The Court said further:

Political expediency may have counseled the Congress's choice of the particular forms and modes by which it has united with the presidency in prosecuting the Vietnam combat activities, but the reality of the collaborative action of the executive and the legislative required by the Constitution has been present from the earliest stages.

In Berk a preliminary injunction was also denied and that decision has been affirmed on appeal. It is interesting to note, however, that the court of appeals remanded the case for further proceedings, calling upon the plaintiff to show first that he does not present an unmanageable political question. If that obstacle is surmounted there apparently will be an inquiry on the question whether congressional action has or has not fallen short of a determinable standard of authorization for the Vietnam war.

On a pending motion to dismiss, it is the Government's contention, in line with the holding in the Orlando case, that appropriations for the war have amounted to authorization. It argues:

The law is clear that "Congress may . . . do by ratification what it might have authorized. . . . And ratification may be effected through appropriation acts . . . (where) appropriation . . . plainly shows a purpose to bestow the precise authority claimed." *Ex parte Endo*, 323 U.S. 283, 303, n.24 (1944 Douglas, J.).

It seems to me that these arguments and holdings have a direct bearing on the amendment. As I read them they say that approval of the appropriations used for the prosecution of a war is equivalent, in practical effect, to a declaration of war.

Mr. President, I have voted for most of the military appropriations bills which have been used for the war in Vietnam. At the same time, going back to 1963, I have firmly opposed our escalating involvement in that conflict. There has been no period of time in which I would have supported a declaration of war in Vietnam. I am sure I have not been unique in the Senate in feeling an obligation to provide full support to the young Americans who have been dispatched to Vietnam, while at the same time believing that they should be brought home.

But it may be that we cannot have it both ways. Regardless of how we construe our votes on appropriations, it appears that the courts, if they reach the question, are likely to treat them as legislative approval for prosecution of the war.

The McGovern-Hatfield amendment to end the war, does no more, therefore, than place directly before the Senate a decision which it has made indirectly each year since the war began. It is a decision we cannot escape, because what the courts are really telling us is that the power to authorize war is not delegable; that we are exercising it even though we may think we are only providing funds to support the troops placed in the field by the President.

Congress not only has the power to review and approve or disapprove the com-

mitment of troops to battle; we have a positive obligation to do so.

It will not do, therefore, for any of us to say that we believe the presence of American manpower in Vietnam should be ended within a certain time but we want the President to do it. Voting the funds is not a neutral act. If we fail to limit their use it will be read as a statement by the Congress that the war should continue.

CANCER DETECTION MUST NOT BE STOPPED

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the Senator from New Jersey (Mr. WILLIAMS) entitled, "Cancer Detection Must Not Be Stopped."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CANCER DETECTION MUST NOT BE STOPPED

(Statement by Senator Williams)

Mr. WILLIAMS of New Jersey. Mr. President, the Administration has admitted that by December 31, 1970 it will eliminate funds promoting a program that detects uterine and cervical cancer, which is particularly prevalent among women from disadvantaged neighborhoods. Funds are also being cut that provide training of laboratory technicians to screen results of these examinations and tests.

The test, commonly known as the PAP smear test, is the most accurate method for identifying this cancer—a cancer that can be cured if detection is made early in its progress.

Precious lives will be lost if public knowledge of this testing program is not enhanced. It is doubly tragic because the program has had such widespread success. The public education process will have to be started anew when it is felt enough funds are available to resume saving these lives. It is impossible to understand how we can turn our backs on those who could be saved now.

Mr. President, I protest most strenuously this very dangerous cut in funds. This program saves lives. It is saving them right now. To discontinue public awareness-education is unconscionable.

An article by William E. Howard appeared in the Newark Star-Ledger of July 12th. The author discloses the particulars of this cancellation and comments on the tragic irony of cutting funds that save lives.

NIXON SHUTS OFF PROMOTIONAL FUNDS FOR PAP TESTS

(By William E. Howard)

WASHINGTON.—The Nixon Administration has quietly dropped a medical program to promote the detection of uterine cancer, especially among poor women.

Herbert P. Dunning, administrator of the Public Health Service's cancer control project, confirmed that funds had been cut off as of July 1. He said the $6.1 million annually in grants to encourage the taking of PAP smear tests had been diverted to "other" medical programs.

Also phased out, he said, was a $1.2 million program to train more laboratory technologists in how to screen PAP smears microscopically for cancer cells. Such technicians are in short supply.

Ironically, the dual programs are being abandoned at a time when federal health officials have been telling Congress that far too few American women are availing themselves to the PAP test. Although the test was proven out 30 years ago, and has been widely publicized by the American Cancer Society and the government, federal officials estimate only 20 million out of 60 million women have it done annually.

An American Cancer Society survey earlier this year showed 53 per cent of the adult female population had the test performed at least once. This is a substantial increase over 1961, when only 30 per cent said they had undergone the test. But it still leaves millions unprotected.

Dr. Carl G. Baker, director of the National Cancer Institute, recently told a House subcommittee he felt use of the test was "distressingly low" and that "an insufficient effort" was being made to promote it in ghetto areas where it is needed.

Medical studies have shown women from poor or "disadvantaged" backgrounds to be more prone to cancer of the cervix and the uterus. Doctors relate the disease to having a child early in life.

Dunning said his recently dropped PAP test project had been conducted primarily in inner city areas and had been successful.

"I think we did perform a great service to 2 million women," he said in an interview.

Once detected, uterine cancer usually can be treated successfully by surgery. It is a question of removing it before the cancer spreads to other organs.

The Cancer Society and many physicians advise having the test at least once a year. Some doctors order patients on birth control pills to have it twice a year.

But Dunning said there is some controversy about the protection afforded by annual checkups, noting that "60 million tests a year really are impractical." He said the natural course of the disease shows that it remains localized for some time, perhaps several years. Hence, he said some doctors believe a woman could be adequately protected with a test at two to three-year intervals.

"The chances are, with the lower frequency of tests, we are protecting more than 25 per cent of American women now and the number is increasing," he said.

Dunning said his program began in 1963 as a demonstration project and has been administered regionally by the Public Health Service in grants to hospitals and clinics.

AN EXAMPLE OF POOR POSTAL MANAGEMENT; WEST TEXAS MAIL SERVICE DWINDLES

Mr. YARBOROUGH. Mr. President, I recently received a letter from Mr. B. E. Loyd, the president of Muleshoe State Bank of Muleshoe, Tex., in which he outlines some of the difficulties the people of this west Texas community are having with the mail service. As Mr. Loyd pointed out in his letter, in a town with a population of 5,225 people, it takes 3 days for a letter to be delivered from one place in the town to another, and it is taking 5 to 6 days for a letter from Muleshoe to be delivered to another point in Texas.

This type of mismanagement is inexcusable. However, instead of trying to correct problems such as those described in Mr. Loyd's letter, the administration would rather dismantle the Post Office and turn it into a corporation which would be managed by the same people who cannot effectively manage the Post Office in its present form.

No one denies that there are problems in the Post Office that need solving, however, rather than face the hard task of reforming the Post Office, the administration forces are going to destroy it. Will the present Postmaster be able to administer a postal corporation with better results than he had administered the Post Office? I submit that he will not be able to do so. The passage of the postal reorganization bill may prove to be the worst piece of legislation in the history of this Nation.

Mr. President, I ask unanimous consent that Mr. B. E. Loyd's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MULESHOE STATE BANK,
Muleshoe, Tex., July 8, 1970.

Hon. RALPH YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: I am sure that you are aware that we are having considerable difficulty with our mail situation in Muleshoe. It is taking 3 days to get a letter delivered from one business to another here in Muleshoe and taking 5 and 6 days for mail to be delivered to other points in Texas where we used to get mail delivered in 2 to 3 days.

I cannot believe that the Post Office Department can save money by having all the mail sent from Muleshoe to Lubbock to be sorted and then returned to Muleshoe.

We would appreciate very much your checking into this and if anything could be done to help the situation we would be most grateful. Thanking you for your attention in this matter, I remain

Yours sincerely,

B. E. LOYD,
President.

THE INDIAN AS A FELLOW HUMAN BEING

Mr. MONDALE. Mr. President, one of the principal findings of the Senate Indian Education Subcommittee was that the existence of myths and stereotypes about Indians was a significant factor in the public's refusal to accept the Indian as a fellow human being.

The subcommittee recommended that school curriculums must change to reflect the true history and culture of Indians, rather than contribute to the propagation of damaging, derogatory—and untrue—stereotypes.

I do not know how many school officials and teachers have taken that recommendation to heart, but I fear the number is far too small. I think we can get some sense of the problem by looking at the answers given by suburban Minneapolis elementary schoolchildren when they were asked what they knew about Indians.

Their responses: They kill white men. They take scalps. They tell lies and fibs. They are mean. They have funny names. They eat all raw meat.

These were the kinds of answers a University of Minnesota survey team found.

In response to this survey the university is preparing an Indian education college-credit course for viewing on statewide educational television. It is being designed to assist teachers in the preparation of curriculum units. Similar curriculum units will also be sent to districts throughout the State.

This is a significant response to a major problem, and I applaud the university's efforts in this area. I ask unani-

mous consent that a Minneapolis Tribune editorial of July 3, 1970, regarding the university survey and proposed TV course, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE INDIANS AS SEEN IN SUBURBS

What do white suburban grade school students think about Indians? Indians mean big trouble. They killed white men. They take scalps. They tell lies and fibs. They are mean. They have funny names. They eat all raw meat. These attitudes, ironically, were expressed by students at Indian Mounds Elementary School in Bloomington.

The students were asked to write "What I Know About Indians" in a one-page essay as part of a survey by the University of Minnesota's Training Center for Community Programs. The survey produced 643 essays from eight grade schools in Bloomington.

The results, reported recently by the training center, are not all as negative as the expressions by some of the students at Indian Mounds. Pupils at Indian Mounds and other schools also mentioned the injustices inflicted by whites on Indian people, referred to Indians in a positive manner, and expressed admiration for Indians. "We didn't treat them as we ought to," wrote a sixth-grader at Brookside School.

But the generalizations in the essays were negative enough, said the authors of the report, to validate the conclusions of a recent U.S. Senate Indian Education subcommittee study. The subcommittee contended that the public schools present a picture of American and inaccurate. In Bloomington, said the uni- Indians that tends to be uncomplimentary versity report, the students showed a depressing lack of facts about the present condition of Indians. The survey also indicated that some teachers were inclined to single out and overemphasize certain "facts" to the exclusion of the broader picture of past and present Indian life styles.

Although the survey was conducted in Bloomington, the results should not be construed as a specific indictment of that school district. Similar results likely could be found in most school districts of the state. Old textbooks containing distorted references to Indians are still in use. A balanced treatment of Indian history often has not been integrated into the curriculum. Not enough contemporary material on Indians is available to teachers.

As a result of the Bloomington survey, the university plans to offer a nine-credit Indian-education college course on educational television stations throughout the state next fall. The purpose of the course will be to give teachers the tools to develop curriculum units for their classrooms. At the same time, the university will be sending a series of curriculum units, produced by teachers, to all school districts in the state.

These and other efforts should help to prevent what the university report terms "a new round in the old cycle of myth creation and maintenance about the American Indian." But, as the report also points out, the schools can't do it all. Distorted perceptions of the Indian in the white family, peer group and media all help to explain why a Brookside fourth grader wrote, "If I saw an Indian, I'd be scared stiff."

ONE OF NATION'S OUTSTANDING EDUCATORS TO RETIRE

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the Senator from New Jersey (Mr. WILLIAMS) entitled, "One of Nation's Outstanding Educators To Retire."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ONE OF NATION'S OUTSTANDING EDUCATORS TO RETIRE

(Statement by Senator WILLIAMS of New Jersey)

Mr. WILLIAMS of New Jersey. Mr. President, I wish to salute one of our Nation's outstanding educators, Dr. Mason Gross. Dr. Gross has announced that he plans to retire after 11 years as president of Rutgers University, the State University of New Jersey.

During his tenure as president, he has guided Rutgers through a period of tremendous growth. But his dedication has not been to growth alone. His overriding goal has been the quality and, most importantly, the relevancy of education.

Dr. Gross has been a precursor; he has set the patterns. When he assumed the role of President, he urged creation of a curricula in Asian and African studies. Today, such studies are commonplace but this was not the situation 11 years ago.

That speech set a pattern which did not vary. Dr. Gross has remained in the forefront of the most innovative educators in America.

To cite all of his accomplishments, would require a major volume.

However, I should like to mention that it was Mason Gross who established the first urban-oriented college in America, the Livingston College of Rutgers University. And it was Dr. Gross who opened the doors of university education to the disadvantaged.

As is true generally of university presidents, Dr. Gross has had his share of problems. And he has met them forthrightly and with success.

Perhaps the finest tribute that could be paid to Mason Gross is to realize that in an age when young people say "Don't trust anyone over 30," he was not only trusted but respected by his students.

While Dr. Gross is retiring as President of Rutgers, I have no doubt that he will continue to lend his great ability and dedication to the cause of quality education in America.

In the meantime, I think the people of New Jersey join in thanking Dr. Gross for a job well done.

How well he served is reflected in editorials which have appeared in New Jersey newspapers.

DR. GROSS SETS DATE

Like most college presidents, Mason W. Gross has not escaped controversy and conflict in this era when educational institutions are undergoing violent upheaval.

Now, after what will be 25 years with the university, including 12 years as president, he plans to step down from his Rutgers post in September 1971, by which time he will be 60 years old and eligible for retirement.

Few will blame Dr. Gross for seeking a quieter and more contemplative life. Although he declares his decision to retire was not influenced by recent events, certainly his view of the burdens he has carried must have undergone changes as the pressures mounted, and along with them, the inevitable criticism.

The dispute with Gov. Cahill over combining Rutgers Medical School with the New Jersey College of Medicine and Dentistry was only the latest of a series of conflicts. Rutgers and its administration have also been targets of criticism, some of it justified and some not, over the Urban University Program and the way it was launched, over discontinuance of ROTC, over student takeovers and other disorders, and over relations with the Legislature and other Trenton officials.

Nevertheless, the tall, scholarly and professorial figure of Dr. Gross has been a popular one on the Rutgers campuses and unquestionably he argued well the case for greater understanding of students' viewpoints and for accommodations allowing youth a larger role in university affairs. He has been a pioneer in pushing for increased focus on the needs of students from disadvantaged groups and in trying to make Rutgers more responsive to the needs of a changing society.

At the same time, Dr. Gross has been a dedicated leader in guiding Rutgers through an 11-year period of unprecedented expansion while it was developing its newly found role as the state university. In the process, it increased its national stature.

For those achievements, and for bearing the recent awesomely difficult burdens with his usual courtliness and grace, Dr. Gross merits gratitude and thanks.

A SUBSTANTIAL LOSS

Dr. Mason Welch Gross at the moment is probably better known to most New Jersey residents for the last two years of his long and distinguished tenure as Rutgers University president than for the previous nine in which the institution had grown appreciably and taken on academic stature.

Controversy has a way of making a celebrity of a person. It was something that Dr. Gross neither sought nor wanted. He was a college president who like numerous colleagues in other universities was caught up in the vortex of violent social change, a mood that was and is deeply rooted in the nation's institutions of higher learning.

Rutgers has been disrupted by demonstrations and protests, but hardly in the clamorous and virulent dimensions that afflicted other universities. And despite the criticism of legislators, Dr. Gross was able to deal with these incidents in most instances with an admirable degree of restraint and understanding.

The period of stress on the Rutgers campus in a fuller, positive sense, was a stern test of the university's administration under Dr. Gross' guidance. And it is apparent that the school not only has survived but has grown with the experience.

The brief tumultuous period in the school's history may currently tend to obscure Dr. Gross' substantial contributions to the school's academic maturity and substance.

But controversy and differences are part of an institution's changing role in a society that is undergoing radical social change. It was apparent that Dr. Gross was acutely cognizant of the new and greater responsibility that American academe has had to assume in this transition. Open enrollment, a program that dramatically broadened educational opportunities for economically disenfranchised students from urban areas, was a major innovation instituted at Rutgers under Dr. Gross' administration.

Any appraisal of his tenure at Rutgers must include his unrelenting and courageous resistance to political incursion of the state university, an issue on which Dr. Gross and legislators have locked horns on a number of occasions. His most recent experience in this area was his opposition to the legislative passage of a measure that would transfer control of the school's two-year medical school to a new statewide medical education board.

This newspaper favored the revamped medical education program initiated by Gov. Cahill to improve the delivery of health care for the whole state, but it recognized that these differences stemmed from genuine conflicts on fundamental issues. Dr. Gross' primary concern was to develop the university's medical school into a four year institution under Rutgers' control; we subscribed to the thinking behind the governor's proposal to integrate medical education because it was addressed to the more urgent problem of meeting health care needs in fullest dimension with available resources.

None of this diminishes the enormous influence he brought to bear during his 11-

year incumbency in which Rutgers has achieved impressive growth, from a relatively small college to a large, multi-campus university that has gained increasing respect in the academic community. His retirement represents a substantial loss in New Jersey higher learning, but even more so for the state university.

ENVIRONMENTAL BILL OF RIGHTS

Mr. MONDALE. Mr. President, since Earth Day, there has been a great deal of talk about the cleaning of our environment and making it livable for future generations. Numerous ideas, many of them sound, have been put forth as suggestions for accomplishing this enormous task.

Yet some of the most basic, yet beautiful thoughts on saving our already ravaged earth, came from Barbara Wadsworth, Richard Perdue, Elizabeth Moran, and the students of Carolyn Roth, biology teacher, North High School in Minneapolis, Minn.

They call it the "Environmental Bill of Rights."

I ask unanimous consent that this effort be printed in the RECORD along with the names of the students who signed the document.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

ENVIRONMENTAL BILL OF RIGHTS

We, being of sound mind and body, do hereby submit these suggestions, while there is still air to breathe, for an environmental Bill of Rights.

(a) No man shall have the right to pollute another man's property without his consent. Nor shall a man be able to pollute his own property in such a way as to endanger his neighbor's property.

(b) The government shall not have the right to infringe on any man's right to a pure environment, (pure environment being of clean water, air free from major pollutants, land free from corrosive misuse.)

(c) Man shall not be permitted to endanger earth's natural species to the point of extinction.

Phillip E. Demry, Susan Heimkes, Mary Madson, Megan Jones, Edwin B. Mudge, Burnadette Pettiford, Billie Bolden, Brian Babb, Becky Shostrom, and Marilyn Magnuson.

Steve Smith, Sandra Demry, Carol Temple, Simon Bank, Mike Allen, Jim Thompson, Charles Williams, Suzy Burke, Terry Minard, and Karl Hanson.

Steven Peterson, R. Jacobson, Carolyn Carter, Rose Ann Genich, Jane Lang, Bud Brophy, Barb Gilmer, Sandi Gilmer, Debby Anderson, and Debbie Comeau.

Gary Pribyl, Suzanne Murschell, Kenn Masica, Charles Varone, Gary Caviness, Tara Lockwood, Richard Z. Woldorsky, David Steen, Greg Olson, and Kathy Voller.

Lyle Geimendinger, Anita Uruina, Marti Lawrence, Lester Hall, Bill Tollifson, Phillip McElhaney, Larry Shackle, Terry Letourneau, John Duyer, and Barb Wadsworth.

PUERTO RICO CONSTITUTION DAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the Senator from New Jersey (Mr. WILLIAMS) on Puerto Rico Constitution Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PUERTO RICO CONSTITUTION DAY

Mr. WILLIAMS of New Jersey. Mr. President, July 25th is a day to honor and salute the people of Puerto Rico, for it was 18 years ago that this small nation achieved Commonwealth status.

The long journey toward self-government, however, was not an easy one. During more than 400 years of its existence—from discovery until United States control in 1898—Puerto Rico was ruled by approximately 140 Spanish governors.

Although not always mistreated, the Puerto Ricans were denied the privilege of self-rule. Even after the United States assumed control following the Spanish-American conflict, Puerto Rican political power did not become predominate. It was not until 1917 that an act of Congress created there the start of a self-governing and free-trading society.

The next several years lead the way to great social change and economic improvement. Governmental dominance was soon channeled through political organizations, guiding Puerto Rico to its first democratic election in 1948, wherein Luis Manoz Marin was elected governor. And on July 25, 1952, climaxing many years of continued determination, a democratic constitution was adopted. Significantly created was a legislative body that has enacted and provided enforcement for all laws, a process that still prevails on this modern and progressive island.

Mr. President, for all Puerto Ricans, Constitution Day is a reminder of the sturdy foundation of their present democratic system. To acknowledge and praise the accomplishments of these people, we in the United States honor the traditions to which all free men aspire.

IS FREEDOM DYING IN AMERICA?

Mr. MUSKIE. Mr. President, Look magazine for July 14 contains an article, written by the noted historian Henry Steele Commager, which is extremely relevant to the debate on the pending bill.

The article is entitled "Is Freedom Dying in America?" In it, the author discusses emerging threats to the freedoms and values enshrined in our Bill of Rights.

One particularly noteworthy passage reads as follows:

Let us turn then to practical and particular issues and ask, in each case, what are and will be the consequences of policies that repress freedom, discourage independence and impair justice in American society, and what are, and will be, the consequences of applying to politics and society those standards and habits of free inquiry that we apply as a matter of course to scientific inquiry?

Consider the erosion of due process of law—that complex of rules and safeguards built up over the centuries to make sure that every man will have a fair trial. Remember that it is designed not only for the protection of desperate characters charged with monstrous crimes; it is designed for every litigant. Nor is due process merely for the benefit of the accused. As Justice Robert H. Jackson said, "It is the best insurance for the Government itself against those blunders which leave lasting stains on a system of justice. . . ."

And why is it necessary to guarantee a fair trial for all—for those accused of treason, for those who champion unpopular causes in a disorderly fashion, for those who assert their social and political rights against community prejudices, as well as for corporations, labor unions and churches? It is, of course, necessary so that justice will be done. Justice is the end, the aim, of government. It is implicitly the end of all governments; it is quite explicitly the end of the United States Government, for it was "in order to . . . establish justice" that the Constitution was ordained.

Trials are held not in order to obtain convictions; they are held to find justice. And over the centuries, we have learned by experience that unless we conduct trials by rule and suffuse them with the spirit of fair play, justice will not be done. The argument that the scrupulous observance of technicalities of due process slows up or frustrates speedy convictions is, of course, correct, if all you want is convictions. But why not go all the way and restore the use of torture? That got confessions and convictions! Every argument in favor of abating due process in order to get convictions applies with equal force to the use of the third degree and the restoration of torture. It is important to remember that nation after nation abandoned torture (the Americans never had it), not merely because it was barbarous, but because, though it wrung confessions from its victims, it did not get justice. It implicated the innocent with the guilty, it outraged the moral sense of the community. Due process proved both more humane and infinitely more efficient.

Or consider the problem of wiretapping. That in many cases wiretapping "works" is clear enough, but so do other things prohibited by civilized society, such as torture or the invasion of the home. But "electronic surveillance," said Justice William J. Brennan, Jr., "strikes deeper than at the ancient feeling that a man's home is his castle; it strikes at freedom of communication, a postulate of our kind of society. . . . Freedom of speech is undermined where people fear to speak unconstrainedly in what they suppose to be the privacy of home or office."

I ask unanimous consent that the entire article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS FREEDOM DYING IN AMERICA?

"There are certain words,
Our own and others', we're used to—words we've used,
Heard, had to recite, forgotten,
Rubbed shiny in the pocket, left home for keepsakes,
Inherited, stuck away in the back-drawer,
In the locked trunk, at the back of the quiet mind.
Liberty, equally, fraternity,
To none will we sell, refuse or deny, right or justice.
We hold these truths to be self-evident.
I am merely saying—what if these words pass?
What if they pass and are gone and are no more . . . ?
It took long to buy these words.
It took a long time to buy them and much pain."

—Stephen Vincent Benét.

"Those, who would give up essential liberty to purchase a little temporary safety," said Benjamin Franklin, two centuries ago, "deserve neither liberty nor safety."

Today we are busy doing what Franklin warned us against. Animated by impatience, anger and fear, we are giving up essential liberties, not for safety, but for the appearance of safety. We are corroding due process and the rule of law not for Order, but for the semblance of order. We will find that when we have given up liberty, we will not have safety, and that when we have given up justice, we will not have order.

"We in this nation appear headed for a new period of repression," Mayor John V. Lindsay of New York recently warned us. We are in fact already in it.

Not since the days when Sen. Joseph McCarthy bestrode the political stage, fomenting suspicion and hatred, betraying the Bill of Rights, bringing Congress and the State Department into disrepute, have we experienced anything like the current offensive against the exercise of freedom in America. If repression is not yet as blatant or as flamboyant as it was during the McCarthy years, it is in many respects more pervasive and more formidable. For it comes to us now with official sanction and is imposed upon us by officials sworn to uphold the law: the Attorney General, the FBI, state and local officials, the police, and even judges. In Georgia and California, in Lamar, S.C., and Jackson, Miss., and Kent, Ohio, the attacks are overt and dramatic; on the higher levels of the national administration, it is a process of erosion, the erosion of what Thomas Jefferson called "the sacred soil of liberty." Those in high office do not openly proclaim their disillusionment with the principles of freedom, but they confess it by their conduct, while the people acquiesce in their own disinheritance by abandoning the "eternal viligiance" that is the price of liberty.

There is nothing more ominous than this popular indifference toward the loss of liberty, unless it is the failure to understand what is at stake. Two centuries ago, Edmund Burke said of Americans that they "snuff the approach of tyranny in every tainted breeze." Now, their senses are blunted. The evidence of public-opinion polls is persuasive that a substantial part of the American people no longer know or cherish the Bill of Rights. They are, it appears, quite prepared to silence criticism of governmental policies if such criticism is thought—*by the Government*—damaging to the national interest. They are prepared to censor newspaper and television reporting if such reports are considered—*by the Government*—damaging to the national interest! As those in authority inevitably think whatever policies they pursue, whatever laws they enforce, whatever wars they fight, are in the national interest, this attitude is a formula for the ending of all criticism, which is another way of saying for the ending of democracy.

Corruption of language is often a first sign of a deeper malaise of mind and spirit, and it is ominous that invasions of liberty are carried on, today, in the name of constitutionalism, and the impairment of due process, in the name of Law and Order. Here it takes the form of a challenge to the great principle of the separation of powers, and there to the equally great principle of the superiority of the civil to the military authority. Here it is the intimidation of the press and television by threats both subtle and blatant, there of resort to the odious doctrine of "intent" to punish anti-war demonstrators. Here it is the use of the dangerous weapon of censorship, overt and covert, to silence troublesome criticism, there the abuse of the power of punishment by contempt of court. The thrust is everywhere the same and so too the animus behind it: to equate dissent with lawlessness and nonconformity with treason. The purpose of those who are prepared to sweep aside our ancient guarantees of freedom is to blot out those great problems that glare upon us from every horizon, and pretend that if we refuse to acknowledge them, they will somehow go away. It is to argue that discontent is not an honest expression of genuine grievances but of willfulness, or perversity, or perhaps of the crime of being young, and that if it can only be stifled, we can restore harmony to our distracted society.

Men like Vice President Spiro T. Agnew simplistically equate opposition to official policies with effete intellectualism, and cater to the sullen suspicion of intellectuals, always latent in any society, to silence that opposition. Frightened people everywhere, alarmed by lawlessness and violence in their communities, and impatient with the notion that we cannot really end violence until we deal with its causes, call loudly for tougher laws, tougher cops and tougher courts or—as in big cities like New York or small towns like Lamar—simply take authority into their own hands and respond with vigilante tactics. Impatient people, persuaded that the law is too slow and too indulgent, and that order is imperiled by judicial insistence on due process, are prepared to sweep aside centuries of progress toward the rule of law in order to punish those they regard as enemies of society. Timid men who have no confidence in the processes of democracy or in the potentialities of education are ready to abandon for a police state the experiment that Lincoln called "the last best hope of earth."

The pattern of repression is, alas, all too familiar. Most ominous is the erosion of due process of law, perhaps the noblest concept in the long history of law and one so important that it can be equated with civilization, for it is the very synonym for justice. It is difficult to remember a period in our own history in which due process has achieved more victories in the courts and suffered more setbacks in the arena of politics and public opinion than in the last decade. While the Warren Court steadily enlarged the scope and strengthened the thrust of this historic concept, to make it an effective instrument for creating a more just society, the political and the law-enforcement agencies have displayed mounting antagonism to the principle itself and resistance to its application. The desegregation decision of 1954 has been sabotaged by both the Federal and local governments—a sabotage dramatized by the recent decision of the Justice Department to support tax exemption for private schools organized to frustrate desegregation.

There are many other examples. Pending legislation, including the Organized Crime Control Act of 1969, provides for "preventive detention" in seeming violation of the constitutional guarantee of presumption of innocence; limits the right of the accused to examine evidence illegally obtained; permits police to batter their way into a private house without notice (the no-knock provision); and provides sentences of up to 30 years for "dangerous special offenders." And the government itself, from local police to the Attorney General, persists in what Justice Holmes called the "dirty business" of wiretapping and bugging to obtain evidence for convictions, though this is a clear violation of the right of protection against self-incrimination.

Equally flagrant is the attack on First Amendment freedoms—freedom of speech, press, petition and assembly—an attack that takes the form of intimidation and harassment rather than of overt repudiation. The President and the Vice President have joined in a crusade designed to force great newspapers like the New York *Times* and the Washington *Post* to moderate their criticism of Administration policies, and to frighten the television networks into scaling down their coverage of events that the Government finds embarrassing; a position that rests on the curious principle that the real crime is not official misconduct but the portrayal of that misconduct. Mr. Agnew, indeed, has gone so far as to call on governors to drive the news purveyed by "bizarre extremists" from newspapers and television sets; it is an admonition that, if taken literally, would deny newspaper and TV coverage to Mr. Agnew himself. All this is coupled with widespread harassment of the young, directed superficially at little more than hairstyle, dress or manners—but directed in fact to their opinions, or perhaps to their youthfulness. And throughout the country, government officials are busy compiling dossiers on almost all citizens prominent enough to come to their attention.

Government itself is engaged increasingly in violating what President Dwight D. Eisenhower chose as the motto for the Columbia University bicentenary: "Man's right to knowledge and the free use thereof." The USIA proscribes books that criticize American foreign policy at the same time that it launches a positive program of celebrating the Nixon Administration and the conduct of the Vietnam war through films and a library of "safe" books selected by well-vetted experts. The Federal Government spends millions of dollars presenting its version of history and politics to the American people. The Pentagon alone spends $47 million a year on public relations and maintains hundreds of lobbyists to deal with Congress, and the Defense Department floods schools and clubs and veterans organizations with films designed to win support for the war.

Meantime, the growing arrogance of the military and its eager intervention in areas long supposed to be exclusively civilian gravely threaten the principle of the superiority of the civil to the military power. Military considerations are advanced to justify the revival of the shabby practices of the McCarthy era—security clearances for civilians working in all establishments that have contracts with Defense—a category that includes laboratories, educational institutions and research organizations. What the standards are that may be expected to dictate security "clearance" is suggested by Vice President Agnew's proposals to "separate the [protest leaders] from our society—with no more regret than we should feel over discarding rotten apples from a barrel." That is, of course, precisely the philosophy that animated the Nazi. Military considerations, too, are permitted to dictate polices of secrecy that extend even to censorship of the *Congressional Record*, thus denying to congressmen, as to the American people, information they need to make decisions on foreign policy. Secrecy embraces, not unnaturally, facts about the conduct of the war; Attorney General Mitchell, it was reported, hoped to keep the Cambodian caper secret from Congress and the people until it was a *fait accompli*. So, too, the CIA, in theory merely an information-gathering agency, covers its far-flung operations in some 60 countries with a cloak of secrecy so thick that even Congress cannot penetrate it. The Army itself, entering the civilian arena, further endangers freedom of assembly and of speech by employing something like a thousand agents to mingle in student and other assemblies and report to the Army what they see and hear. This is, however, merely a tiny part of the some $3 billion that our Government spends every year in various types of espionage—more every year than the total cost of the Federal Government from its foundation in 1789 to the beginning of the Civil War in 1861!

It would be an exaggeration to say that the United States is a garrison state, but none to say that it is in danger of becoming one.

The purpose of this broad attack on Amer-

ican freedoms is to silence criticism of Government and of the war, and to encourage the attitude that the Government knows best and must be allowed a free hand, an attitude Americans have thought odious ever since the days of George III. It is to brand the universities as a fountainhead of subversion and thus weaken them as a force in public life. It is to restore "balance" to the judiciary and thereby reverse some of the great achievements of the 16 years of the Warren Court and to reassure the Bourbons, North and South, who are alarmed at the spectacle of judicial liberalism. It is to return to a "strict" interpretation of the power of states over racial relations and civil liberties—a euphemism for the nullification of those liberties.

The philosophy behind all this, doubtless unconscious, is that government belongs to the President and the Vice President; that they are the masters, and the people, the subjects. A century ago, Walt Whitman warned of "the never-ending audacity of elected persons"; what would he say if he were living today? Do we need to proclaim once more the most elementary principle of our constitutional system: that in the United States, the people are the masters and all officials are servants—officials in the White House, in the Cabinet, in the Congress, in the state executive and legislative chambers; officials, too, in uniform, whether of the national guard or of the police?

Those who are responsible for the campaign to restrict freedom and hamstring the Bill of Rights delude themselves that if they can but have their way, they will return the country to stability and order. They are mistaken. They are mistaken not merely because they are in fact hostile to freedom, but because they don't understand the relation of freedom to the things they prize most—to security, to order, to law.

What is that relationship?

For 2,500 years, civilized men have yearned and struggled for freedom from tyranny—the tyranny of depotic government and superstition and ignorance. What explains this long devotion to the idea and practice of freedom? How does it happen that all Western societies so exalt freedom that they have come to equate it with civilization itself?

Freedom has won its exalted place in philosophy and policy quite simply because, over the centuries, we have come to see that it is a necessity; a necessity for justice, a necessity for progress, a necessity for survival.

How familiar the argument that we must learn to reconcile the rival claims of freedom and order. But they do not really need to be reconciled; they were never at odds. They are not alternatives, they are two sides to the same coin, indissolubly welded together. The community—society or nation—has an interest in the rights of the individual because without the exercise of those rights, the community itself will decay and collapse. The individual has an interest in the stability of the community of which he is a part because without security, his rights are useless. No community can long prosper without nourishing the exercise of individual liberties for, as John Stuart Mill wrote a century ago. "A State which dwarfs its men, in order that they may be more docile instruments in its hands . . . will find that with small men no great thing can really be accomplished." And no individual can fulfill his genius without supporting the just authority of the state, for in a condition of anarchy, neither dignity nor freedom can prosper.

The function of freedom is not merely to protect and exalt the individual, vital as that is to the health of society. Put quite simply, we foster freedom in order to avoid error and discover truth; so far, we have found no other way to achieve this objective. So, too, with dissent. We do not indulge dissent for sentimental reasons; we encourage it because we have learned that we cannot live without it. A nation that silences dissent, whether by force, intimidation, the withholding of information or a foggy intellectual climate, invites disaster. A nation that penalizes criticism is left with passive acquiescence in error. A nation that discourages originality is left with minds that are unimaginative and dull. And with stunted minds, as with stunted men, no great thing can be accomplished.

It is for this reason that history celebrates not the victors who successfully silenced dissent but their victims who fought to speak the truth as they saw it. It is the bust of Socrates that stands in the schoolroom, not the busts of those who condemned him to death for "corrupting the youth." It is Savonarola we honor, not the Pope who had him burned there in the great Piazza in Florence. It is Tom Paine we honor, not the English judge who outlawed him for writing the *Rights of Man*.

Our own history, too, is one of rebellion against authority. We remember Roger Williams, who championed toleration, not John Cotton, who drove him from the Bay Colony; we celebrate Thomas Jefferson, whose motto was "Rebellion to tyrants is obedience to God," not Lord North; we read Henry Thoreau on civil disobedience, rather than those messages of President Polk that earned him the title "Polk the Mendacious"; it is John Brown's soul that goes marching on, not that of the judge who condemned him to death at Charles Town.

Why is this? It is not merely because of the nobility of character of these martyrs. Some were not particularly noble. It is because we can see now that they gave their lives to defend the interests of humanity, and that they, not those who punished them, were the true benefactors of humanity.

But it is not just the past that needed freedom for critics, nonconformists and dissenters. We, too, are assailed by problems that seem insoluble; we, too, need new ideas. Happily, ours is not a closed system—not yet, anyway. We have a long history of experimentation in politics, social relations and science. We experiment in astrophysics because we want to land on the moon; we experiment in biology because we want to find the secret of life; we experiment in medicine because we want to cure cancer; and in all of these areas, and a hundred others, we make progress. If we are to survive and flourish, we must approach politics, law and social institutions in the same spirit that we approach science. We know that we have not found final truth in physics or biology. Why do we suppose that we have found final truth in politics or law? And just as scientists welcome new truth wherever they find it, even in the most disreputable places, so statesmen, jurists and educators must be prepared to welcome new ideas and new truths from whatever sources they come, however alien their appearance, however revolutionary their implications.

"There can be no difference anywhere," said the philosopher William James, "that doesn't make a difference elsewhere—no difference in abstract truth that doesn't express itself in a difference in concrete fact. . . ."

Let us turn then to practical and particular issues and ask, in each case, what are and will be the consequences of policies that repress freedom, discourage independence and impair justice in American society, and what are, and will be, the consequences of applying to politics and society those standards and habits of free inquiry that we apply as a matter of course to scientific inquiry?

Consider the erosion of due process of law—that complex of rules and safeguards built up over the centuries to make sure that every man will have a fair trial. Remember that it is designed not only for the protection of desperate characters charged with monstrous crimes; it is designed for every litigant. Nor is due process merely for the benefit of the accused. As Justice Robert H. Jackson said, "It is the best insurance for the Government itself against those blunders which leave lasting stains on a system of justice. . . ."

And why is it necessary to guarantee a fair trial for all—for those accused of treason, for those who champion unpopular causes in a disorderly fashion, for those who assert their social and political rights against community prejudices, as well as for corporations, labor unions and churches? It is, of course, necessary so that justice will be done. Justice is the end, the aim, of government. It is implicitly the end of all governments; it is quite explicitly the end of the United States Government, for it was "in order to . . . establish justice" that the Constitution was ordained.

Trials are held not in order to obtain convictions; they are held to find justice. And over the centuries, we have learned by experience that unless we conduct trials by rule and suffuse them with the spirit of fair play, justice will not be done. The argument that the scrupulous observance of technicalities of due process slows up or frustrates speedy convictions is, of course, correct, if all you want is convictions. But why not go all the way and restore the use of torture? That got confessions and convictions! Every argument in favor of abating due process in order to get convictions applies with equal force to the use of the third degree and the restoration of torture. It is important to remember that nation after nation abandoned torture (the Americans never had it), not merely because it was barbarous, but because, though it wrung confessions from its victims, it did not get justice. It implicated the innocent with the guilty, it outraged the moral sense of the community. Due process proved both more humane and infinitely more efficient.

Or consider the problem of wiretapping. That in many cases wiretapping "works" is clear enough, but so do other things prohibited by civilized society, such as torture or the invasion of the home. But "electronic surveillance," said Justice William J. Brennan, Jr., "strikes deeper than at the ancient feeling that a man's home is his castle; it strikes at freedom of communication, a postulate of our kind of society . . . . Freedom of speech is undermined where people fear to speak unconstrainedly in what they suppose to be the privacy of home or office."

Perhaps the most odious violation of justice is the maintenance of a double standard: one justice for blacks and another for whites, one for the rich and another for the poor, one for those who hold "radical" ideas, and another for those who are conservative and respectable. Yet we have daily before our eyes just such a double standard of justice. The "Chicago Seven," who crossed state lines with "intent" to stir up a riot, have received heavy jail sentences, but no convictions have been returned against the Chicago police who participated in that riot. Black Panthers are on trial for their lives for alleged murders, but policemen involved in wantonly attacking a Black Panther headquarters and killing two blacks have been punished by demotion.

Turn to the role and function of freedom in our society—freedom of speech and of the press—and the consequences of laying restrictions upon these freedoms. The consequence is, of course, that society will be deprived of the inestimable advantage of inquiry, criticism, exposure and dissent. If the press is not permitted to perform its traditional function of presenting the whole news, the American people will go uninformed. If television is dissuaded from showing controversial films, the people will be denied the

opportunity to know what is going on. If teachers and scholars are discouraged from inquiring into the truth of history or politics or anthropology, future generations may never acquire those habits of intellectual independence essential to the working of democracy. An enlightened citizenry is necessary for self-government. If facts are withheld, or distorted, how can the people be enlightened, how can self-government work?

The real question in all this is what kind of society do we want? Do we want a police society where none are free of surveillance by their government? Or do we want a society where ordinary people can go about their business without the eye of Big Brother upon them?

The Founding Fathers feared secrecy in government not merely because it was a vote of no-confidence in the intelligence and virtue of the people but on the practical ground that all governments conceal their mistakes behind the shield of secrecy; that if they are permitted to get away with this in little things, they will do it in big things—like the Bay of Pigs or the invasion of Cambodia.

And if you interfere with academic freedom in order to silence criticism, or critics, you do not rid the university of subversion. It is not ideas that are subversive, it is the lack of ideas. What you do is to silence or get rid of those men who have ideas, leaving the institution to those who have no ideas, or have not the courage to express those that they have. Are such men as these what we want to direct the education of the young and advance the cause of learning?

The conclusive argument against secrecy in scientific research is that it will in the end give us bad science. First-rate scientists will not so gravely violate their integrity as to confine their findings to one government or one society, for the first loyalty of science is to scientific truth. "The Sciences," said Edward Jenner of smallpox fame, "are never at war." We have only to consider the implications of secrecy in the realm of medicine: What would we think of doctors favoring secrecy in cancer research on the grounds of "national interest"?

The argument against proscribing books, which might normally be in our overseas libraries, because they are critical of Administration policies is not that it will hurt authors or publishers. No. It is quite simply that if the kind of people who believe in proscription are allowed to control our libraries, these will cease to be centers of learning and become the instruments of party. The argument against withholding visas from foreign scholars whose ideas may be considered subversive is not that this will inconvenience them. It is that we deny ourselves the benefit of what they have to say. Suppose President Andrew Jackson had denied entry to Alexis de Tocqueville on the ground that he was an aristocrat and might therefore be a subversive influence on our democracy? We would have lost the greatest book ever written about America.

There is one final consideration. Government, as Justice Louis D. Brandeis observed half a century ago, "is the potent, the omnipresent teacher. For good or for ill, it teaches the whole people by its example." If government tries to solve its problems by resort to large-scale violence, its citizens will assume that violence is the normal way to solve problems. If government itself violates the law, it brings the law into contempt, and breeds anarchy. If government masks its operations, foreign and domestic, in a cloak of secrecy, it encourages the creation of a closed, not an open, society. If government shows itself impatient with due process, it must expect that its people will come to scorn the slow procedures of orderly debate and negotiation and turn to the easy solutions of force. If government embraces the principle that the end justifies the means, it radiates approval of a doctrine so odious that it will in the end destroy the whole of society. If government shows, by its habitual conduct, that it rejects the claims of freedom and of justice, freedom and justice will cease to be the ends of our society.

Eighty years ago, Lord Bryce wrote of the American people that "the masses of the people are wiser, fairer and more temperate in any matter to which they can be induced to bend their minds, than most European philosophers have believed possible for the masses of the people to be."

Is this still true? If the American people can indeed be persuaded to "bend their minds" to the great questions of the preservation of freedom, it may still prove true. If they cannot, we may be witnessing, even now, a dissolution of the fabric of freedom that may portend the dissolution of the Republic.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, 5 minutes prior to the vote today on the pending District of Columbia conference report, the Sergeant at Arms be directed to clear the floor and the lobbies of all staff personnel except the staffs of the Secretary of the Senate, the Sergeant at Arms, the secretary for the majority, the secretary for the minority, their assistants, the aides to the leadership on both sides of the aisle, staff personnel associated with the manager of the conference report, and the personnel of the two policy committees, and that such personnel remain off the floor and from the lobbies until the vote is announced, at which time they may be permitted to return to the Chamber.

I further ask unanimous consent that the Sergeant at Arms be instructed to inform those aides, when they do come on the floor, that they are to take seats in the rear of the Chamber and stay seated, or leave the Chamber.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered, and the Sergeant at Arms is so instructed.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. EAGLETON). Without objection, it is so ordered.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

DISTRICT OF COLUMBIA COURT REFORM AND CRIMINAL PROCEDURE ACT OF 1970—CONFERENCE REPORT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The PRESIDING OFFICER. The business will be stated by title for the information of the Senate.

The legislative clerk read as follows:

The report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the amendment of the House to the text of the bill (S. 2601) to reorganize the courts of the District of Columbia, and for other purposes.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate proceeded to consider the conference report.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. TYDINGS. Mr. President, I yield 8 minutes to the distinguished Senator from Nebraska (Mr. HRUSKA).

The PRESIDING OFFICER. The Senator from Nebraska is recognized for 8 minutes.

Mr. HRUSKA. Mr. President, on July 11, 1969, the Department of Justice sent to the Congress legislation providing for a comprehensive reorganization of the inefficient and antiquated system of criminal justice in the District of Columbia.

There was no dissent at that time, nor is there dissent today, from the position that this proposed reorganization is long overdue and vitally necessary. Indeed, the President of the United States issued a message only 11 days after he assumed office on January 20, 1969, calling for such a reorganization and reform of the criminal justice system in the Nation's Capital.

Today, more than 18 months after the Presidential message and over a year after the introduction of the necessary legislation, the court reform and reorganization are needed more than ever. For the existing system of criminal justice is simply incapable of coping with the local crime problem.

How else can we explain the fact that despite the enormous increase of crime in recent years, the number of felony indictments returned in the District in 1969 was the same as it was 20 years ago? How else can we explain the average 9 month delay in bringing a felony case to trial? How else can we explain the fact that on March 31 of this year, there was a pending backlog in the juvenile court of 6,300 cases?

The conference report of the District of Columbia Court Reform and Criminal Procedure Act of 1970 provides the thorough, basic reorganization needed to remedy these intolerable deficiencies in the existing system. This legislation, the product of extensive hearings, debate and a lengthy Senate-House conference, contains a number of major improvements: First, it provides a major restructuring of the court system, centralizing all local, non-Federal matters in one court. For the first time in its history, the city of Washington has been given a true judicial branch of local government. The number of judges of

this court are significantly increased. To attract more highly qualified lawyers to these positions, their pay and tenure are increased. To protect the system against judges whose behavior threatens the fair and efficient administration of justice, an independent commission of judges, lawyers, and laymen is empowered, after hearing, to remove or suspend judges.

A second, major innovation of this legislation is its provision for a family division within the new court structure. This family division has jurisdiction over paternity suits which, consistent with the modern approach, are made civil matters rather than quasi-criminal.

It also has jurisdiction over intrafamily offenses. Today, for many intrafamily offenses between husband and wife, parent and child, the only court remedy is criminal prosecution and jail. The conference report offers the alternative of a civil action directed at the issuance of a protective order—an equity decree aimed at solving and seeking solutions to the underlying family problem. This will relieve the criminal calendar of cases which are essentially domestic relations matters and also provide real assistance to those who come to the courts seeking help.

The family division will also have jurisdiction over all matters relating to juveniles. In this regard, the conference report contains a comprehensive revision of the code of juvenile procedure, the first such comprehensive revision since 1938. The revised code contains all the due process procedures required by recent Supreme Court cases and indeed goes well beyond these minimum requirements. It specifies the detailed requirements for notice of charges, notice of and the right to counsel and provision for counsel for those unable to afford counsel, prompt hearings on the need to keep a child in custody, factfinding and dispositional hearings with distinct standards of proof and standards for admissibility of evidence, and periodic court review of dispositional orders. These improved procedures will help reduce the present disastrous backlog of 6,300 cases.

A third major innovation of the conference report is its provision for a full-fledged public defender system. The present Legal Aid Agency is only a pilot project. This legislation authorizes the public defender to represent up to 60 percent of adult and juvenile defendants who are unable to obtain adequate representation. This will decrease the heavy burden on the private bar of this city and provide these defendants with skilled, experienced counsel. Representation will be afforded defendants not only in criminal cases, but also in cases involving revocation of probation or parole, civil commitment and release on mental health grounds, civil commitment of drug addicts, and civil commitment of chronic alcoholics. The net effect of this noteworthy provision is to guarantee all persons, however poor, the right to skilled counsel when they are faced with loss of liberty.

The fourth major contribution of the conference report is its comprehensive revision of the code of criminal procedure for the District of Columbia. If the new District of Columbia courts, which will have jurisdiction over all local felony violations, are to provide an efficient, prompt, and fair administration of justice, it is vitally important that they be equipped with a progressive, effective criminal procedure. The present provisions in the District of Columbia Code which relate to criminal procedure are scattered throughout the Code. Many are hopelessly outmoded. Indeed, absent from the District of Columbia Code are a number of provisions for years considered basic to a modern code of criminal procedure. For example, the present District of Columbia Code contains no provision providing a procedure for collateral attack of a criminal conviction. The proposed District of Columbia Code remedies this defect. The present District of Columbia Code does not even contain a provision prohibiting conspiracy. The proposed District of Columbia Code remedies this defect. Antequated procedures for obtaining arrest and search warrants, now covered in various titles in the District of Columbia Code, are modernized and consolidated in one title of the District of Columbia Code.

With all these major innovations and significant improvements in the administration of justice in the Nation's Capital, one would have expected, Mr. President, the speediest possible enactment of this legislation. Each day of delay results in a further deterioration of the administration of justice in our Nation's Capital. Yet, as I have already observed, more than one year and a half has elapsed since the President first called for this legislation.

Why the delay? Why has Congress not enacted this legislation? The answer is clear: opposition to a few provisions of the bill, provisions which critics claim constitute a radical departure from existing law and unreasonably made the citizens of the District serve as a guinea pig for the rest of the Nation. Mr. President, let us examine these isolated provisions singled out for opposition to determine if this criticism is valid.

Opponents criticize the omission of trial by jury for juveniles. How do these critics explain the fact that approximately 40 States do not provide jury trial for juveniles and every single model code of juvenile law has no jury trial?

Opponents also criticize the fact that 16- and 17-year-olds charged by the U.S. Attorney with murder, forcible rape, armed robbery and first degree burglary, offenses punishable by death, life imprisonment, or 30 years imprisonment, are to be treated as adults. How do these critics, Mr. President, explain the fact that over half the States have similar laws reducing the age for juveniles charged with serious crimes such as these.

The opponents of the bill criticize its no-knock provisions as unconstitutional. How then do they explain the fact that no-knock entries have been authorized in the limited circumstances provided for by the bill since the common law in England? How do they explain the passage of legislation in five States which contains less restrictive standards than those in the conference report?

Mr. President, yesterday, I had printed in the RECORD a table showing that 30 States of this Union, either by express statute or by definite case law decision, have no-knock provisions which are in active and constant use within their borders.

How do the opponents explain the fact that the constitutionality of this legislation was unanimously upheld by the highest court in the State of New York? How do they explain the fact that in that case the Supreme Court in 1966 denied certiorari? How do they explain the fact that the District of Columbia Bar Association supports the conference report no-knock provisions? When legislation requires police to obtain prior judicial approval, whereas under present law the police have complete discretion to make a no-knock entry, how do critics explain that this warrant procedure violates the fourth amendment?

The opponents of the bill criticize the wiretapping provisions of the bill. How do they explain, Mr. President, the fact that Congress, in 1968, specifically authorized the States to enact such provisions? How do they explain the fact that the proposed legislation provides more safeguards than those in the Federal legislation? How do they explain the fact that other States have adopted similar legislation? How do they explain the fact that the District of Columbia Bar Association supports this provision for local wiretapping authority?

The opponents criticize the provision making insanity in criminal cases an affirmative defense. How do they explain the fact, Mr. President, that over half the States follow this rule. If this is such a radical departure from existing law, how do these critics explain the fact that this is the rule used for centuries in England?

The opponents criticize the one proposed mandatory sentence of 5 years for a second armed crime of violence. How do they explain the fact that this is the same penalty provided for by the Congress in the Federal Gun Control Act of 1968 and that, therefore, this provision only makes the local law consistent with the Federal law.

Finally, Mr. President, the opponents criticize most strenuously the provision of permitting pretrial detention of dangerous defendants charged with specified categories of serious felonies for a maximum of 60 days. How do these critics explain the fact that all major countries in the world today authorize pretrial detention of dangerous defendants, including those countries which have as great a concern for individual liberties as we do, such as England, Canada, Australia, and the Scandanavian countries? How do these critics explain the fact that England, the source of our law and jurisprudence, has by statute authorized pretrial detention for certain felonies since 1275 and as recently as 1967 authorized pretrial detention on grounds of dangerousness for persons charged only with misdemeanors?

How, Mr. President, do these critics explain the fact that today in the United States every State detains dangerous defendants prior to trial through the hypocrisy of setting high money bail, a procedure which discriminates between rich and poor? How do these critics explain the fact that this detention is not limited to 60 days but can last for months and even years? How do these critics, Mr. President explain the fact that the Bail Reform Act of 1966 permits pretrial detention on the grounds of dangerousness for defendants charged with capital crimes—with no time limit? Since when, Mr. President, is a husband charged with first degree murder of his wife, who can be detained, more dangerous to society than a narcotics addict-robber, a professional burglar, or a psychopathic rapist? How do these critics explain or justify this absurd distinction? How do the critics explain the fact that pretrial detention has been recommended by the President's Commission on Crime for the District of Columbia, two successive committees of the Judicial Council to study the operation of the Bail Reform Act of 1966 in the District of Columbia, and Senator TYDINGS' commission to study armed crimes of violence in the District of Columbia? Do the opponents, Mr. President, prefer continuation of the detention of dangerous defendants through the hypocritical use of money bond or do they prefer the honest, limited detention permitted by the conference report?

The truth of the matter, Mr. President, is that opponents of the conference report have never satisfactorily answered any of the questions thus posed. The reason for their failure to do so is obvious. The provisions they criticize are not radical departures from existing law. To the contrary, they are based on the practice or law of the majority of States or on legislation recently enacted by the Congress. Particularly with respect to the provisions for pretrial detention and no-knock, they represent improvements and reform of existing practice and procedure. Most of them have the affirmative support of the organized bar of the District of Columbia and committees of the local Judicial Council of the United States. Not one of the provisions singled out for criticism by opponents of the bill are opposed by the bar or these committees. They do not detract from this legislation; indeed, they strengthen it and make the need for its passage even more imperative.

In view of the widespread support for these provisions, in view of the reforms and improvements they make in existing law and practice, in view of the enormous need of the Nation's Capital for the benefits of this legislation, I strongly urge my fellow Senators to vote in favor of the conference report.

The PRESIDING OFFICER (Mr. EAGLETON). The time of the Senator from Nebraska has expired.

Mr. TYDINGS. Mr. President, I yield 2 additional minutes to the Senator from Nebraska.

The PRESIDING OFFICER. The Senator from Nebraska is recognized for 2 additional minutes.

Mr. HRUSKA. Mr. President, in closing, let me say that this afternoon the Senate will be called upon to vote the District of Columbia crime bill up or down. Those are our two choices; there is no other. The vote last week by the other body to approve the conference report discharged its conferees and dissolved the conference. Should the Senate now vote nay this bill is dead for this session. The House of Representatives stands strongly behind the conference version of the bill; its vote of 332 to 64 to approve the measure proves that. Should the Senate now attempt to pass an emasculated version of this bill, it is the judgment of this Senator that the House will amend that bill until it again resembles the conference bill or the even stronger House version of the District of Columbia crime bill. I do not believe that it is the will of the Senate that the District have no crime bill from the 91st Congress.

This bill, if approved this afternoon, will be the first piece of crime legislation to emerge from this Congress. It will provide the President with his first opportunity to fulfill his pledge to stop the rising tide of crime in this Nation. Few will forget, I am certain, the strong support this pledge gained in the 1968 campaign. The Senate has a good record on crime legislation. Most of the administration's proposals have been approved by the Senate and now await action by the other body. Let us not falter; let us not mar that admirable record.

Each of the controversial sections of the bill has been previously approved in one form or another by the Senate, with the exception of preventive detention. Indeed, one of these sections, "no knock" has been voted on and approved by this body three times since last December. By approving this bill today we break no new ground. There exists solid precedent in State and Federal practice today for each of these provisions. Juvenile jurisdiction, electronic surveillance, preventive detention, no knock are each well thought-out, constitutional, strictly limited weapons in the war on crime. Along with the reorganization of the court system of this city which S. 2601 will authorize, the Congress needs to give the judges, the police and the prosecutors the tools necessary to obtain victory over this deadly serious problem. To do one without the other is not to do the job. It is akin to providing troops but denying them arms.

S. 2601 is a monumental bill. The conference version is almost 250 pages long. It will take a great deal of time to implement all of its provisions. Much time has already been lost during the year this bill has been under consideration by the Congress. We cannot afford to wait any longer for court reform and modernization of the criminal code for this city. To vote nay on this bill is to delay for another year or two any progress in this area for the Nation's Capital. We cannot afford, if we are serious in our desire to end crime in this Nation, to wait a single day. I urge each of my colleagues to vote for this conference bill.

The PRESIDING OFFICER. Who yields time?

PRIVILEGE OF THE FLOOR

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that during the vote two staff members attached to the subcommittee of the able and distinguished Senator from North Carolina (Mr. ERVIN), Lawrence Baskir and Glenn Ketner, be permitted on the floor of the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered. Who yields time? The time is divided equally and is running.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time be equally charged against both sides.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ERVIN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ERVIN. Mr. President, I yield myself such time as I may use.

Mr. President, Senators and Representatives are by nature and profession political animals. As a consequence they are buffeted by many temptations to take action which at the moment seems to be politically profitable.

We live today in a state of emergency. Crime is rampant and rising. There are demands for drastic legislation to deal with crime.

Since the last presidential campaign was based on the law and order issue in part, I myself have been beset by temptation. But I shall not succumb. I sincerely pray that none of my colleagues will be beset by the same temptation. The siren voice of that old devil, political expediency, has been whispering in my ear, "You had better vote for the District of Columbia crime bill because it is a law and order bill, and it is not politically sagacious or politically profitable for Senators to vote against a law and order bill such as the District of Columbia crime conference report, even to preserve the individual liberties of our people."

I trust that none of my brethren has been subjected to this temptation of the old political devil. I confess that I have been subjected to it.

I have listened to some arguments made which were evidently inspired by this old political devil that say, "Senators had better vote for law and order because that is what is politically expedient at this moment."

It might be of help to some of my colleagues to tell them why I have been able to resist the temptation posed by this political devil which invites all of us who hold political office to consider expediency when it is politically advantageous to do so.

Several years ago I had the privilege of sitting in a joint session of the Senate and the House of Representatives in the House Chamber and hearing one of our original astronauts, Col. John Glenn, make a speech.

During the course of his speech, Col-

onel Glenn made a remark which convinced me that in one respect, at least, the heart of Colonel Glenn and my heart beat in unison. Colonel Glenn said with the eloquence of simplicity, "I still get a thrill when the flag goes by."

When I look at Old Glory, I note that it is red and white and blue. To me, the red in Old Glory symbolizes the blood, the sweat, the tears, and the prayers of all those men and women, both great and small, who have made America free.

To me the white in Old Glory symbolizes the purity of the motives of those who drafted the Constitution to keep America free.

To me the blue in Old Glory symbolizes the obligation which rests upon all of us to be true and to be true blue, if you may, to the sacrifices of those men and those women who made America free and to the handiwork of those who drafted our Constitution to keep America free.

Unfortunately for America the Constitution is an inanimate document in writing. It cannot enforce its own precepts. It depends upon people and especially upon public officials who love it to do that.

If those who occupy high office in this Nation do not love the Constitution enough to take such action as is necessary to make its precepts living principles of government in our land, the rights which the Constitution undertakes to create, the responsibilities which the Constitution undertakes to impose, and the freedoms which the Constitution undertakes to secure become naught except meaningless words on a useless scrap of paper.
